VOLUME CII

JAN: JUNE 1912

THE BUILDER

AN : ILLUSTRATED : WEEKLY MAGAZINE : FOR : THE ARCHITECT : ENGINEER : ARCHÆOLOGIST : CONSTRUCTOR : SANITARY-REFORMER : AND ART-LOVER.

"EVERY man's proper mansion-house, and home, being the theater of his hospitality, the seate of selfe-fruition, the comfortablest part of his own life, the noblest of his sonne's inheritance, a kind of private princedome, nay, to the possessors thereof, an epitome of the whole world, may well deserve, by these attributes, according to the degree of the master, to be decently and delightfully adorned."

"Architecture can want no commendation, where there are noble men, or noble mindes."—SIR HENRY WOTTON.

"OUR English word To BUILD is the Anglo-Saxon Byldan, to confirm, to establish, to make firm and sure and fast, to consolidate, to strengthen; and is applicable to all other things as well as to dwelling-places."—DIVERSIONS OF PURLEY.

"ALWAYS be ready to speak your mind, and a base man will avoid you."—WILLIAM BLAKE.

OFFICE: CATHERINE ST. STRAND: LONDON: W.C.

INDEX TO VOLUME CII.

JANUARY TO JUNE, 1912.

THE POLICY OF THE R.I.B.A.

RECENT correspondence in our columns gives expression to a feeling of discontent amongst the Associate members of the Institute with the general attitude and policy of the Council, which discontent appears to be aggravated and brought to a head by the proposals for absorbing the members of the Society of Architects in order to facilitate Registration.

In so far as the Associate class represents the younger and better-educated members of the Institute, and in so far as their discontent voices the eternal conflict between the new ideas and the old, we may say at once that we sympathise with their feelings. Although we cannot associate ourselves with everything said by our correspondents—indeed, must expressly disassociate ourselves from certain of their remarks—we cannot disguise from ourselves that the Council of the Institute has laid itself open to them, has not always been representative of the best elements in the profession, or as conspicuous as it should be in the forefront of progress.

It is, we suppose, the inevitable tendency of all such societies to become fossilised, and eventually to concern

themselves more with their own dignity and privileges, forms, and ceremonies than with the vital interests of the science or art for whose advancement their Charter was granted. It is also perhaps the inevitable tendency of all those who hold positions of dignity and authority in such societies to adopt the same attitude towards the interests of the less dignified and privileged members they are supposed to represent. The Institute is not the only society where respectable gentlemen may sometimes be found who appear to think that all that is required of them is to occupy with dignified affability the exalted position to which their own native worth naturally and justly entitles them, and serve time on the Council in the complacent belief that they are serving their professions.

It is, no doubt, only natural that anyone with an established practice, reputation, and a seat on the Council should feel some slight difficulty in condemning a state of things which brought him to the front without discounting his own success in the process, or in realising that there is anything seriously wrong with a world which has given him all these desirable things. It is equally natural, however, that those without them should see it very clearly.

There is little doubt, we should imagine, that both the Institute and its Council have in a general way suffered from this inherent vice in a somewhat aggravated form, and that the interests of the younger members have not always been studied with exactly that anxious solicitude which could rightly be described as paternal, although, on the other hand, a lack of tact and of right feeling does not always amount to criminal negligence.

While, then, we have every sympathy with the younger members, to whom the struggle for mere existence is very real, we must confess that we are by no means satisfied that the present agitation is prompted solely by a concern for their welfare. If the Associates, as a class, are working for a general reform and uplift of the whole Institute, which would involve incidentally the removal of their special grievances, they may expect the sympathy and support of all loyal and right-minded members; but if they are simply a privileged class fighting to retain and to increase their privileges at the expense of those less fortunate their attitude is less heroic, and one in which we can take but a qualified interest.

It seems to us that in considering the grievances of the Associates and their attitude towards the present proposals we are bound to recognise that their present position is a somewhat anomalous one. So relatively large and influential a class does not appear to have been contemplated by the Charter. Its existence seems to be contrary to its spirit and intention. The continual appeals from the Council to Associates to pass on to the Fellowship suggests that the position of the average Associate was always recognised to be a temporary one from which he would pass in due course to the Fellowship as soon as he was eligible, and also that the present situation is not the fault of the governing body. On the contrary, a remark by one of our correspondents, with reference to a recent appeal by the President, that the Associates "would be well advised to do nothing of the sort," suggests evidence of a deliberate and settled policy antagonistic to the constitution of the Institute, which, if consistently pursued till all the present Fellows die out, will ultimately reduce the whole situation to absurdity.

Such a definite attitude should be capable of a definite explanation. We hesitate to suggest that the higher subscription is the trouble, and that the Associate, after agitating till his present position and title of A.R.I.B.A. has become good enough for business purposes, prefers to spend his money some other way, and to obtain greater powers and privileges in the Institute by further agitation instead of by payment of the higher subscription of a Fellow.

We prefer to think that the examination is at the root of the difficulty, and that a certain pride and satisfaction is felt in belonging to a class that can only be entered by merit and in holding a diploma which is a proof of some definite knowledge and skill.

Here, again, it is possible that certain considerations are overlooked. The examination was instituted to raise the standard of the whole Institute—Fellows as well as Associates. It was never intended solely for the benefit of the Associates as such, or to create a privileged class of members who by their self-interested action would defeat its object.

When, therefore, the complaint is made that so few of the Fellows have passed the examination, or when it is put forward as a grievance that, while the Associates outnumber the Fellows by nearly two to one, they are not proportionately represented on the Council, the reply seems to be that the grievances are of the Associates' own making, and that the remedy is in their own hands. It is entirely their own fault if the Associates so largely outnumber the Fellows, while if every Associate now eligible immediately took up the Fellowship the present representation on the Council might not be considered disproportionate for those who were left—the genuine Associates, whose legitimate interests should certainly be most scrupulously guarded.

It does not seem altogether reasonable that the Institute should be blamed for the evil results of a situation for which it is not responsible, which was not contemplated by its constitution, is not the natural outcome of any normal development, but is due to the action of the Associates themselves, and is terminable at their discretion.

With every wish to appreciate and do justice to the point of view of the Associates, it must be said that such considerations as these are likely to discount any opposition they offer to the proposals before the meeting next Monday, and that arguments based on the fact that so many of their number have not altogether acted up to the spirit of the Charter and constitution of the Institute must necessarily fail to impress. We cannot help feeling that the whole situation is somewhat out of drawing and lacking in proportion, and that the older Associates in established practice and eligible for the Fellowship are viewing the matter from a somewhat false position. They might see it in truer perspective if they viewed it from the position to which their qualifications entitle them.

Our correspondents seem to betray a tendency to look upon these proposals as merely another instance of the neglect of their interests, and to take advantage of the opportunity to air all their grievances and to impress the Council in a general sort of way with the fact that they are too important to be ignored, thus introducing much irrelevant matter into a question which is already controversial enough.

This may be good tactics from their point of view, although we doubt it, and are glad to see that a resolution dealing with the Associates' representatives on the Council has been postponed to a future occasion, when it will be more likely to receive the attention it deserves.

As, however, our correspondents do not express any decided or reasoned objections to the principle of the proposals, we are encouraged to think that there is no really widespread and settled objection to them, and to hope that, after all, they may be discussed on their merits—and their merits alone and finally adopted with the goodwill of everyone.

Surely the first question all—whether Associates or Fellows have to ask themselves is this:—Are these proposals for the good of the Institute and in the best interests of architecture, or are they not? If they are not, there is no more to be said. Let them be put away. But if they are, then they must be approached for consideration in a spirit of goodwill. Some sacrifice may have to be made for the object to be obtained. We cannot make omelets without breaking eggs, and this is not a world in which something can be obtained for nothing. If the profession is to obtain the advantage of having one united and completely representative society instead of two mutually antagonistic ones, and if the Institute is to obtain the advantage of being that strengthened Society and of exercising its increased power and influence to facilitate Registration and other vital reforms, each individual member or class of members must be prepared to pay the price, care being taken that the price is reasonable and that no member or class of members be asked to pay more than a fair share.

For reasons we have already given it is quite possible that the Council has not fully understood the Associates' point of view, or realised exactly what these proposals mean to them, and that, in consequence, the Associates may be able to show that, as a matter of fact, it may cost them more to pay their share than the Council anticipated. If this is so, the terms should be capable of adjustment.

But even if it should become evident after the most mature consideration and exhaustive discussion that any terms must in the nature of things bear with undue weight upon the Associates, they must still remember that if they pay more now they will profit more in the end, as it is the younger generation

ho will ultimately enjoy the benefits of egistration. And if there should be igible and middle-aged Associates to hom this reflection brings no comfort, ho still see themselves called upon to ay a special price for benefits to be aped by their younger brethren, again ie remedy is in their own hands.

It is open to them to avoid this disaster y taking their proper place in the ranks the Fellows, so leaving those to pay ho will ultimately profit. These latter, eing young and inexperienced, may not e quite the same grave injustice in dmitting to the Fellowship competent en who are older and more experienced an themselves.

We are aware that this is regarded y some as a matter of principle. lthough it is a poor principle that will ot stand the strain of an exception, e, no more than the Associates, have ay desire to see this one more honoured the breach than in the observance.

But every reasonable man must, e think, admit that this is a quite xceptional occasion of the greatest nportance to the future of architecture which ordinary custom does not pply. It is a crisis which must be dealt ith on its merits, and settled, we hope, ith the full approval of the general ody.

After all, the Associates might remember that a reasonable number of Fellows, xamined or not examined, are, by the erms of the Charter, as necessary to the onstitution of the Institute as the ssociates themselves. Fellows must be reated somehow, if only to fulfil atutory obligations. If the Associates ill not pass on themselves or allow nyone else to—what do they suppose going to happen?

What we venture to suppose is going happen on Monday is that the ssociates, having satisfied themselves hat no slight was intended and that heir interests really were seriously onsidered and honestly dealt with by he Council, having assured themselves hat the price they are called upon to ay is no more than the advantages stify and the necessities of the case emand, will turn out to be not such errible fellows after all, or such sticklers or privilege as they would have us to elieve.

Once convince them that these proosals are for the good of the whole ofession and of the art to which they ow such eager devotion, they are far ore likely to place the least of its terests before the whole of their rivileges.

The New Year could not open under appier auspices.

CRYSTAL PALACE ENGINEERING SCHOOL.

The "Wilson Premium," for the best paper ad before the Crystal Palace Engineering ociety (affiliated to the Society of Engineers, corporated), during the present session, has en awarded by the Council to M. F. Da S. ravo, for his paper on "Aviation." Other apers read during the session were:—Railroad Construction," by W. R. L. eaumont; "Cement Testing," by A. ammar; and "Bridge Construction," by . M. Beg. The premium was presented to r. Cravo by Sir Douglas Fox, Past-President the Institution of Civil Engineers, on the casion of the 117th distribution of certifites of the above School on Tuesday, ecember 19, at which he presided.

PAINTER AND DECORATOR.

THE question, What is decorative painting? is not an easy one to be answered. Perhaps the nearest approach to a definition would be that it is studied in relationship to its surroundings, and yet a painting may be highly decorative in effect if the process is reversed and the surroundings are brought into harmony with it, though, strictly speaking, it could hardly lay claim to the title.

Take, for example, the work of the late Mr. Edwin A. Abbey, which forms the leading feature of this year's winter exhibition at Burlington House. Few painters of recent years have shown so strong an instinct for what is usually termed the decorative quality. Quite apart from the important works executed for specified positions in public buildings, a large proportion of Mr. Abbey's easel pictures owe their main interest to composition in colour and line most emphatically decorative in its aim. In the Columbus, with the "Flamingo's Flight," so much commented on when it was first exhibited, it is clear that, regarded as the visualisation of an historical incident, the picture would tell its story more vividly without the birds, but how far away would it have been from its conception of colour pattern? The same instinct prompted the introduction of the scarlet halberds in the "Richard and Lady Anne." If these paintings may not be termed "decorative" in the strictest sense of the word, they are at all events from the hand of a decorator; and the same may be said of nearly all the artist's works, not omitting the black and white illustration to which he devoted so much of his energies.

It is as yet too soon to attempt an appreciation of the ultimate position Mr. Abbey will take in the history of the painter's art. Technically most accomplished and with, in some directions, a marked individuality, it would hardly be wise to claim for him, at the moment, an outstanding position. At the same time his work possesses so much charm and makes so strong an appeal in the direction we have indicated above that we feel tempted to hope that future generations may treasure it for these qualities, and will always preserve a niche in their temple of art for the man who but a short time back passed from our midst.

The Royal Academy has done well in giving this opportunity for studying and comparing the various forms in which their late member expressed his imaginings. It is perhaps unavoidable that the easel paintings and book illustrations should be more fully represented than the strictly decorative work. If a really good set of reproductions of the frieze in the Boston Library had been included it would have greatly enhanced the interest of the exhibition and have enabled the visitor to realise more fully the range of the artist's work.

NEW BRIDGE, BOSTON.

The Boston Town Council has been recommended to instruct their Consulting Engineer (Mr. J. J. Webster) to prepare plans for a steel bridge to cost about 5,500*l.*, the bridge to have a roadway about 25 ft. wide, with footways each side 8 ft. wide.

NOTES.

The Environment of Southwark Cathedral.

WE are glad to see that public attention is aroused to the inadequate surroundings of Southwark Cathedral. Encroached upon and hidden by buildings of the most commonplace description, and dominated and dwarfed by the adjacent elevated railway track, its condition is little short of a public scandal. We are particularly interested to notice that it seems at last to be realised by the public that the setting and environment of a building powerfully affects, for good or evil, the amount of influence which it is able to exert, and that a cathedral situated as this is fails to appeal. This is just one of those buildings of historic and artistic interest to which reference is made in a suggestion for an Imperial London in our Review of Civic Design. Any broad scheme for the improvement of this district would naturally consider the approaches and surroundings of Southwark Cathedral.

Sir Joshua Reynolds' Window in New College, Oxford.

VISITORS to the Royal Academy Winter Exhibition will certainly notice the series of allegorical figures painted by Sir Joshua Reynolds for reproduction in the painted glass window at the west end of New College chapel, Oxford. In these may be seen the accomplished balance of line and mass so notable in the replicas on glass, and we can appreciate their masterly treatment without being distracted by the utter unsuitability of the method by which these designs are embodied in a painted window. Many of our readers will remember the unhappy effect of the masses of light and shade so utterly destructive of the architectural effect of this end of the chapel and have no doubt felt their admiration of the grace and dignity of the various figures in conflict with their reprobation of the mistaken conception of what the effect of a stained glass window should be. At Burlington House we can forget the window and study the figures apart from these distractions. The two shepherds from the Nativity and the figures of Prudence and Hope are particularly fine, and, indeed, the whole series is admirable for any other scheme than the glazing of a Gothic window.

Aspirations for 1912.

AMONG the various replies to the question put to some of our leading men by the *Daily Graphic*, "What would you most wish to see accomplished in 1912?" that of Archdeacon Sinclair stands alone in displaying an appreciation of the influence of the arts on national welfare. The Archdeacon's seven proposals are as follows:—

"(1) A worthy central Gallery of Sculpture for London. Every other great capital has this essential department of art. We have a splendid collection of antiques at the British Museum, and some modern sculpture in other galleries; but if it were all collected together in periods and schools in spacious halls and corridors, as at the Vatican, the Pinakothek, or the Naples Museum, it would give an immense impulse to art and be an encouragement to donors.

(2) The restoration of the Abbey of Holyrood, hitherto defeated by the combination of

that maudlin sentimentalism which rejoices in a ruin, and that acrid pedantry which, fearful of touching anything built in a previous era, could only have been really happy if each generation had allowed every earlier structure to moulder unimpeded into decay. The architecture of Holyrood is of the simplest character.

(3) The completion of another section of the mosaic decoration of St. Paul's Cathedral.

(4) The erection of the north wing of the west front of Ely Cathedral, which has been an unsightly ruin for several centuries.

(5) The refacing of the east front of Buckingham Palace, which by common consent is unworthy of the fine Adams structure behind, as well as of the new situation created by the Processional Road and the Victoria Memorial, and of the illustrious and popular Monarchy of the United Kingdom.

(6) The purchase by public benefactors of fields in a circle all round London, to be maintained for ever as playgrounds for the children of the working classes.

(7) A central and truly imperial group of buildings, with abundant room for expansion, for the teaching University of London, so that it may exercise its just and predominating influence in the life of London."

With the first of these we can only express the most cordial sympathy; the question raised in the second has provoked widely divergent views, but we must say that we have never thought the case against reparation conclusively proved. As regards St. Paul's, architects have always maintained that the effect has not been improved by the mosaics, which are entirely out of sympathy with the architectural ideals of Wren. The east front of Buckingham Palace, though by no means so bad as public opinion seems to assume, might certainly be redesigned to form a more effective terminal to the new monumental way. Our only fear is that in the present chaotic state of architectural ideals we might get something with less breadth and repose than the present building exhibits. Archdeacon Sinclair's last two proposals commend themselves as of urgent importance, and we trust that they will not be overlooked by those who are in a position to give effect to them.

The Tower Bridge. SIR JOHN WOLFE-BARRY in a recent interview defended the combination of structural steel with decorative stonework. With the artistic ethics of the case we are not at the moment concerned, but we would point out that Sir John has on this, as well as on previous occasions, assumed the entire responsibility for the design. "I was bound to make the bridge harmonise more or less with the Tower of London," are his words. Now, we have always understood that whatever credit is due for the architectural treatment of the bridge should be given to the late Sir Horace Jones, in whose office the original design for the bridge was prepared, and by whom the general architectural treatment was determined at a time when the engineering section was still in a preliminary stage. In this statement we hold ourselves open to correction, but if our view is accurate, as we believe it to be, we cannot too strongly reprobate the tendency to forget the work of those who are no longer with us.

The Late Mr. D. G. Driver. WE should like to call attention to the letter which appears on another page from Mr. Arthur Keen, Hon. Treasurer of the Architectural Association, in reference to the proposed practical recognition of the services of the late Secretary to the Association. It will cause widespread regret to the many friends of the late Mr. Driver to learn that his widow and two children are unprovided for, and we have no doubt there will be a ready response to Mr. Keen's appeal, especially when it is known that the sum of money to be raised will be placed in the hands of trustees and that the scheme will include provision for the education of the children. Mr. Driver's wholly unexpected death at a time of life when it might reasonably be supposed he would have many years in which to provide for those dependent upon him will, no doubt, be remembered by the many friends of a man who devoted his energy so usefully to the welfare of the Association.

THE SKETCH SOCIETY.

THE Sketch Society have provided a very creditable exhibition at the Royal Institute Galleries. If it contains no work of outstanding merit that is because perhaps a general level of merit is pretty well sustained. And, in any case, where there is such a large number of works in which the intention and accomplishment is pretty much the same it would require more space than we can give to the subject to distinguish the qualities of painting susceptible of being classified into groups. In many instances the prices which the artists appraise for their works seems to us almost painfully modest. These may be what one calls the market price, or the lowness of the figure may be an expression of the artists' contempt for the facility in which he has achieved his handiwork; or, again, it may be due to the fact that the art of painting in water-colours has hitherto been overestimated. The small prices, however, are most probably due to competition and the struggle for existence, at a time when the sentiment for lyric expression, whether it be in painting, in poetry, or even the banal ditties of the musical play and music-hall, is vastly underestimated from the point of view of remuneration. And the aim of many of these water-colourists (the oil sketches are few) must have been, consciously or unconsciously, lyrical: the song of stretches of moorland and spacious skies, of odd harbours and shipping, of sheep with the sun or the mist on them, of—here and there—quaint bits of streets and buildings. And, of course, there is some rubbish (not very much), as in every exhibition, which is none the less exasperating because it is generally wrought with greater artistic placidity and seriousness than work which seeks to express a more impressionistic and ingenuous mood. Taking the exhibition, however, altogether, and looking at it from the point of view of the modern "movement" in water-colours, we seem to be able to distinguish, quite broadly, two tendencies (if we may leave out the pictures of Mr. Lawson Wood, Mr. Hassall, Mr. Staynes, and one or two other artists who, delightful and fanciful illustrators as they may be, are not particularly concerned with our point), two groups—the group who work after the intimate fashion of the old Norwich School and the group who do not seek for the secrets of atmosphere, the poetic quality of nature so much as the personal sentiment of colour, of form and mass which resolve themselves into a scheme—not yet perhaps quite realised by the artists themselves which may be called decorative. We do not wish to treat a tentative, modest exhibition like the present too seriously or attach undue importance to it, but it is a finger-post, even if it is not sure of the distance and direction. The message of the Norwich School has nothing fresh to tell us; the careful painter of every leaf, of a later school, has had his uninteresting day; there are indications, however, from the present exhibition, as there have been from others, which show that the modern artist has yet to realise certain aspects of presentment which are of more various import than the interpretation of that which hangs loosely before his eyes. For, after all, a painter must not only feel and see; the exigencies of his art also demand that he must think, and facility of accomplishment is a small matter compared with a more personal, a more thoughtful apprehension of the abstract purposes of painting than is generally to be found on these walls.

THE "ALTARE DELLA PATRIA" OF THE VICTOR EMMANUEL MONUMENT AT ROME:

I.—SCULPTURE RELIEFS BY ANGIOLO ZANELLI.

IN writing of the "Monumento Vittorio Emanuele," which was described in the *Builder* of June 9 of last year, very close upon the period of its official opening, we had occasion to mention that when the architects sought to lay the foundations they had found not, as they expected, solid work, but accumulations of rubbish dating from Roman times, through which they had to strike down. "Hence," we added, "came the idea of galleries beneath, and above these a long series of stairways, which should lead up to the central group of the 'Monumento'—the equestrian figure of the 'Re Liberatore' with beneath it the (so-called) '*Altare della Patria*' (the Nation's Altar), adorned by a frieze in marble . . . the frieze of the *altare* has been assigned, as a result of competition, to the two sculptors, Zanelli and Dazzi, and their work will be submitted to public inspection *in situ*, to decide which of the two designs shall be finally selected."

That decision has now been made, and if in the moment of choice there has been a certain amount of partisanship on either side—which will scarcely surprise those who are acquainted with art circles in Rome, but which is to be regretted in the case of work of such high competing merit—there can be no doubt, to our mind, that the decision has been an excellent one: a decision which, in accepting the relief of Angiolo Zanelli for the marble decoration of the front of the Country's Altar, places that brilliant young sculptor in the forefront of his profession in Italy and secures to his work a monumental place in the world's art.

The decision of the Royal Commission for the "Monumento," which met on the first day of last December, under the presidency of the Hon. Sacchi, and at which were present the famous lecturer and successful organiser of the Venice International Exhibitions, Antonio Fradeletto, the architect Basile, Dr. Corrado Ricci, the Director of Fine Arts, the well-known critic, Ugo Ojetti, to whom the Florence Exhibition of last summer owed so much, Senator Monteverde, and others—all names in the forefront of the art movement in Modern Italy, passed unanimously the order of the day:—"That the Royal Commission selects for execution the *alto-rilievo* (high relief) of Angiolo Zanelli, with the condition that the central statue shall be modified in a manner which corresponds more closely to the traditions of Rome and to her significance as a city (*significato civile*)." This condition which we believe to have been owing in a great measure to the influence of Ugo Ojetti, and which we shall show later in this article that we consider as critically sound—was followed by another "order of the day," in which the Committee

recommended to the Ministry to take steps that the work of Dazzi should not be entirely destroyed; and we shall follow this recommendation to some extent here also by giving a general note on the two competing reliefs before we devote our entire attention to the work of Zanelli, which is the special subject of this article.

Both reliefs have this much of subject and treatment in common that they represent an advancing and ordered group of processional figures, treated in the highest spirit of classic art and centering in the upright or seated form of Rome, the "*dea Roma*," the embodied personification of the immortal past as well as the living present and future of the Eternal City.

Such a treatment, classic in the best sense, is the only one possible to an essential central panel of the decoration of a building of such classic inspiration as that which was first created in the "Monumento" of Sacconi and never, in spite of difficulties and modifications, has really departed from his spirit; and how thankful we may here be—looking at this subject not merely from the point of view of Italian patriotism, but of the world's art—that we have been spared advancing Bersaglieri and the battlefields of the revolt from Austria.

But with this similarity in subject the likeness of the two competing reliefs ends. Of the work of Dazzi, which represents heroic groups of men, women, and even children advancing to a central seated figure of Rome, we shall not speak further here, since we hope to treat it more fully in a subsequent article; its originality and merit deserves special study. But to the work of Angiolo Zanelli, we have—from the very first moment that we saw the designs and a portion of the work itself last spring at Rome already *in situ*—given our enthusiastic admiration and approval.

When, in our notice of the "Monumento" last June, we said, "It would be out of place here to forestall the public criticism of the two competing designs," we were careful to add, "we will, therefore, only say that the relief by Angiolo Zanelli, part of which we have seen *in situ* upon the front of the '*altare*,' is very noble sculpture, inspired by that dignity of sentiment, that high sense of form which has come down to us in a masterpiece of Hellenic art—the frieze of the Parthenon"; and fuller study of the work since then has only confirmed and secured that entire approval.

We then compared this work with the best of Hellenic art; and, in fact, it is Hellenic in its dignity of form and purity of plastic inspiration. How nobly conceived these draped maidens who guide the great oxen beneath the mounted trumpeters; or, again, the four, one of whom lifts her tiny babe against her breast, might be the splendid sisters of the Caryatides or Ariadne of the Vatican! But in these processional figures there is a note which is far apart from the Hellenic serenity, but which is infinitely attractive and satisfying—a calm sadness, as if these figures who realise the human glory of life know, too, its limitations and their journey's ending. Had the sculptor drawn in this spirit with his early studies at Florence of that school where, in the hands of Mino or the Rossellini, the exquisite finish of the marble has the same note of resigned tranquillity; or had he come under the influence of the great modern sculptor of Death, Leonardo Bistolfi, as great in this his own field of art as is Daniel Chester French in America?

Before we proceed further with this question, let us enter into some details of the life and work of the young victor of the reliefs of the "Monumento." Angiolo Zanelli was born on March 17 of 1879, at S. Felice di Scovolo, near the beautiful Lago di Garda, from a Lombard family which for generations had been small proprietors and cultivators of the soil. His first studies were at the industrial school of Salo, but the love of the marble was born in him, as it would seem, and before long we find him busied in the quarries of Botticino, from which (as we pointed out in our previous article) the material of "Monumento" was to be taken. Coming later to the workshop of a good decorative sculptor of Brescia, Faitini, he made such good progress that he was able to win the purse offered every three years by the city of Brescia (of 1,500 lire annually) for three years of art study to students born within the province.

"*Brescia l'Armata*"—Brescia, whose glorious antique bronze figure of Victory may have inspired his young dreams as she did those of Carducci, was the first influence of Zanelli, and next to her Florence: for after some hesitation he chose this city—instead of Rome—for his art studies, which he prosecuted in the Academy of Fine Arts, which the present writer knows well, under the sympathetic guidance of Rivalta. These happy years of study were interrupted by the call to military service; and when—after two years lost to art, but with benefit to health and character—he returned to Florence, he found a fresh influence in the friendship of the Swedish sculptor, Lundberg. His life of artistic activity had already commenced, and the young sculptor found his way to Rome, and thence to Naples, where the wonderful "Museo Nazionale" offered to him her treasures, to which he devoted months of study. But Zanelli did not spring at once to success; his "Zanardelli Monument" has been frankly condemned as a failure; his "Gaspare di Salo" of the same period was better, but for a long time he was studying intensely, seeking out his path, creating and then destroying his own creations, unable to satisfy himself, a despair to his friends and admirers, and a likely aim for detractors.

With "The Woman with the Basket" he finds his way at last—the way that he was seeking in the "*Torso*" and the "*Biga*"; for here in this "Donna alla Canestra," a country girl carrying her basket poised upon her head, he shows that combination of simplicity of treatment, grace and charm of sentiment, and ruling strength which is the keynote of his reliefs of the "*Altare*," and which found another expression in his next commission, the "Funeral Frieze" (*Fregio Funerario*) for a mausoleum which the brilliant young architect, Marcello Piacentini, whom we found last spring at the head of the Rome Exhibition Works, had designed—taking as his model the famous Temple of Vesta at Tivoli—for a rich American client.

The impulse to compete for the "*Altare della Patria*" came to him suddenly, and with only three weeks in front of him before the "sending in." He hoped for a delay, but it was not accorded; and in this necessarily hurried work it was probably only the severity of his earlier studies—directly the recent "*Fregio Funerario*," less directly but not less surely the "*Biga*," which had entailed the most careful study of equine form, and his intense application to the human form in the "*Torso*"—which carried him through and have placed him now on the pinnacle of success.

But this success is not merely personal, and this is a point which we wish specially to bring forward in this article. It has been said, with, we believe, perfect truth, by his biographer, Mario Lago, in a very brilliant notice published by the *Tribuna*, that "had Zanelli's relief been exhibited ten years ago no jury would have accepted it, and no

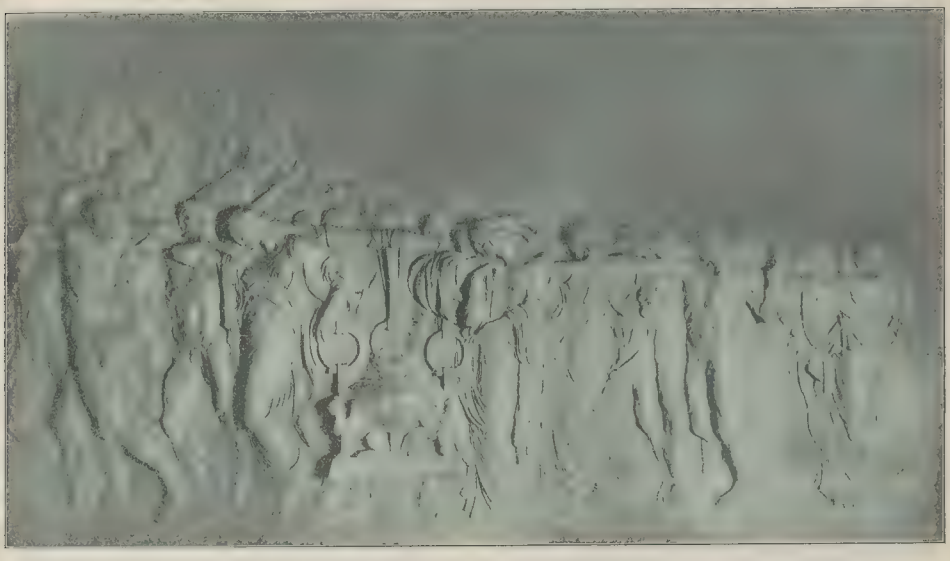
Signor Angiolo Zanelli.

public in Italy would have applauded." This is to say that the young sculptor is, in a sense, the product of his age, or has at least come forward into an "*ambiente*" which made the highest sculpture possible; and we wish to insist on this point, because it is, in our belief, scarcely recognised as yet in England. While we are marking time, other nations in the plastic arts are going forward. From the academic sculpture of Canova, more coldly academic in his successors, Italian sculpture had plunged into an excess of realism which is called by her critics "*il verismo*," whose vulgarity and superficiality has only been exceeded by the recent plastic efforts of the (so-called) Post-Impressionists; and it was at this very epoch that Italy broke out into a perfect eruption of public monuments.

We are not for one moment here disparaging the patriotic sense of national unity which called for the art expression of that recent and glorious fact: we can, however, recollect our feeling when we had to report the unveiling of the statue of Manin in one of the more beautifully situated "piazze" of Florence, and we know that this is not the only plastic atrocity, or perhaps even the worst.

It is the efforts of a band of modern sculptors—among whom we would mention the names of Trentacoste, Calandra, Canonica, Macagnani, and of other sculptors whom we have the privilege of knowing personally, Apolloni, Fontana, and the great Leonardo Bistolfi—who have redeemed Italy from this invasion of ugliness, which was always opposed to the traditions of her genius; who have first stirred, then educated, and at last conquered public interest and turned indifference into intelligent sympathy.

But their work has been materially assisted by such great public undertakings as this "Monumento," which have been thrown for the most part into open competition, with the most beneficial results; and we will venture yet again to refer to our article of June 9, in which we said:—"It is not possible to leave this portion of the subject without stating our conviction of the immense benefit to the sculptors' art in Modern Italy from these free public competitions which have taken place, especially in connexion with this 'Monumento.'



The brilliant young sculptor Zanelli is one, among others, of the younger men whom these competitions have brought forward."

In fact, in studying this young sculptor's successful and fairly rapid career one cannot help observing that a happy series of these "*concorsi*" have been the stepping-stones which made his success possible. In England we proceed on a different system, and the writer fails to see that we have any reason to congratulate ourselves on the results attained; nor do we think, without any disparagement either to a brilliant sculptor, whose work we know and admire, or to a committee which includes high and respected names in British art, that the King's Memorial—to take a single instance—would not have been better if offered as a reward to the freest competition, limited, very properly, to sculptors within the Empire. The reward, which must come in any case—and here very deservedly—would then have been a wider stimulus. We do not say that this alone would revive the present condition of plastic arts within our Empire, but it would certainly aid in doing so.

When we contrast what is being achieved at this very day and hour in the plastic arts, both in Italy and the United States of America, with the public apathy in England, and the sort of living there that awaits all but the very few most successful sculptors, one is tempted to ask—Why throw aside any means, however limited, which might help forward a better state of things? But here we feel that we must not pursue further a theme which is apart from the immediate subject of this notice.

The "Altare della Patria": Details of Frieze. Signor Angiolo Zanelli, Sculptor.

Part of the "Altare della Patria": Processional Figures bearing the Sacred Fire. Signor Angiolo Zanelli, Sculptor.

That subject is the sculpture of Angiolo Zanelli, of which we have already expressed our high opinion, and which we shall not attempt to describe in detail because we prefer to let the interesting illustrations speak for themselves. We do not for one moment pretend that even these reliefs are not open to criticism. We consider the anatomy of the muscles among some of the male nudes to be overmarked and obtrusive; and we have already given our support to the view expressed by that able critic, Sig. Ojetti, and endorsed by the Royal Commission, as to the central figure of Rome. "Zanelli," says one of his critics, "took his ideas from two masterpieces of antique sculpture—the *Athena Parthenos* of Pheidias and the *Minerva Promachos* of the Naples Museum." To base one's art on the masterpiece of Pheidias is not certainly aiming too low; but (writing from memory and without the photograph before us) his standing Rome is too archaically treated, too distinctly Hellenic for the subject, which, in treating this old mistress of the nations, needs something richer, broader than even Hellenic art can give, and is, in fact, better treated, seated, and with the spear and winged Victory as she has been designed by Dazzi.

It is hard to achieve the perfect, and it is no purpose of ours to proclaim its discovery here. What we have to acclaim here is a work of plastic genius, of divine promise; and to call from our northern capital of Empire to the young artist who steps out into the full light of fame, with all its glamour, all its pitfalls—"Be not satisfied! Be not content with yourself or the applause! Go on! Press forward, as you did in the past through those years of dissatisfied labour, to the sublime achievement, which shall come to you only through the sublime endeavour!"

GENERAL NEWS.

Professional Announcement.

Messrs. Geo. Elkington & Son, architects and surveyors, 7, Laurence Pountney-hill, E.C., have taken Mr. Hylton B. Elkington, younger son of the senior partner, into partnership as from January, 1912. He is an Associate of the Royal Institute of British Architects, and has for several years held a leading position in the office. The present title of the firm, "Geo. Elkington & Son," which has been in use since 1875, will remain unaltered.

Works of the Late Professor Legros.

The friends and admirers of the late Professor Legros will be gratified to hear that his family has arranged to hold an exhibition of the paintings, drawings, goldpoints, and crayons, medallions, and sculpture left by him. It will open at the Fine Art Society's, New Bond-street, on Friday in next week.

New Year Honours.

Mr. Bertram Mackennal, A.R.A., who designed the new coinage, and the new Indian, and New Zealand, with other Colonial postage stamps, has been appointed a member of the Fourth Class of the Royal Victorian Order. Knighthood has been conferred upon Mr. John Tudor Walters, M.P., of Sheffield, architect and surveyor. He was born, in 1866, at Clitheroe, Lancs, and practised formerly in Leicester, where, being a member of the Town Council, he carried out the scheme of municipal housing. The Y.M.C.A. Buildings, London-road, Leicester, were erected, 1901, from the designs of Messrs. Draper & Walters and Mr. A. E. Sawday, at a cost of 35,000*l*. Mr. Walters was elected M.P. for Sheffield (Brightside) in 1906 and in 1910; he has been President of the Education Association for England and Wales, and takes special interest in housing, education, and land reform.

Association of Consulting Engineers.

The Association of Consulting Engineers will hold their inaugural meeting on January 15 in the lecture theatre of the Institution of Electrical Engineers, Victoria-embankment. The Association has been formed in order to prevent the appointment of unqualified persons to advise upon engineering schemes which involve the health or the safety of the community.

Kames Castle, Bute.

Mr. A. M. Mackinlay, of Rothesay, has prepared the plans for the rebuilding, after the Scottish baronial style, of Kames Castle which is reputedly the oldest inhabited residence in Scotland. The property, formerly owned by Lord Bannatyne of Kames, now belongs to the Marquis of Bute. Mr. Mackinlay's designs comprise a group, upon a rectangular plan, of one-storied buildings, with the keep on one side, encompassing a large courtyard. We understand that the ancient keep, or tower, will thus be preserved and incorporated in the new castle.

King Edward VII. Memorial, Shadwell.

It is understood that the Corporation of the City of London would consent to transfer for about 70,000*l*. their interest in the Shadwell riverside market site, provided the site is acquired for purposes of the proposed memorial and park. The land, of which the freehold vests in the Corporation, is valued in their books at about 140,000*l*. The London County Council have agreed to capitalise for 14,000*l*. their liability in respect of their lease, having fifty-five years unexpired, at a rent of 710*l*. per annum, of a portion of the site. The Council have also offered to undertake the maintenance of the projected open space and park.

The London Museum.

Under the superintendence of Mr. Guy Laking, Keeper of the King's Armoury, considerable progress has been made in the classification and arrangement of the collection in the rooms on the upper floor of Kensington Palace. The showcases are after the Mantelet pattern, and many of them are already filled. Some of the larger exhibits, with the Roman boat from Lambeth, the cells from the prison in Wellclose-square, St. George's-in-the-East, and many architectural fittings will be shown in the northern annexe. There will be a very interesting display of XIVth and XVth century pottery, weapons, spurs, and table-knives, whilst much earlier times are represented by prehistoric remains and relics of the Bronze Age discovered in excavations in London. The comparative scarcity of Saxon objects reminds us that for a long period preceding the Conquest London continued to be more Roman than Saxon and did not regain the importance it possessed during the Roman occupation. It is anticipated that the Museum will be opened to the public shortly after the return of the King from India.

Two Old London Charities, Schools, and Almshouses.

A scheme formulated by the Board of Education applies the revenues of the Newcomen Foundation, Southwark, which amount to 1,700*l*. per annum, to the establishment of scholarships of 20*l*., tenable by boys at St. Olave's and St. Saviour's Grammar School or the Borough Polytechnic, and, to the extent of about 1,200*l*. yearly, to a higher grade domestic economy school for girls. The charity was founded by Mrs. Elizabeth Newcomen in 1675. The Charity Commissioners will erect a fresh scheme for dealing with the Amyas, Dale, Lawrence, Mills, Powell, and other charities in St. Luke's Parish, Old-

street. The trustees will be charged with the upkeep and maintenance of the Amyas Almshouses, for eight women, in Old-street, and of the Alleyne's Almshouses, appertaining to Alleyne's College of God's Gift, and the St. Luke's parochial Almshouses, in Bath-street, for twenty-two inmates. A considerable portion of the consolidated income is devoted to pensions and doles to the parishioners and almspeople.

Cambridge University, New Buildings.

The tender of Messrs. Kerridge & Shaw has been accepted for the building of section A of Block 2 of the new Museum of Archæology and Ethnology, after the designs of Mr. T. G. Jackson, R.A. (illustrated in the *Builder*, July 31, 1909, and May 7, 1910), which will complete the Downing-street façade embracing the Squire Law Library, the Law School, and the front wing of the Sedgewick Memorial Museum. On January 15 the Bishop of Ely will dedicate the new buildings of Ridley Hall, which have been erected, after the designs of Mr. William Wallace, in harmony with his previous work there, including the chapel of which we published a drawing on December 10, 1902. The new block provides accommodation in a detached house, having three stories and a basement, for ten students, with a set of rooms for a member of the resident staff. The new Literary Lecture Rooms, of which Mr. George Hubbard was the architect, comprise a lecture theatre, eight lecture-rooms, several class-rooms, library, and professors' common-room. The block stands upon the site, near Corpus Christi College—latterly the Lady Margaret Professor's Garden—of St Austin's Friary, of which some remains were discovered; the stones of a XIVth-century archway have been built into a wall of the basement floor. So similarly the fragments of the central part of Inigo Jones's choir screen at Winchester Cathedral have been reconstructed to form a doorway of the Museum of Archæology and Ethnology. In our number of June 18, 1910, we gave an illustration of Mr. Jackson's drawing of a restoration of the screen.

COMPETITION NEWS.

The Legislative and Executive Building Winnipeg, Manitoba.

The cost of the proposed building is estimated at 400,000*l.*, exclusive of heating, lighting, plumbing, etc. The site provided is a fine one, about 1,000 ft. square, at the south end of the city: it faces Broadway on the north and the Assiniboine River on the south.

The competition is in two stages, the preliminary drawings to be in pencil or ink without wash or colour to a scale of 16 ft. to the inch; plans of all floors, elevations, and two sections are required, with a brief report, estimate of cost and cubic contents.

Five designs will be selected for a second competition, and their authors will each receive 400*l.*

The successful architect will be employed to carry out the work, and will be paid in accordance with the Manitoba Association of Architects' scale of charges (elsewhere 4 per cent. is mentioned).

It is to be noted that, while the competition is open to all architects who are British subjects, the date fixed for the delivery of designs for this complex and important building, viz., February 15, 1912, renders it impossible for any architect outside Canada to do himself justice in the preparation of his design. The time is short, even without the deduction of three weeks, the handicap under which the English competitor labours.

In other respects the competition looks so promising that we would urge the R.I.B.A. to approach the Manitoba Government with a view to obtaining such an extension of time as would give English competitors a chance in this competition.

Workmen's Dwellings, Banbury.

This competition is for twenty houses costing 175*l.* and twenty costing 135*l.*, each for the working classes. The first premium of 20*l.* is to merge in a remuneration at the rate of 3½ per cent. on the work *actually carried out*. A second premium of 10*l.* is offered, 5*l.* to be added if the Council decides to purchase the second premiated design.

The Council does not bind itself to accept any of the submitted designs, nor to proceed with any design after its acceptance. It is stated in the conditions that the architect's commission is to cover plan, sections, specifications, estimates, detail drawings, quantities, superintendence, certifying, attendance at Local Government Board inquiry, and all out-of-pocket and travelling expenses.

The Council may therefore under these conditions accept plans, and then employ the architect for the erection of, say, four houses of different design and cost, and he must prepare contract and bill of quantities or pay the surveyor. For this he will receive only the premium of 20*l.*, that being about the amount of the 3½ per cent. on four houses. This is inclusive of quantities, all copy plans, all expenses, all alterations, and making up the final accounts. The Council may utilise these plans, specifications, quantities, and accounts for the erection of the remaining houses without employing the architect; or, finally, although the assessor may have "placed" the first two designs, they may reject the whole after making use of them for their own purpose.

We have rarely come across a more preposterous demand, and we trust that the architectural profession will unite in indicating its opinion of Banbury beadledom by leaving its propositions severely alone.

Grand Stands to Racecourse, Lombardy.

The Società Lombarda per le Corse di Cavalli have instituted an international competition for grand stands and subsidiary buildings at the Trenno racecourse near Milan. The awards will be made by the Council of the Society, and premiums of the value of 320*l.*, 120*l.*, and 40*l.* are offered. It is not, however, guaranteed that these premiums will be awarded, as if the Council do not consider the designs of sufficient merit three indemnities of 40*l.* each may be substituted. The cost of the proposed buildings is not to exceed 20,000*l.*; the conditions appear to be fairly well drawn up, but the facts that no professional assessor is to be employed and that the premiums may be withheld are discouraging.

Holyrood Palace.

In connexion with the Scottish National Memorial to King Edward, a memorial, to cost 15,000*l.*, will be erected at Holyrood. Most of the money has been subscribed. Three competitors will be chosen from Edinburgh, two from Glasgow, and one from Inverness.

Cardiff Fire-Station.

We understand that a competition will be open shortly for a new fire-station at Cardiff, the cost of which will be probably 15,000*l.* The site of the proposed building is in Cathays Park.

CORRESPONDENCE.

The Late Mr. D. G. Driver.

SIR, It is generally felt that some practical recognition of our late Secretary's services to the Association should be made. Mr. Driver, who was Secretary for over twenty years, leaves a widow and two children unprovided for, and it is proposed to raise a sum of money and to place it in the hands of trustees for their benefit.

The method of help to be adopted must depend upon the amount of the fund, but it is felt that the scheme should include provision for the education of the children.

To many of us Driver was a personal friend, and all of us know how unselfishly he spent his time and energy in the service of the Association. Such service is never paid for, and it is hoped that every member and friend of the Architectural Association will send some contribution, however small, to alleviate the hardship of those who were dependent upon him.

Contributions will be received and gratefully acknowledged by the President, Hon. Secretary, Mr. Maule, or myself.

ARTHUR KEEN,
Hon Treasurer.

The Policy of the R.I.B.A.

SIR,—Mr. Bonner makes exception to the use of the term "back door" by me in my previous letter. Surely he is convinced that plausible words are of little avail at the R.I.B.A. If not, he should be. It is time strong words were used, and even stronger action taken. Associates do not wish to form themselves into a distinct class over the matter, and the co-operation of those Fellows who have a firm purpose to rid the R.I.B.A. of all, whether officials or otherwise, who are not conscientiously doing their duty to the profession from standpoints other than art.

The Guild suggested by "Associate R.I.B.A." should, if established, leave no hesitation in the minds of the profession as to the purpose of its existence. Every member should pledge himself to attend any meeting of the R.I.B.A. when asked to do so by the Secretary of the Guild, and also to vote as his Guild wishes on the matter at issue. A strong membership pledged to act as above would cause an uneasiness in the dovecote, and enlighten the R.I.B.A. Council on various matters, including the fact that "even a worm will turn."

No, sir, the time of soft words is over. The Associates have to choose now, and either make themselves heard, and that in no uncertain manner, or retire into even greater oblivion than heretofore. I for one will hear of no half-measures. If there is dirty linen at the R.I.B.A., the sooner it is washed in public the better. ANOTHER ASSOCIATE.

SIR,—In reply to "F.R.I.B.A." in your last issue, I beg to inform him that the "R.I.B.A. Defence League" exists for the very purposes he has in view, and its membership comprises both Fellows and Associates. I shall be most pleased to give him, and others, all particulars as to its work. WILLIAM H. BURT.

Hon. Secretary, R.I.B.A. Defence League.
14, *Southampton-street, Strand.*

The Architect's Clerk.

SIR,—I read with personal interest your article on "The Architect's Clerk" in the current issue of your paper. An architect's clerk myself, I do not remember having ever seen my species in so prominent a place as in the columns of your journal.

I am, as you very rightly hint, a growing necessity, and I thank you for implying that I can be a real treasure when acquired; but there is unfortunately a general tendency with architects to regard a "clerk" more as a mere "establishment charge" than as a necessary economy. They do not realise the value of a competent clerk with a sound general technical knowledge, to relieve them of the office work, other than drawing, and to counteract that ruinous disorder and muddle in dealing with papers and drawings which, in course of several years' experience, I have found to be one of the outstanding characteristics of the architect and his draughtsman.

The architect in his profession is "up against" the same problem that besets the manufacturer, viz., how to produce an article at less cost to the purchaser, without reduction of efficiency, but with a sufficient profit to himself. Many influences make economy imperative to the architect. Among them are the concessions he has to make on the R.I.B.A. schedule of charges and the many cheaper forms of construction, which reduce the amount of his percentage without correspondingly lessening his "expenses of production." How can the architect accomplish that "economy with efficiency" which he desires? Surely best by concentrating his personal attention upon the purely technical work which he has been trained to conduct, leaving the clerical side to his trained and, let us hope, intelligent clerk.

A clerk, as indicated in your article, is infinitely of more value than appears from the description assigned to him. Given a fair education, used to advantage, he may become less of a clerk and more of a general secretary and business manager. He may accompany his chief on surveys, and from notes dictated on the spot may draft the reports, rough out specifications, and prepare

estimates of cost. Because the draughtsman has only been trained to draw, he cannot compose a good business letter, and a creditable report is far beyond him.

The architect's clerk can acquire an intimate knowledge of the cost of works, and can often take builders' accounts almost entirely off his principal's hands; he can effect many savings in time by a businesslike handling of variations on contracts, by the introduction of simple indexing systems for papers, drawings, and catalogues, and by many other means.

But the architect must realise that he has to pay for intelligence and business ability, and I am bound to say that the majority of the profession seem to think that the cheap clerk from the open market or the junior draughtsman is good enough to muddle along with.

X. Y. Z.

Architectural Assistants and the Office of Works.

SIR,—Your correspondent "The Whole Truth," in your last week's issue, brings keenly before your readers the significant omission by this Department, when supplying a List of architects they employ for Mr. Noel Buxton in Parliament on the 15th ult., of an entire class of professional men termed by them "Architectural Assistants," who have been undeniably for a number of years the genuine "workers" in the architectural hive of this Department, and although, like other hives, there are a number of "drones," these cannot be of the unestablished class, because the permanent officials have ever been distinctly jealous of their privileges in this respect.

Now it not infrequently happens that those harassed with genuine grievances when confronted with the forceful inquiry, "What do you want?" are unable (caused, in part, by dwelling too long on their "do not want" aspect) to supply an immediate answer, either concise or intelligent of what they do want. But the "Architectural Assistants" of the Office of Works are not of these. Their reply carries conviction. It is that, having received from their Board a professional qualification, a technical certificate of efficiency (in itself equivalent to a Civil Service Certificate) as far back as 1907, and the majority having a number of years of good service as architects even prior to this period to their credit, have at last the temerity "to hold up their heads and demand fair play" in the shape of (*a*) an established position; (*b*) adequate remuneration; (*c*) regular annual increment; and (*d*) the entire charge, including preparation of all drawings (assisted by "Draughtsmen") of one or more of the contracts, directly under the chief of their Branch. It should here be said this latter demand is nothing but the return to them of what was theirs up to three or four years back, when it was slowly and surreptitiously purloined and given to a number of Juniors, termed "Assistant Architects of the 2nd Class" (*vide* Mr. Dudley Ward's before-mentioned incomplete list of the "classes"); and here we might usefully take a leaf from other boards' books, even railway boards, by abolishing second class altogether, for this they have found needful for efficient working, retaining only 1st Class and "Parliamentary."

This surreptitious and almost imperceptible lowering of status, meted out to those who, by their efforts and abilities, gain the execution of superior work, to be followed by their subsequent demand for its recognition and fair wage for it, is quite "the mode" in the Department. Instead of its being met with a straightforward refusal and the denial of the superior services, thus giving opportunity for resisting injustice, the method is to deny nothing, but to prevent you from again asking for adequate return by taking the superior work quietly away, even withholding the payment for such time as you were engaged upon the superior work!

But, as stated by your correspondent "Labour Member," in 22nd ult.'s issue, Sir Schomberg McDonnell would be well advised to immediately put the Architectural Section of "his house in order" upon the lines here indicated before the more strenuous methods of the forthcoming Civil Service Commission, after taking the evidence which will be placed through the Labour Members before them, be brought into action.

LABOUR MEMBER No. 2.

The Traffic at Aldwych.

SIR,—The accompanying plan illustrates a proposed method of directing traffic round Aldwych and along the Strand, between St. Clement Danes Church and Wellington-street.

The recent addition of a fifth road at the junction near Wellington-street has enormously increased the work of regulating traffic, and the delays consequent upon the frequent stoppages which have to be made under the present system of regulation.

For instance, traffic has to be periodically stopped as under:

(*a*) At the west end of Aldwych west-bound traffic has to be stopped in Aldwych to allow east-bound traffic in the Strand to pass, and *vice versâ*.

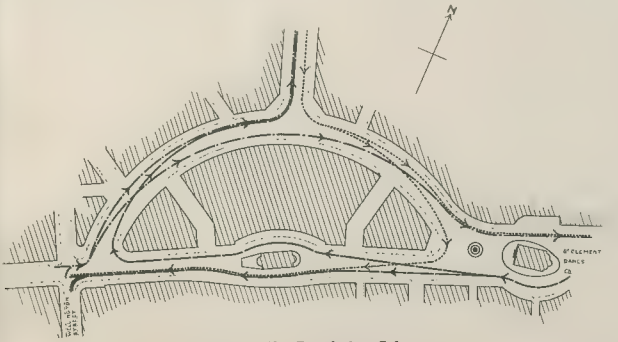
(*b*) At the east end of Aldwych traffic going from the City to Aldwych crosses the traffic from the Strand to the City. Although the volume of this traffic is not large at present, yet it is certain that with the development of Aldwych and Kingsway it will increase so much as to necessitate special supervision and frequent stoppages if the present system be adhered to.

(*c*) At the junction of Kingsway and Aldwych, west-bound traffic from Kingsway crosses traffic from the City to Kingsway. Special regulation of this will also become necessary.

In all the above cases where lines of traffic cross vehicles are moving in opposite directions, hence the necessity for stoppages and regulation.

On inspection of the above-mentioned plan it will be seen that by its adoption:—

(1) These meetings of cross traffic would be entirely avoided.



(2) The traffic arrangements would be greatly simplified, and there would be less danger of collisions.

(3) No police regulation would be necessary except that which was in existence before the construction of Aldwych and Kingsway.

(4) The traffic would be more evenly distributed between Aldwych and the Strand, both of which streets would carry a greater volume and at an increased speed.

(5) There would be no necessity to continue the widening of the Strand on the south side, east of Wellington-street, and thus there would be a great saving to the ratepayers in capital expenditure.

HAROLD SOUTHON.

Aldwych Traffic Regulation Scheme.

Statue of Achilles.

SIR,—The interesting letter in your last number on the Hyde Park statue of Achilles encourages me to hope that you will publish a suggestion of mine, which, with your permission, I now make, to erect in London a duplicate of Foley's statue in Chowringlue, Calcutta, to Outram. I am aware that there is already in London a statue to Outram, but that in Calcutta is a far more striking one, and it would give real pleasure to art lovers in London were a copy of it placed permanently on view in this city.

I understand that Alfred Steven's original model for his Wellington statue will happily remain in the Tate Gallery, and no one will be found to quarrel with this decision. The principle, however, is thus admitted of accepting for Millbank a model only as a permanent exhibit. My suggestion is that Foley's Outram should also be erected in the centre of one of the rooms at the Tate Gallery. This could be easily done, as the Crystal Palace collection already possesses a full-size model of the same artistic creation, and it is quite possible the present controllers of that collection might be willing, if approached, to present it to the Tate Gallery, thus affording many an opportunity of seeing it under far more inspiring conditions than those offered by its now incongruous surroundings.

The statue is an equestrian one; it occupies a commanding position on the maidan in Calcutta, and is one of the features of the city of palaces. Before going out to India, some time in the mid-sixties, it stood for months in Pall Mall, so far as I can gather, on or near the site upon which it is intended to place the Florence Nightingale statue when ready. I have read that the London of those days was very anxious to retain it here perpetually, and that efforts were made to induce the Calcutta subscribers to surrender their rights in it, but without avail.

Where in the world could so fine a work by a British artist be more appropriately placed than in the Tate Gallery? The statues of Calcutta are almost all remarkable for strength and beauty. That to Helen in St. Paul's Cathedral, Calcutta, has its duplicate in St. Paul's Cathedral, London. The same statue to Lord Napier of Magdala stands at Prince's Ghât, Calcutta, and in Waterloo-place, near the York Column, London, while the same statue to Clive will shortly adorn both Calcutta and London. Why should not Outram be similarly duplicated in both cities?

The Future of St. Thomas's Hospital.

THE fixing of the site for the new hospital is a highly important matter which we trust will be well considered, if it be not already too late for further consideration. Hospitals, in the midst of so vast a concourse of people as that in London, may be regarded as highly requisite; but there are also great evils arising from their position in the midst of such a population. The very object of such hospitals—the speedy cure of patients—is to a great extent frustrated by their mere locality; and if it were possible to remove the main hospital to some convenient and healthy suburban district—such as Blackheath, for example—while one or more minor establishments for the reception and the temporary disposal of patients were maintained in town, the expense and time requisite for recovery would, we do believe, be greatly lessened. In reference to St. Thomas's, now is a fitting time for well considering this subject, and we earnestly trust it is not too late to do so.

EDITORIAL SUMMARY.

Our leading article, entitled "The Policy of the R.I.B.A.," is suggested by the correspondence in our columns on questions of importance to Associate members of the Institute.

Our second article, "Painter and Decorator," deals with the work of Mr. Edwin A. Abbey, which is now in the Winter Exhibition at Burlington House (p. 3).

In "Notes" columns (p. 3) are comments on: "Sir Joshua Reynolds' Window in New College, Oxford"; "The Late Mr. D. G. Driver"; "Aspirations for 1912"; "The Tower Bridge"; "The Environment of Southwark Cathedral."

A notice of the Sketch Society Exhibition at the Royal Institute Galleries will be found on p. 4.

An illustrated article on "The Altare della Patria of the Victor Emmanuel Monument at Rome: the Reliefs by Signor Angiolo Zanelli," appears on p. 4.

In Correspondence columns (p. 8) are communications on: "The Traffic at Aldwych"; "Statue of Achilles"; "Policy of the R.I.B.A."; "Architectural Assistants and the Office of Works"; "The Architect's Clerk"; "The Late Mr. D. G. Driver."

Our Monthly Illustrated Civic Review (p. 11) contains: "Imperial London"; "Town Planning"; and Notes.

In the Building Trade Section (p. 16) will be found: "Failure of Buildings Caused by Drought"; "Legal Points about Tenders"; "Land Taxes and the Building Trade."

The Autumn Examination results of the R.I.B.A. are given on p. 19.

Another article on "London Architect's Procedure" appears on p. 20.

In Legal Column (p. 21) some observations will be found on: "Workmen's Compensation Cases"; "Rating 'Gathering Grounds' for Water."

MEETINGS.

SATURDAY, JANUARY 6.

Architectural Association.—First Spring Visit, to St. Paul's Girls' School, Brook Green, Hammersmith, Mr. Gerald C. Horsley, F.R.I.B.A... 2.30 p.m.

MONDAY, JANUARY 8.

Royal Institute of British Architects. — Business meeting. 8 p.m.

University of London (Victoria and Albert Museum).—Mr. Banister Fletcher on "Renaissance Architecture in Germany." 5 p.m.

Surveyors' Institution.—Mr. Frank W. Hunt on "The Tendency of Recent Modifications of the Lands Clauses Act." 8 p.m.

Liverpool Architectural Society.—Mr. E. T. Hall on "Museums and Art Galleries." Illustrated by lantern slides. 6 p.m.

Incorporated Clerks of Works' Association (Carpenters' Hall, London-wall).—Monthly meeting. 7 p.m.

TUESDAY, JANUARY 9.

University of London (King's College).—Mr. Banister Fletcher on "Etruscan and Roman Architecture, and Greek and Roman Architecture Compared." Lantern illustrations. 4.30 p.m.

The Institution of Civil Engineers.—Papers: "Reinforced-Concrete Wharves and Warehouses at Lower Pootung, Shanghai," by Somers Howe Ellis, M.Inst.C.E.; "The Direct Experimental Determination of the Stresses in the Steel and in the Concrete of Reinforced-Concrete Columns," by William Charles Popplewell, M.Sc., Assoc.M.Inst.C.E.; "Composite Columns of Concrete and Steel," by William Hubert Burr, M.Inst.C.E. 8 p.m.

WEDNESDAY, JANUARY 10.

Manchester Society of Architects.—Members' meeting. 6.30 p.m.

Northern Architectural Association.—Paper by Mr. T. M. Claque. 7.30 p.m.

THURSDAY, JANUARY 11.

Society of Architects.—Paper by Mr. John Darch on "Illumination as a Study for Architects." 8 p.m.

The Concrete Institute.—Discussion of the report of the Reinforced Concrete Practice Standing Committee of the Concrete Institute, embodying suggestions on "The Standardisation of Drawings for Reinforced Concrete Work." 8 p.m.

Sheffield Society of Architects and Surveyors.—Mr. C. F. Innocent on "The Old Slavonic Dwelling."

Institution of Electrical Engineers.—Mr. C. A. Ablett on "Some General Principles Involved in the Electric Driving of Rolling Mills." 8 p.m.

ILLUSTRATIONS.

Entrance to St. Mark's Hospital, Venice.

THE building formally called Scuola di S. Marco was built from the designs of Pietro Lombardo in the XVth century, and has been used as a hospital since 1815.

The architectural treatment combines effectively classical details with early Renaissance and Byzantine forms.

W. WALCOT.

The Lady Chapel, St. Jacques, Dieppe.

THE Church of St. Jacques is one of those picturesque buildings in which each style of architecture from the XIIth to the XVIIth century is represented. The piers of the nave and crossing are good work of the XIIIth century, and the transepts both internally and externally are fine examples of this period. The west front and tower, rising over early work, are profusely carved in the lacelike Flamboyant architecture of the XVth century, and here and there are Renaissance additions making a picturesque mass of stone, toned into one key by the hand of time and all crumbling in a beautiful state of decay.

The lady chapel at the east end is one of the most picturesque features. It is late Gothic in style. The cornice-like termination of the walls is evidently a latter patching up, but now in its weather-worn condition it harmonises with the rest. The chapel abuts on the apse, and is surrounded by the other apsidal chapels with their Gothic pinnacles and Renaissance turrets. Internally the surrounding chapels are divided from the rest of the building by very delicate and richly carved stone screens of late Gothic and early Renaissance designs, and the interior throughout is a fair example of Northern French art.

Few people only who cross by Dieppe to the continent bent on archæological study or architectural interest ever stay at this town. Yet a day or two can well be spent, for the views of St. Jacques rising over the old red-tiled houses surrounding the quays are most picturesque, and the Church of St. Remy, the castle, and the surrounding scenery well repay a visit.

HENRY C. BREWER.

Raising the Crucifix on the Summit of a Mexican Temple.

THIS drawing was suggested by reading Prescott's "Conquest of Mexico," and illustrates the event of the erection of the Crucifix and performance of Mass, by Father Olmedo, on the summit of one of the principal teocalli, or temples, as a thanksgiving for the first decisive victory over the Aztecs.

The doubtless horrible images of the native divinities—Quetzalcoatl, Tezcatlipoca, and others—had been previously thrown down and broken or burnt.

M. Viollet-le-duc, in his interesting work, "Cités et Ruines Américaines" (Paris, 1863), very convincingly argues that the ancient inhabitants of Mexico were of European and Asiatic descent; the peoples of these continents having, at some remote period, entered North America at the points where this continent almost touches the two others, namely, Greenland and Behring Straits. The immigrants from the opposite continents made their way slowly down the Atlantic and Pacific coasts, leaving very distinct traces of their progress visible to this day.

The period of their wanderings probably extended over some centuries. Arrived at Mexico, the southern point of the great triangle of North America, the opposing forces of immigrants necessarily met. Then ensued terrific combats as to which should be master of the soil.

This decided, the victors combined with the vanquished, producing in time the race and civilisation destroyed by Cortes.

M. Viollet-le-duc traces, in the remarkable architecture left by the vanished Mexicans, characteristics belonging in due proportions to the various nationalities of which the entire community was made up, as Finnish, Scandinavian, Malay, Chinese, etc.

To my eye, the Japanese element is distinct in many of the forms.

The most important of the ruins are those of Mitla, Palenqué, Izamal, Chichen-Itza, and Uxmal. They are, however, scattered plenteously about the Peninsula of Yucatan, one being on the edge of the cliffs and visible at sea.

F. Catherwood visited and drew the ruins in the years 1839-42.

Alexander von Humboldt has left an interesting work, "Researches Concerning the Institution and Monuments of the Ancient Inhabitants of America" (1814). In this he explains the hieroglyphic or picture-writing of the Aztecs, together with their calendar, etc.

There is a remarkable article, "The Ruined Cities of Central America" in "Chambers's Papers for the People" (1850).

A. C. CONRADE.

Manchester Library and Art Gallery.

WE referred at length in our issue of December 15 to the ten sets of designs submitted in the final competition for this building, still, unfortunately, only "proposed." This week we supplement our first illustrations of the conception of Messrs. Worthington & Son with a reproduction of Mr. Walcot's perspective drawing which accompanied the design.

We cannot do better than quote from the *Manchester Guardian* Professor Reilly's opinion on the design:—

"There is no doubt that the most scholarly set of drawings is that by Mr. Percy Worthington, with draughtsmanship as delicate and refined as the architecture. Unlike the winners, but like most of the other competitors, Mr. Worthington has divided his building horizontally into departments. He has a floor for his libraries, a floor for his museum, and a floor or floors for his picture galleries. Circulation is, therefore, easier throughout, and he can give a central yet retired position to his main library. This latter is a fine apartment, as, indeed, are all Mr. Worthington's rooms. His building, too, except perhaps for a very projecting entrance block, is finely shaped, and the curved back helps to soften the adjustment to a very angular and difficult site. The chief distinction, however, of Mr. Worthington's work is his architectural detail, as shown on his façades, which reaches a standard of refinement untouched by the other competitors. It is fitting that the one Manchester architect who has achieved the honour of getting into the final competition should be the one whose work best stands the test of Manchester's own buildings. Apart from the detail, however, there is a fine scale about Mr. Worthington's building. His, too, is the only building which on its face carries a plain indication that it is erected for artistic uses. Most of the other designs might be great banks, law courts, municipal offices, and one or two even hotels; but Mr. Worthington's, with its faint echo of the present reference library, could be nothing but a gallery, museum, or building for similar purposes. The plans are practical, while always remaining architectural, and if the additional drawings in the report are studied it will be seen that, in spite of its apparent lack of windows, all the rooms are well lit."

Mr. Percy Scott Worthington writes as follows:—

"I particularly tried in the external character to express the use of the building, and the niches in the upper part of the front mark the sculpture galleries inside. The lighting of these side-lighted sculpture-rooms was very particularly studied. It is all done from the other side, and was based on the experiments and report of the Boston Committee, with large allowance for difference in climate. A whole series of top-lighted sculpture recesses run along one side, so that not only was the gallery well lighted from the proper height and with a glass area of one-fifth of the floor, but the disadvantage of side lights, by which you often get a very dark space under the lights, was avoided, and the recesses themselves form a long series of spaces for such things as altars, fireplaces, etc., and were, I think, quite architectural and practical on plan. The central part behind the front projection was, of course, all top-lighted, and contained the sculpture hall."

It may be mentioned that Messrs. Worthington's scheme included the removal of the statue of Queen Victoria from its present incongruous position. It would have been placed against the building on one side of the main entrance, and balanced with a seated statue of King Edward on the other side.

Imperial London.

TWO OF our plates this week appear in connexion with an article on "Imperial London" (p. 11), which supplements the one published in our New Year's number last year. In presenting these suggestions we are indebted, as before, to the fine draughtsmanship of Mr. Adrian Berrington, who has interpreted our ideas not only with pictorial inventiveness but with considerable resource in the details of the schemes. The bird's-eye view is novel in conception, and illustrates effectively the broad basis of the design. We hope that the drawings will be studied in conjunction with the article by those who are professionally interested in the development of London, and if public interest can be aroused in the matter the possibilities of such a work being carried out are by no means remote.

The "Altare Della Patria."

SIGNOR ZANELLI'S sculpture on the Victor Emmanuel Monument, Rome, has appealed strongly to residents and visitors alike. Our illustrations show some of the chief groups, and an article on the subject appears on p. 4.

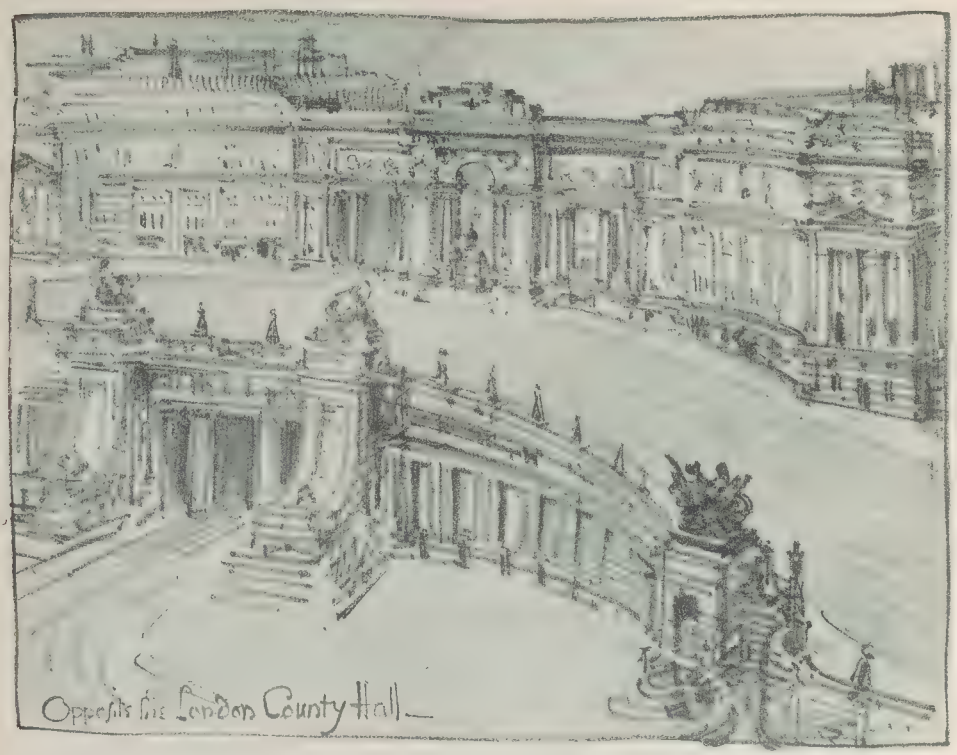
IMPERIAL LONDON.

HE recent celebration of the Corona tion of King George V. brings to mind once more the idea of Imperial ration towards which all the States acknowledge his sovereignty appear slowly but inevitably tending. That yesterday was but the dream of enthu- to-day is the subject of discussion ractical statesmen; to-morrow it may ealised. When that day arrives it d find London prepared to justify tural position as the seat of a Federated rial Government.

would, of course, be possible, and some t think it more reasonable and more cordance with the fitness of things, to the example of America and of the ated States of Australia, and to found capital city, placing the seat of Empire me central position chosen by reason general convenience for the Empire whole. But it is probable that, whatever listant future may have in store, to over point the centre of gravity of our cal power may ultimately shift, a certain nentality and that sense of historic nuity which are such strongly-marked res of our racial character will preserve re-eminence for London, provided it is ble to remodel it on Imperial lines.

our overgrown village is to be trans- ed into a capital city of sufficient leur to satisfy the ideas of those of race who, free from the cramping influence of a narrow insularity, have developed, under the influence of a more spacious environment, a wider and more international outlook, nothing less than a complete reversal of our present mental attitude towards architecture and of our conception of London will be required to enable us to see this subject in the right light and to handle it in any adequate manner.



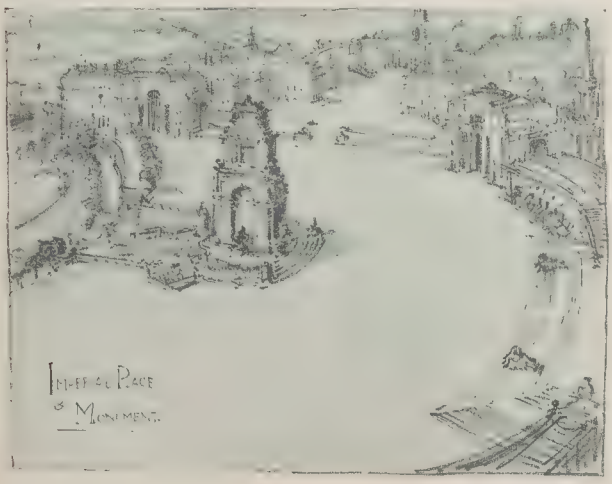
The problem to be solved in creating the capital city of our Empire under the conditions of modern civilisation differs in one essential point from that which faced the builders of the capital cities of the ancient Empires. A modern Empire is the voluntary association of equal and independent States; an ancient Empire was the involuntary association of subjugated States. This affects the question of finance. Ancient Rome was the centre into which the wealth of the conquered provinces was poured, so providing funds for palaces, temples, and fora. The city was built and rebuilt by the forced contributions of the whole Empire. London will have to be remodelled at the expense of her citizens or by the voluntary contributions of the different States.

Rome was built to please the taste of the central authority—Emperor or Senate—the tribute wrung from unwilling provinces was spent without consulting them and without in any way expressing their ideas; but in modern times he who pays the piper has the right to call the tune. London will have to express not only our own ideas, but those of the inhabitants of every quarter of the globe. This will be all to the good, for, though we may at one time have prided ourselves in conducting the affairs of the greatest Empire on earth within the four walls of a dingy little committee-room at Westminster, this curious idiosyncrasy will hardly appeal to anyone outside these islands.

A Federated Empire in these democratic days presupposes an Imperial Parliament dealing exclusively with Imperial affairs, and this appears to entail the necessity for an Imperial Parliament House. For this purpose the present Houses of Parliament would be quite inadequate, even if they would not be required for purely English affairs.

Although it were determined to locate the new Parliament House in London, yet again it might be thought more reasonable to select some open spot on the surrounding heights as an Imperial quarter. No doubt this would give a finer opportunity for architectural display, but here again practical convenience and our sense of historic continuity may possibly lead us to endeavour to preserve the great traditions inseparably connected with the name of Westminster.

The difficulty of creating an Imperial quarter with a central and commanding site for our Imperial Parliament House in the



centre of London and within touch of Westminster might have been insuperable were it not for the fact that the geographical centre of London is a district that has always been overlooked and is now crying aloud for development. The whole of the district south of the river from Westminster Bridge to Blackfriars or London Bridges could be acquired and developed for this purpose at a most reasonable cost and without disturbing any buildings of artistic or historic value, and without interfering, to any appreciable extent, with the general life of the community.

In our issue of January 6, 1911, we published a suggestion for the removal of Charing Cross and the other railway stations to the south side of the river and the substitution of two union stations in connexion with the bridges and with a main traffic route from Westminster to London Bridge.

We now publish sketches showing how the space between this railway and the river can be utilised as a site for an Imperial Parliament House in connexion with a general scheme suggested by the necessities of an Imperial city.

Buckingham Palace is shown rebuilt as an Imperial Palace—as distinct from St. James's Palace, more intimately and historically associated with the Court of the United Kingdom. It is placed somewhat to the west of its present site, with a tower centring on the junction of the axial lines of the Mall and of Eaton-square. The present position of the Victoria Memorial is retained as the centre of a rond-point from which avenues radiate, the Mall forming the principal approach to the Palace. A diagonal avenue is formed by opening up the end of Pall Mall and St. James's Palace, and is continued through to Buckingham Palace-road, while Constitution-hill is slightly altered in direction to strike the centre of the rond-point and is then continued straight through St. James's Park as a grand processional way from the Palace to Westminster.

In order to form a more dignified environment and approach to both the present Houses of Parliament and to Westminster Abbey, Paliament-square is considerably enlarged. This would provide for a more dignified processional approach to these buildings on such occasions as a coronation or the opening of Parliament, and would make it possible to arrange seating accommodation for the public in some architectural form and avoid the disfigurement of, and danger to, the Abbey which is now entailed by the erection of stands in the present confined area.

From Westminster an Imperial processional way is continued over the bridge, passing the London County Council Hall—where an open place is provided for the ceremonies connected with the presentation of addresses to the Sovereign—to the Imperial Parliament House.

This is placed in a spacious square facing the river. In the centre of this square is an Imperial monument axial with Cleopatra's Needle, and with an improved Adelphi-terrace having an orchestral area in the centre and a narrowing avenue leading to a National Theatre on the site of the present Adelphi Theatre, the "Home of British Drama." The Parliament House would be

approached by steps and by inclined ways for carriages, and would extend back between Waterloo Bridge-road and the new Hungerford Bridge (over York-road), and connect with the railways.

The whole of this district, being at a lower level than the opposite bank of the river, could be treated as a double-decked city with the Imperial way and Parliament House on the higher level. Between these and the river would be an Imperial quarter in which could be situated the embassies of foreign Powers and the headquarters of the various States composing the Empire and of the different dependencies or Crown Colonies, the whole forming a magnificent river front to the south side of the Thames. Under these buildings would be waterways for barges, and the present lower level would be available for commerce and for heavy through traffic. The district south of the Imperial quarter would be left for the development which would naturally follow.

The Imperial way would continue with a monumental Place at the end of Blackfriars Bridge and connect with St. Paul's Bridge, over which it would form a processional approach to St. Paul's Cathedral, and on to the Guildhall or Mansion House. The proposal to rebuild the Mansion House suggests that it might be grouped with the Guildhall and approached by a broader avenue from Southwark Bridge.

Considerable attention has lately been given to the necessity for a general scheme for London. It is possible that the ruling idea of such a scheme may be found in the consideration of its needs as the future capital of a Federated Empire, which aspect would transcend all purely local considerations of convenience or profit. The primary requirements of such a city appear to consist of a Palace of State for the Emperor, an Imperial Parliament House for the deliberations of the Council of the Empire, and a processional way connecting them which would afford facilities for the numerous outdoor State functions which might reasonably be expected to occur more frequently than in the past. Considering the inadequacy of our streets for this purpose and the fact that all State processions nearly always follow the same route, it might be possible to get an idea from the columnal streets of the ancient Roman towns and gradually evolve an architectural processional way circling through the whole of London and touching the various places of historic or national interest.

TOWN PLANNING.*

TOWN planning has lately come into prominence in this country owing to the passing of the Town Planning Act, but it must not be assumed from this that the subject is a new one.

The Act has simply given local authorities power to carry into effect certain improvements which for years had been the dreams of the more advanced of our social reformers, and has brought the subject down from the region of the speculative to that of practical fact.

But although this Act enables us to remedy some of the worst evils in the development of the outskirts of our towns—providing, as it does the means for dealing with these districts as a whole—it hardly seems to touch the main problem, for it does not seem to be its deliberate intention to give powers to deal with the improvement of the central area of a town, to readjust it to meet the requirements of the more congested population and traffic incidental to, or caused by, the growth of the suburban areas.

In this sense the scope of the Act may be considered disappointing, and its title misleading.

The chief value of the Act, from the wider point of view, is that it has drawn public attention to the whole subject. It is hardly possible to conceive that when once the outskirts of a town are all laid out on comprehensive lines, the central area will be allowed to remain in a state of chaos.

Apart from these considerations this Act has, I believe, the distinction of being the first Act of Parliament to take official cognisance of the amenities of life—to recognise and to insist on the practical value of beauty. This alone is a proud achievement.

It should not be necessary here to insist on the value of the amenities of life, or to point out the effect on human health and happiness of gracious and pleasant surroundings; but, all the same, I would ask you to bear this in mind, as it is, I think, the paramount consideration, and the ultimate end to which all our endeavours are directed.

But, although we may take this for granted, it is to be feared that the public does not, and if in this respect the Town Planning Act may be said to be in advance of public opinion we should be all the more grateful for it on that account.

That the amenities of life have been neglected, since the rise of our modern industrialism, is most evident in the aspect of many of our manufacturing towns, where we generally find a development dictated solely by the financial interests of a comparatively small number of capitalists who are not obliged to live in the towns, without due consideration being given to the interests of those who are.

Now we, as town planners, have to consider the needs of every class of the community; we have an equal interest in all alike. From our point of view such a town is a failure, however well it may serve its purpose of cheap production—to the profit of the manufacturer and the advantage of the general consumer—if it does so at the expense of the health and happiness of its inhabitants. Indeed, I do not think we should be far from the truth if we asserted that a town is a success which first of all provides a healthy life for its inhabitants, even though it thereby increases the cost of production, and so handicaps itself in the race for commercial success.

We must not, however, misunderstand this point, as it is particularly important. It is not suggested that every town should be laid out simply as an agreeable place of residence without any regard for the necessities of its trade, or that, if divided up into factory and residential quarters, the factory quarter should be made so agreeable to the workers while at work that it is no use as a factory, or spread out so spaciously and adorned so lavishly as to render it an economic impossibility. This, obviously enough, would be absurd, for a town has to pay its way, otherwise it could not exist; but all the same it must be done in such a way that its inhabitants have at least a healthy place in which to work, and a pleasant place in which to play.

If it be contended that a town in the Potteries, for instance, cannot, in the nature of things, by reason of the character of its work, fulfil these requirements, our answer as town planners must be that it must either reorganise its methods of manufacture or cease to exist. If we are told that neither alternative is possible, we might suggest that it is only a question of time, and, possibly, of money. How long will the inhabitants of such a town submit to their present degrading environment, or, if the cost of improving this environment will lessen the profits of the trade of the town, what percentage of that profit can be devoted to this purpose without ruining the trade?

When we consider our present advanced state of civilisation, and our general high standard of decency, cleanliness, and comfort, and then think of the volume of trade and the immense profits made by our thriving manufacturing centres, we can only express our astonishment at their present condition, and their complete lack of the first necessities of civilised life, and ask ourselves why it is so.

Now, if we look at this question from the point of view of the town as a complete unit,

* Extracted from an introductory lecture at the Westminster Technical Institute by Mr. A. R. Jemmett, F.R.I.B.A.

consider the inhabitants of a town as a body of men carrying on an industry owned by themselves, it would seem that the problem would work itself out in a natural way.

The whole object of money, the fruit of industry, being to provide ourselves with the comforts, conveniences, and pleasures of life, it is to be supposed the people of such a town would naturally spend a percentage of the profits of the town on their own comfort and pleasure. A certain amount might be put by and invested, or spent in travel and amusement elsewhere, but considering the Englishman's love of his home and garden we might expect a considerable amount to be spent on securing home comforts amid pleasant surroundings, pure air, clean streets, foliage, and running water. Where a town is doing a thriving trade, such amount should be sufficient to procure the most beautiful surroundings—for the town could afford it.

Why is it not so? There are no doubt many causes which all combine to create the results we deplore, but the one to which I would draw your attention now is this. As a matter of fact the inhabitants of a town do not usually own the industries of the town, do not receive the bulk of the profits from these industries, so these profits are therefore not spent on the town.

The majority of the inhabitants consists of the workers in the industries with the retail traders and professional men, who feed and clothe them, and minister to their needs. The industries themselves are, as often as not, owned by absentee capitalists or shareholders in companies, who live anywhere but in the town.

Shareholders being but human, their chief interest is in their dividends—as long as these are paid they are apt to be satisfied—they know little of, and care less for, the town that created their dividends.

We thus get this position, that the wealth created by the town is not spent on the town and is not available for its improvement without the consent of those who take no interest in its amenities because they do not live there, while the actual inhabitants of the town, receiving only the workers' wage or the retail traders' comparatively small profit—which comes out of the workers' wage—are not in a position to improve the town at their own expense.

It is quite possible that the conditions here described are not exactly applicable to any one individual town. I am not suggesting that they are, I am only drawing your attention to one aspect of our social and economic organisation, which seems to me to exercise a bad influence on the amenities of our towns. But whatever the cause may be, the broad fact remains that thriving manufacturing towns are precisely those which should be able to afford the amenities of life, while it is notorious that they are just the ones that most lack them.

We must not, however, lose sight of a fact that has some influence on this question. When men are hard at work, their minds absorbed in their business, they are comparatively indifferent to their surroundings. The more occupied the brain, the more concentrated the mind, the less it is open to outside influences; therefore it may be argued that in a factory town, where everyone is busy, gracious surroundings would be thrown away on them.

This fact has an undoubted influence, but it is really a question of degree; it does not give sufficient reason for leaving out the amenities; it only helps us to determine their amount and special character. It helps us, for instance, in determining the different treatment to be adopted in the factory quarter as distinct from the residential quarter, or in a factory town as distinct from an agricultural or a residential town. But there is no proof that beautiful surroundings may be entirely neglected where people are sufficiently preoccupied, if only for the further fact that the influence of environment is partly subconscious, and has a certain influence, even though the mind does not consciously appreciate it.

We shall find that this point has a bearing on many aspects of our subject, and that, if we apply it for a moment to this question of the factory town, we arrive at rather curious results.

As you are all aware, the tendency of modern commercial organisation, especially in a factory where machinery is used, is to put one man in authority to administer the business and do the thinking for the rest. The more perfect the machinery used the less thought is required from the men who use it. The few managers then have their minds fully occupied, while the many workers have an occupation which allows them to think of other things.

We can understand, then, that the manager, coming in from his pleasant country residence, with his mind entirely preoccupied with the many pressing problems of his business, might be quite unconscious of the appearance of the streets through which he passes, while the factory hand, with mind less preoccupied, would be more likely to notice and be affected by their depressing influence.

So we find this—not only are the greater number of the owners of the profits absentees, and therefore indifferent, or even hostile, to the amenities of the town, but the few who come there every day as managers or the highly paid officials who represent them, who could, by their influential positions, do much for the cause, are just the very people who do not feel the need, the town being to them simply a place of business; while, on the other hand, the worker has no influential position, and can do nothing, although the town is to him a home.

All this seems to lead to the conclusion that those who have interesting and absorbing work do not need such pleasant environment as those engaged in unthinking, mechanical labour. So, from this point of view, the managing staff might live in the squalid neighbourhood of the factories, while the factory hands came in from the more pleasant atmosphere of the country. For where mechanical occupations tend, by their monotony, to deaden the mental and emotional faculties, pleasant surroundings are all the more necessary to counteract their effect. The more deadening and degrading the work, the more beautiful should be the environment. On this principle, factory towns should be the most pleasantly situated and most cheerfully disposed of all.

I have dwelt at some length upon this particular aspect of the subject, as it shows us that we cannot begin to discuss the amenities of a town—apart from mere practical necessity or convenience—without at once coming into contact with social, economic, and political questions, with physiological, psychological, and even ethical considerations, with which we may be told we have no direct concern.

Now, if we adopt the point of view that we are not concerned with ethics or political economy, we can take our present social conditions—the life of the city as we find it—acknowledge that it is no concern of ours whether it is good or bad, but that our business is simply to express it as we find it by arranging the town to suit it. We can apply the theory that our business is to provide each member of the community with an environment suitable to the work he happens to be performing.

But if we accept life as we find it, we must accept the bad—or the indifferent—with the good. If we provide such an environment as will facilitate the work of the bricklayer and be in proportion to his value to the community, then when we come to deal with a class of degenerate derelicts of no economic value to the state, we must provide them also with no more than the miserable sort of accommodation that is in keeping with their economic worthlessness. But if we facilitate the work of the bricklayer, we seem bound to facilitate that of the burglar also, for he also, on this assumption, is part of life as we find it. It is not for us on this theory to dabble in morality, to approve or to disapprove, but to confine ourselves to our proper business of arranging the town to suit the needs of every class of its inhabitants.

But if we facilitate the work of the burglar we are bound also to facilitate that of the police; and we reduce the whole argument to absurdity if we contemplate the town planner contriving a system of crooked alleys and slipways exactly adjusted to give the burglar a sporting chance of escape, or laying out a superior residential district with a nice appreciation of the conflicting interests of burglar and policeman.

We started out with the assumption that it was our duty to consider the needs of every class of the community, and to take an equal interest in all. It is evident that we must qualify that assumption to some extent. If we look upon the life of the town as an organic whole, it seems necessary to encourage the elements which tend to strengthen and solidify that life; not to disintegrate it.

I think, then, we may safely start the consideration of our subject on the assumption that there are defects in our social system which every right-minded man would wish to see removed, and that it is our business to help, and that social and ethical questions are our concern in so far as they affect our subject.

Now our subject, unfortunately, touches upon, and is intimately related to, certain questions, such as land tenure, which are sometimes the subject of acute and bitter controversy. It is therefore very necessary for us, in order to avoid prejudice, to approach them in a detached and impersonal way, to realise that we are not interested in them for their own sake, but only as they affect town planning. That we are town planners, not politicians or social reformers, and that we discuss the proposals of either simply from this point of view. If, on the one hand, the Radicals propose a radical or even a revolutionary change in the condition of our slum areas, we are Radicals with them—to that extent. If, on the other hand, the Conservatives wish to conserve our open spaces, or the beauty of our river banks, we are Conservatives with them—to that extent.

The more we study this subject, the more we see that the town is the result, and the expression in bricks and stones of the human life within it; that if you want a well-arranged town, you must first of all have a well-arranged social life.

No one can admit the perfection of the present basis of our civic life, with its enormous wealth, its appalling poverty, its misery, its vice, its disease, and crime, or maintain that our business is simply to arrange the town to suit these conditions, so that each man can find a suitable environment in which to be either rich or poor, healthy or diseased, criminal or law-abiding, with the greatest satisfaction to himself and all concerned.

As we have said, it is not our business to reform society; our object is to produce the perfect town, but, as we cannot have one without the other, it seems to be our duty to call attention to any social or economic custom which seems to be inconsistent with our purpose. Should we find any such custom so completely opposed to our ideals as to make a perfect town impossible, it is for us to point out the fact, and for the public to decide whether they prefer the custom to the town.

Let us take, as an instance, a point we have already touched on, the system whereby town factories or other town properties, such as slum areas, may be owned by absentees. Here we seem to come up against our whole industrial and economic organisation—the system of putting money out to interest, of joint stock, trading, and limited liability companies.

It is possible that this method of trading, whereby a man need not even always know how or where his money is being used—a system which has increased and reached a high state of development in modern times—will be found on inquiry to be largely responsible for the absence of the amenities in our modern towns.

It appears to separate capital from all personal, human feeling, and from all sense of personal responsibility, and it is just this personal feeling that seems so necessary when the question of beauty arises, particularly the personal interest and enthusisam of those who have the controlling financial interest.

As a matter of fact, I should doubt if it was possible in these days to carry out any improvement—even utilitarian—without coming into contact with the interests of absentee owners, who know nothing about it and care less—so long as they are looked after.

Now it is not for us to say whether this system is necessary to the social community or not—we are no judges of this—but I think it is for us just to point out that if every factory owner lived next door to his factory, and every slum owner lived in his own slum,

should probably see an improvement in h. But, as the owner of shares in a dozen ferent industries, situated in a dozen differ- towns could not possibly live in all of m at the same time, we might again point that if a percentage of the profits of any lustry or slum area, sufficient to provide amenities of life for the workers in that tory or the dwellers in that slum, were ducted before the profits were paid away outsiders—possibly even foreigners—the ne improvement might result.

I would ask you then to consider the town the outcome, the result, the expression material form of the physical, mental, and iritual needs of its inhabitants. To re- mber that these inhabitants are not in- pendent units who live independent lives, t that they are mutually dependent one on e other, and are being gradually welded gether by a process of evolution into a cial or civic organism, a coherent and ing entity, the collective or corporate life the city.

Now, as we have seen, this corporate life far from perfect yet. The elements of nich it is composed are not completely fused. nch conflicting interests as rich and poor, pital and labour, landlord and tenant, are ntinually acting and reacting one upon the her. There is a residue of degeneracy, of sease, and crime. There is nothing final our present social state. It is simply a assing phase in the general progress of manity towards the ideal of the perfect vic life. When that ideal arrives, it will e the town planner's duty and pleasure to ndeavour to express it in a perfect city.

We shall find that this subject of town lanning is not only important, but intensely nteresting also. It deals with human life n all its manifestations. It should appeal o all tastes, and to all types of mind, for o vast is the subject, so varied its details, hat everyone should find something to nterest him. Complicated it may be, but it s not commonplace; difficult, perhaps, but ot dull. However scientific or abstract some f its aspects may appear, underlying them ll is the human interest which never fails us.

CIVIC DESIGN NOTES.

New Houses and Streets in the Metropolis.

It is stated in the official report of the Commissioner of Police of the Metropolis that in the year 1910, in the Metropolitan Police District, 11,757 new houses were built, and that 172 new streets and two new squares were formed, the aggregate length of these new streets and squares being 28 miles 1,456 yards. The number of new houses being built at the commencement of the year 1911 was 3,285. The following are detailed figures for the present century :—

Year.	No. of New Houses Built.	New Streets.	New Squares.	Length of New Streets and Squares.	
				Miles.	Yards.
1901	27,174	301	0	60	408
1902	25,480	301	1	64	764
1903	26,42	350	0	68	944
1904	23,269	374	0	74	139
1905	21,070	300	0	60	409
1906	21,415	295	0	68	917
1907	19,211	264	0	64	1,742
1908	13,377	250	0	51	1,688
1909	13,343	217	0	48	378
1910	11,757	172	2	28	1,456

Two Thames Bridges, Kingston and Hampton Court.

The widening of Kingston Bridge will be shortly proceeded with after the plans of Mr. Basil Mott, with whom Mr. A. Dryland and Mr. H. Wakelam, County Surveyors for Surrey and Middlesex respectively, will be associated in the work. The two County Councils have contributed a sum of 120,000*l.*, which will be expended upon improving the approaches and widening the bridge upstream from 25 ft. to 55 ft. The existing structure—of which we published a view, after a drawing by Mr. W. Monk, on January 7, 1905—was built in 1825-8 by Edward Lapidge, county surveyor, the total expenses being limited by the Act to 40,000*l.*; the bridge itself cost 26,800*l.* A wooden bridge at Kingston is cited in a Close Roll of seventh Henry III., and, London Bridge excepted, it was the most ancient across the Thames. The ugly iron bridge at Hampton Court is to be repaired at an immediate outlay of 3,500*l.*; the carriageway will be laid with wooden blocks upon concrete, and the plank-decking will be replaced with a decking of mild steel. The bridge has a roadway about 18 ft. wide with one narrow footpath, and a general opinion prevails in the locality that it should give way to a new structure in view of the greatly increased traffic.

Columnal Monuments.

The two monuments we publish are taken from a valuable and profusely illustrated article in a recent number of the "Town Planning Review" on "Columnal Monuments as a Feature in Civic Design," and published by the courtesy of the editor.

The Development of Port Arthur, Canada.

The City of Port Arthur has evolved from the appearance of a village to every indication of a city in the short space of three years.

Three years ago there were no paved roadways. To-day one drives on asphalt roads over 10 miles, and arrangements have been completed which will result in there being 25 miles of asphalt-paved streets by the end of 1912.

Three years ago there was not 1 ft. of permanent sidewalk. The city now boasts 100 miles of concrete sidewalks, all 8 ft. wide.

Three years ago the city after eight o'clock at night was almost in total darkness. Now the streets at night are almost as light as in the day. Thousands of incandescent lamp standards have been erected, not only in the business district, but throughout the residential quarter. This elaborate lighting system was made possible by harnessing water power within reach of the city.

In 1909 the actual value in buildings and land was 3,600,000*l.*, and to-day the value of buildings and land is 11,000,000*l.*

Three years ago the stranger approaching the city by water was impressed mainly with the untidy appearance of the water front, docks, etc. To-day he is amazed at its beautiful appearance. Terraced banks of rich green grass give an effect both artistic and progressive. The railway-stations which adjoin the docks are surrounded by attractive gardens. At nighttime the water front is a blaze of light.

The secret of this wonderful development is the fact that Port Arthur has been discovered to be the logical manufacturing centre for Canada, as she is situated just exactly halfway between the enormous Western and Eastern markets. Owing to her being the terminus of navigation, freight rates, which are such an important item with the manufacturer, are most satisfactory, rail rates being controlled by water competition.

Old Houses at Guildford.

In the course of a letter to the *Times* the Rev. Gerald S. Davies, M.A., Master of Charterhouse, writes :—"Of the towns which lie south of London and near it, there is none so well known and so worth knowing as a storehouse of really beautiful, simple, dignified old English houses as the town of Guildford. The municipality possesses therein, to put the matter on its most vulgar footing, a source of income through the number of visitors which are attracted to it annually thereby which, as a mere matter of duty to their town, no member of that body has any right to ignore. One learns, therefore, with no small surprise, that it is intended to destroy two old and valuable examples which could be saved with hardly any difficulty. About 200 yds. south of Guildford Station, on the south side of the narrow street which leads directly to the main Portsmouth road, stand two houses of that quiet, restrained, well-proportioned, and wholly satisfactory type which is still the best model, from all points of view, for our domestic town architecture. These are to go to widen the road which, every one admits, is too narrow now for motor traffic. But on the north side there are houses of no such value, which could be removed without any one regretting them. It is quite admitted that the removal of these houses on the north side presents no difficulty and entirely meets the need. Possibly and probably it would cost a little more. But the municipal authorities, who are the guardians surely of all that is worth guarding, would thereby have preserved, for all eyes to see, some of that inestimable store which, since I first knew the beautiful old town, has been so sadly reduced."

Beautiful Gardens.

A lecture was recently delivered by Mr. Horace J. Wright, F.R.H.S., to an audience assembled in the One and All Club Room of the Agricultural and Horticultural Association, Longacre. It was explained by Mr. Edward Owen Greening, who presided, that a special interest attached to the lecture because it was part of a movement for promoting rural revival. An effort was being made, under Mr. Wright's control, to federate the numerous local horticultural societies throughout the kingdom which organise annual flower shows.—Mr. Wright showed by lantern illustrations the remarkable results which can be achieved with skill and knowledge in London backyard gardens, adding that, where space permitted, the combined culture of vegetables, fruit, and flowers was the ideal at which to aim.

THE BUILDING TRADE.

LEGAL POINTS ABOUT TENDERS.

IT is important for every contractor who makes a tender to clearly understand the legal position in which his tender places him. Inasmuch as a large part of the work in the office of an engineering contractor consists in preparing tenders, it is useful to understand exactly what a tender should contain and what is the legal effect of its acceptance. For instance, something may occur after the tender has been posted, in consequence of which the contractor may desire to withdraw the document. Can he do so? If he makes a tender, he not unnaturally requires to know whether he has any remedy against the employers if they refuse to accept it. Finally, he will require to know his position when his tender is accepted.

A tender is an offer to do certain work at a certain cost based upon specifications which are sent out by the employers. As a general rule, the advertisement for tenders contains a statement to the effect that "the company [or as may be] do not undertake to accept the lowest or any tender." If this advertisement appears, and a tender is made upon the strength of it, the lowest tenderer has no cause for complaint if he fails to get the contract. If no such disclaimer is made, however, it is a nice question whether there is not an undertaking on the part of the advertisers to accept the lowest tender.

First, as to the making of a tender. The man who tenders sometimes repents before his tender is accepted. It is useful to point out that an offer or tender may be revoked at any time before it is accepted. The retraction must, however, be received by the employers before their acceptance has been posted, for the acceptance of an offer is deemed to be received as soon as it is posted.

A tender is usually made in writing, but it is not necessary that the tender should be in the tenderer's writing, providing the other circumstances are sufficient to identify the tenderer.

In a case which was heard many years ago, a railway contractor met a number of persons, one of whom we may call A, in order to receive tenders from each of them as to the execution of certain work. He read the specification with reference to the work, and after this A handed in his tender with the others. His tender was signed with his name, but there was no evidence that it was in his handwriting. It was held, notwithstanding, that such tender, taken with the specification, sufficiently proved the contract (Allen *v.* Yoxall, I. C. and K. 315).

It is important to notice that a tender and acceptance may amount to a contract, although the acceptance refers to a formal contract to be drawn up afterwards. So if an electrical contractor were invited to tender for certain work, and he made his tender and received the following reply from the employers:—"We accept the tender. The contract will be prepared by our solicitors," this would form a complete contract. In Lewis *v.* Brass (3 Q. B. D.) it was held that where a tender was accepted for building, with notice given that the contract would be ready for signature in a few days, it was held that there was a binding agreement upon acceptance of the tender. This rule, however, does not hold good if it can be made clear that the employers will require a written document. In the case of Kingston-upon-Hull (Governors) *v.* Petch (10 ex. 611), the Guardians of the Poor had issued an advertisement stating that they would receive tenders for the supply of the workhouse with meat for three months, from 30 stone to 50 stone (setting out the description of the meat), that sealed tenders were to be forwarded, and that all contractors would have to sign a written contract after acceptance of the tender. A butcher wrote to the Guardians as follows:—"I propose to supply your house with meat according to advertisement for the next six months at 6d. per pound." His proposal was accepted, and he was informed that he was appointed butcher, upon which he immediately declined the appointment. It was decided that the transaction amounted merely to a proposal for a contract, and that there was no binding agreement until a written document was signed.

A most important question arises as to the validity of an agreement amongst a number of contractors not to tender for a particular piece of work. This course is sometimes adopted in order to leave the field clear for an independent contractor who may be under agreement to share profits with those who have stood out of the way. The principle that such an agreement was not void was declared in an early case. There it appeared that tenders for the supply of stone were invited by a corporation. Four neighbouring quarry owners entered into an agreement that they each supply a certain proportion of the stone, and that the plaintiffs should make the lowest tender to the Corporation. The plaintiffs entered into contracts with the other quarry owners to purchase the proportion of stone agreed upon from each. Notwithstanding the agreement, one of the quarry owners sent in a tender, which was accepted by the Corporation. The other quarry owners who had been party to the agreement thereupon applied to the Court of Chancery for an injunction to restrain the supply of stone to the Corporation by the defendants. It was held, overruling an objection by the defendants, that the agreement was not void, either as against public policy or upon any other ground.

An agreement not to tender in competition extends apparently to work other than that which may be within the immediate contemplation of the parties at the time of the contract. Thus, suppose two electrical contractors agreed not to tender in competition with each other for the supply of goods or machinery to a certain Corporation. This agreement would not be satisfied merely by their recognition of it in respect of one tender. In one case an agreement was made between A and B not to tender in competition with each other for gas-tar. In answer to an advertisement, and acting upon his agreement with B, A sent in a merely nominal tender, with the result that B got the contract. Later, fresh advertisements were issued and a tender by B was rejected, whereupon A, without communicating with B, sent in a tender on his own account. It was decided that the agreement between them was still pending and that A was liable for the breach of it.

It may be stated that, as a general rule, there is no implied undertaking in an advertisement for tenders to the effect that the lowest tender will be accepted. This rule, however, only holds good where there is no custom of the trade to the contrary. In one case the plaintiff sent to the defendant's agent a tender for the execution of certain buildings. It was held that the judge was right, having regard to the evidence, in concluding that, according to the custom of the trade, the plaintiff's tender, being the lowest, it had been accepted, although their agent had absolutely no authority to accept the lowest. In a later case, however, an attempt to establish a custom met with failure. There the defendants had issued a circular in which it was stated that they had been instructed to offer to the wholesale trade for sale by tender the stock-in-trade of a certain firm, which they announced would be sold at a discount in one lot. They also stated in the circular the day and hour when the tenders would be received and opened at their offices. The plaintiffs made a tender which they alleged was the highest. In an action against the defendants for not accepting such tender it was decided by the Court that the circular was only an invitation for offers, and that there was no implied undertaking by the defendants to accept any tender at all.

No "custom" to accept the lowest tender could be set up in the engineering circles, although it may be, and often does, turn out that the lowest tenderer is successful. Yet a tender must be *bonâ fide* and not in any way likely to open the door to fraud. For instance, suppose employers agreed to accept the lowest tender for the erection of an electric lighting station, and that a contractor sent in a tender by which he undertook to do the work for, say, a less sum by 100*l.* than any sum mentioned by any of his rivals. It is submitted that the employers could not be compelled to give him the contract.

This submission is based upon the case of the South Hetton Coal Company *v.* Haswell (1898, 14 T. L. R. 277), which differs in that the question there arose in connexion with the purchase of royalties due from certain collieries. An offer was made to accept the highest net money tender they should receive (all other things being equal) from one of two rival purchasers. One party offered a certain sum, the other offered such a sum as would exceed by 200*l.* the amount offered by the other proposing purchaser.

Upon a refusal on the part of the employers to accept this offer, an action was brought for specific performance. The Court refused to grant a decree. Lord Lindley, then Master of the Rolls, when the case came before him in the Court of Appeal said:—"The plaintiff's offer is illusory; it does not answer to the description of the highest money tender either in the business sense or in the legal sense of the words. To hold that the plaintiff's offer answered that description would be to encourage trickery and chicanery. It would be opening the door to the grossest fraud, not only towards purchasers, but towards vendors also.

FAILURE OF BUILDINGS CAUSED BY DROUGHT.

IT is impossible to estimate the enormous damage that has been done to buildings throughout the country by the excessive spell of hot and dry weather experienced last summer.

Suburban London has suffered to a remarkable degree. In many districts, where the foundations rest upon clay, buildings by the hundred have needed underpinning.

The explanation of the trouble is a simple one: clay retains a considerable amount of water in its structure, and even at the height of an ordinary summer the soil is found to be quite moist at a depth of from 2 ft. 6 in. to 3 ft. from the surface. Last year, however, so great was the heat that the moisture evaporated to a much greater depth and the clay was frequently found perfectly dry as much as 5 ft. and 6 ft. down. The extraction of all this water left a considerable vacuity in the ground, and shrinkage in bulk of the clay took place, and with it settlements appeared in the buildings above.

Just as clay shrinks in a vertical direction, so also does it contract horizontally, forming great fissures. Some were found to extend 6 ft. into the ground under the abnormal conditions that prevailed last year. There is yet another cause of failure, for, as clay when dry tends to fall to powder, the rain of early autumn, instead of percolating gradually through the soil, finds its way into these fissures and washes the powdered clay out of its place, and, moreover, sliding or lateral movement is likely to occur where a part only of the soil is thoroughly wet and the remaining parts are still quite dry.

The proximity of trees to a building considerably increases the damage, as their roots suck out the water from the soil and the fibres running in all directions through the clay split it up and destroy its cohesion.

The paving of the surface of the ground, whilst keeping the rain from the clay, yet seems to act as a protection from the fierce rays of the sun, preventing the moisture being drawn out to the same extent as when the ground is unpaved. At any rate, it keeps the ground in a more equable condition, and, after all, the stability of the structure above depends, not so much upon whether the clay is moist or dry, as upon the condition, whichever it be, remaining unaltered.

The consideration of the action of the rather upon the clay emphasises the import- ce, firstly, of obtaining a sufficient depth of ndation to reach below the point affected sun and rain, and, secondly, of carrying all ndations to a uniform depth.

In the first case, increase of width does t make up for depth, for, assuming that e bearing capacity of the soil is adequate, hether the clay is wet or dry, the building still certain to settle if the moisture is with- awn from any part of the ground beneath e concrete bed, and, no matter how strong e foundations may be in themselves, failure bound to follow if an adequate depth is not ached.

In the second case, in dealing with over enty examples of failures last autumn the tter found only two or three instances of ctures occurring where the foundations were a uniform depth; and this is what might expected, for where an even settlement of whole building takes place no great harm done, but where one part settles more than other cracks and rents are sure to appear.

AND TAXES AND THE BUILDING TRADE.

We have received the following communica- n from Mr. Hy. Wrighitt, of Beverley :—

'I have read with deep interest your leader this week's *Builder*. The Chancellor nies the effects of the Land Taxes on the ilding trade. Would it not be possible to k a Member of Parliament to move for a turn of the number of building plans for ouses" passed by the various local authori- s during the last six years? This might ry up the promised inquiry."

ISIT OF STUDENTS TO VARNISH AND ENAMEL WORKS.

A party of students, under the leadership of Charles H. Eaton, who is the Instructor the Willesden Polytechnic, Redhill Technical stitute and Godalming Technical Institute rrey), and Mr. John West Derrett, who nducts the decorators' classes at the Batter Polytechnic and the Bromley School of t (Kent), visited Messrs. Thomas Parsons & ns' varnish and enamel works at Mitcham ring the Christmas vacation. As Messrs. rsons have a large order in hand for India, students were enabled to see practically the ole of the works in full operation.

The party, which was made up of students m the various institutes, was conducted und by Mr. V. W. Theobalds, the works nager and a colleague, and observed the ocess of manufacture of the enamels, Endel- e and Endelflat, and the undercoating ako.

Before departing, the visitors partook of ht refreshments, which were supplied by the n, when Mr. Derrett took advantage of the portunity, on behalf of the students, to der their thanks for the excellent manner in ich the firm, through their manager, had d everything explained. The students were ch presented with a souvenir of the occasion.

RE AT SILK MILL BUILDINGS, DERBY.

The accompanying illustration is of the k Mill buildings at Derby, after a severe fire ne time ago. The fire, which was very roe, gutted the inside of the building com- tely, but the iron staircase remained stand- g, the top part being strong enough to hold without the walls in an extraordinary nner. The staircase, which was supplied by ssrs. Hayward Brothers & Eckstein, Ltd., ion-street, Borough, S.E., was afterwards en down, and on the mill being rebuilt it being re-erected.

ENERAL BUILDING NEWS.

CHURCH OF ST. NICHOLAS, WALLASEY.

The Church of St. Nicholas, Wallasey (the rrison memorial), was consecrated on the h ult. by the Bishop of Chester. The urch is built upon a raft made of Kahn el rods, embedded in concrete and resting on the sand. The ground plan consists of ve, north and south aisles, narthex, chancel, e chapel, clergy and choir vestries, and zan-chamber. There are two main entrances the north and south sides of the church. h special entrance to side chapel. The urch is heated by means of a low-pressure hot-water system, and ventilated by radiators, with fresh-air inlets in the walls and extract ventilators in the roof. The lighting is by electricity. The exterior of the building is of rock-faced Storeton stone, with rubbed-faced quoins and dressings. The interior is rubbed Storeton stone and plaster. The roof is covered with Yorkshire flags. The floor of the chancel is Hopton Wood marble paving, with borders of green tinos and red verona panels. The remainder of the church is of wood-block flooring. The seating accommoda- tion is :—Nave, aisles, and transepts, 548; side chapel, thirty-six; chancel, twenty-six—total 610. The total external dimensions of the church are :—Length, 128 ft. 6 in.; breadth, 54 ft.; height to top of tower, 75 ft. Mr. J. Francis Doyle, Liverpool, is the architect; Colonel S. W. Doyle, V.D., surveyor; Mr. W. H. Power, clerk of works; and the follow- ing have been the contractors :—Building, Messrs. John Thomas & Sons, Oxton, Birken- head; plumbing, painting, and glazing, Messrs. S. R. Henshaw & Son, Liverpool; electric light, Messrs. F. B. Hellon & Co., Liverpool; heating, Messrs. J. R. Cooper & Sons, Liverpool; wood-block floors, Messrs. Roger L. Lowe & Co., Liverpool; reredos, Messrs. Harry Hems & Sons, Exeter; chancel and chapel and altar paving, Mr. George Swift, Liverpool; carving, pulpit, and font, Messrs. Norbury & Co., Liverpool; chancel seats, etc., Messrs. Jones & Willis, Ltd., Liver- pool; chancel screens and vestry furniture, Messrs. Waring & Gillow, Ltd., Liverpool; organ, Messrs. Nicholson & Co., Worcester; bells, Messrs. John Warner & Sons, Ltd., London, N.E.; chancel window and chapel window, Messrs. Shrigley & Hunt, Lancaster. Engineer for the raft, Mr. A. C. Auden, A.M.Inst.C.E.; engineer for electrical work, Mr. A. H. Robinson.

GRAMMAR SCHOOL, EYE.

New classrooms, a central hall, laboratory, carpentry, laundry, and cooking rooms have been erected on the site of the old Grammar School. The buildings, which are of red brick with white Gunton dressings, and roofed with sand-faced tiles, are heated with hot-water throughout, and ventilated by Boyles' ex- tractor ventilators, with fresh-air inlets; they have been erected from plans prepared by Mr. J. Webb, Surveyor to the East Suffolk County Education Committee, who also super- intended the erection. The general con- tractor, Mr. A. Gayford, of Ipswich, carried out the work. Messrs. Martin & Newby, of Ipswich, supplied the gas installation, and Mr. E. Scott, of Ipswich, erected the heating apparatus.

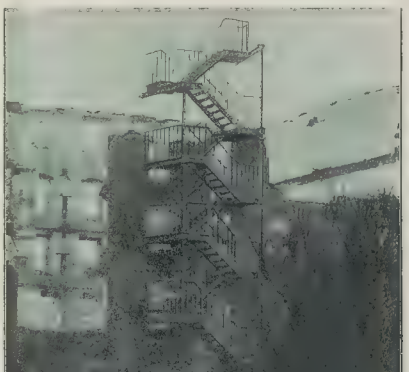
NEW COLLEGE, CAERLEON.

The amended plans of Messrs. Alfred Swash, F.R.I.B.A., & Son, architects, of Newport, have been approved by the Local Government Board, and the erection of the college is to be proceeded with at once. The contract has been secured by Mr. F. Bond, builder, of Cardiff, whose estimate was 28,248*l*. The college will be a three-story building, and will have a frontage of over 230 ft.; a residence for the principal, caretaker's cottage, and power house will also be erected. Mr. Charles Locke, of Newport, is the clerk of works.

ABERDEEN BUILDING TRADE.

The statistics as to the extent of building in the city during the past twelve months—for the period from December 1, 1910, to Novem- ber 30 last—show an increase as compared with those of the past two or three years, but the improvement is not of an outstanding nature, and, in the words of several of the builders themselves, 1910 has been "a dull year." The total value of the new buildings, alterations, and additions sanctioned during the year was 139,781*l*., as compared with 100,235*l*. in 1910—an increase of 39,546*l*. This looks a substantial increase, and one which might be expected to give gratification to those concerned; but how far the industry has receded from the high- water mark will be seen when it is stated that this year's value is the lowest of any year from 1907 to 1898, in which year the total value was 514,015*l*. The value in 1909 was 132,054*l*., and in 1908 91,272*l*. The number of the new buildings erected and additions and alterations carried out during the year under review was 214, as against 183 in 1910. The new goods stations accounted for 35,000*l*. of the total—that being the amount of expendi- ture on that work sanctioned during the past year.

DUNDEE BUILDING TRADE.



According to the *Dundee Advertiser*, those engaged in the building trades in Dundee have just passed through one of the poorest years on record, and the outlook is far from promis- ing. Since the completion of the scheme for providing district libraries, including the Central Reading Rooms, there has been no building of any outstanding nature started, and next year all that appears likely to be undertaken will be the erection of a new Training College for teachers in Park-place and the provision of a hostel or hostels for students in training on the Mayfield estate in the east end of the city.

NEW BUILDINGS IN LONDON.

Model dwelling-houses, site of vacant brewery, Brookmill-road, Deptford, S.E. (11,000*l*.); Mr. W. J. Burton, builder, Broad- stairs. Extensions to No. 165, Gray's Inn-road, W.C. Messrs. Mattock & Parsons, builders, 10, Gray's Inn-road, W.C. Proposed public hall, Hotham-road, Putney, S.W.; Rev. Canon Rivington, Vicar, St. John's Church, Putney. Conveniences, Victoria-embankment-gardens, E.C. (1,215*l*.); Messrs. W. Johnson & Co., Ltd., builders, Wandsworth Common, S.W.

NEW BRIDGE, SOUTH WALES.

The opening of the new Rumney Bridge took place on New Year's Day, when the Lord Mayor of Cardiff performed the cere- mony. The bridge has been erected at a cost of about 7,000*l*. from the plans of the engineers,

Staircase after Fire at the Silk Mill Buildings, Derby.

Mr. W. Harpur, M.Inst.C.E., and Mr. W. Tanner, F.S.I. The contractors for the work were Messrs. Barnes, Chaplin, & Co., of Cardiff.

TRADE NEWS.

Under the direction of Mr. William Huckvale, architect, Tring, the "Boyle" system of ventilation (natural), embracing Boyle's latest patent "air-pump" ventilators and air inlets, has been applied to the Victoria Hall, Tring.

The Roman Catholic School, Romford, has recently been fitted with two of D. O. Boyd's "hygnastic" ventilating school stoves, supplied by Messrs. O'Brien, Thomas, & Co., Upper Thames-street, London, E.C., and Excelsior Works, South Bermondsey.

The Infectious Hospital, Newark, is being supplied with Shorland's warm-air ventilating patent Manchester grates, patent exhaust roof ventilators and inlet ventilators, supplied by Messrs. E. H. Shorland & Brother, Ltd., of Failsworth, Manchester.

Messrs E. H. Shorland & Brother, Ltd., of Failsworth, Manchester, have just supplied their warm air ventilating patent Manchester grates to the Council Schools, Cleethorpes.

The Directors of the London County and Westminster Bank, Ltd., have declared a dividend of 10§ per cent. (less income tax) for the half-year ended December 31 last, making a total distribution for the year of 21¼ per cent.

THE LATE MR. I. C. JOHNSON.

The estate of the late Mr. Isaac Charles Johnson, of Mayfield, Gravesend, head of the firm of Messrs. I. C. Johnson & Co., Ltd., cement manufacturers, who died on November 29, in his 101st year, is sworn as of the gross value of 40,656*l.*, with net personalty 38,750*l.*

PROJECTED NEW BUILDINGS IN THE PROVINCES.*

ABBEY MOUNT.—New hall (3,000*l.*); Mr. E. Calvert, architect, 16, North-street, Andrew-street, Edinburgh.

Bedley (Beds).—School (5,000*l.*); Mr. J. T. Blackwell, architect, Market-place, Kettering.

Bedminster.—Catholic church; Mr. J. C. Bevan, 36, Corn-street, Bristol.

Bellshill.—Rebuilding works for Messrs. W. Beardmore, Ltd., Mossend-street Works, Bellshill.

Bexhill.—School (4,325*l.*); Messrs. Cook & Son, builders, Crawley.

Bridgend.—Proposed maternity ward at workhouse (1,150*l.*); Clerk, Bridgend and Cowbridge Board of Guardians.

Caehopkin.—School (3,600*l.*); Mr. A. W. Best, County Architect, Brecon.

Cambridge.—School (6,000*l.*); Mr. J. Julien, Guildhall, Cambridge.

Cambusnethan (Wishaw). Extensions to school (2,000*l.*); Mr. J. King, Russell-street, Wishaw.

Chard.—Corn exchange (2,000*l.*); Mr. A. W. Hearn, Surveyor, Chard Town Council.

Chirk (Denbighshire).—Mansion-house for Lord Howard de Walden; Mr. E. G. Davis, architect, Llangollen.

Chorley.—Billiard hall (2,000*l.*); Mr. J. F. Edmondson, Burnley road, Nelson.

Crichton (Edinburghshire). — Additions, Crichton Royal Institute (5,000*l.*); Messrs. Mitchell & Wilson, architects, 13, Young-street, Edinburgh.

Darlington. Ice and cold-storage buildings; Mr. G. Walesby Davies, High row-chambers, Darlington. School, Durham-road; Mr. G. Winter, Surveyor, Darlington Town Council.

Doncaster. — Swimming-baths and washhouses (5,000*l.*); Mr. F. A. Kirby, Surveyor, Doncaster Town Council. Proposed additions to hospital, Mexborough and Doncaster Joint Hospital Board.

Dumbarton.—Lodging-house (3,000*l.*); Mr. J. Bell, architect, 3, Merry street, Motherwell.

Dundee.—Additions to calender, Victoria-road, for Messrs. A. & S. Henry & Co., Ltd. Warehouse and workshop, South-road and Millar's-lane for Messrs. East Brothers, Ltd.

Durham.—Laundry; Mr. L. E. Ekins, Wholesale Co-operative Society, West Blandford-street, Newcastle. Parish hall (2,000*l.*); Vicar, St. Margaret's Church, Durham.

Eastbourne.—A plan has been passed for a garage at "Avila," Prideaux-road, for Mr. Joseph Martin, builder. Plans have been lodged as follows:—Cinematograph hall, seaside; Mr. H. Baker. Six houses, Victoria-drive; Mr. T. H. Sawyer & Sons.

Eccles.—Plans have been passed as follows:—Picture theatre, at junction of Church-street and Corporation road; Eccles Picture Theatre Company, Ltd. OBITUARY.

Mr. Joseph Bell.

We regret to record the death of Mr. Joseph Bell, the senior member of the firm of Messrs. William Bell & Sons, builders, contractors, and timber merchants, of Saffron Walden and Cambridge, which occurred at his residence, Dorset House, Saffron Walden, on Saturday, the 30th ult., at the age of seventy-eight years. Mr. Bell was born at Cambridge, the son of the late Joseph Bell, and grandson of William Bell, who founded the business 118 years ago. He established the Saffron Walden branch in connexion with the Cambridge business forty-seven years ago, and shortly after went to reside at Saffron Walden. Mr. Bell had been a member of the Saffron Walden Town Council for the last thirty-nine years, and he has been ten times Mayor of the Borough, and at the time of his death was Deputy Mayor. He was elected an Alderman of the Borough in 1884, a Justice of the Peace for the Borough in 1884, and a Justice of the Peace for the county of Essex in 1895. Mr. Bell had been President of the Cambridge Master Builders' Association since its formation, thirty-five years ago. Mr. Bell has carried out extensive works in all parts of the country. He was one of the founders of the Saffron Walden Lodge of Freemasons, and was its first Master. He married a daughter of the late Emanuel Foster Davy, of Beaminster, Dorset, and they celebrated their golden wedding in 1905. Since then both have died. They have left a family of two sons and two daughters. Mr. Bell was President of the Institute of Builders for the year 1907. The funeral took place at Saffron Walden Cemetery on Wednesday afternoon.

THE ROYAL INSTITUTE OF BRITISH ARCHITECTS:

THE AUTUMN EXAMINATIONS.

Preliminary.

THE Preliminary Examination, qualifying for registration as Probationer R.I.B.A., was held in London and the provincial centres mentioned below on November 20 and 21. The Board of Architectural Education, reporting the results to the Council, state that of the ninety-five candidates admitted thirty-seven were exempted from sitting, and the remaining fifty-eight were examined, with the following results:—

Centre.	Total Examined.	Passed.	Relegated.
London	40	27	13
Bristol	7	6	1
Leeds	3	2	1
Manchester	6	5	1
Newcastle	2	2	0
	58	42	16

The passed candidates, with those exempted, making a total all together of seventy-nine, have been registered as Probationers, and are as follows:—

S. C. Allum, London
H. Andrew, Hull
H. G. Atkin-Berry, London
A. Barley, Westcliff-on-Sea
S. Barlow, Stockport
A. M. Bisiker, Crouch End
J. D. Blackpool, Kidderminster
A. W. Bowman, London
J. Bradshaw, Failsworth
H. C. Bradshaw, Liverpool
S. A. Brinkworth, Corsham
C. J. Brooks, London
H. F. Brueton, Bridgwater
W. Burgord, Holt, Norfolk
J. Caldwell, Penzance
J. G. Cameron, Inverness
E. Carreras, St. John's Wood
M. Cooper, Regent's Park
G. Cooper, Willesden Green
F. Crossley, Bradford
H. Crowther, Elland
L. Curtis, Tufnell Park
Dangerfield, St. Albans
T. Drew, Grove Park, Kent
H. Evans, Moseley
L. Feirn, Windermere
A. S. Forbes, Newlyn, Penzance
G. Foster, Buckfastleigh, South Devon
M. Frame, Larkhall, Scotland
E. Gossling, South Croydon
Gray, Hertford
H. Gutteridge, London
H. Harris, Stoke Newington
St. J. Harrison, Newcastle-on-Tyne
O. B. Hitch, Vauxhall
Hunt, Oxford
Colonel B. Hustler, Castleford
D. Jackson Oxton
[illegible], Salisbury
M. Jeffreys, Maldon
H. J. Jeynes, Birmingham
C. MacA. C. Johnson, Gloucester
H. A. Johnson Heaton Moor
W. D. Key, Upminster
G. A. Langdell, London
I. B. Macbean, Ealing Common
H. Macpherson, Glasgow
G. L. S. Marner, London
E. A. L. Martyn, Redruth
J. F. L. Mercer, Blackburn
F. Milnes, Huddersfield
G. Moerdijk, Battersea Park
A. R. Mosley, Eastbourne
I. Omar, Hampstead
A. J. Palmer, London
H. Paul, jun., Ealing
R. W. Pite, Ealing
F. H. N. Powell, Bournemouth
J. F. Pye, Grimsby
R. M. dos Remedios, Maida Vale
A. D. Rix, Norwich
J. J Robinson, Kentish Town
J. R Rogers, Leamington Spa
L. J. Routley, Taunton
W. Rudman, Chippenham
F. H Shackleton, Luton
A. R Shibley, Merton Park
C. H. N. Smith, Norfolk
G. V. Spurway, Milverton
L. S. Stanley, Cambridge
E. A. D. Tanner, Fulham
D. R. Thomas, Llangadock
H. M. Thomas, Maidstone
J. S. Thomson, Wimbledon
H. B. Tunnard, Denmark Hill
F. Wager, Birmingham
S. E. Walker, Halifax
L. E. Williams, Stockwell
P. J. Williams, Carmarthen

Intermediate.

The Intermediate Examination, qualifying for registration as Student R.I.B.A., was held in London and the undermentioned provincial centres on November 20, 21, 23, and 24. The Board of Architectural Education report to the Council that 100 candidates were admitted and examined, with the following results:—

Centre.	Total Examined.	Passed.	Relegated.
London	59	36	23
Bristol	8	5	3
Leeds	5	2	3
Manchester	23	14	9
Newcastle	5	3	2
	100	60	40

The successful candidates, who have been registered as Students, are as follows, their names being given in order of merit as placed by the Examiners:—

T. P. Bennett, Kilburn
W. N. Thomas, Crewe
W. G. Newton, London
F. Lorne, London
M. R. Hofler, Eastcote
M. D. Robertson, London
K. B. Mackenzie, London
L. G. A. Dubins, London
N. F. Woodroffe, Purley Downs
C. Rowntree, Hammersmith
L. H. Lait, Ravenscourt Park
E. H. M. Ebbs, Harlesden
J. G. Hinton, Winchester
R. A. Walter, Harringay
W. H. Elgar, Folkestone
H. S. Friscott, Plymouth
G. Moerdijk, Battersea Park
R. V. Taylor, Southport
F. Williamson, Manchester
H. A. Gold, Beckenham
N. G. Harland, Stamford Hill
C. E. Hill, Sheffield
J. O. Cheadle, Kensington
E. J. Hart, Manchester
W. G. Pidsley, Pinhoe
P. W. G. Rudhall, London
G. Hemm, Heaton Chapel
G. A. K. Robertson, Belfast
C. J. K. Clark, Newcastle-on-Tyne
E. F. Bothwell, Forest Gate
F. A. Broadhead, Nottingham
S. Clark, Carlisle
A. T Edwards, Liverpool
S. C. Garrett, Brighton
W. S. Grice, Ealing
A. W. Harwood, London
B. de C. Jackson, Beckenham
W. J. Lewis, Pontypridd
R. H. Maddock, Sutton
R. E. Matthews, Coventry
G. McLean, Portmadoc
E. W. Mountford, Guildford
C. E. Nichols, Sheffield
E. B. Norris, Didsbury
J. Palmer, Islington
W. G. Parkin, Hampstead
R. H. Riley, Lower Darwen
A. Silcock, Bath
T. H. Smith, Bolton
M. C. Sunter, Manchester
A. G. Toone, Manchester
A. J. West, Nottingham
P. G. White, Bickley
J. S. Wiggins, Brighton
J. G. Williams, St John's Wood
W. J. V. Williams, Swansea
P. T. Wilsdon, Kensington
A. M. Winder, Oldham
B. W. Woodhouse, Carlisle
L. M. Yetts, London

The following table shows the number of failures in each subject of the Intermediate Examination:

I. Classic Architecture	18
II. Mediæval Architecture	27
III. Renaissance Architecture	34
IV. General Questions	20
V. Theoretical Construction	18
VI. Descriptive Geometry	20
VII. Applied Construction	17

Intermediate Exemptions.

The following candidates, having produced, in accordance with the regulations, satisfactory evidence of previous training, were exempted from sitting for the Intermediate Examination, and have been registered as Students R.I.B.A., viz.:

F. R. Barry, Richmond, Surrey
L. E. Carreras, St. John's Wood
V. H. Hughes, Sandgate
I. Omar, Hampstead
P. E. Webb, London
L. E. Williams, Stockwell

Final and Special.

The Final and Special Examinations, qualifying for candidature as Associate R.I.B.A., were held in London from November 30 to December 8. The Board of Architectural Education report to the Council that of the ninety nine candidates admitted and examined fifty-six passed, and the remaining forty-three were relegated to their studies. The passed candidates, who, subject to Clause 8 of the Charter, have become qualified for candidature, are as follows, the * prefixed to a name indicating that the candidate sat for the Special Examination, which is designed for architects in practice and chief assistants exempted by the Council from the Preliminary and Intermediate Examinations and from submitting Testimonies of Study:—

H. H. Archer, Windsor
H. J. L. Barefoot, Wandsworth Common
R. F. Bargman, Dorking
* J. A. M. Baxter, Edinburgh
T. Bennett, Gravesend
H. S. Besant, Lee
H. W. Brittan, Croydon
* C. Castelow, Leeds
J. M. Clarke, Preston
C. J. M. Cowdell, Leicester
F. A. Crouch, Brighton
* D. S. Cullen, South Norwood
J. Dovaston, Ealing
F. Dowdeswell, Palmer's Green
G. M. Dunn, London
A. M Durrant, Hemel Hempstead
S. J. Edwards, Bayswater
J. K. Ground, London
J. B. Healing, Leicester
P. D. Hepworth, Hampstead
B. Johnston, South Ealing
* J. J. Knewstubb, Penrith
* A. W. Larsen, London
C. H. Lay, Hampstead
F. J. Lenton, Stamford
R. B. Ling, Clapham
* R. G. Lovell, Eastbourne
H. R Martin, Lee
D. L. Meiklejham, Golders Green
F. H. Morley, Liverpool
H. E. Moss, Kingston-on-Thames
F. W. Nicholson, Liverpool
* R. D. Nicol, Calcutta, India
R. Ordish, Derby
G. Owen, London
* W. B. Oxley, Leicester
J. Page, Barnet
A. T. Phillips, Harpenden
H. G. F. Robinson, Hampstead
A. L. Russell, London
E. R. D. Selway, Clapham
R. Shears, Westcliff-on-Sea
W. B. Sinclair, Bexley
C. L. Souster, Lee
W. B. Stedman, Harlington
* H. S. Stewart, London
R. Stockton, Stockport

The following table shows the number of failures in each subject of the Final and Special Examination:—

I. Design	31
II. The Principles of Architecture	24
III. Building Materials	11
IV. Principles of Hygiene	25
V. Specifications	18
VI. Construction Foundations, etc.	31
VII. Construction — Iron and Steel, etc.	30

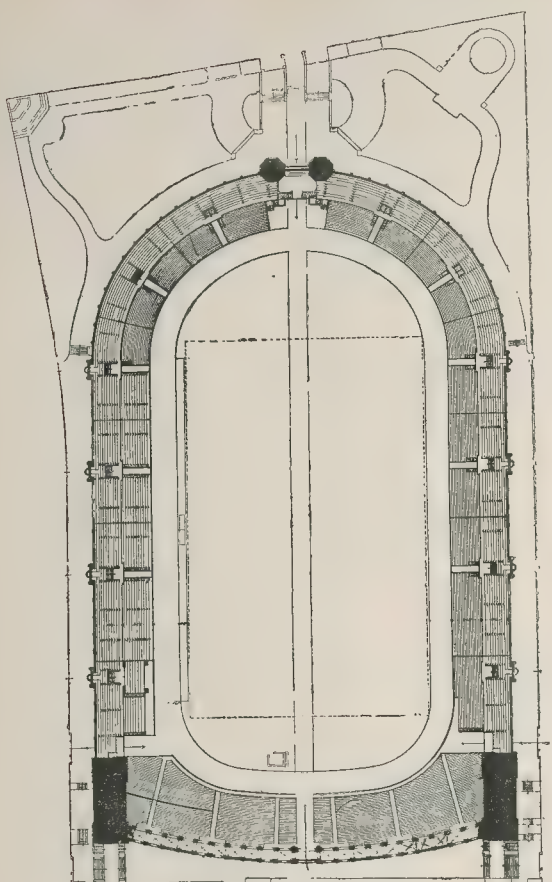
Ashpitel Prize, 1911.

The Board of Architectural Education recommend the Council to award the Ashpitel Prize for 1911 to Mr. Philip Dalton Hepworth, of "Cahirdown," Holford-road, Hampstead Heath, who passed the Final Examination above referred to, he being the candidate who has most highly distinguished himself in the Examinations held during the current year.

The Licentiateship.

We are asked to mention that it is absolutely necessary that all applications for election to the class of Licentiates be in the hands of the Secretary of the Royal Institute by April 30, 1912. No further election to the Licentiateship can take place after June next, but, as it takes some time to examine the applications, it is essential that all the papers be sent in by April 30 at the very latest.

OLYMPIC GAMES, STOCKHOLM, 1912.



THE Stadium for the Olympic Games of 1912 is now in course of erection. The building, which will be of a thoroughly permanent character, is erected in hand-made purple brick and granite. The plan shows a perfect amphitheatre, all under cover, at the foot of a hill which forms the northern side of the complex. Inside this permanent building extra rows of temporary seats will be arranged for use during the games. The Stadium will then hold about 35,000 spectators. It contains a running track, four laps to the mile, and a grass football ground which in the winter-time will be transformed into a skating rink.

The entrance to the special dressing-rooms, to which long corridors lead, are situated at the foot of the hill.

The gates and arcades are vaulted in the old mediæval Swedish style. On the brick walls there are blocks of granite inlaid, in which a series of Swedish heroes will be sculptured, and the gates to the entrance stairs will likewise be decorated by eighteen heathen gods and goddesses.

Two massive brick towers will stand at the side of the eastern and western gates, and behind them two side buildings, each containing a hall and a number of administration, reading, lecturing, and assembly rooms. At the centre of the northern arcade, which connects the side buildings, is the gate through which all the competitors will march down to the ground on the opening day.

In front of the southern elliptical arcade, outside the Stadium proper, but within the enclosure, is a fine garden of oaks and birches, with paths for the spectators. The paths run the whole way round the building. At the foot of the two big towers, two granite water fountains are to be arranged. From the balconies of the towers trumpet signals for the various races will be given. Above the southern gateway, which forms the main entrance for the spectators and beside which two octagonal brick towers will be erected, is the bandstand, which will be used for the distribution of the prizes. The flags to be hoisted in honour of the

Olympic Games, Stockholm, 1912 : Plan of Stadium.

winners will be placed on the top of the northern entrance. The Royal box is situated alongside the finishing-post.

The money towards the expenses has been granted by the Swedish Government, who will ultimately become the owner of the building and grounds.

The site is situated close to the most fashionable part of Stockholm.

THE LONDON ARCHITECT'S PROCEDURE:

PROCEDURE WITH THE LONDON COUNTY COUNCIL.

Council's Consent to Works Otherwise Irregular.

THERE are many matters which an architect may desire, in his clients' interest, to carry out, but which, "except with the consent of the Council," are contrary to the rules of the London Building Act, 1894. Amongst these may be mentioned questions of frontage (sects. 13 and 22), questions of projections (sect. 73), deviations from certified plans (sect. 43), and special buildings (sect. 82).

We are all familiar with the impatience of building owners, who naturally begrudge the payment of high ground rents during the erection of a building, and we know how that impatience is accelerated by unforeseen delays. A judicious architect will inform his client of all matters requiring the Council's consent, and of the fact that four weeks at least—possibly more—may be expected to elapse between the date of application for such consent and the receipt of the Council's reply; and he will send in the necessary application with the least possible delay. As to the form which it should take, and the plans that should accompany it, the Council's printed regulations will be his guide; but should he be in doubt upon any such matters, a visit to the Council's offices and an interview with some courteous gentleman in the Building Act Department may be found helpful.

Some persons have followed the somewhat hazardous course of first carrying out a desired work in despite of the district surveyor's objection—and then applying for the Council's consent to its retention. By this means, provided the consent be granted, they obtain what they require with less delay than if they had awaited the result of an application to the Council before commencing the work. No doubt there have been cases in which such tactics were successful; but consents of the Council are sometimes accompanied with such conditions as an owner may not care to accept; and it is far better that he should be in a position to decide whether he will avail himself of such a consent or not.

Licences for special buildings and consents for projecting shelters, etc., are usually granted for a limited period; and an architect will naturally remind his client when a renewal of licence or consent must be obtained, or the structure affected be removed.

Means of Escape in Case of Fire.

Under the London Building Acts (Amendment) Act, 1905, new buildings, or buildings which by considerable additions become new for purposes of the Act, are usually subjected to more stringent conditions (under sect. 7) than old or "existing" buildings dealt with under sect. 9. Under the former section, an architect may have some difficulty in getting a scheme approved by the Council which shall serve the interests of the owner, especially when it is not known for what purposes the building will be let or sold. There, as in all cases of application to the Council, it is desirable that all questions should be settled at an early date.

Frequently it has happened that a building has been completed and occupied, and some details of the means of escape have been omitted, because the tenant objects to them. Then the owner or his architect has applied for the Council's certificate, which has been refused, on the ground of non-compliance with the conditions of approval.

The architect should warn his client at an early stage that he is liable to a penalty of 20*l.*, and a daily penalty of 10*l.*, for allowing his building to be occupied without the certificate of the Council; and that if modifications of an approved means of escape become necessary through unforeseen circumstances the modified conditions must be not only approved, but actually carried out before the building can lawfully be occupied.

When an architect is carrying out alterations and additions to an existing building which comes within the scope of sect. 9, he should endeavour to persuade the owner to have a scheme of means of escape approved by the Council, and to give effect to it. Sometimes an owner is deterred from this course by considerations of cost; but he may be reminded that he can, under sect. 20, compel his tenants to contribute to the expense incurred, in proportion to their interest in the building. Should he, however, be still unwilling to provide the means of escape required by the Act, he should not forget that the Council may at any time serve him with a notice requiring certain things to be done, necessitating disturbing the tenants with further building operations. Most persons will agree that it is better in such circumstances not to make "two bites of a cherry."

Under the Factory and Workshop Act, 1901, the conditions are similar in principle to the foregoing. The architect will usually find that the buildings with which he is concerned comes within the scope of sect. 14 (1), to which the arbitration clause (3) is not applicable; and he will take care to comply with all requirements. The certificate of the Council must, of course, be obtained before the building can be occupied.

Council's Notice Served upon Owner.

When an owner has been served by the Council with a notice requiring him to form access to the roof of his building, under sect. 12, or to provide means of escape under sect. 9, of the Act of 1905, he is in a more serious position than formerly. His legal obligations are unaltered, but he is no longer able to plead ignorance of them. If he should disregard the Council's warning, and if loss of life should occur through fire in his building, he might have to face the consequences, not only of a prosecution by the Council, but of an adverse verdict by a coroner's jury. Similarly, if a notice is served under sect. 14 (2) of the Factory and Workshop Act, the penalty of 1*l.* per day for non-compliance is insignificant in comparison with the responsibility in case of death through fire.

Alterations to Buildings Approved by the Council.

When a building or any portion of it has been constructed in accordance with plans approved by the Council, under the terms of any consent or certificate, any alteration which brings it out of conformity with such plans will render the consent or certificate null and void. An architect, therefore, when instructed to plan alterations to a building will ascertain from his client whether it is

ject to any former consent or certificate the Council, and will make the necessary lications for approval of modified condi-s, taking care that the building shall not altered as regards the matters affected il the further approval of the Council shall e been obtained.

intenance of Appliances Approved by the Council.

All means of escape and other things which e been approved by the Council must be intained by the building owner in proper king order. The architect should draw client's attention to sect. 14 of the London lding Acts (Amendment) Act, 1905, as to intaining the means of escape, and to t. 24 (1) (*iii.*) (*f*) as to the penalty of and further penalty of 10*l.* per day for ure to do so, or for permitting such means scape to be rendered less commodious. It uld not be overlooked that sect. 14 applies "All means of escape in case of fire, pro-ed in accordance with the provisions of s Act or otherwise," and is therefore plicable to all means of escape approved by Council, whether to a "certified build-" under the repealed sect. 63 of the Act of 4, or to a factory or workshop dealt with der the Act of 1901.

Similarly, any owner failing to maintain proper condition any iron or other doors, tters, fastenings, etc., provided under the ndon County Council (General Powers) t, 1908, whether by the Council's consent otherwise, is liable to a penalty of 20*l.*, d to "a daily penalty of the like amount."

Conversion of Buildings by User.

A building owner should be made aware t there are circumstances under which a lding cannot lawfully be "converted" thout the consent of the Council being viously obtained; and that unlawful con-rsion may take place without structural eration. An architect who has carefully used sect. 211 of the London Building Act, 4, is in a position to caution his client ainst any of the various ways in which it y be infringed, and to advise him of the cessity of obtaining the Council's consent an intended conversion.

For example, a building erected without the en space at rear required by sect. 41, and ended to be used "wholly or principally as ouses or counting-houses," could not lawfully used principally as a dwelling-house. A elling-house exceeding ten squares in area uld not lawfully be used in any part for rposes of trade without the structural aration required by sect. 74 (2), nor could building of the same extent, hitherto used olly for trade, be used in any part as a elling-house—not even by a caretaker thout such separations.

When a building has been dealt with under t. 12 of the London Building Acts (Amend-nt) Act, 1905, by the provision of proper ans of access to the roof, it cannot lawfully occupied by more than twenty persons; d should this number be exceeded with the ner's knowledge he would be liable to a nalty of 20*l.* and to a daily penalty of 10*l.*

There are cases in which an owner's siness fluctuates, so that at one period of e year he employs less, and at another riod more, than twenty persons. In such a se the architect should comply with sect. 12 providing access to the roof to the approval the district surveyor, and should obtain e Council's approval to a means of escape to provided in compliance with sect. 9. Of urse, if more than forty persons are nployed, the Factory and Workshop Act applicable.

Public Entertainment Buildings.

An architect instructed to design a theatre a building for public dancing, music, or her public entertainment should carefully ruse the Regulations of the Council with spect to the requirements for the protection om fire of all such buildings. The Regula-ons made on July 30, 1901, relate to the anning, means of exit, and general arrange-ent of the buildings; those made on arch 25, 1902, relate to electric lighting nd heating.

One of the earliest questions that will occur the architect is, whether the proposed site suitable for the owner's purpose. In this nnexion attention should be directed to o. 2 of the first-named Regulations, which ovides that one-half at least of the total length of the boundaries of the site shall abut upon public thoroughfares; and, of course, where such conditions do not obtain, the architect cannot advise the acquisition of the site.

Such preliminary questions being settled, the architect will prepare complete drawings of the intended building, showing its extent, its internal arrangement, accommodation, exits, etc., all in accordance with the Regulations, with methods of construction and drainage clearly indicated. Copies of the plans are to accompany a written application to the Clerk of the Council for a certificate under the Metropolis Management and Building Acts Amendment Act, 1878. The sanction of the Council must also be obtained before the installation of the electric light or any electrical work is commenced; and an application accompanied with plans and full particulars has to be made and the result awaited. The various Regulations with respect to heating have to be observed in the design and erection of the building, and each boiler or heating apparatus is required to be tested in the presence of an official of the Council, and subsequently every year by a competent person, whose certificate shall be furnished to the Clerk of the Council.

It is, of course, understood that compliance with the above-named Regulations does not relieve the owner from the obligation to comply with all rules of the London Building Act, 1894, which are applicable to the building.

Tribunal of Appeal.

There are cases in which the approval of the Council is necessary for an intended work, and in which any person dissatisfied with the Council's decision may refer the matter to the Tribunal of Appeal. As to whether it is worth while to do so, will depend upon the circumstances of the case. The expense need not be great, the fees payable to the Tribunal being moderate enough; any considerable cost could only be for professional assistance. The principal objection to going to the Tribunal would probably be the delay involved. Questions as to frontage lines, rearrangements of cleared sites, etc., might involve delay which would mean loss to the owner, as might also questions of variation in means of escape to suit the incoming tenant of a new building. On the other hand, similar questions in relation to an existing building could not injuriously affect the owner by delay, for there is nothing to prevent such a building being occupied pending an appeal. An architect who gives due attention to all the issues in a case should have no difficulty in advising his client for the best.

LEGAL COLUMN.

Rating "Gathering Grounds" for Water.

Some interesting points as to what constitutes "occupation" for rating purposes arose in the case Lord Mayor of Liverpool *v.* Chorley Union and others.

The Corporation, in addition to the land actually occupied by their works, reservoirs, etc., purchased a large tract of moorland, some 1,165 acres, in order to keep the water supply from pollution and to secure the supply.

The farms which were on this land were closed and left unoccupied, and it was only used for sporting purposes — the sporting rights being let — with the exception of 300 acres, which was planted with trees, and 8½ acres which was used as a nursery for young trees. The Quarter Sessions decided that the Corporation were only in ratable occupation of these latter portions of the land; but the Divisional Court held that they were ratable as to the whole. The Court of Appeal have now affirmed this judgment, and the judgments delivered by the Lords Justices contain some interesting observations on rating law. It was held that owners in possession are *prima facie* occupiers for rating purposes, unless they can show someone else to be in occupation, whilst here the Corporation not only did not show anyone else to be in occupation but they were also using the land to exclude a resident population settling thereon, and diminishing the water supply and to secure the water from risk of pollution. They had, besides, let the sporting rights over it. The case was remitted to the Quarter Session, with a further intimation that the price paid by the Corporation was an element to be considered in assessing the ratable value.

There is one further point we may mention in connexion with this decision. Lord Justice Vaughan Williams found some difficulty in distinguishing this case from those where an unoccupied house is exempted from rates, although the owner does not prove other occupation, and he intimated that these cases must be considered as an isolated exception that has grown out of decided cases. Lord Justice Buckley, however, brought this case into line by pointing out that the Corporation were deriving benefit from the land, and it was like those cases where a house is not considered a vacant house if, although uninhabited, it is kept ready for occupation.

Recent Workmen's Compensation Cases.

A case, Rex *v.* Templer, *ex parte* Howarth, which arose under the Workmen's Compensation Act, 1897, but the decision of which applies equally to the Act of 1906, has just been decided by a Divisional Court.

On March 22, 1907, a workman sustained injury by accident, his right hand and part of the arm being torn off. His employers, Sir B. Samuelson & Co., allowed him as compensation half his wages, 12*s.*, and a memorandum was registered. A Committee, representative of employer and workmen, was in existence, with powers of arbitration, under Schedule II., par. 1, of the Act.

About December, 1909, the employers reduced the compensation to 8*s.* 6*d.* a week, and the workman, objecting to this, applied to the Committee. The Committee, after an adjourned hearing, considered that the man should accept an offer of the employers to take him back at his old wages at light work, which the Committee held he was capable of performing, and they stopped his compensation as from December 31, 1909. In September, 1910, the Committee, in order to keep the man's claim alive, made an order for 1*d.* a week, and a memorandum was registered.

In November, 1910, the workman left work, alleging himself to be physically unfit to perform it, and on February 7, 1911, he applied to the County Court for a review of this last order of 1*d.* a week. The employers' solicitors notified him that the Committee would meet on February 24; but on February 19 he gave his employers notice that he objected to the Committee acting.

The County Court Judge, when the application for review came on for hearing, held that he had no jurisdiction to entertain it as the Committee was seized of the matter.

The workman then appealed to the Court of Appeal, but that Court held that the appeal in such a case lay to the Divisional Courts.

The Divisional Court found the question difficult to determine, but they decided that a "review" was a fresh matter or stage in the proceedings, and that if objection were taken in time the jurisdiction of the Committee would be terminated, and the County Court have jurisdiction to hear the review.

We may draw attention to the wording of Schedule II., par. 1, which provides that if a Committee exists any matter is to be settled by such Committee, "unless either party objects by notice in writing sent to the other party before the Committee meet to consider the matter."

Since our last review of these cases under the Workmen's Compensation Act the House of Lords, in Morgan *v.* William Dixon, Ltd., have had to consider whether, where under Schedule I., par. 4, a workman, after giving notice of accident, is required to submit himself for examination by a medical man provided and paid by the employer, he is to be deemed to have refused so to submit himself if he merely makes it a condition that his own medical man shall be present. The Court of Session had held this conditional compliance to amount to a refusal, and had stayed all proceedings. The House of Lords, Lord Shaw dissenting, held that there was no absolute rigidity in the workman to insist on the presence of his medical man, in each case the circumstances would have to be considered, and it would be a question of fact whether there had been a refusal or not, depending upon whether the request was reasonable. The House would not disturb the finding of fact in the case, but intimated that in nearly all cases such a request would be a reasonable one to comply with.

The House of Lords have affirmed the decision of the Court of Appeal in Barnes *v.* Nunnery Colliery Company, Ltd. (the *Builder*, February 3 last).

A boy employed in a mine rode on a corve instead of walking to the place where he was to work, and he was killed by his head coming in contact with the roof of the mine. There was a rule prohibiting workmen from riding on the corves, and the boy knew of this; but there was evidence that in contravention of the rule boys sometimes did ride on the trucks.

LEGAL COLUMN—*Continued on page 24.*

List of Competitions, Contracts, etc.

For some Contracts still open, but not included in this List, see previous issues. **Those with an asterisk (*) are advertised in this number:** Competitions, iv.; Contracts, iv. vi. viii. x. xii.; Public Appointment, —; Auction Sales, xxxviii. Certain conditions beyond those given in the following information are imposed in some cases, such as: the advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in.

*** It must be understood that the following paragraphs are printed as news, and not as advertisements; and that while every endeavour is made to ensure accuracy, we cannot be responsible for errors that *may* occur.

Competitions.

JANUARY 6. — **Bolton.** — Miners' Federation Hall and Offices. Limited to architects within twenty-five miles of Bolton. Premiums, 50*l.* and 25*l.* Assessor, Mr. Jonathan Simpson, F.R.I.B.A. Particulars from Messrs. Fielding & Fernihough, 7, Fold-street, Bolton.

JANUARY 6. — **Stafford.** — PUBLIC LIBRARY.— The Stafford Corporation invite designs for a Public Library. Mr. Henry T. Hare, F.R.I.B.A., assessor. Second and third premiums of twenty and forty guineas. Deposit, 1*l.* Particulars from Mr. W. Plant, A.M.Inst.C.E.

JANUARY 8.—**Banbury.**—WORKMEN'S DWELLINGS.—The Banbury T.C. invite designs for workmen's dwellings. See advertisement in issue of December 8 for further particulars, and Competition News, page 8.

JANUARY 9.—**Magherafelt.**—TECHNICAL SCHOOL. —Particulars from Mr. W. D. Cousins, County Technical Office, Court-house, Coleraine.

JANUARY 9.—**Spennymoor.**—PUBLIC HALL, ETC.—The Spennymoor U.D.C. invite competitive plans and designs for a public hall, market, and offices, etc. Three premiums are offered. See advertisement in issue of December 1 for further particulars.

JANUARY 28.—**Buzau, Roumania.**—TRAINING COLLEGE (16,000*l.*).—Premiums 200*l.*, 40*l.*, 20*l.* Particulars from the Ministère des Cultes et de l'Instruction Publique, Bucharest.

JANUARY 29. - **Montevideo.** - Government palace (premiums, 2,125*l.* and 850*l.*) and town improvement scheme (premiums, 1,060*l.*, 640*l.*, and 425*l.*). Conditions may be seen at the Board of Trade, 73, Basinghall-street, E.C.

JANUARY 31. — **Australia.** — DESIGNS FOR FEDERAL CAPITAL CITY.—The Government of the Commonwealth of Australia invite competitive designs for the laying out of this Federal capital city. See advertisement in issue of September 1 for further particulars. See also page 508, November 3.

FEBRUARY 3.—**Bolton.**—NURSES' HOME AT THE INFIRMARY.—Premiums of 30*l.*, 20*l.*, and 10*l.* Assessor, Mr. John B. Cass, F.R.I.B.A.

* FEBRUARY 15.—**Winnipeg.**—NEW PARLIAMENT BUILDINGS.—The Government of Manitoba invite competitive drawings for new Parliament buildings. See advertisement in this issue and Competition News, page 8, for further particulars.

FEBRUARY 17.—**London, E.C.** -NEW OFFICES — The Port of London Authority invite preliminary sketch designs for new head offices in Trinity-square, and for laying out remainder of land as a building site. See advertisement in issue of November 24 for further particulars

* FEBRUARY 17. -**York.** -SCHOOL.—The York Education Committee invite competitive designs for a public elementary school. See advertisement in this issue for further particulars.

MARCH 15. — **Drammen, Norway.** -RAILWAY-STATION.—Particulars from the Norges Statsbaner, Christiania.

* MARCH 15.—**Prestatyn, North Wales.**—LAYING-OUT ESTATE.—Lord Aberconway and the Trustees of the Prestatyn Estate invite designs for laying-out of the estate. Three premiums are offered. Particulars from 33, Henrietta-street, W.C. See advertisement in this issue for further particulars.

* MARCH 16. -**Harrow.**—PUBLIC OFFICES.—The Harrow-on-the-Hill U.D.C. invite tenders for the enlargement of and alterations to their Public Offices. See advertisement in this issue for further particulars.

MAY 1.—Society of Architects' Travelling Studentship. Design for a Town Hall. 25*l.* and medal.

JULY 1. — **Dusseldorf.** — A plan for the extension of the City of Dusseldorf. Premiums of 1,000*l.* to 375*l.* Conditions on application to the Chief Burgomaster, Dusseldorf. A translation appeared on page 365, September 29.

NO DATE.—**Edinburgh.**—MEMORIAL TO KING EDWARD.—Limited.

NO DATE.—**Jordanhill, Glasgow.**—PROPOSED TRAINING COLLEGE.—Limited to six firms, named in Competition News, December 1, 1911, page 635.

Contracts.

BUILDING.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in.

JANUARY 5.—**Wellingborough.**—SCHOOL, ETC.—Erection of new juniors' school and boarding-house, and new intermediate school. Architects, Messrs. Talbot Brown & Fisher, Burysteed, Wellingborough. Deposit of 10s.

JANUARY 6.—**Berwick-upon-Tweed.**—ALTERATIONS. For alterations to the old infant school in College-place. Plans and specifications with the architects, Messrs. Gray & Boyd, 2, Ivy-place, Berwick-upon-Tweed.

JANUARY 6.—**Camborne.**- SCHOOL.—For additions and alterations to the Camborne Roskear Council School. Plan and specification with Mr. S. Hill, architect, Green-lane, Redruth.

JANUARY 6.—**Chesterfield.**—ALTERATIONS.—For For alterations and improvements to the Council school. Plan and specification from Mr. S. Hill, Architect to the Committee, Green-lane, Redruth.

JANARY 6. — **Chesterfield.**—ALTERATIONS. For alterations to Council-chamber, etc. Mr. Jno. Middleton, Town Clerk.

JANUARY 6.—**St. Minver.**—HOUSE, ETC.—Erection of a master's house, and making improvements and additions to school buildings, offices, and playground at the school. Plans and specification with Mr. B. C. Andrew, Architect to the Committee, Biddick's-court, St. Austell.

JANUARY 8. **London.** KIOSK. Erection of a kiosk at Primrose-hill, Regent's Park. Drawings, specifications, and form of contract with Mr. G. J. T. Reavell, H.M. Office of Works, etc., Storey's-gate, London, S.W. Deposit of 1*l.* 1s. for quantities.

JANUARY 8. **Morley.**—RESIDENCES.—Erection of two residences, Texas-street. Plans and specifications seen, and quantities from Mr. T. A. Buttery, Lic.R.I.B.A., architect, Queen-street, Morley.

JANUARY 8. -**Whitley.** CEMETERY.—Completion of laying out and draining of new cemetery at Hartley, and construction of 18-in. cast-iron sea outfall sewer. Plans and specification seen, and quantities and forms of tender from Mr A. J. Rousell, A.M.Inst.C.E., Surveyor, Council Offices, Whitley Bay.

JANUARY 8. -**York.** ENTRANCE —For erection of a side entrance at the Theatre Royal, York. Plans seen, and specification and quantities from Mr. F. W. Spurr, City Engineer, Guildhall, York. Deposit of 1*l.* 1s.

JANUARY 9. - **Cheltenham.**—BUILDINGS.—The Great Western Railway invites tenders for the erection of station buildings in timber at the racecourse. Plans and specification seen, and forms of tender and quantities from the Engineer at Gloucester Station.

JANUARY 9. — **Newcastle-on-Tyne.** — GREENHOUSE, ETC. -Erection of a greenhouse and hot frames at the Walker park. Specification and a form of tender, and the drawings and general conditions of contract, from the City Engineer, Town Hall. Deposit of 1*l.* 1s.

JANUARY 10.—**Kirkmichael.** -ADDITION.—For addition to school. Plans and specifications with Mr. L. Falconer, architect, Blairgowrie.

JANUARY 10.—**London.** REPAIRS, ETC.—For alterations and repairs to the premises, No. 120, King-street, Hammersmith. Plans seen, and specification and quantities from Mr. H. Mair, Borough Surveyor, Town Hall, Hammersmith, W.

JANUARY 10.—**Macclesfield.** -ADDITIONS.—For alterations and additions to Alderley Edge Council School. Plans and specifications with Mr. H. Beswick, F.R.I.B.A., County Architect, Newgate-street, Chester. Quantities on deposit of 1*l.*

JANUARY 10.—**Morley.**—GARAGE.—For erection of motor garage in Queen-street. Plans and specifications seen, and quantities from Mr. T. A. Buttery, Lic.R.I.B.A., architect, Queen-street, Morley.

JANUARY 11.—**Ashby-de-la-Zouch.**—HOLDINGS. -Erection of four small holdings, Boundary, near Ashby-de-la-Zouch. Drawings from Mr. M. Hunter, A.M.Inst.C.E., surveyor, Bridge-street, Belper. Quantities on deposit of 1*l.* 1s.

JANUARY 11. — **Kendal.** — ALTERATIONS.—For alterations to vagrant wards at the Workhouse. Plans, specifications, and quantities from Mr. Stephen Shaw, F.R.I.B.A., architect, Kendal.

* JANUARY 11.—**London, N.**—ALTERATIONS, ETC. —The St. Mary Islington Guardians invite tenders for certain alterations, etc., at Receiving Homes, Hornsey-rise, N. See advertisement in this issue for further particulars.

JANUARY 11. — **Newbridge.** — CHAPEL, ETC.— Erection of a chapel, schoolroom, and class-rooms. Plans and specifications with Mr. R. L. Roberts, M.S.A., Abercarn.

JANUARY 11.—**Pentrebach.**—DWELLINGS.—Erection of forty-eight workmen's dwellings and contingent works at Pentrebach, Merthyr Tydfil. Plans, and forms of tender, and specification from the Borough Surveyor, Town Hall, Merthyr Tydfil. Deposit of 2*l.* 2s.

JANUARY 12.— **Hinckley.** — EXTENSIONS.—For extension of Hinckley Post-Office. Drawings, specification, and a copy of the conditions and form of contract with the Postmaster, Hinckley Post-Office. Quantities and forms of tender on deposit of 1*l.* 1s., from the Secretary, H.M. Office of Works, etc., Storey's-gate, London, S.W.

JANUARY 12.—**Workington.**—POST-OFFICE.— Erection of new post-office. Drawings, specification, and form of contract with the Postmaster at Workington Post-Office. Quantities and forms of tender, on deposit of 1*l.* 1s., from the Secretary, H.M. Office of Works, etc., Storey's-gate, London, S.W.

JANUARY 13. **Melksham.**—DISPOSAL WORKS.— For construction of disposal works, consisting of balancing tanks, storm-water tanks, Dortmund tanks, filters, pumping station, and other works. Specifications, quantities, and form of tender from the Engineer, Mr. A. E. Adams, M.Inst.C.E.I., A.M.Inst M.E., High-street, Chippenham, on deposit of 2*l.* 3s.

JANUARY 15.—**Chatham.**—NEW BLOCKS. For demolition of water tower, and erection of new administrative, operation, and ward blocks and boiler-house, at the Military Hospital, Fort Pitt. LEGAL COLUMN—*Continued from page* 21.

As we have explained before, under the Act of 1906, where the consequences of the accident are serious the defence of serious and wilful misconduct is of no avail to the employer, and the only question that can be raised is whether the accident arose "out of and in the course of" the employment.

The County Court Judge had awarded the dependants of the boy compensation, but the majority of the Court of Appeal held that the accident did not arise out of the employment, and the House of Lords have affirmed this judgment. The Lord Chancellor, however, expressed some hesitation. He is reported as having said:—"You cannot say that this boy was employed to be prudent and cautious, and deny him compensation if by reason of his want of prudence and caution he meets with accidental injury. Nor can you deny him compensation on the ground only that he was injured through breaking rules. But if the thing he does imprudently or disobediently is different in kind from anything he was required or expected to do, and also is put outside the range of his service by a genuine prohibition, then I should say that the accidental injury did not arise out of his employment."

Another case of the same description, Pope *v.* Hill's Plymouth Company, Ltd., the facts of which will be found in the *Builder*, July 9, 1910, has also recently been confirmed on appeal by the House of Lords. A rough test often applied has been furnished by answering the question, whether, when the accident occurred, the workman was or was not furthering his employer's business? This seems to provide a working rule, but since the passing of the Act of 1906 the law has been very unsatisfactory. Disobedience to rules should in every case be penalised—rules are for the protection of the workman and his fellow-workmen—and to excuse a workman for his own serious and wilful misconduct and to overlook serious disobedience to rules is to weaken discipline and to render the working of dangerous undertakings more perilous.

LONDON COUNCILS.

Acton.—200*l.* has been voted to the work of repairing footpaths in parts of the district.

Croydon (County).—Application is to be made by the County Council to the Local Government Board for sanction to a loan of 1,050*l.* for carrying out the work of erecting a handicraft centre at Boston-road. Double tramway track is to be substituted for a portion of the existing interlacing line and the existing double track is to be centralised at North End, at an estimated cost of 950*l.* The tender of Mr. William Hall, 23, Colvin-road, Thornton Heath, has been accepted, at 1,755*l.*, for repairing a portion of Tylecroft-road, as has also the tender of Messrs. William Smith & Sons, London-road, Croydon, at 2,449*l.*, for the erection of a disinfecting station and cottage in Factory-lane. A site is to be purchased in Brigstock-road, at a cost not to exceed 800*l.*, for the erection of a fire-station. The following plans have been passed:—Messrs. Higgins & Thomerson, 87, Finsbury-pavement, E.C., six houses, Macclesfield-road; Mr. H. Carter Pegg, London-road, school, The Crescent; Mr. G. W. Wood, 8, Chartham-road, six houses, Chartham-road; Mr. J. W. Hall, 315, Portland-road, eighteen houses, Alderton-road; Mr. G. Poulton, 11, Westbrook-road, six houses, Ardfern-avenue; Stroud Green House, Ltd., 30*a*, George-street, eight houses, Blackhorse-lane.

Croydon (Rural).—The tender of Mr. E. Yewen, Croydon, has been accepted at 849*l.* for making-up Malcolm-road, Beddington, also at 369*l.* and 599*l.* for the drainage and sewerage respectively of Downscourt-road, Coulsdon. They have further accepted the tender of Messrs. E. & E. Iles, at 842*l.* and 955*l.*, for making-up Bencombe-road and Burcott-road, Coulsdon, respectively.

Heston and Isleworth.—Plans have been passed as follows:—Messrs. Yetts, Sturdy, & Usher, alterations to Nag's Head, King's Head, and Lion and Lamb, High-street, Hounslow; Messrs. Nowell, Parr, & Kates, alterations to White Bear, Kingsley road, Hounslow; Messrs. Smee & Houchin, Baptist Chapel, Staines-road, Hounslow; Mr. George Gear, Baptist Chapel, Inverness-road, Hounslow. Plans have been lodged by Messrs. Messom & Sons for additions to Lodge, Nazareth House, Isleworth.

Hornsey.—Tenders are being invited for the erection of new workmen's dwellings at Highgate, also for the erection of a sanitary depôt. The work of constructing a connecting footpath from the boundary of the Midhurst Estate to Woodside-avenue, Muswell-hill is to be proceeded with at an estimated cost of 370*l.* At the last meeting of the Council the report of the Public Health and Hospital Committee, recommending the erection, as soon as possible, of a new steam laundry block and disinfecting chamber at the Isolation Hospital, at an estimated cost of 4,700*l.*, was referred back to the Committee. Extensions of plant are to be carried out at the electricity works at an estimated cost of 8,941*l.* The following plans have been passed:—Mr. G. Taft, Hornsey, three houses, Rokesly-avenue; Mr. A. B. Dewdney, alterations and additions to "Rushacre," Colney Hatch-lane.

Leyton.—Subject to a contribution from the Essex County Council, the footpath of Chestnut Walk is to be paved at an estimated cost of 130*l.* The Surveyor has been instructed to raise the kerb in Church-road and pave where necessary, providing paved channels, and making-up the roadway with tarviated granite at an estimated cost of 1,030*l.* The following plans have been passed:—Mr. J. W. Wyles, twenty houses, Pretoria-road; Messrs. W. A. & J. A. Tharpe, alterations to Cedar Lawn, Knotts Green; Mr. A. Radcliffe, eight houses, Canterbury-road. Plans have been lodged by Messrs. R. W. & I. Puddicombe for alterations to Nos. 668-690, High road, Leytonstone.

Merton.—The Surveyor has been instructed to prepare a scheme and estimate showing the widening of that portion of Kingston-road fronting the whole of the South Wimbledon, Merton, and District Hospital Committee's property and Blakesley in order that early application might be made to the Road Board for a grant in connexion therewith.

Staines.—The Board of Guardians have appointed Mr. G. W. Manning engineer in connexion with the sewering of the workhouse, at an inclusive fee of 55*l.* The system of sewers connecting up with the Staines Urban outfall works has been adopted, and application is to be made to the Local Government Board for sanction to a loan of 1,620*l.*, the estimated cost of the work.

FOREIGN AND COLONIAL.

Hotel, Manitoba.

H.M. Trade Commissioner reports that a large hotel is about to be constructed in the Province of Manitoba. Further particulars may be obtained by British contractors and manufacturers on application to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall street, London, E.C.

Labour in the Colonies.

From the January circulars of the Emigrants' Information Office (34, Broadway, Westminster, S.W.) we learn that in Sydney, New South Wales, and suburbs the building and iron trades and factory workers have been well employed; and stonemasons, bricklayers, plasterers, carpenters and joiners, and able-bodied labourers are in great demand. The Royal Commission on the shortage of labour in New South Wales has reported that immediate need exists for artisans in Sydney.—In Victoria employment continues to be very good; and assisted passages are now being granted to mechanics. There is a large demand for generally useful men, bricklayers, carpenters, plasterers, boilermakers, blacksmiths, moulders, engine fitters, plumbers, sheet metal workers, and furniture makers.—South Australia grants cheap passages to emigrants. Work of nearly all kinds is plentiful, and there is good demand for bricklayers, masons, plasterers, carpenters, first-class painters, plumbers, boilermakers, ironworkers, moulders, coppersmiths, and, in country districts, unskilled labourers.—The Queenslands Government grants nominated passages to emigrants. The general demand for labour has considerably increased, and wages have risen, on account of the flourishing condition of the agricultural industry and the great extension of railway construction. There has been plenty of employment for most kinds of mechanics. There is a good demand for strong men for railway construction.—Western Australia offers free and reduced passages to emigrants, and free grants of 160 acres.—In New Zealand the demand for mechanics is not so general, but skilled men, such as plumbers, have little difficulty in finding work.—In the Union of South Africa employment in the building trades in Johannesburg continues brisk. In Pretoria the state of trade is fair in building. In the Orange Free State a demand for builders exists at Bethlehem. In the Cape there are openings at Cape Town for a few masons in the stone-dressing industry.

TRADE CATALOGUES.

We have received from the Limmer Asphalte Paving Company, Ltd., London, S.W., a copy of a new book on asphalting, written by the company's Managing Director, Mr. H. Blake. The book, which embodies the results of forty years' experience in asphalting in all its various departments, will be found of considerable interest to architects, engineers, and surveyors who require information in connexion with these matters. The book deals with all the latest forms of asphaltic pavings, and is illustrated with views of the company's factories, mines, works, etc. It gives a good account of the manufacture and uses of the company's mineral rock mastic asphalts, compressed asphalt, lithofalt, and lithomac pavings, insulating bituments, etc.; and we have no doubt it will be of value to architects and others.

Mr. John Tann, of Newgate-street, London, E.C., forwards us his latest catalogue of his well-known "Anchor Reliance" safes, strong-rooms, strong room doors, etc. The firm, which has over forty years' experience in safe-making, patented as far back as 1843 the moisture-generating fireproof composition which in one form or another has become an inseparable necessity of all modern safe design. In 1865 the compound drill-proof unbreakable steel plate was originated by Mr. John Tann. This consists of alternate layers of high carbon steel and tough mild steel, the brittleness of the first being corrected by the toughness of the last, and the whole forming a composition which the test of years has proved to be immune from the burglar's drill. The latest innovation is a device for protection against the oxy-acetylene blowpipe, the newest and most powerful steel-cutting agent. Each "Anchor Reliance" safe is formed from a single plate, bent solid at all twelve corners, the back being riveted to the inside face of the back flange. No higher commendation is needed than the fact that a John Tann safe was selected to have the crown jewels of England on board the *Medina* during her voyage to India with the King and Queen. The firm manufacture complete strong rooms, party wall or "Insurance" doors, and safe locks and accessories of all descriptions. It is claimed that no safe made by Mr. John Tann has ever yet succumbed to fire or thief.

We have received from Messrs. Stanley Jones & Co., Ltd., shopfitters, 8, Gray's Inn-road Holborn, W.C., an illustrated brochure showing contracts recently carried out by the firm. These contracts are representative of various trades, and indicate the ability of the firm to carry out work of this kind. Messrs. Jones's model factory at Shepherd's Bush covers over two acres of ground.

30,357 of 1910.—George Bailey: Boilers for kitchen ranges and the like.

TO CORRESPONDENTS.

NOTE.—All communications with respect to literary and artistic matters should be addressed to "THE EDITOR" (and not to any person by name); those relating to advertisements and other exclusively business matters should be addressed to "THE PUBLISHER," and *not* to the Editor.

All communications must be authenticated by the name and address of the sender, whether for publication or not. No notice can be taken of anonymous communications.

The responsibility of signed articles, letters, and papers read at meetings rests, of course, with the authors.

We cannot undertake to return rejected communications; and the Editor cannot be responsible for drawings, photographs, manuscripts, or other documents, or for models or samples sent to or left at this office, unless he has specially asked for them.

All drawings sent to or left at this office for consideration should bear the owner's name and address either the face or back of the drawing. Delay and inconvenience may result from inattention to this.

Any commission to a contributor to write an article, or to execute or lend a drawing for publication, is given subject to the approval of the article or drawing, when received, by the Editor, who retains the right to reject it if unsatisfactory. The receipt by the author of a proof of an article in type does not necessarily imply its acceptance.

N.B.—Illustrations of the First Premiated Design in any important architectural competition will always be accepted for publication by the Editor, whether they have been formally asked for or not.

PRICES CURRENT OF MATERIALS.

* Our aim in this list is to give, as far as possible, the average prices of materials, not necessarily the lowest. Quality and quantity obviously affect prices—a fact which should be remembered by those who make use of this information.

THE ARCHITECTURAL SOCIETIES OF FRANCE:

I.—L'ACADÉMIE ROYALE D'ARCHITECTURE; LA SOCIÉTÉ CENTRALE DES ARCHITECTES FRANÇAIS.

IN fulfilment of a promise which we made to our readers in a recent article, we propose to devote a little space in the present and two subsequent issues to a brief review of the constitution and organisation of some of the leading architectural societies which have their central offices in Paris. It is not uninteresting to cast our eyes across the Channel in this matter, for it is to France that we must look for the parent of all architectural corporate bodies, and for a hierarchy of organised architectural effort established in advance of any other country. Since the foundation of l'Académie Royale d'Architecture by Colbert, under the reign of Louis XIV., in 1671, the continuity has been preserved until the present time, with the exception of the stormy years of the Revolution, when this society, with other established institutions, was suppressed by a decree of the National Convention. It would be beside our present purpose to pay more than a passing tribute to this parent association, which, with François Blondel as its first Director and Professor, formulated an organisation which has provided the basis of initial procedure for all subsequent architectural societies. L'Académie Royale was always numerically a small body. At first consisting of six members, chosen by the King, this number was increased (in 1699) to seventeen, with a professor and a secretary. Subsequently the Académie, being granted letters patent, became entitled to elect its own members (in 1717), who were then increased to twenty-four, divided into two classes, of which the first consisted of ten architects, a professor, and a secretary. These numbers were from time to time increased, but never reached a larger total than sixty, of which twenty-eight were either Honorary Academicians or corresponding members. Meetings were held twice a week; on Tuesdays to hear the lectures and receive instruction from Professor Blondel; on Thursdays to discuss matters either of immediate practical importance, or of an abstract kind connected with architectural art and history. The records of the work and studies of the Académie, contained in ten volumes of MS., consisting of 5,000 folio pages, are preserved at the Institut de France. Only occasional extracts from these papers have been published. Among other things it is interesting to note that the foundation of the Grand Prix de Rome was established under the patronage of l'Académie Royale in 1720, Antoine Desgodetz being the Professor at the time, the name of the Director, or President, not being ascertainable at the moment of our research. Inclusion within the ranks of the Académie conferred great distinction, just as the attainments of its various members brought distinction to the corporate body. Until its extermination by what Professor Blomfield calls the brutal pedantry of the decrees of Republican Government in 1793, l'Académie

Royale occupied a powerful, even brilliant position. Its history covers a period of architectural achievement which the recent publications of Mr. Blomfield and Mr. Ward have assisted to elucidate in works which are an ornament to British scholarship. Its membership was small, but in artistic associations it is the quality of the unit which gives strength to the whole bundle. The methods of architectural practice have changed both in France and elsewhere since the days of Louis XIV., and the foundation of l'Académie Royale, although Blondel and his *confrères* were largely protagonists of the practising architect as we know him to-day. The title of architect was indeed just then coming into vogue, replacing that of master of the works.

To descend, however, to later times, there are at present two architectural societies of power and influence established in the French capital; and there is also l'Association Provinciale, an influential organisation whose administrative offices are at Versailles. To a certain extent the efforts of these various societies may at moments clash, although each is established on a logical basis independent of the other. In addition to the three Parisian societies -that is to say, the Société Centrale des Architectes Français, the Association des Architectes Diplômés par le Gouvernement, and l'Association Provinciale des Architectes Français—there are some thirty-four provincial societies, the majority of which are federated with the Association Provinciale, but not all; but all of which are *en correspondance* with the Société Centrale. The Société Centrale is the oldest of these bodies; it claims more or less to carry on the tradition of the old Académie Royale, and is jealous of its power and the prestige of its members; the Société des Architectes Diplômés par le Gouvernement was founded in 1877, and its membership is restricted to those who have obtained the architectural diploma at l'École Nationale et Spéciale des Beaux-Arts; the Association Provinciale does not consist of individual members, but of numerous federated societies, from whose members its President and other officers are elected.

The Société Centrale des Architectes was founded at a meeting of architects on June 9, 1840, convened to promote means by which common action might be taken to remedy the condition of affairs resulting from the absence of any available testimony to distinguish an architect from the man who assumed the title without possessing adequate qualifications. On November 15 following—the meeting aforesaid having drawn up a report—it was decided that a Society of Architects should be formed having for its principal objects:—

1. To seek to unite and bring together at a common centre architects who possess the testimonies and the necessary guarantees of instruction, experience, capacity, and morality.

2. To exercise over its members a power of control and discipline.

3. To concern itself with questions of art, of practice, of mutual agreement, of law and administration, which are of importance to architecture and to architects.

The Société Centrale was thus founded, beginning with about 100 members, and held its first general meeting under the Presidency of M. Pierre Baltard on January 24, 1841. The two following years were occupied in the elaboration of statutes and rules, and in taking the necessary steps to establish its legal existence. On May 27, 1843, the Society, having then doubled its membership, received from the Ministry of the Interior the necessary legal confirmation. From that time it proceeded to issue its bulletins, so as to keep its scattered members in touch with its affairs. In 1888 the well-known weekly journal, *l'Architecture*, was established. The Society is composed of titular members, honorary members, corresponding members, and free Associates (*d'associés libres*). The latter class are chosen from persons who, without being architects, encourage or patronise the arts, or the sciences, or institutions which have some useful connexion with the profession of an architect. But members of this class, as well as the corresponding members, are not entitled to take any part in the elections or the administration of the Society.

Briefly put, then, we have here a constitution and an organisation incorporated pretty much after the manner of the Royal Institute of British Architects. And the comparison may be carried further when we proceed to consider the formulation of principles of professional practice. These are elaborated with truly Gallic precision in *les devoirs professionnels*, under the following heads:—(1) The duty of the architect towards himself; (2) towards his professional brethren; (3) towards his clients; and (4) towards his contractors or builders. The professional and moral obligations which have always been the rule of conduct and honour of architects "*véritablement digne de ce nom*" are put into plain terms. The conditions of membership are registered unmistakably, so as to guide the public, the architect's clients, and governing authorities, with regard to what they have a right to expect from reputable architects in the honourable exercise of their profession. And, with the characteristic respect of the French for clearness of thought, the propagation of these principles is prefaced by the definition of an architect taken from the *Dictionnaire de l'Académie Française*, which is a little difficult to translate because it applies terms of general applicability to artistic work, but which are not usual in English as applied to architecture. But let us take the definition as it stands. An architect, then is "the artist who composes buildings, arranges their various parts and decoration, controls their execution, and verifies the accounts." This is, however, only a rough paraphrase of the original, which reads as follows:—"L'artiste qui compose les édifices, en détermine les proportions, les distributions, les décorations, les fait exécuter sous ses ordres et en règle les depenses." And further, to elucidate the position, the programme continues:—"Consequently an architect is at once an artist and a professional man," which in its frank recognition of the various kind of duties which devolve upon a man responsible for the creation and carrying out of building prevents any misconception as to his status in the social economy. For the rest, the obligations which are defined are those which govern English practice:—An architect must not advertise, receive secret commissions, be concerned in any trade transactions connected with his work, and so on.

It would require a special article to deal with the various Boards and Committees which organise and give effect to the general work of the Société Centrale, or to the labours of the special committees which deal with technical matters, with materials and their application, with law, sanitation, and other subjects always more or less in a state of flux or evolution, likely to provide cause for useful discussion.

The Société Centrale is the most influential architectural association in France. As we have said, it has largely continued in the tradition of its great predecessor, l'Académie Royale, while extending its membership and bringing its scale of operations more into line with the democratic expression of a later age. Admission to its ranks is controlled by a standard of honourable practice and achievement. The history of the Académie Royale during its century and a quarter of existence was tranquil; its influence perhaps more powerful than that of any subsequent society; its membership extremely limited. Under present conditions such a limited association is not desirable, and could not be considered adequately representative of the increasing number of those who are engaged in the design and carrying out of building work in France. A society on a broader basis was both necessary and inevitable, but the membership of the Société Centrale is by no means promiscuous or all-embracing. The actual numbers are:—Membres résidants, 339; non-résidants, 138 -total 577.

We shall deal in our next article with the constitution and organisation of the Société des Architectes Diplômés par le Gouvernement, an organisation of growing importance, which brings into collective operation a group of architects united by a system of scholastic training and examination.

THE POLICY OF THE R.I.B.A.

TIME brings its revenges. Who would have anticipated, some five years back, when the younger members of the Institute were lashing the governing body into action over the Registration question, that in the few brief years these same juniors would be putting on the brake and pulling up the Council team on the ground of its attempting to force the pace and pledge itself too definitely to a Registration Bill?

Youth on the side of caution and revered age sitting rebuked for rashness is such an unusual state of affairs that one may well hold one's breath and wonder how such a position has come about; but, to be candid, the expressions youth and age in this case are purely symbolic, for the protagonists of the Government and the Opposition are not to be

istinguished in the matter of years. It is herely in the popular conception that the wo classes have been thus differentiated; n reality the average age of the member f Council is much the same as that of is critic, and we are not so sure that he movement to hold the Council in heck does not owe more to those who would, a year or two back, have been egarded as reactionary, than to those who claim to belong to the "advanced" ection.

At all events, whatever fundamental ifferences may exist in the inner mental rocesses of those composing these two roups, they have proved themselves n accord on the question at present ppermost in the R.I.B.A., and as a result he Council must needs adopt more radual methods in their progress towards ulfilling the instructions of their constituents in obtaining a legal qualification or architects.

While many important factors in the ase do not seem, so far, to have been resented to those outside the joint ounsels of the R.I.B.A. and the Society f Architects, we can naturally understand that it is difficult to disclose these without a risk of prejudicing negotiations hat may be regarded as still in progress. t is easy to see that without these disclosures the case of the "Opposition" nay appear inconclusive in some particulars. This is, however, of slight importance, as it seems to have been brought forward on the fairest possible lines of broad principle, with all petty details omitted as being of little moment at the present time.

The principle enunciated is this: That the R.I.B.A. would be unwise to pledge itself to the form a Registration Bill should take, contenting itself with an undertaking that a Registration Bill should be promoted. Now, as a sketch draft of such a Bill formed part of the terms in the proposed amalgamation with the Society, it becomes a question as to whether such an amalgamation can be carried through without it, and it remains to be seen whether the Society will be content with an agreement which leaves the details of a Registration Bill to be threshed out at a future date.

We congratulate the Institute on the way in which the pros and cons were placed before the meeting on Monday last. The deliberate abandonment of all the factors not essential to the main question at issue, but which might none the less exercise considerable influence on the relative position of individual members, is a pleasant feature in such a debate, in which minor issues might have been exploited to obscure the main principles involved.

The Council can have no cause for complaint against its critics, who uniformly dealt with its efforts in a sympathetic spirit, and solely with regard to the general line of policy best calculated to maintain the position of the Institute on a firm basis.

MEMORABLE LONDON HOUSES.

Commemorative tablets will shortly be affixed on No. 32, Craven-street, Strand, the home in 1827 of Heine, and No. 36, Onslow-square, S.W. (on the south side of the square, near Sumner-terrace), where Thackeray lived in 1853-62, before he built his house on Palace-green, Kensington.

NOTES.

The Lay Press and Architecture.

We are always glad to welcome the criticism of the lay press on matters architectural, and an article on "Architecture of 1911," with a sub-title, "Progress in the Rebuilding of London," which appeared a day or two ago in the *Evening Standard and St. James's Gazette* is almost wholly appreciative in its estimation of the year's work. Even when we read such phrases as, "The torch lighted by Inigo Jones in the XVIIth century has never been quite extinguished. It blazed forth in glory, and was a light to the feet of Wren, showing him the path on which to lay out his new London and build its great and abiding glory, Paul's dome (*sic*), which hangs co-equal with the clouds, for ever. Throughout the XVIIIth century the torch burned, only with less lustre"; and so on. Even when we read such phrases we are not dismayed; we are even grateful to our contemporary for discovering that there is such an art as architecture. The writer is hopeful about modern work; he tells us how its scale "has grown or put on, as it were, imperial wings," and he proceeds to illustrate his point by the scale of the new buildings in Regent-street! We shall not refer particularly to the "floors which are embraced by columns," or to the "play of imagination which touches art as with a transforming wand," because these are probably not more foolish than most efforts at appreciation which make for the general good of a cause that matters. And the *Evening Standard* states a truth of inestimable significance when it says that "art patrons change. Princes have forgotten their privileges, and to-day we look for patronage to shopkeepers of wide outlook. It promises to be good for architecture that they are awakening to the fact that building rivalry must enter into their other and more immediate trade competition." Out contemporary talks about scale and imperial wings, but many of the finest buildings of classical times which have come down to us are comparatively small buildings. Greatness of scale is a small matter compared with the balance of parts which one calls proportion and which establishes the rhythm which our critic bless him!—styles "petrified music." Our architectural lapses are accounted for by the same writer by the fact that our best men are engaged in fruitless competitions, and that the bulk of work is given to the men who do not count, with the proviso that "the remedy lies with the public!"

Old Houses at Guildford.

It may be said concerning the demolition of definitely ancient structures to meet the exigencies of modernity that each case must be "judged upon its merits." But unless a guiding principle be established there will always be a tendency in this—and perhaps in any—country to act on unfounded assumptions, usually unavowed or unstated also, and therefore difficult to dismiss. On each occasion, besides the customary protest, the housebreaker is encouraged at the outset by prodigious sighs of regret from the instigators themselves ("What a pity! But needs must . . . . ."); and it would seem as though persons, of whom one would not have thought it, take a subtle pleasure in this delicate form of self-mortification. If appears also that a more positive and quite ferocious emotional delight may be derived from destruction, desecration, and wild laceration of the sensibilities of those too refined to stoop to actual power in matters of this kind. These tendencies, together with mere muddle-headedness, and on the other hand an obstreperous, flaunting of modernity in despite anything that is old, may only be obviated by a clear recognition of the factors involved.

The Case in Point.

In the first place, old buildings have the absolute value of the irreplaceable—a brief tour in Australia or Canada would establish a comprehension of this—and there are all sorts of subsidiary qualities, historic, picturesque, artistic, and—dare we say?—atmospheric, with which a civilised community should not lightly dispense. Against these properties, which are great, of indefinite possessions, there are ranged the needs incident to growth and the aspirations of the present. And it is upon a right estimation and clear balance of these qualities when ranged in opposition that a right decision must be based. *Only when what is old positively and demonstrably throttles the life of to-day may demolition be condoned.* But in the case of the old houses, in the narrow street from the station to the Portsmouth road at Guildford, to quote Mr. G. S. Davies' letter to the *Times* of January 2:

"On the north (the other) side there are houses of no such value which could be removed without anyone regretting them." And, "It is quite admitted that the removal of these houses on the north side presents no difficulty, and entirely meets the need"—a need which is, after all, chiefly that of the transient motor.

The Immurement of Ashes in Church Walls.

A faculty was recently applied for in the Consistory Court of Llandaff Cathedral for the immurement in the wall of a parish church of the cremated remains of a deceased parishioner. The Chancellor stated that this was only the second application of this nature that had ever been made in this country, but on evidence being given that the building of the church would in no way be affected he granted the faculty prayed for. If such applications became very common, and the practice became universal, there would seem ground for apprehension that the structure of churches in populous districts might suffer.

The Wallace Collection.

As Lord Redesdale remarks in a letter to the *Times* of the 4th inst., replying to Mr. Bell's animadversions on the management of Hertford House, "to cover up the beautiful works of art with glass would . . . largely detract from the pleasure and interest afforded by the collection." But is this the only way? He says: "It will not alter the

composition of the air inside the glass, which must, of course, be the same as that outside." By no means "of course"—a simple chemical operation could purify the air inside (remove the harmful ingredients, that is to say) and airtight cases could maintain its condition. The cases would undoubtedly be unpleasant, however. But is not the whole building a "case"? It is heated, if we remember rightly, by hot air. Is not *that* the air which should be purified?

Sootfall. We may refer our readers to some interesting statistics recently published in the *Lancet* as to the sootfall in the Administrative County of London. The experiments were carried on from June, 1910, to May, 1911, at four stations, one in the City area, two in the S.W. district, and one at Sutton, in Surrey. The soot gauges represented an area of 4 sq. ft., and from the city area the deposit calculated for the whole county (117 square miles) represented a sootfall of 76,050 tons. If the gauges in the S.W. district were taken as the basis of computation for the whole area the deposit would average 53,820 tons. The Sutton gauge gave comparatively small deposit. The report will be of interest to architects and builders from a twofold point of view, as the composition of the deposit itself is analysed, and its corrosive influence on building materials must be considered; secondly, the existence of the deposit at all points to faulty combustion and the "domestic hearth" is a considerable offender in this respect.

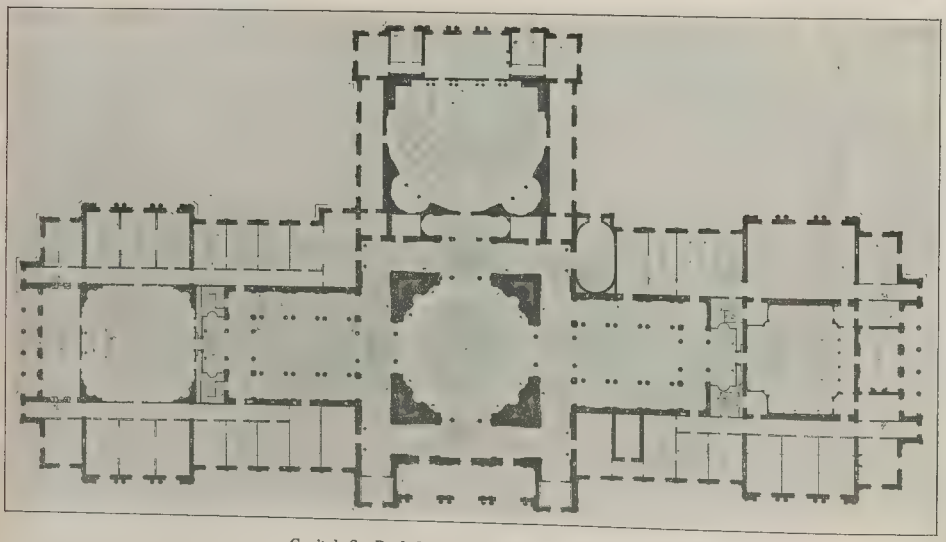
CONTEMPORARY ARCHITECTS AND THEIR WORK:

MR. CASS GILBERT, OF NEW YORK AND ST. PAUL.

Very few American architects have found it consistent with success to establish practice as individuals. "Two heads are better than one" is too generally accepted as a maxim to be easily driven from the mind of the business man who has the giving out of nearly all the work that finds its way to an architect's office. The few that have achieved a very large practice and carried it on with more than ordinary success over a period of many years may be counted on th fingers of one's hand. There were Thomas Walter, Richard Morris Hunt, Henry Hobson Richardson, and Bruce Price, and there still is Mr. Cass Gilbert. There are a few others who have designed a great many good buildings, but none who have ranked among the half-dozen leading men or "firms" over a period of fifteen years or more.

The "artistic," or inventive, scientific, executive, financial, and legal aspects of the modern practice of architecture offer such diversity of problems and such complex solutions that none but a person with great resolution and confidence in his own prowess and versatility can hope to cope with all of them in dealing with even a moderate amount of work; and it is only the man of exceptional mental balance who ever realises such hope.

Four of the five branches of practice mentioned above are beyond the scope of a review, such as this, of an architect's work; and it is only with the artistic, or purely architectural, side of Mr. Gilbert's work that we can attempt to deal. Bearing this in mind it is not unworthy of remark that Mr. Gilbert has, without the aid of a partner to relieve him of the worries of business and care of technical detail, developed a practice which is larger than that of any other single architect in the United States, and, with the exception of one or two of the great "firms" or "associations," such as McKim, Mead, & White and Burnham & Co., it is probably unrivalled in extent. The character of work entrusted to him by the keen business men of America is a sufficient guarantee that his buildings have been well executed, and good judgment displayed in the dispensation of funds. His popularity among his *confrères* is indicated by the numerous offices he has held in professional societies and his frequent nomination as member of jury in competitions. His "all-round" position as an architect and as a man is implied by the fact that he is one of the three architect members of the National Committee of Fine Arts, which corresponds almost to a Ministry in the United States Government.



[*Photo. by Pach.*

Mr. Cass Gilbert.

Mr. Gilbert, though an American, born of American parents, whose four or five generations of antecedents were also American, comes of English stock—from Devonshire, whence came also Sir Humphry, Adrian, the designer of the gardens at Wilton House, Francis, the inventor and the ancestors of Sir John, Sir William, and Alfred, the sculptor, and most of the other distinguished English men of arts and letters bearing the name of Gilbert.

The American branch of the Gilbert family settled at Zanesville, Ohio. The great-grandfather of Cass Gilbert was a colonel in the American Revolutionary Army; the grandfather one of the early graduates of Yale University and the first Mayor of Zanesville; and the father a brigadier-general and Government engineer in the United States Army. Cass Gilbert was named in honour of his great-uncle, Lewis Cass, a former Governor of the State of Michigan, Secretary of State in President Buchanan's Cabinet, Minister to France, and Democratic nominee for President of the United States.

Mr. Gilbert began his training in an architect's office at St. Paul, Minnesota, in

Capitol, St. Paul, Minnesota: Plan of First Floor.
Mr. Cass Gilbert, Architect

876, and about a year later became connected with a railway survey party. In 1878 e entered the Massachusetts Institute of echnology to take a special course in rchitecture under the guidance of the late rofessor Eugene Letang. He won the nstitute Prize for the year 1878-79. The ummer of the following year he was appointed to the Coast Survey and sent to Vest Point, New York, to measure and plot he Point, upon which the National Military Academy is located. In January, 1880, he et out to travel and study in Europe with he intention or finding employment in some f the English offices and spending his acations upon the Continent measuring, rawing, and sketching. He made the equaintance of Street, Waterhouse, Pearson, nd Burges, but, not finding employment, ent on to Paris, where he was attracted by he work of Viollet-le-Duc and the theories f the Ecole des Beaux-Arts. He remained n Paris until the spring, when he went on a our through Italy; on his return from the atter country to France he set out with map nd compass from Lyons with the intention f going over the mountains of Auvergne on ot; but after a few days was arrested on uspicion of being a Russian Nihilist. Fortunately, he carried a letter from Alexander Ramsay to Lowell—who was then United States Minister to Spain—which secured his release; but the incident caused him to change his plans, and after a trip along the Loire he returned to Tours, and thence, by way of England, back to the United States. In September of the same year, 1880, he entered the office of McKim, Mead, & White, shortly after Mr. White had become a partner in that firm. He worked upon the designs for the Newport Casino, Drayton House, and Charles Barney House as White's personal assistant, and jointly with White designed the Tiffany House in New York and the Ross Winans House at Baltimore, and then upon the Villard House with Wells. He was afterwards sent to Baltimore to take charge of the work of McKim, Mead, & White in that city. In December, 1882, he went to St. Paul and formed a partnership with Mr. James Knox Taylor (now Supervising Architect of the United States Treasury Department at Washington), which continued during the next ten years. The partnership was dissolved in 1892 by mutual consent and on the friendliest of understandings, both partners continuing in independent practice. During the partnership Messrs. Gilbert & Taylor designed several houses and a number of small stations and other buildings for the Great Northern and the Northern Pacific Railway Companies, the Dayton Avenue Presbyterian Church, and the Swedenborgian Church; nearly all of which were built in a free, picturesque style, displaying great charm in composition and adaptation of local materials. The Endicott building, erected in 1888, is an architectural work of distinction and refinement. It is an office building, containing an arcade, designed wholly to meet requirements, but in the style of the Italian Renaissance as regards composition and detail. It had an important influence for the betterment of "style" in American architecture, as it was perhaps the earliest building in the country—certainly the West—to confirm the broad, simple character which Wells had imparted to the Villard House, which up to that time had been the best work to the credit of McKim, Mead, & White.

Much of the early work of the latter firm in the Renaissance style, though picturesque, refined in detail, and often admirable in certain features, and, sometimes, as an entire composition, suffered from a picayune prettiness and delicacy—the use of ornament suitable to an interior decoration applied externally, and also to the meaningless introduction of "features," unnecessary to express anything as regards interior

Capitol, St. Paul, Minnesota: Main Stairway.

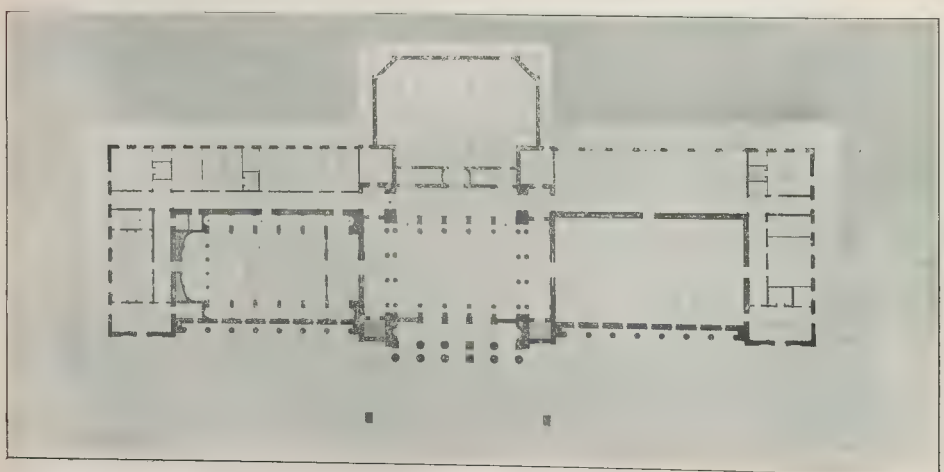
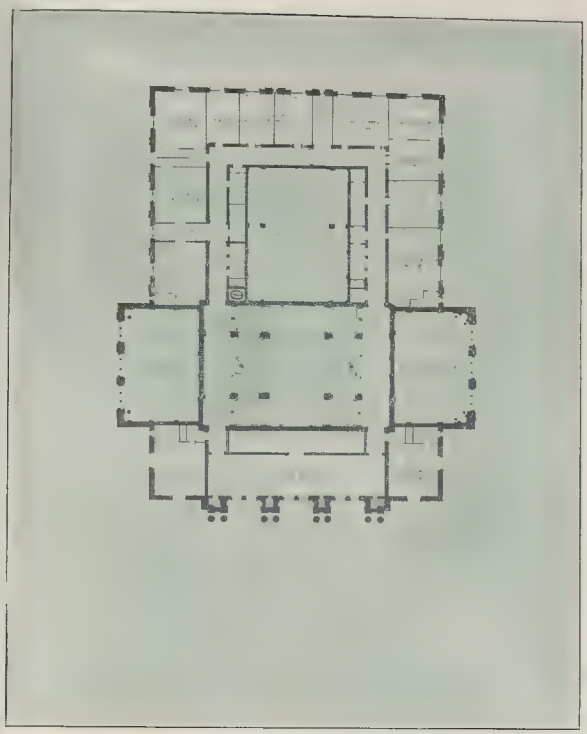
Design for State Library and Supreme Court, Connecticut. By Mr. Cass Gilbert.



arrangement, and distracting as decorative composition, as exemplified in the Century Club, the "Judge," Warren, and Goelet buildings, the Yosemite Apartment House, New York Life building at Kansas City, and several others.

It may be that the Villard House design suggested the adaptation of the Bramantesque detail of the Endicott building—a mere personal surmise, however, on the part of the writer; and, likewise, it is probable that the simplicity of the Endicott building suggested in its turn the straightforward fenestration of the Metropolitan and University Clubs at New York, in which the work of McKim, Mead, & White rose to an uncommonly high plane as architecture, regardless of questions of style. The Endicott building is to-day, as it was when just erected, the most dignified and elegant building for its purpose in America—a work that is remarked upon by every architect who visits St. Paul.



The Shattuck School at Fairbault, Minnesota, and five buildings for the Roman Catholic Seminary at St. Paul, built for Mr. J. J. Hill, were among other important works carried out by Messrs. Gilbert & Taylor before each branched out in independent practice. Mr. Gilbert rose to national prominence in 1896, when he won, in competition, the Minnesota State Capitol building at St. Paul, which was a notable building in many ways. It was one of the earliest, and one of the very few State legislative buildings to be the subject of a proper architectural competition carried to satisfactory completion. The design differed essentially from the prevalent types, most of which were inventions of ex-Army engineers and designed along the lines described by Stevenson's hero, Loudon Dodd, in "The Wrecker." In elevation it differed especially in the adoption of the round, full dome, following the general lines of that of St. Peter's at Rome, but studied to suit the smaller diameter and smaller scale; and, secondly, in the refinement of the architecture itself, which, like the Endicott building and some of Mr. Gilbert's student work, displayed direct derivation from the work of Bramante. The World's Fair of Chicago had just manufactured the "brand new" taste for "classic architecture," and architecture was a popular subject at that time. That fact accounts, in a measure, for the material white marble—of which the whole superstructure, including the dome and lantern, is built.

Throughout, internally as well as externally, the building is as consistent in scale as it is in refinement; it is well studied, workmanlike, and highly skilful in the arrangement of its parts. It is a building that on the whole finds favour with the architectural student and delights the lay mind.

As regards domes generally, and high domes in particular, that is to say, domes with a drum, such as Santa Maria at Florence, should not a feature such as this always be the principal roof of a building or group of buildings? The low dome, such as employed in the Pantheon and in the Library of Columbia University, is usually so employed, and the pleasure one derives from beholding them is due to the obvious natural completion which they make to the form of the structure below, the expression of the great rotunda with mere appendages surrounding it. But as an architectural mass a low dome can be a satisfactory termination only to a low substructure, and when this condition does not obtain—as was the case with the completion of the cathedral at Florence—the elevation of the curve and introduction of the drum becomes, from the æsthetic point of view, necessary; and we cease to look upon the dome simply as a beautiful roof, and think of it as something between a domical roof, the primary object of which arises from necessity, and a steeple which is purely an object of beauty, whether it is or is not used for some other purpose than giving pleasure to the eye. Experiment in art proves that any structure which does not seem stable is wanting in beauty, that it does not satisfy the attentive eye; and the importance of the structure determines the importance of its apparent stability. Thus, when the dome is very small, reduced to a mere ornamental termination to a high drum, so that it becomes "a pepper-box on a table," it is only the stability of the "table" that concerns us; but if it is very large—the dominating mass—it is absolutely necessary that the tower upon which the dome rises, and of which the drum is merely the superstructure, should have visible support extending from the ground. Brunelleschi, Michelangelo, Longhena, and Soufflot recognised the necessity of an octagonal base to give direction to, and, in effect, "buttress" the drums of their domes in order to prevent the drum from appearing to

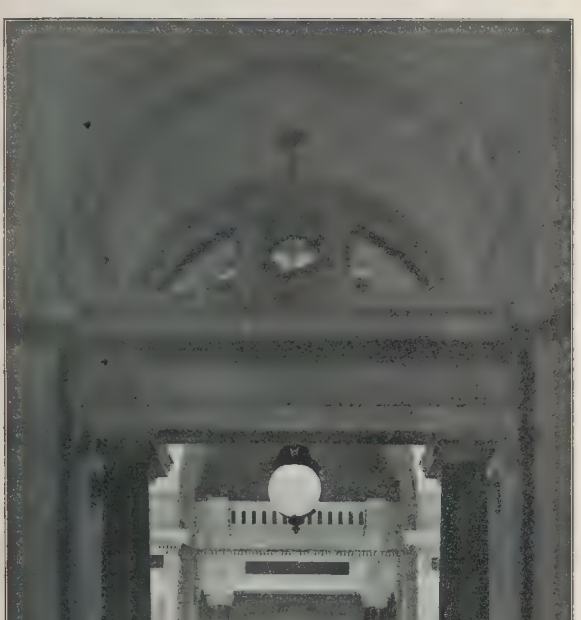
Design for State Library and Supreme Court, Connecticut. By Mr. Cass Gilbert.

Essex County Court House, Newark: Plan of Second Floor.
Mr. Cass Gilbert, Architect.

ınd upon the roof. Wren perhaps felt the ıdency his dome would have to "spin und" when he introduced the solid points 'tween the columns which give it direction ld also cause the drum to appear polygonal. is original design agreed with the others in at he desired to make nave, transepts, and oir mere appendages to a central rotunda. ıother point to note in considering the fect of high domes is the awkward com- nation of lines which results when a diment is placed in front of the dome; the ping lines of the latter uniting with the rves produced by horizontal courses in the me produce effects of distortion, as though e drum of the dome were bent. The ihappy combination of pediment and high me is the usual rather than occasional ror. As instances there are La Superga at ırin; Santa Maria della Salute at Venice; .. Paul's, London; the Pantheon, the Val- -Grace, and the church of the Sorbonne at aris—instances which are due to the esence of the nave.

The American legislative type of building esents a somewhat different problem from ıy of the fine old domed buildings of urope. It consists of two large chambers, ch surrounded by corridors and offices and bbies connecting the groups with a central tunda. Now, had the conditions of com- ətition for the Minnesota Capitol been ideal erhaps a more monumental solution might ave been found in such a plan as Michel- ngelo's for St. Peter's, used as a central ock, and two low structures, such as the de wings of the present design, connected ut not attached to the sides of it. But, of ourse, the conditions were not ideal, and an estimate of cost" had to be submitted. ot only that, but also there is the United tates Capitol to be remembered as the type hat every young American has been brought p to admire and regard as proper effect for a "capitol" building, and the architect of the Minnesota Capitol found himself "up against"

> "The common problem yours, mine, everyone s,
> Is not to fancy what were fair in life
> Provided it could be; but, finding first
> What may be, then find how to make it fair
> Up to our means."



In the west front of the United States Capitol the central feature consists of a colonnade extending between two *avants-corps*, supported on a rusticated basement story. Above the colonnade is a high attic story, and on a plane with the wall behind the colonnade and rising above the attic story is the front face of an octagonal plinth to the circular drum of the big dome above. Seen from the east, or principal front, it appears as a strange excresence above the small pediment over the entrance portico; but on the west front, seen in conjunction with the attic story, it gives the effect of a receding wall plane rising behind the colonnade and forming a plinth to the drum; the two sides of the octagon perpendicular to the front plane continue the line of the inner side of each of the *avants-corps*, and in order that the diagonal sides of the octagon may not project too far and appear to cut off the circular base of the drum the octagon is made the size required by returning short side walls from each of the four principal faces. This device serves to give the dome a direction, enables the eye to locate the central axis of the building, and creates the impression that the outer walls buttress the dome. The same idea has been used by Mr. Gilbert in the Minnesota Capitol; but, whereas the colossal dome of the national Capitol is of such extent in diameter that it actually extends beyond the east wall, Mr. Gilbert has inscribed his dome in a square and kept a corridor all round, the result being the common one of a circular building over a square one; that though the dome seen from any side parallel with the building successfully dominates as the principal feature, from the diagonal view it seems small, and appears, as most of the great examples do, to "stand on the roof"—in this case, fortunately, a flat, plinth-like roof, instead of being the principal roof.

As a whole there is probably no other State legislative building that can be compared to it in general architectural excellence, and as it was constructed promptly and thoroughly it brought the name of Cass Gilbert into the "limelight." Important commissions followed, the Brazer office building at Boston being the first, then came the Broadway Chambers, at the corner of Broadway and Chambers-street, New York, which was completed in 1898. It was one of the first attempts to make "a design" of an office building structure, instead of merely "clothing an iron skeleton." The simile of "a column with base, shaft, and capital" was applied to it to indicate the divisions which represented the original scheme of horizontal divisions, which were to contain shops, offices, and clubrooms respectively. Then in 1899 came the first great competition among architects for a United States

Suffolk Savings Bank, Boston, Mass.
Mr. Cass Gilbert, Architect.

Government building after the passing of the Tarsney Act, which required this method of obtaining designs. The competition was for the great Customs House for New York City. Twenty of the leading architects representing the best talent in the country "had a shot at it." After long deliberation the expert jury, in conformity with instructions from the Government, placed two designs in "first rank," three or four more in "second rank," and so on. After doing so they were directed to examine into existing conditions at the old Custom House and recommend a design for adoption. The designs placed in first rank proved to be by Mr. Cass Gilbert and Messrs. Carrère & Hastings, and the design finally adopted was by Mr. Gilbert. The method adopted by the Government was by no means perfect, and gave rise to hope in several of the competitors for which there was no justification. A great deal of disappointment ensued and unwarrantable aspersions were freely cast upon the members of the jury, who, fortunately, were men whose integrity was above suspicion. At that time Messrs. Carrère & Hastings had, by virtue of their successes in two or three very important competitions, become, for the time being, the leading firm of architects in New York, and Mr. Gilbert was only just beginning to be known in the east, and the announcement of his victory over the leaders was received with amazement, especially by the young "following" of Carrère & Hastings. When the designs were published the surprise was increased, because, looking at the plans and elevations casually, the plans seemed to be pretty much the same, while as to elevations Carrère & Hastings had quite surpassed themselves. The writer was one of a good many who believed, and still believes, that their elevations were better than those submitted by Mr. Gilbert; but as to the plan there could be no question of the vast superiority of Gilbert's scheme. The question then arose, as it often does: Is architecture a matter of plan or of elevation? But the answer became another question: Out of which of these two schemes, taking plans and elevations together, can the best result be obtained? And the answer, by a large majority, confirmed the judgment of the jury. Really great plans are few and far between; they "happen" about ten or fifteen years apart, at different points all over the world, but usually at Paris; but the plan of the New York Custom House is one of the few that have "happened" in America. In the development of the elevations Mr. Gilbert revised them in several respects, but adhered to his original scheme, retaining an order running through three stories, and keeping to the giant scale upon which he began. In the course of his studies he changed from the Doric to the Corinthian Order, eliminated a story from the frieze, and changed the slope of the roof; but the scheme—the design proper—is the same as submitted in the competition, yet it has been so much improved in the study that it is beyond anything his best friends could have hoped for in the result. The writer has, since beginning this article, had the opportunity of seeing the actual building, and is able to subscribe to the opinion of another architect who had told him: "You can get no idea of it either from the drawings or photographs; it has to be seen to realise the scale." As regards scale, it is not as heavy as a photograph leads one to suppose; it is, as its designer expressed his intention to make it, a "kind of elephant among a lot of giraffes"; but a better description of it would be as a great gateway to the luxuries of the world that is what it suggests itself as being.

Custom House, New York: View of Main Hall.
Mr. Cass Gilbert, Architect.

During the year 1900 Mr. Gilbert won in competition the Essex County Court House at Newark, N.J. The other competitors being McKim, Mead, & White; Carrère & Hastings; Babb, Cook, & Willard; and George B. Post & Sons. And, in association with Mr. John Dufois, he won the Union Club of New York against another field of New York's brilliant young talent—Morgan, Barber, Hornbostel, and others. Also, shortly afterwards, the American Insurance Company's building at Newark. He entered an excellent design in the competition for Washington University in St. Louis the plan of which was in a good many respects better than the adopted design.

In 1901 he became one of the members of the Board of Architects of the St. Louis Exposition, and jointly with Mr. C. Howard Walker, of Boston, and the late John M. Carrère, devised the preliminary plan for the Exposition. He made a sketch independently which, in the opinion of the writer, was more practical than that which was adopted, as it conformed better to the contours of the site and brought the principal buildings nearer together. He was appointed architect of the Fine Arts Building, the only permanent building erected in connexion with the Exposition, which he designed in a very dignified Roman classic style; and of the Temporary Buildings for Art Exhibits, which were executed in "staff" and in an adaptation of the Spanish Renaissance style. The Festival Hall became a part of the Fine Arts Group, and Mr. Gilbert designed this to conform to Mr. Masqueray's general scheme for the treatment of the "crowning group" of buildings on the hilltop, which included the Restaurant Pavilions, Colonnade of States, Festival Hall, and the Grand Cascades, all of which formed the "central picture" at the head of the main avenue in the Exposition grounds. The Festival Hall was a masterpiece; it reflected exactly the spirit of the Exposition, and especially the taste of the people of the "middle west" of the United States. Elaborate, gay, enormous in size and scale, it held its own as the *pièce de résistance* at the top of a hill 70 ft. high and between two restaurants which were a quarter-mile apart. In perfect scale with Masqueray's work, it seemed to grow up from and to be a part of the hill upon which it stood.

In 1904 he won the Madison High School, Wisconsin, and the Wisconsin State Capitol; the latter competition, however, miscarried. The same year he was appointed architect of the Suffolk County Savings Bank at Boston, which he executed in very monumental fashion, fitting a semicircular room into an irregular plot of land and making an interesting front with a row of Greek Doric columns.

In 1906 he was commissioned to design the West-street building (see our issue of May 26, 1911), a twenty-four story office building in Lower New York, which is one of the most interesting of that city's high—or comparatively high—commercial buildings. In the detailing of this building, which suggests Gothic in style, he took a special interest, even going so far as to model parts of it himself.

Since the West-street building his commissions have included the St. Louis Public Library, which, as decorative architecture, is even better than the Boston Library by McKim, and as practical planning is a model

future libraries. The St. Louis Library, Library of the University of Texas at stin, and the group plan of the University Minnesota at Minneapolis represent his ncipal successes in competitions during last two or three years. He was com-ssioned in 1909 to complete the Arkansas te Capitol, and has practically rebuilt it. ong his works, which have extended over eriod of some years, are the improvement ns for the city of St. Paul, Minnesota, and city of New Haven, Connecticut, the mer having been developed between the rs 1902 and 1909, the latter having been igned in conjunction with F. L. Olmstead, dscape architect. Among his smaller rks may be noted the Loney Tomb at neateles, N.Y., 1900; the Ward Tomb Newark, 1906; the Ives Library at New ven, 1908; the Industrial Art School at nton, N.J.; and several small stations for New York, New Haven, and Hartford ilroad. His designs for the station at New ven, the McKinley Monument at Canton, Grand Army Memorial at Pittsburg, and Boston Stock Exchange are among the st noteworthy of his studies. The above omplete list indicates the principal works cuted during the course of a career of ich perhaps this record is a mere "first ." At present he is engaged upon the struction of his design for the Woolworth ilding—the highest skyscraper in America e our issue of May 26, 1911).

Though actively engaged at all times, as must have been upon such a great volume work, he has managed to find time to take leading part in the organisation and ministration of societies for the advance-nt of architecture and the allied arts. He was one of the founders of the Architec-al League of New York, and during many ars has been an active member of the iety which formed the nucleus of the ganisation of architectural societies known the Architectural League of America. He s chosen a member of the Jury of Selection the section of Fine Arts of the Columbian position in 1893, and of the Paris Exposi-n of 1900; and as member of the jury upon competitions for the New York Public brary, 1897, and West Point Military ademy, 1903; as member of Jury of Award the section of architecture of the Pan-nerican Exposition at Buffalo. In 1906 he s elected an honorary corresponding mber of the Royal Institute of British chitects. During 1905-6 he served as ce-President of the American Institute of chitects, and was subsequently elected esident, serving two terms from 1907 to 09, and has since been a director. In the ar 1907 he was elected an Associate of the tional Academy of Design, and two years er was made an Academician. The Archi-tural Society of Liverpool University and e Royal Canadian Institute of Architects ve bestowed honorary membership upon n.

He was appointed by President Roosevelt member of the Council of the Fine Arts, ose action in constituting this body was e first official action looking towards vernment control of art works. In June, 10, he was appointed by President Taft a member of the National Commission of ne Arts, which is devoting its energies wards the completion of the L'Infant plan Washington.

THE LONDON ALMANACK, 1912.

The "Calendarium Londinense," produced at he Dial House, Amersham, has for headpiece n etching of the Old Dick Whittington Inn, loth Fair. This almanack is the work roughout of Mr. W. Monk, R.E., and forms n artistic broadsheet. This is the tenth year f publication, and while some of the head-iece etchings of previous years—such as "St. ames's Palace," "Clifford's Inn," "The ower"—have had more definite architectural nterest, the present one shows a fragment of ld London which has considerable charm.

THE ARCHITECTURAL ASSOCIATION:

FIRST SPRING VISIT.

ST. PAUL'S GIRLS' SCHOOL, Hammersmith, was built about ten years ago for the purpose of extending the educational foundation of Dean Colet in the XVIth century. Originally for boys only, increased returns from the endowments in the hands of the Trustees rendered the extension possible. A fine site on the south side of Brook Green and adequate funds produced conditions favourable to the creation of a really satisfactory educational building, and the influence of such a building as Mr. Horsley has produced must be a considerable asset in the formation of character. Mr. Horsley explained that, in planning, it was a chief object to minimise corridor and passage space as much as possible, and in the result this has been so effectively achieved that one main cross-corridor, 14 ft. wide, is practically all that exists, and this is in great contrast to the mean passages so often suffered in similar buildings. Its ample width and admirable architectural treatment make it quite the finest and most distinctive feature of the School. The plan is quite simple in scheme, and is said to work excellently in practice. The main entrance occupies a central position on the front, and conducts directly to the cross-corridor above mentioned, past a porter's office on the left, and a waiting-room communicating with the head mistress's room on the right. Facing the entrance is the central hall, round which are classrooms in two stories directly approached from the hall, those on the upper floor being reached from a gallery boldly bracketed out into the hall. The two main staircases are to right and left of the entrance next the cross-corridor, from which they are approached, the pupils entering at the basement level, where their cloakrooms are situated, and reaching the classroom floors by these staircases without traversing the main entrance. In the basement are also a large dining-hall and kitchen under the classrooms to the left of the hall, and a covered playground in the corresponding position on the right. The gymnasium and swimming-bath (the latter by Mr. Saxon Snell) are detached buildings on either hand, also entered from opposite extremities of the main corridor in the basement. At either end of the ground-floor corridor are lofty one-storied wings containing the science-rooms and library respectively. On the first floor above the centre block are a small cookery school and a number of spare rooms, at present used as music-practice rooms; on the second floor the whole of the front block is occupied by a large art-room. Rooms for the caretaker are in the basement, beneath the science block. The central hall, 80 ft. by 45 ft. and 40 ft. high to the crown of its enriched plaster barrel ceiling, is a very fine room. It is panelled in oak throughout, and the refined design, coupled with excellent workmanship, make this panelling a joy to the eye. The scheme has recently been completed by the installation of a large organ on the platform, with excellent carving in low relief by Mr. Aumonier. The classrooms are admirable in arrangement and lighting, and means are provided for extraction of air to the roof space, whence it is drawn by fans to the central turret for discharge. This turret properly marks the crossing of the two axes of the plan, and contains a domed skylight, which plays no mean part in the design and effective lighting of the cross-corridor and approach to the hall.

In the external treatment of the building Mr. Horsley has hardly been so successful when judged by the high standard of his internal effects. The central block and wings seem not perfectly in scale one with another, and the low relief carvings in the gables of the wings by Mr. Pegram—"Science" and "Art"—though admirable in themselves, seem scarcely in accord with the rather bold projections of the architectural members. There is also a doubt engendered in the mind as to

Art Gallery, St. Louis, Mo.: Main Entrance.
Mr. Cass Gilbert, Architect.

whether the building is of brick with stone dressings or *vice versâ* a condition which produces a feeling of unrest.

After the lapse of ten years it is possible to pay unstinted tribute to the excellent workmanship of Messrs. Holloway Bros., by whom the building was erected. That the services of all connected with the work—architect, clerk of works, foreman, and all alike—have been rightly appreciated was pleasingly shown by an inscription which the School authorities have caused to be placed in the library—an excellent precedent.

GENERAL NEWS.

The New Capital of India.

Reuter's correspondent, telegraphing to the London Press from Bombay, says:—"The Indian Government has practically decided to employ the services of a town-planning expert from Europe in connexion with the alterations at Delhi involved in the change of capital."

Guildford's Ancient Cottages.

As a result of the opposition to the proposal of the Guildford Town Council to demolish a number of ancient cottages in the town for purposes of street improvement the Mayor has suggested a conference between representatives of the Town Council, the County Council, the West Surrey Society, and the Society for the Preservation of Ancient Buildings, with a view to ascertaining how far each body would be prepared to go to preserve the cottages.

British Museum and Victoria and Albert Museum Lectures.

Mr. Banister Fletcher, F.R.I.B.A., is continuing a course of University Extension Lectures on "Ancient Architecture" dealing with the Roman, Early Christian, and Byzantine styles, at the British Museum (by permission of the Trustees), on Tuesday, January 9, at 4.30 p.m. Also a course of twelve lectures on "Renaissance Architecture," at the Victoria and Albert Museum (by permission of the Board of Education), embracing the Elizabethan and Jacobean periods in England and the later Renaissance, on Monday, January 8, at 5 p.m. These courses are to be fully illustrated by lantern slides, photographs, diagrams, and models. Particulars can be had from Miss Gaudet, 120, Cheyne-walk, Chelsea, S.W.

Lectures on Illuminating Engineering.

A course of ten lectures on Illuminating Engineering will be given on Tuesday evenings at Northampton Polytechnic Institute, St. John-street, London, E.C., at 7.30 p.m., commencing January 16. The lectures are intended for a technical audience, and each lecture will be given by a specialist in the particular subject.

Windsor Castle.

During the King's absence in India opportunity has been taken to renovate and redecorate many of the State apartments and to clean the paintings in the Vandyck Room. The Guard Chamber and Vestibule are repaired, and the sanitary system throughout the Castle has been inspected for the purpose of laying down larger water-mains from the private reservoirs in the Cranborne Tower and of making plans of all the pipes in the terraces. An inventory has been made of all the articles in the Palace, and the most valuable have been photographed. Mr. A. Y. Nutt, M.V.O., is resident architect and clerk of the works at Windsor Castle.

A Swiss National Monument.

The designs of M. E. Zimmermann have been selected out of five sets submitted in a strictly limited competition for the national monument to be erected at Schwyz, distant 22 miles from Lucerne. The complete designs provide for a statue of Liberty, in front of the main building, upon a terrace, at the rear of which will be a large open space for public resort and festivals. The wings of the main building will bear bas-reliefs depicting the battles of Morgarten (1315) and Sempach, and the interior will contain many national busts and statues to be sculptured by Swiss artists, together with mural and decorative paintings illustrative of scenes and episodes of the nation's history and progress.

The Royal Sanitary Institute.

A public meeting to inaugurate arrangements for the Congress and Exhibition of the Royal Sanitary Institute, to be held at York from July 29 to August 3, has been convened by the Lord Mayor of York in the Mansion House, on Wednesday, January 10. The arrangements already made include the following:—Engineering and Architecture: President—J. Walker Smith, M.Inst.C.E., Chief Engineering Inspector, Local Government Board for Scotland; Recording Secretary—A Saxon Snell, F.R.I.B.A., 22, Southampton-buildings, Chancery-lane, W.C. Engineers and Surveyors to County and other Sanitary Authorities: President—A. F. Greatorex, M.Inst.C.E., Borough Engineer and Surveyor, West Bromwich; Recording Secretary—J. S. Brodie, M.Inst.C.E., Borough Engineer, Blackpool. Sanitary Inspectors: President—T. G. Dee, Sanitary Inspector, Westminster; Recording Secretary—A. E. Drummond, Chief Sanitary Inspector, York. The President of the Congress will be his Grace the Lord Archbishop of York.

The Equitable Life Insurance Building, New York.

The Equitable Life Insurance Building, New York, was totally destroyed by a fire on Tuesday, with the loss of six lives, and a total monetary loss variously estimated at from 3,000,000*l.* to 6,000,000*l.* In addition to the total destruction of the Insurance Company Buildings, the New York Clearing House, which is close by, was smoked out, and a state of panic prevailed, as, in the early hours of the morning, the flames threatened to extend to numerous banking institutions in the neighbourhood of Wall-street. It is believed that the fire started in the basement, in the storeroom of a safe deposit company. The Equitable Life Insurance Society's building covered an acre of ground and was built of granite before the era of fireproof construction became general. It contained, says the *Daily Telegraph*, the Lawyers' Club and a law library of 13,000 volumes, together with several valuable paintings. Erected in 1869, the original building was extended and remodelled in 1887, the additions made producing a structure eleven stories high, with approximately 160 ft. of frontage to Broadway and 310 ft. in depth. Its most notable feature after the remodelling was the arcade of polished granite, which was opened in 1887. This is composed of a court 100 ft. long, 44 ft. wide, and 30 ft. high. Plans were made in 1908 to pull down the building and erect a sixty-two-storey structure, 909 ft. high, at a cost of 5,000,000*l.*, consisting of a main building 489 ft. high, of thirty-four storeys, and a tower of twenty-eight storeys, with a cupola 420 ft. high. These plans were temporarily abandoned.

The British Fire Prevention Committee.

Recent testing operations of the British Fire Prevention Committee comprised two high temperature tests, *i.e.*, with a thin metal fire-resisting partition and with two thin metal fire-resisting doors, the former for the one-and-a-half-hour standard fire test, and the latter for the two-hour standard fire test, both followed by the application of water from a steam fire-engine. There was a large attendance, including representatives from the Home Office, Admiralty, H.M. Office of Works, London County Council, and other public bodies, and the American Consulate was represented by its Vice-Consul, as the object under test was of American origin. The members and subscribers were received by Mr. Edwin O. Sachs, Chairman, and Mr. Horace Folker, Hon. Treasurer, and the testing operations were conducted by a Sub-Committee, with Mr. Ellis Marsland, District Surveyor, as directing member, which comprised Messrs. J. Herbert Dyer, J. W. Brooker, C. T. Cuss, and Bertram Chatterton.

Church Building Society.

The Incorporated Church Building Society held its usual monthly meeting on the 21st ult. at the Society's House, 7, Dean's-yard, Westminster Abbey, S.W., the Rev. Canon C. F. Norman in the chair. Grants of money were made in aid of the following objects, viz.:—Building a new church at Furness Vale and Newtown, St. John the Baptist, Cheshire, 80*l.*; rebuilding the church of St. James, Manston, Yorks, 125*l.* for the first portion; and towards enlarging the churches at East Hanney, St. James the Less, Berks, 10*l.*; and Hoole, All Saints, near Chester, 60*l.* Grants were also made from the Special Mission Buildings Fund towards building mission churches at Caergeiliog, St. David, Anglesey, 10*l.*, making in all 40*l.*; Leeming Bar, Bedale, Yorks, 25*l.*; Oswestry, St. David's Welsh Church, Salop, 30*l.*; and Two Mile Hill, St. Michael, near Bristol, 50*l.* The following grants were also paid for works completed:—Halifax, St. Hilda, 200*l.*; Caversham, St. Andrew, Oxon, 50*l.*, making in all 150*l.*; Gwytherin, St. Eleri and St. James, N. Wales, 20*l.*; Blackrod, St. Katherine, Lancs, 80*l.*; Cockfield, St. Mary, County Durham, 60*l.*; Slade Green, St. Augustine, Kent 100*l.*; Friern Barnet, St. John, Middlesex, 105*l.*; Clifton, Campville, St. Andrew, Staffs, 50*l.*; Chillington, St. James, Som., 10*l.*; Millbrook, St. Nicholas, near Southampton, 15*l.*; Walton-on-the-Hill, St. Mary, Liverpool, 50*l.*; Ilkeston, St. John, Derbyshire, 70*l.*; Birmingham, St. Basil, 130*l.*; Furzedown, St. Paul, Surrey, 50*l.*; and Edmonton, St. John, Middlesex, 40*l.* In addition to this the sum of 300*l.* was paid towards the repairs of fifteen churches from Trust Funds held by the Society.

"Who's Who."

The 1912 edition of *Who's Who*, with which is incorporated *Men and Women of the Time*, contains in its 2,364 pages about 24,000 biographies—a statement which gives some idea of the extent of the work. The accuracy, too, of its pages can be inferred from the fact that every biography is submitted for personal revision, the knowledge of which makes reference to the volume a greater pleasure than it might otherwise be. It is published by Messrs. A. & C. Black, Soho-square, London (cloth, 10s. net). *Who's Who Year Book* (price 1s. net) is also issued by the firm. It consists of the table forming the original nucleus of *Who's Who* itself. These tables supply exactly the kind of information which is needed to enable any one to take full advantage of the information in *Who's Who*. Another valuable reference book issued by Messrs. A. & C. Black is *The Englishwoman's Year-Book and Directory* (price 2s. 6d. net), this being the thirty-first year of issue. The work is edited by G. E. Mitton, with the assistance of an honorary consultative committee. The contents cover every department of life. Apart from its usefulness the book is highly interesting, as the articles are **not only** thoroughly practical, but are most readable.

An Architects' Diary.

The "Architects' and Surveyors' Diary, Directory, and Price Book" for 1912 has just been issued by Messrs. Waterlow Bros. & Layton, Ltd., Birchin-lane, E.C. (price 3s. 6d. and 6s., according to binding and diary space). This well-known diary is an excellent production, containing not only the information usually found in a diary, but much information of particular use to architects and surveyors. It is a very neat work, and we have pleasure in calling attention to it.

Wembley Hill Estate.

The sale of the Wembley Hill Estate, the property of the Wembley Park Estate Company, has this week been carried out by Messrs. Gibsons, of Avenue-chambers, Bloomsbury-square. The property is about 2 miles nearer London than Harrow. The hill is noted for the panoramic view it commands, ranging over five different counties, Windsor Castle being easily discernible on a clear day. The purchasers are a Bedfordshire syndicate, who will lay out the property in plots for the erection of small freehold ideal homes, costing, with the land, about 350*l.* to 400*l.*, and a few positions will be reserved for shops. The purchasers have retained the services of Messrs. Gibsons to carry out the scheme of development.

"Willing's Press Guide."

The thirty-ninth annual issue of "Willing's Press Guide" (James Willing, jun., Ltd., 125, Strand, W.C.) has just been issued after revision. We have previously noticed this admirable work, the arrangement of which leaves nothing to be desired. It is one of the handiest and best Press guides we know.

CORRESPONDENCE.

ckingham Palace and the Victoria Memorial.

SIR,—In the bird's-eye view of an Imperial ondon published in the current number of our journal Buckingham Palace is shown built. Three of the main points in the plan the new Palace are, firstly, it is placed to e west of the present one; secondly, the ntre road of Eaton-square is brought into e scheme and a tower placed where its axis ntersects that of the Mall; thirdly, a large en quadrangle is placed towards the Mall. These are three of the points of the plan for building the Palace which you did me the nour of publishing in your issue of Novem- er 5, 1910.

The intersection of the axial lines of the all and Eaton-square is decidedly the archi- ctural key of the site. In a suggested heme for the Victoria Memorial, which the en Editor of your paper accepted for publica- on in 1901, but which never appeared, I roposed it as the site of the actual monu- ent, with the Palace rebuilt around it.

To refer again to the scheme in your rrent number. It is proposed to alter the e of Constitution-hill so as to make it rial with the Victoria Memorial (as it should), which would then be the centre of a nd-point. In the number of your paper for pril 27, 1901, I published a suggested heme in which the memorial is thus made centre, being placed where the existing ds of Constitution-hill intersects the Mall; e approach from the Buckingham Palace- ad is brought in at the same angle, a road taken northward to Piccadilly, and another uthward to Birdcage-walk. This plan had e advantage of placing the memorial where terminated the vistas of five roads, and in- olved only a slight alteration to the Palace ilings at the bottom of Constitution-hill, id on the other side. It has practically been ecuted, the only change being the placing the memorial rather nearer the Palace, nsequently just missing the axes of Con- itution-hill and the approach from the uckingham Palace-road, and thus only rminating three vistas instead of five.

The road leading northward to Piccadilly as first suggested in my scheme, and addi- onal interest has recently been given to it y the selection of the upper end as the site f the King Edward Memorial.

I am glad to see you have overcome the bjection to a central tower which you raised hen you kindly published my scheme in ovember, 1910.

PLAN THE BASIS OF DESIGN.

The Policy of the R.I.B.A.

SIR,—I have read your leading article in his week's *Builder* with great interest. There e some points, however, to which I, as an ssociate, feel bound to draw exception.

The advice offered to Associates to heal hemselves is truly admirable. But, sir, you eem to overlook the fact that the great ajority of Associates can never expect to ualify themselves for the Fellowship, seeing obtain that dignity they must first have een principals for at least seven years. And, gain, your argument that in order to voice heir grievances as Associates they should dvance to the Fellowship is somewhat beside he point, and seems, moreover, to savour of he Irish bull. What we are asking for is greater representation of "Associate mem- ers" on the Council.

Surely the R.I.B.A. exists for some better urpose than the carrying out of a constitu- ion, though it be never so good or never o antiquated. And surely the good of the reponderant section of the members ought to utweigh any antiquarian interest we may ave in that august document.

JOHN F. SCHOFIELD, A.R.I.B.A.

Architectural Assistants and the Office of Works.

SIR,—Surely the justice of the claim of he Architectural Assistants in the Office of Works to be put on the establishment needs o bolstering up by exaggerated statements nd unfounded assertions such as are put for- ward by "Labour Member" in your issue of December 22.

I feel sure that I am voicing the sentiments f the majority of the class referred to in dissociating myself entirely from such statements. So far from the Junior Assistant Architects "riding rough-shod" over the Architectural Assistants, the two classes work harmoniously together, and the former generally are wholly in sympathy with the claims of the latter to establishment.

The unwarranted assumption of "Labour Member" that the Junior Assistant Architects are "taught on their entry into the Department" by the Architectural Assistants needs no comment. Such statements (though merely the opinion, I am convinced, of a small minority) are calculated to do harm, not good, to the cause which we are trying to advance.

FIAT JUSTITIA.

SIR,—It is a significant fact that two Labour Members of Parliament consider it needful, not only to inquire into the much-discussed methods of this department in the House of Commons, but also to seek the powerful aid of your columns, although it was foreseen that so soon as the full extent of the injustice to these professional men became known to them they would be sure to see the matter through. These methods are all the more reprehensible when we consider the misleading reply furnished by them to Mr. Dudley Ward in Parliament on the eve of the recent prorogation, and our best thanks are due to your correspondent, "The Whole Truth," for exposing it in your recent issue, when the fact that an entire class of architects, to the number of no less than forty, and known in the service as "Architectural Assistants," most of them holding diplomas of the Royal Institute of British Architects and allied societies, and have been employed for a considerable number of years (I learn some have twenty years' service), was withheld from the member for North Norfolk, who, be it noted, did not ask for the number of "established" architects only, but the total number engaged in the department, and so the only explanation within the scope of those who supplied it is nullified, and in the public interest an explanation is due to them from the secretary.

These are the men who in their memorial to the Board dated November, 1906, made the statement that their daily duties consisted to the full those of a practising architect, and included—"(*a*) Sketch designs; (*b*) surveys; (*c*) preliminary estimates; (*d*) contract drawings; (*e*) details; (*f*) specifications; (*g*) superintendence of building (in some cases)," and, be it noted, not one fact therein contained was denied by them; and yet the rate of pay for these services, as previously supplied by your correspondents, to the majority amounts to a scandal. They cannot leave and obtain employment in outside offices, for it is obvious that, after being accustomed for years only to special work never seen outside, no practising architect would employ them, and this the Government, who are supposed to be model employers, are well aware of.

I understand from your able correspondent "Labour Member No. 2" in last week's issue that this class do not become architects in the eyes of their Board until they reach the age of thirty, when a technical certificate is issued to them, stating that the recipient is capable of doing all the architectural work of the department, but, as it does not hitherto appear to have been put to any useful purpose, I venture to suggest that it should be removed from its official pigeon-hole at Storey's-gate, and presented to the Commissioners of the Civil Service at Burlington House, when it would be honoured by their issuing, in exchange, one of their own, which will be found all provided for in "the Order in Council, June 4, 1870," and, judging from those who hold this veritable "Aladdin's Lamp" (the "Assistant Architects of the Second Class"), their salaries would be doubled, official status created, holiday leave increased, annual sickness up to six months allowed, together with an old age pension long in advance of the recent Act.

But the "Architectural Assistants," one and all, look with confidence to their First Commissioner of Works, who has now been made aware of their disabilities, and has promptly promised establishments in the House of Commons, that he will see their very reasonable demands are granted them, and that the scales of justice are no longer tampered with.

ARCHITECT.

Failure of Buildings Caused by Drought.

SIR,—The article contained in this week's issue (5th inst.) on the above subject is of great interest. Enough forethought and care is not generally taken when dealing with foundations on clay.

One of the most frequent causes of subsidence, other than long spells of dry and hot weather, is the presence of drain trenches, sewers, etc., at lower levels than the foundations of the walls. Notwithstanding the filling in of the trench with concrete abutments, the clay adjoining is drained of its natural moisture, which latter finds its way to the bottom of the trench, and the adjoining clay shrinks, the inevitable result appearing above

A paved area round a building has its advantages certainly, but it also has its disadvantages, as it prevents the clay from receiving any replenishment of moisture by the percolation of rain.

As stated in the article, the necessity of one absolutely uniform depth of foundation, irrespective of light or heavy portions of a building, cannot be too strongly emphasised.

T. G.

Statue of Achilles.

SIR,—I have to thank you for inserting my letter on page 9 of your current issue. May I, however, be permitted to make a correction therein? In the sentence, "That to Helen in St. Paul's Cathedral, Calcutta, has its duplicate in St. Paul's Cathedral, London," the word printed "Helen" should have been printed "Heber."

WILMOT CORFIELD.

Porch of St. Mary's Church, Oxford.

SIR,—Your report (December 1) of Mr. A. T. Bolton's paper, "Some Thoughts on Jacobean Architecture," is illustrated with a view of the porch. Mr. Bolton says: "There seems no reason to refuse the authorship of the porch of St. Mary the Virgin to him [Inigo Jones] as well." In the Stone MSS., annotated by Vertue (Soane Museum), is, in one "account book," a list written by Charles Stoakes (or Stokes) of "Some of the most Eminentt Workes that my Vncle Mr. Nickcolas Stone, Senior, did in England. in Holland, and Scotland." One item is: "The Noble Fronttispeece with Twisted Collums hee desined and built att St. Mary's Churche att Oxford." Other entries in the account books show that Stone worked upon the porch when he was employed at Cornbury, 1631-1633. The words "hee desined" frequently occur in the list; we cannot always give to them their present signification. Stone writes:—"I mad," or, "I set up"; though he writes:—"In 1631 Agreed with the . . . Lord Earell of Danby for to . . . desine a new hows for him at Corenbury . . . and to deRuckt the workmen and mak all thar . . ."

W. E. D.-MILLIKEN.

INTERCOMMUNICATION COLUMN.

Cost of Schools.

SIR,—The voluntary schools in the country districts are in many cases not up-to-date, and are being condemned by the Local Education Authorities.

Will you kindly open your columns to an inquiry as to the cost per head for which schools from 100 300 can be built, excluding such items as fences and asphalting playground, which must vary?

The difficulty of raising funds for voluntary schools in the existing unsettled state of affairs demands the most rigid economy, and there appears to be an opening for some such material as concrete.

Will anyone who has had experience in putting up thoroughly sound, substantial, plain, inexpensive buildings give statistics of actual cost?

HON. SECRETARY OF A VOLUNTARY SCHOOLS ASSOCIATION.

Quick-Setting Plaster.

SIR,—Could you inform me where I could get a quick, hard-setting plaster suitable for slabbing tile curbs and panels? I know of Bassetts and Wood Brothers; I want a harder material than these firms make. Do you know of any other firm I could try? Is there any book on plasters and cements published which I could get?

H. WINTERBOTTOM.

EDITORIAL SUMMARY.

The leading article, the first of a short series on "The Architectural Societies of France," deals with the Académie Royale d'Architecture and La Société Centrale des Architectes Français.

"The Policy of the R.I.B.A." is the title of our second article (p. 28) in reference to the future action of the Institute in regard to Registration.

In "Notes" Column (p. 29) are comments on: "The Immurement of Ashes in Church Walls"; "Old Houses at Guildford"; "Sootfall"; "The Lay Press and Architecture"; "The Wallace Collection."

An appreciative article on the life and work of Mr. Cass Gilbert, of New York and St. Paul, is given on p. 30, under the heading of "Contemporary Architects and Their Work." The article is illustrated.

A notice of the first Spring Visit this year of the Architectural Association, to St. Paul's Girls' School, Hammersmith, is given on p. 35.

In our Correspondence columns (p. 37) are letters on: "Porch of St. Mary's Church, Oxford"; "The Policy of the R.I.B.A."; "Statue of Achilles"; "Buckingham Palace and the Victoria Memorial"; "Architectural Assistants and the Office of Works"; "Failure of Buildings Caused by Drought."

The Monthly Illustrated Review of Construction (p. 39) contains: "Paddington Children's Hospital Extensions"; "Dry Rot in Timber."

The Building Trade Section (p. 44) includes: "Discounts"; "The Penalty Clause"; "Projected Building Works"; "The Wood Trade"; "The Building Trade Unrest."

A meeting of the Society of Architects was held on Thursday, when a paper by Mr. J. Darch, F.S.I., on "Illumination as a Study for Architects," was read. An abstract appears on p. 47.

A proposal put forward by Mr. A. H. Henderson-Livesey for opening up Southwark Cathedral is dealt with on p. 49.

Book Reviews (p. 50) include: "Reinforced Concrete Construction"; "Reinforced Concrete Compression Member Diagram"; "Architectural Hygiene"; "Stresses and Thrusts"; "Chemistry for Engineers and Manufacturers"; "Boiler Draught"; "Smoke Prevention and Fuel Economy"; "Bricks and Tiles"; "Manufacture of Varnishes and Kindred Industries"; "Pyrometry," etc.

In Legal Column (p. 52) some observations will be found on: "Acts in Interference of Trade."

MEETINGS.

FRIDAY, JANUARY 12.

Battersea Polytechnic (*Lectures on Illuminating Engineering*).—Mr. J. S. Dow, B.Sc., on "The Measurement of Light." 7.30 p.m.

MONDAY, JANUARY 15.

Architectural Association.—Mr. E. F. Strange on "Alfred Stevens." 7.30 p.m.

University of London (*Victoria and Albert Museum*).—Mr. Banister Fletcher on "Heidelberg Castle and Later Renaissance Buildings." 5 p.m.

Liverpool Architectural Society.—Mr. F. E. G. Badger on "Housing and Town Planning in England and Germany." Some notes and comparisons. Lantern slides.

TUESDAY, JANUARY 16.

University of London (*British Museum*).—Mr. Banister Fletcher on "The Fora and Rectangular Temples of the Romans." Lantern illustrations. 4.30 p.m.

Institute of Metals (*at the Institution of Mechanical Engineers*).—Annual general meeting. 3 p.m. Third annual dinner in the evening.

Illuminating Engineering Society (*at the Royal Society of Arts, John-street, Adelphi*) Mr. Thomas E. Ritchie on "Colour Discrimination by Artificial Light." 8 p.m.

Northampton Polytechnic Institute (*Illuminating Engineering*). -Mr. S. D. Chalmers, M.A., on "The Nature of Light and of Radiation." 7.30 p.m.

Institution of Civil Engineers.—Ordinary meeting. 8 p.m. Papers: "Reinforced Concrete Wharves and Warehouses at Lower Footung, Shanghai," by Mr. Somers Howe Ellis, M.Inst.C.E.; "The Direct Experimental Determination of the Stresses in the Steel and in the Concrete of Reinforced Concrete Columns," by Mr. William Charles Popplewell, M.Sc., Assoc.M.Inst.C.E.; "Composite Columns of Concrete and Steel," by Mr. William Hubert Burr, M.Inst.C.E.

WEDNESDAY, JANUARY 17.

Royal Society of Arts.—Sixth ordinary meeting. "Illuminated MSS.," by Mr. Cyril Davenport, F.S.A. 8 p.m.

The Institute of Metals.—Annual general meeting concluded. Eight papers will be read and discussed. 10.30 a.m.

THURSDAY, JANUARY 18.

Society of Architects.—Students' section. Smoking concert, to be held at 28, Bedford-square. 8 p.m.

The Institution of Municipal Engineers.—Western District meeting at Birmingham. (1) Mr. Henry Hulse, Borough Surveyor and Engineer, Droitwich, on "The Institution and its Benefits to Members"; (2) Mr. J. Brook on "The Proper Disposal of Domestic Wastes in Rural Districts." At the conclusion of the meeting a visit will be paid to the Star Sanitary Ware Works of Messrs. W. E. Farrer, Ltd., Cambridge street. 1 p.m.

Society of Antiquaries. 8.30 p.m.

Institution of Electrical Engineers.—Adjourned discussion on Mr. A. H. Seabrook's paper on "Residence Tariffs." 8 p.m.

Royal Society of Arts (*Indian Section*).—"The Old District Records of Bengal," by the Rev. Walter K. Firminger, B.D., Senior Chaplain H.M.'s Bengal Establishment, will be read by the Rev. J. A. V. Magee, M.A. 4.30 p.m.

FRIDAY, JANUARY 19.

Royal Institution.—Professor Sir J. Dewar, M.A., LL.D., D.Sc., on "Heat Problems." 9 p.m.

Battersea Polytechnic (*Lectures on Illuminating Engineering*).—Mr. J. S. Dow, B.Sc., on "Illumination and its Measurement." 7.30 p.m.

Glasgow Technical College (*Architectural Craftsmen's Society*).—Mr. J. M'Kissack on "Rothenburg on the Tauber." 7.45 p.m.

Institution of Mechanical Engineers 8 p.m.

Institution of Civil Engineers (*Students' Meeting*).—Paper to be read: "The Turbo-Blower and Turbo-Compressor," by Mr. George Ingram, Stud.Inst.C.E. 8 p.m.

ARCHITECTURAL SOCIETIES.

Royal Institute of the Architects of Ireland.

A meeting of the Council of this Institute was held at No. 31, South Frederick-street, Dublin, on Monday last. The President, Mr. A. E. Murray, R.H.A., F.R.I.B.A., was in the chair. There were also present: Messrs. F. Hayes, J. H. Webb, L. O'Callaghan, A. G. C. Millar, W. A. Scott, H. Allberry, W. Kaye-Parry, F. G. Hicks, and C. A. Owen, Hon. Secretary.

The minutes of the regular and special meetings of December 4 and 18 were read and signed. The proposed date of the annual dinner was under discussion. A large amount of correspondence was dealt with.

A satisfactory report from the Publication Committee was received and adopted. A vote of thanks to Mr. Allberry, Hon. Secretary to the Committee, was passed by the Council.

A report from the Professional Practice Committee in connexion with the importation of shop fronts was received and adopted.

The Standing Committees were appointed as follows: -Professional Practice: Messrs. W. Kaye-Parry, F. Batchelor, L. O'Callaghan; Arts Committee: Messrs. G. C. Ashlin, W. A. Scott, G. P. Sheridan. Publication Committee: Messrs. F. Hayes, R. C. Orpen, J. H. Webb; Examination Committee: Messrs. H. Allberry, R. C. Orpen, F. G. Hicks.

FIFTY YEARS AGO.

From the *Builder* of January 11, 1862.

The Thames Embankment Commission.

THE Commissioners appointed to inquire as to the propriety of embanking the south side of the Thames have been sitting, with the Lord Mayor presiding. One witness, Mr. Crosby, of the Metropolitan Board of Works, said he would carry out an embankment along the whole side of the river; whether on the present line or not must depend on the conveniences of trade. At Lambeth an embankment, such as Mr. Cubitt made at Pimlico, he should recommend; at Rotherhithe a wall only. On the question of taxation, he should suggest tonnage dues on all articles coming into the port of London. By this plan the trades benefited by the embankment would pay. Mr. Pegg, of Bankside, who had premises abutting on the river, recommended an embankment and roadway. He was one of a Commission some years ago appointed to raise Bankside. They did not raise it so much as they intended owing to the opposition of the wharfingers.

ILLUSTRATIONS.

The Work of Mr. Cass Gilbert.

OUR illustrations this week represent many of the buildings designed and executed by Mr. Cass Gilbert, reference to whose work will be found on page 30.

COMPETITION NEWS.

Salford Union Offices Extension.

Mr. Paul Ogden, A.R.I.B.A., has assessed the fourteen designs submitted in this competition. The result is:—First premium, 20*l.*, Messrs. Topham & Adshead, Manchester; second premium, 10*l.*, Mr. J. Bushell, Manchester. It is estimated that the extensions will cost from 4,000*l.* to 5,000*l.*

Baptist Church and Schools, Nottingham.

In this competition, for a church and schools, costing about 7,000*l.*, the design submitted by Messrs. Ernest R. Sutton, F.R.I.B.A., and F. W. C. Gregory, of Bromley House, Nottingham, has been placed first by the assessor, Mr. Herbert W. Wills, A.R.I.B.A., of London. Building operations are to be proceeded with at once.

Saxon Snell Prize.

Fifty guineas and the Silver Medal of the Royal Sanitary Institute is offered for an Essay on "Suggestions for Improvements in the Ventilating, Lighting, Heating, and Water Supply Appliances and Fittings for an Operating Room and Its Accessory Rooms for a General Hospital of 400 Beds (no Students)." The essay, to consist of not more than 5,000 words, is to be illustrated by drawings or sketches. Two competitors of different professions or crafts may join in sending in an essay and plans. Essays must be delivered before 4 p.m. on or before August 30, 1912, addressed to the Secretary of the Royal Sanitary Institute, 90, Buckingham Palace-road, London, S.W.

Town-Planning Competition, Hale.

The Hale U.D.C. invite competitors to prepare plans for laying out their district of 1,283 acres for residential purposes. The drawings are to be made on $\frac{1}{2500}$ Ordnance sheets provided by the competitors. The premiums of 50*l.* and 25*l.* seem somewhat inadequate, considering the work involved, and we do not quite like the invitation to tender for the fees for subsequent work. The undertaking in regard to an assessor should also be more definite. We trust the Competitions Committee of the R.I.B.A. will look into these and other details before members of that body decide to compete.

Banbury Workmen's Dwellings Competition.

The Council of the R.I.B.A. are of opinion that the conditions of this competition are very unsatisfactory, but, in view of the near approach of the date for sending in, they do not see their way to inform members that they must not take part in it, but they express the hope that members will refrain from doing so.

Greenock Burgh School Competition.

Members and Licentiates of the Royal Institute are asked not to take part in this competition.

Town-Planning Scheme, Halifax.

Professor Adshead will adjudicate shortly in the competition dealing with the development of the belt of country surrounding Halifax. Eight sets of designs have been sent in.

MONTHLY REVIEW · *of* · CONSTRUCTION.

THE CHILDRENS HOSPITAL PADDINGTON GREEN. W. OUTPATIENT EXTENSIONS.

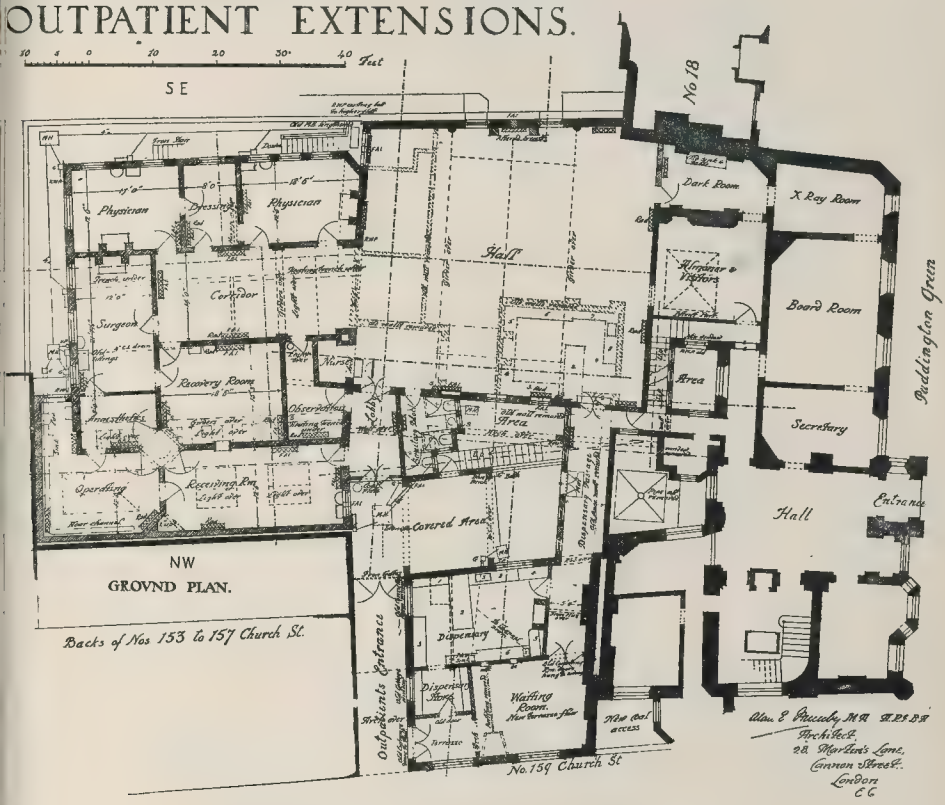

Fig. 1. Plan showing Old Buildings and Extensions.

ESTABLISHED in 1883, the Children's Hospital in Paddington-green provides for the treatment of nearly 900 indoor s a year, while the work of the out-patient artment covers more than 18,000 cases some 54,000 out-patient attendances. h view of the importance attaching to the er department, the Council of King ard's Hospital Fund suggested a year or two that the buildings should be extended, since then have contributed 2,250*l.* towards cost of the works, which have recently h completed from the plans of and under direction of Mr. Alan E. Munby, M.A., I.B.A., by Messrs. T. Henwood & Son. extensions were formally opened by the ness Louise, Duchess of Argyle, on ember 16 last.

ig. 1 is a ground-floor plan of the out-ents' department, where the extensions indicated in cross-hatching, the previously ting buildings being in solid black. The ensions consist mainly of a new block ering the area formerly occupied by Charlotte-e and replacing cottage property. A se in Church-street has also been acquired, ween the main building and the out-patients' ance passage, to facilitate the remodelling he ground floor and basement stories.

he requirements comprised a larger hall, e roomy consulting and operating rooms, a new dispensary, accommodation for pathological research, and nurses' quarters.

The site indicated above and on the plan was a particularly awkward one to deal with, being all "back land" only approached by a passage 8 ft. wide, and the house taken over in Church-street. This house, it may here be mentioned, has been worked into the scheme pending a more use of the frontage, when additional wards become necessary.

General Arrangement and Structural Features.

On the ground floor the main hall for out-patients remains a one-story building, but has been provided with a new roof at higher level and increased to nearly double its former size by throwing into it the space formerly occupied by consulting-rooms and the old dispensary, and by squaring it out by an extension at the entrance. Windows have been provided on three sides in addition to a large roof lantern. The hall measures 45 ft. by 42 ft. in plan, and, being without columns or any projections below the ceiling line, air can be efficiently extracted from every part with great rapidity.

The basement has been extended and re-arranged, and benefits by the construction of a new area giving increased light and air and direct area communication between the front and back of the building.

The new block, projecting at the left hand of Fig. 1, is approached by a wide corridor from the main hall, and comprises on the ground floor two physicians' consulting-rooms, one surgeon's consulting-room, anæsthetic, operating, recovery, and receiving rooms, and an observation-room for possible infectious cases. The rooms shown as recovery and receiving rooms can have their uses reversed, but as designated on the plan they meet the needs of urgent casualty cases, which demand immediate contact with the operation theatre. For ordinary routine the reversed arrangement is more convenient, as recovered patients can obtain direct egress from the building as rapidly as possible.

The house in Church-street has been modelled so as to provide accommodation on the ground floor for a new passage for out-patients, having independent access to the main part of the hospital, and for the new dispensary and waiting-room.

This and all other parts of the extensions has been carefully planned to comply with that important element of success in an out-patients' department—adequate and convenient means of circulation. In this matter the position of the dispensary and facilities for storing and re-storing perambulators are vital points for consideration by the architect.

The satisfactory manner in which Mr. Munby

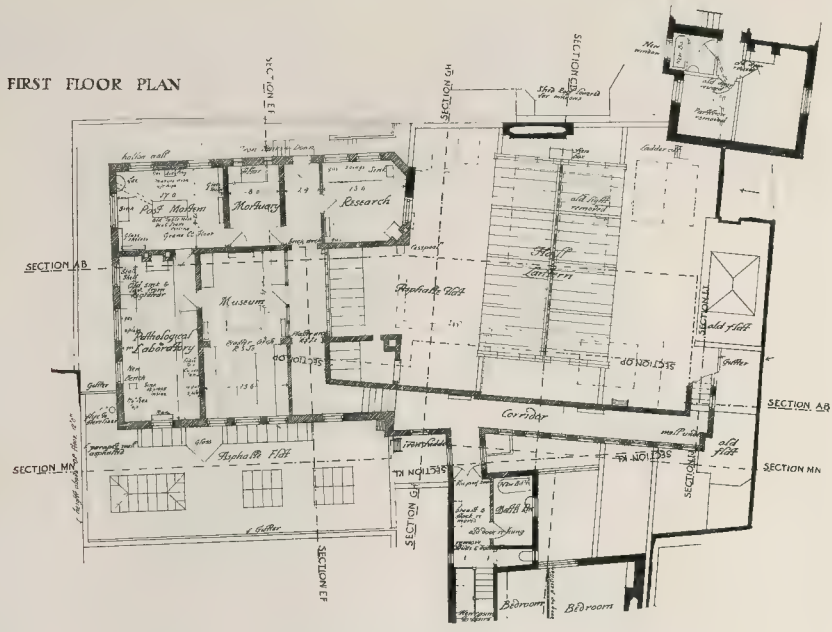

Fig. 2. Plan of First Floor.

has dealt with the problem is evidenced by the following summary of the routine adopted at the hospital.

Patients enter the hall lobby immediately opposite the street entrance, and are divided into medical and surgical cases by the sister in charge, or casualty official, who has a recess near the doorway. After treatment, medical cases return to the hall, pass round at the back to the almoner's room, and thence to the dispensary by the new passage, adjoining which is the covered area devoted to the storage of perambulators. Surgical patients can follow the same route or alternatively may pass out directly into the hall lobby through the room designated "receiving-room" in Fig. 1, the second course being adopted on occasions when the room in question is being employed as the recovery-room. The observation-room, for suspected cases of infectious character, gives access to the lobby without requiring patients to return to the hall.

The first floor of the building has no direct communication with the ground floor below. This story extends over the ground floor new block at the left hand of Fig. 1 and the ground floor of the house in Church-street, the main hall and buildings at the right hand of Fig. 1 being of one story only.

In the new block are situated the post-mortem room and mortuary, the latter treated in the style of a chapel, a large pathological laboratory, a second laboratory, and a museum, the whole forming a suite of rooms clearly indicating the appreciation shown by the Hospital Committee of the growing importance attached to pathological research. This part of the building is connected with the main block by a corridor hung on the side of the out-patients' hall. It also has an outside covered stairway from the mortuary passage, and is finished with a flat roof to facilitate the future construction of a second floor. Branching from the main corridor is a connexion to the upper part of the house in Church-street, where the nurses' quarters are situated and entirely cut off from the out-patients' department.

The nature of the site naturally precluded and rendered unnecessary anything in the nature of architecture, as judged from the artistic standpoint. But from the point of view of technical design and construction the works have involved a great deal of difficulty, architecture, for which Mr. Munby deserves much credit.

Structural Materials and Equipment.

The walls are in London stock and red bricks, the copings and sills being of Blue Pennant stone. As the façade of the first floor corridor will some day be seen from numerous ward windows in the contemplated Church-street extension, sand-faced bricks and arched windows have been adopted so as to make this part of the work pleasing to the eye.

All suspended floors and flats are constructed on the Kleine system of reinforced hollow brick. The floors of the hall and various public rooms are finished in terrazzo laid by the Mosaic Manufacturing Company, of King's road, N.W., and the floors of the consulting rooms are finished in asphalt and covered with linoleum. The steelwork, of which particulars are given below, were constructed by Messrs. H. Young & Co., of Nine Elms.

Care has been taken throughout to obviate dust traps by the adoption of rounded angles

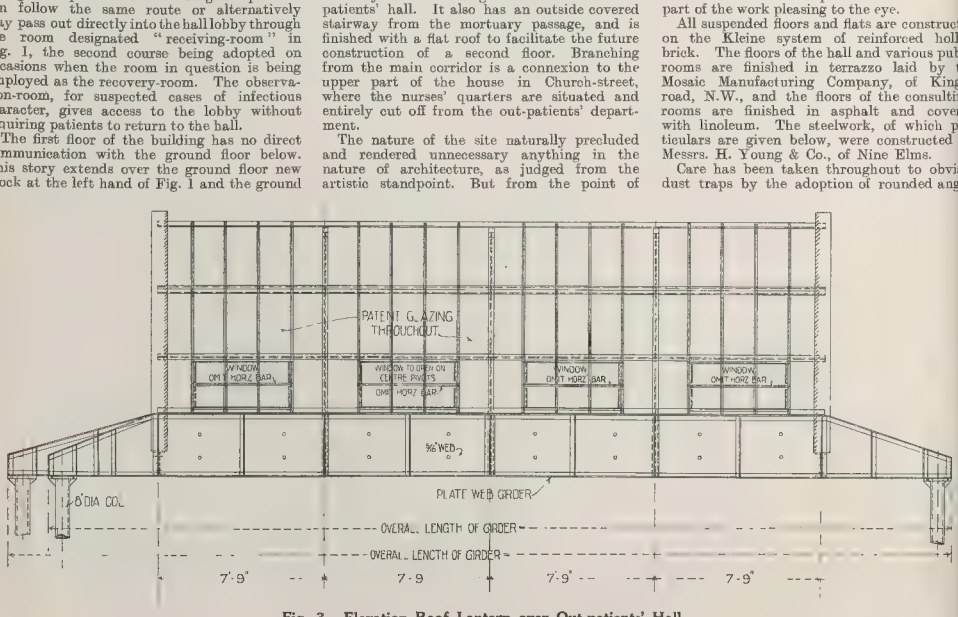

Fig. 3. Elevation Roof Lantern over Out-patients' Hall.

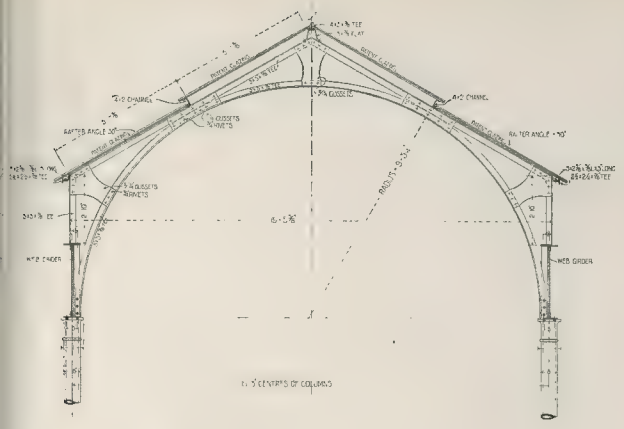

Fig. 4. Section of Roof Lantern over Out patients' Hall.

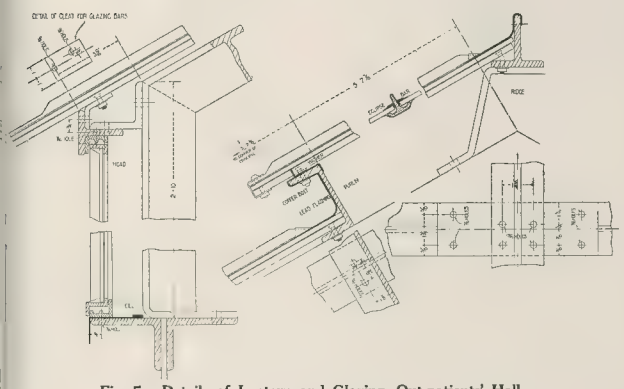

Fig. 5. Details of Lantern and Glazing, Out-patients' Hall.

floors, walls, and joinery, the rounded ges of the window-frames having been made the solid to avoid the risk of shrinkage cks.

The buildings are warmed throughout by water installed by Messrs. J. T. Boulting Sons, of Union-street, the operation theatre ng on an independent system, which can be d in summer-time apart from the system ving the remainder of the buildings, with object of reducing the labour of cleaning; fireplaces are in glazed stoneware, the hot- ter radiators are fixed on brackets clear of floors, the radiators and pipes are painted enamel, and the gearing to roof lights is ced outside on the flats. The buildings furnished with a complete system of secret- vice telephones installed by Messrs. W. & J. yer, Ltd., of Paddington, the electrical o-contractors.

The general contractors were Messrs. T nwood & Son, of Portman-square, who com- ted the work in a most satisfactory manner the period of twenty weeks, despite con- erable difficulties and unavoidable delays.

Structural Steelwork.

The employment of structural steel in the ent extensions is practically limited to the ofs of the out-patients' hall and the operating atre in the new block, and, as mentioned ove, the whole of the steelwork was con- ucted and erected by Messrs. Henry Young Co., Ltd., of Nine Elms Ironworks, S.W.

Fig. 3 is an elevation of the new lantern er the out-patients' hall, which has brick lls on all four sides to the height of about ft. above floor level. The two side walls, aced 46 ft. apart, are parallel; the back ll is at right angles to them, and the front ll is not parallel to the wall at the back, it follows the building line, which causes the hall to vary in length between front and back from 40 ft. at one side to 44 ft. 6 in. at the other side.

The new lantern extends from front to back along the middle of the hall, and is carried by two plate web girders, spaced 19 ft. 3 in. apart and measuring 41 ft. 10½ in. and 43 ft. 10½ in. long over all respectively. For the greater part of their length the girders are 36 in. deep by 8¼ in. wide, the ends tapering down to the depth of 6 in. over the supporting cast-iron columns.

The ends of the parallel parts of the girders, 31 ft. long, are connected by two 14-in. by 6-in. 46-lb. rolled-steel I-beams, upon which are built the two brick walls forming the ends of the roof lantern, the roof framing being carried by these walls and three intermediate steel trusses of the form illustrated in Fig. 4. The circular arched intrados of the truss is struck to the radius of 9 ft. 3½ in., and springs from the top of the cast-iron columns, the truss measuring 19 ft. 3 in. between the centres of the columns and 19 ft. 5⅜ in. over all.

The roof slope is at the angle of 30 deg. with the horizontal and is covered throughout by "Eclipse" glazing. In each roof bay at either side of the lantern is a window, 4 ft. 6 in. wide by 2 ft. 3 in. high, opening on pivots and providing for efficient natural ventilation of the hall. One range of four windows may be seen in Figs. 3 and 4.

Details of the roof truss construction and glazing are given in Fig. 5 to enlarged scale. At the left-hand side is a part section of one main-plate girder supporting the lantern, together with part of the truss and details of the connexions for the glazing bars. Other details are given at the right-hand side where the lead flashings and glazing bars are shown in section.

The "Eclipse" glazing bar, made by Messrs. Mellowes & Co., Ltd., of Westminster and Sheffield, consists of a steel core entirely surrounded by lead sheathing on each side of which are three webs, two rubbed down upon the glass from the outside and the third rubbed up to the glass from underneath. Thus a perfectly watertight joint is formed without packing of any description, and a safeguard against

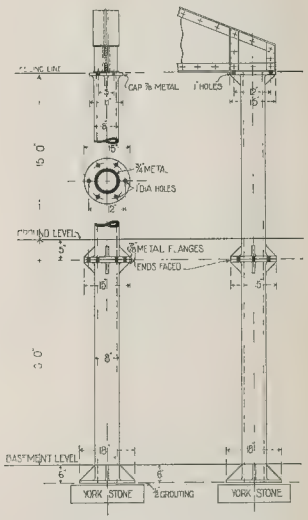

Fig. 6. Columns supporting Roof Lantern, Out-patients' Hall.

the breakage of glass by expansion is provided by the special form of the bar.

Particulars of the cast-iron columns supporting the roof lantern are given in Fig. 6. Having an extended base seated on a block of York stone below basement floor level, each column extends through the basement story up to the general ceiling line of the hall. The columns are of 8 in. diameter outside, the metal being ¾ in. thick. The flanges for connexions are of 15 in. diameter, each secured by six bolts, and the column ends are lathe-faced to ensure perfect alignment. The cap measures 11 in. by 15 in., and to it the main girders are connected by four bolts.

Fig. 7 is an elevation of the roof lantern over the operation theatre in the new block. Like the analogous construction in the

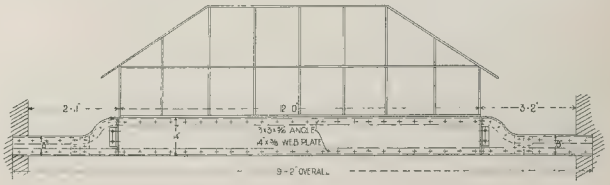

Fig. 7. Elevation of Roof Lantern, Operation Theatre.

out-patients' hall, the lantern is carried by two plate girders, one 19 ft. 2 in. long and the other 19 ft. 5 in. long over all. The ends of the girders are 8 in. deep and the middle portion 14 in. deep, the width being 3½ in. throughout. Upon the girders is built the lantern frame, 12 ft. long by 6 ft. wide, with a central ridge, the sides, ends, and slopes being glazed so as to provide abundance of light for operations.

DRY ROT IN TIMBER.

INVESTIGATIONS have recently been made on the Continent into the decay of timber in houses and particularly into the best means of preventing destruction by the most active fungoid enemy of timber—the *Merulius lacrymans*—causing the form of decay termed dry rot in this country.

M. Karel Havelik points out that the decomposition of timber is produced by two classes of fungus—(1) Those attacking the wood from the outside and causing deterioration of the surface; and (2) those attacking the interior, where the work of destruction goes on without showing on the surface, the same kind of fungus being incapable of living in the tissues of the wood and upon its surface.

Interior decay is chiefly due to *Leuzites*, but these scarcely ever occur except in buildings where affected timber has been employed.

Exterior decay, however, which is caused by the *Merulius lacrymans*, the *Polyporus vaporarius*, the *Coniophora Cerebella*, and similar growths, may result from infection at any time. The two last named fungi are only capable of growing in damp places, while the *Merulius* flourishes in dry situations, because it is able to abstract water chemically combined in ligneous tissue, and is a particularly dangerous enemy, because it is able to propagate itself indefinitely throughout any building wherein a foothold has once been obtained. Moreover, this fungus flourishes under the conditions obtaining in most buildings, where variations of temperature and humidity are less marked than outside and currents of air are never very strong.

From the investigations of M. Falcz, it appears that the mycelium of the *Merulius* cannot be produced at the temperature of 27 deg. to 28 deg. C., the most favourable temperature interval being that between 16 deg. and 22 deg. C., which corresponds to the mean of the temperature variations in buildings. It follows that of all destructive fungi the *Merulius* is one that finds specially favourable conditions for growth. The mycelium is able to traverse walls, even where these are dry, because it is sheltered from currents of air.

As it appears impossible to stop the propagation of the fungus by any means hitherto adopted, after it has once taken hold, M. Falcz proposes the novel method of destroying it by heating any building affected beyond 40 deg. C., this being the temperature at which the *Merulius* is killed. Owing to the fact that timber is a poor conductor of heat, it is considered necessary to bring the whole building up to 42 deg. C., and to maintain this temperature for at least two hours. A very important matter is to be quite certain as to the nature of the growth before having recourse to heat treatment. For instance, if the decay were due to fungi growing inside the wood, the application of heat would only intensify the work of destruction, because fungi of this class flourish more actively at the temperature which kills the dry rot fungus.

CONSTRUCTION NOTES.

Collapse of a Building in Indianopolis.

A THREE-STORY reinforced concrete building which collapsed during construction in December last once more points the moral that green concrete must be adequately supported. The designs appear to have been perfectly sound, and the disaster is attributed by engineers who have investigated the matter to the removal of floor centring and supports before the concrete had hardened sufficiently to carry its own weight and small incidental superloading. A good deal of attention is being devoted just now to regulations for the safe design of reinforced concrete buildings, a development against which we have nothing to say. But as practically all failures in the past have occurred during construction it is highly important that regulations of the kind should deal satisfactorily with the question of removing temporary supports. This point, we may add, has received attention in the R.I.B.A. Report, but not in the L.C.C. draft Regulations.

Transmission of Heat by Linoleum.

SOME experiments as to the passage of heat and cold through linoleum and other materials have recently been made by Professor Hoffmann, at Halle. The experiments made with linoleum of various thicknesses have shown, as was anticipated, that heat and cold are transmitted less quickly by thick than thin linoleum; and different results were obtained with pieces of the same thickness, but not of similar manufacture. Heat and cold are transmitted less quickly by layers of wood than by linoleum. The experiments made with wood covered with linoleum, are particularly important, as this combination corresponds with the common use of these materials. It was found that it was almost exclusively the layer of wood which determined the resistance to the cold. Similar tests were made with other materials—bitumen, gypsum, béton—which, in a general way, gave results very similar to those obtained with linoleum. The experiments made by the Professor are of special interest at the present time, in the light of their bearing upon the question of dry-rot in floors, and the effect that the covering of wood floors with linoleum may have. The opinion has been expressed that this covering tends to produce dry-rot; and the fact that linoleum excludes the air almost entirely, and may at the same time subject the wood to rapid changes of temperature, would appear to confirm this view. Linoleum is a good conductor. It absorbs the warmth of the body much more quickly than wood, which will never become of so low a temperature as linoleum. Whilst a person standing upon a wood floor during cold weather may experience no discomfort, as soon as a layer of linoleum is used as a covering to the floor a sensation of cold is felt—often in a marked degree. The plan which has been advocated of putting linoleum directly upon concrete, in the case of workmen's cottages and the like, though it may be a cheap method, cannot, with the results of these experiments before us, be considered a good one from a hygienic point of view.

Rock Asphaltum and its Uses.

M. H. CRUMP, in the *Journal* of the Royal Society of Arts, describes a Kentucky rock asphaltum that occurs 10 miles east of the celebrated Mammoth Cave. The material is a fine-grained, sharp siliceous sandstone containig from 5 per cent. to 25 per cent. of maltha or bitumen. The sand is very hard, and each grain is coated with from 8 per cent. to 15 per cent. of bitumen; the commercial product must contain at least 8 per cent. For use in roadmaking the material is put through a jaw-crusher, and then through two sets of rolls, and is thus disintegrated into separate grains. The ground material is spread cold on the prepared macadam surface to a depth of 2 in., and rolled until the interstices of the broken stone are filled. The cost of bringing a road to grade with 4 in. of broken stone, rolling once, covering with a layer 1½ in. thick of rock asphaltum, and thoroughly rolling, was 2s. per square yard. The asphalt is an excellent binding material for the wearing course, and gives a dustless waterproof surface which resists deformation under load, and is sufficiently plastic to break the blow of a horse's hoof. A mastic is also made by heating 75 per cent. of crushed rock asphalt, 20 per cent. of ground limestone, and 5 per cent. of pure bitumen to about 250 deg. Fahr., and moulding the mixture into 50-lb. blocks, which are used for waterproofing breweries, subways, etc. The cost of surfacing macadam streets is 5d. to 10d. per square yard higher than with ordinary macadam.

Straightening Brick Chimney Shafts.

TWO CHIMNEY shafts, 120 ft. high, built in 1859 at the pumping station of the Louisville Waterworks, near the Ohio River, inclined to a dangerous extent during construction, and were afterwards straightened by work on the foundations, in the manner described in an article by the late Mr. Charles Hermany, recently published in the *Rose Technic*. Owing to the softness of the soil both chimneys began to settle long before completion, and then inclined, one towards the east and the other towards the south-west, the overhang being about 3 ft. in one case and 4 ft. 8 in. in the other.

To remedy the defect a trench, 4 ft. wide by 21 ft. deep, was dug along the foundations opposite the sunk side, and vertical pits, 18 in. by 9 in. by 6 ft. deep, were sunk 6 ft. below the bottom of the trench, spaced 30 in. apart. Almost as soon as the pits had been completed one of the chimneys began to straighten, and after ninety-one days the top was only 3 in. from the vertical. The ground was then filled in, and in a few days the shaft became perfectly straight. The other chimney was more troublesome, and had to be moved by the aid of screw-jacks, in conjunction with artificial means of causing the soil to yield in the required direction. The chimney was eventually brought vertical, although 213 days were occupied in the process. The weight of each shaft is stated at 800 tons, and the foundation pressure at about 2 tons per square foot.

Repairing Concrete Injured by Freezing.

IT is stated by an American journal that concrete which has been exposed to frost before hardening can be successfully repaired where necessary in the following manner:—Pick out the concrete affected by frost and wash the surface with water. Apply a 1 : 3 solution of hydrochloric acid, wash again, and apply a very wet mixture of new concrete. If this this kept damp for a week it bonds perfectly with the old surface.

Tungsten and Electric Lighting.

ONE October night, in the year 1781, a German scientist, working in his laboratory, discovered a metal which he found impossible to melt in his crude charcoal furnace. He called the new metal tungsten, from the Swedish "tung" (heavy) and "sten" (stone), because the heavy ores had come from Sweden. Little did the old man know that his find would one day completely revolutionise electric lighting. The filaments of incandescent electric lamps were made of carbon, because no other material could be found which would withstand the intense heat. Every well-known metal was tried, but melted before reaching the required temperatures. Then the inventors began to experiment with the more uncommon metals, and again a German scientist took up the study of tungsten. At first the great trouble was to secure pure tungsten. This difficulty was overcome with the aid of an electric furnace, but the product, in the form of a gray metallic powder, proved so refractory that it could not be melted into ingots or drawn out into wire. An experimental filament was made by mixing the fine powder with a paste and squirting the mixture through a die, much the same as a spider spins his web. This thread was in turn heated in an electric furnace till the powder was fused into the form of a fine wire. With the melting-point of tungsten so much higher than any other known metal, it was possible to heat the filament to greater incandescence, producing more and better light with less waste of current in useless heat. The advent of the new tungsten lamp, or metallic filament lamp, as it is popularly known, was startling to the users of electricity for lighting purposes, for they at once saw that the metallic filament lamp would easily give the same light as the common incandescent lamp for one-third the cost. A home that was lighted by electricity for 8s. a month could be lighted with the new lamps for 2s. 6d. Not only that, but the light from the new tungsten lamps proved to be pure white, very nearly akin to actual sunshine. When the metallic filament lamp made its appearance it was thought the apex of achievement in incandescent electrical illumination had been reached. Yet the present year has witnessed a still further advance in the manufacture of electric lamps. In the early autumn it was announced that a British firm of electrical engineers had succeeded in rendering tungsten into a ductile form and drawing it into a wire one-thousandth part of an inch in thickness, and were making filaments of electric lamps out of it. Thus has the last and perhaps the only defect of tungsten for electric lamp filaments been removed.

National Theatre, Boston (U.S.A.).

THIS theatre, in Tremont-street, Boston, has seating accommodation for 3,000 persons, and represents a form of building construction which is unusual in this country, the frame being partly of steel and partly of reinforced concrete. The foundations are carried by concrete piles, the columns are of steel, the girders are of reinforced concrete, and the floors and roof are of the same material.

lvance in ber Values.

TEN years ago timber, in spite of its grand quality, was a drug in British Columbia. A capitalist who built a railway ancouver Island received from the Province nsiderable timber tract as a bonus on his prise. Though a shrewd man, he bewailed ot in being thus saddled with such poor Not long since this very timber realised 00*l.* The denudation of the forests of the ed States has proceeded at a gallop in the quarter of a century. In the Central State chigan less than twenty years ago timber little commercial value, yet in fifteen years reats have been cut down to bare stumps. e year Michigan timber rose 12s. 6d. per ft. on the stump. The best-informed er-men said that values must come back a ut they never dropped one penny. Up to in the Western State of Minnesota white Norway pine was obtainable at 4s. to 8s. ,000 ft. on the stump—*i.e.*, uncut. Eleven later no such wood could be had under to 48s. per 1,000 ft., and there was little ooming even at those prices. Twenty- years ago timber in Michigan was only n 1s. to 2s. per 1,000 ft. on the stump; to such timber fetches 48s. to 60s. if any ens to be offering. There, as elsewhere in rica, the few timber belts left are held by nen for the fancy prices which the approach- mine must bring.

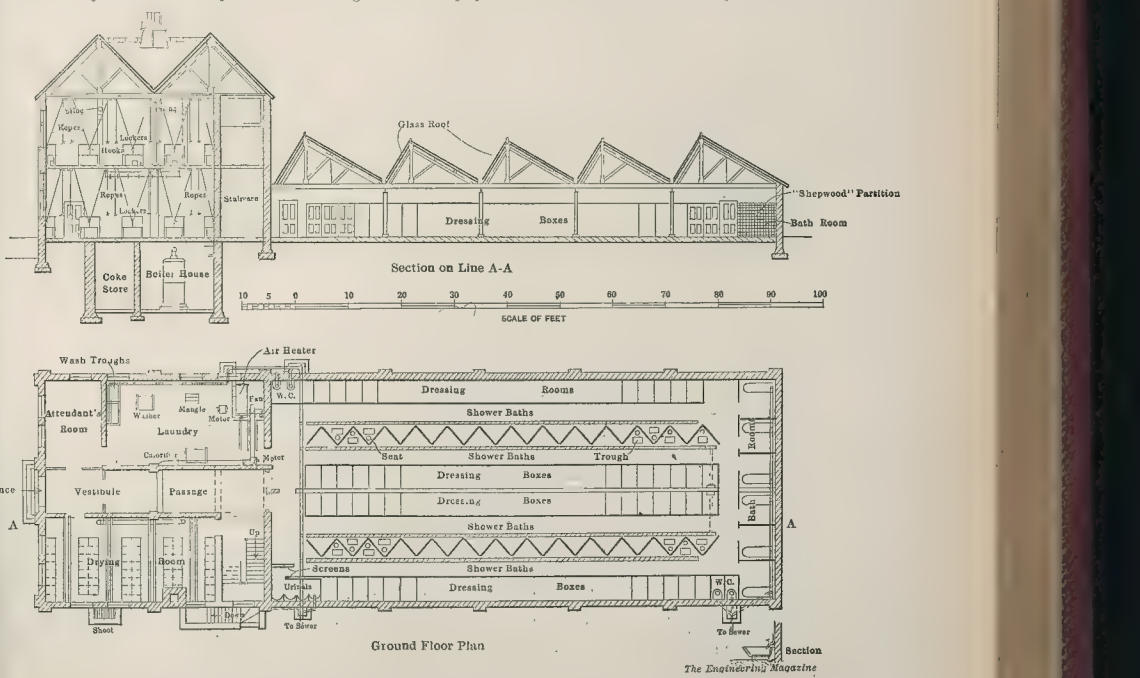
ngthening athedral Tower ndations.

THE foundations of the two towers of St. John's Cathedral, Denver, Colorado, were reinforced last year in order to remedy injuries due to settlement and to prevent future from the same cause. As constructed, the dations were intended for a much smaller than that afterwards placed upon them, esult being that serious injury was caused stonework of the towers. After considering native methods of treatment the engineers ulted recommended the strengthening he original foundations by building a rced concrete ring around the foundation ch tower and bracing the ring by four of reinforcing bars arranged in the form ross, and embedded in concrete deposited our triangular spaces between the old dations and the new work. The bars were d through four steel tubes forced under the nal foundations by means of screw-jacks. Although the reinforcement of the foundations as carried out is not considered to be so effective as entire reconstruction would have been, the work as executed will safeguard the towers against excessive settlement and obviate the risk of further injury. The bearing surface has been almost doubled, and the average pressure on the soil reduced to 3,980 lb. per square foot, as compared with 6,666 lb. per square foot in the case of the original foundations.

Test for the Penetration of Preservatives into Wood.

A SIMPLE method of determining the penetration of inorganic preservatives into timber is described in a circular issued by the United States Forest Service. In this method visual inspection of prepared specimens is adopted for determining the depth to which the preservative agent has penetrated. A specimen disc of the treated wood is cut, and in the case of zinc chloride the freshly-cut surface is immersed for ten seconds in a 1 per cent. solution of potassium ferro-cyanide. It is dried with blotting-paper, dipped in a 1 per cent. solution of uranium acetate, and allowed to dry. Unimpregnated portions of the wood then exhibit a dark-red colour, and treated portions are whiter than the natural wood. It is stated that chemical tests show that proportionate amounts of zinc chloride as small as 0·2 lb. per cubic foot can be detected in this manner. In the case of copper salts, the specimen discs need only be dipped in potassium ferro-cyanide solution, and the penetration zone is marked by a deep-red stain. The same test for iron salts is followed by a dark-blue stain. Mercury perchloride is made visible by a solution of hydrogen sulphide resulting in a black stain. A great advantage of the method is that it can be quite readily applied by anyone desiring to ascertain whether treated timber has been adequately impregnated.

Earthquake-proof Dwellings at Messina.



ALTHOUGH reinforced concrete is excellent for the construction of buildings to resist earthquake shocks, this material does not always furnish the most economical means of affording safety, especially in countries like Italy, where steel bars are relatively costly. This consideration has decided the authorities of the Italian State Railways to adopt timber-framed buildings for the housing of their employees at Messina. The new dwellings, to the number of 700, replace the temporary barracks constructed after the recent earthquake. These houses contain four or six rooms, all on one story, and are covered with a flat roof. Ample space is left between them, so as to minimise risk and to provide land for gardens. The exterior and partition walls consist of expanded metal, covered with cement mortar and supported by pitch-pine standards treated with a preservative solution. The walls are constructed with an interior air space, 25 centimetres wide, which reduces the transmission of heat and sound. The timber standards are connected by steel brackets to the foundation sills and roof beams, and are braced suitably to insure rigidity. The roof is of generally similar construction, and covered by a composition of wood and cement coated with tar. The floors are finished with coloured cement tiles.

Tall-Building Risks.

THE fall of a stone minaret from the tower of the Trinity Building, New York, emphasises the necessity for exceptional care in the design and construction of lofty structures. In this case the minaret weighed about 200 lb., and fell from the height of 275 ft. above the street. On reaching the pavement it was smashed into numerous fragments, which flew in all directions, causing injury to some innocent pedestrians. As it is stated that the minaret was torn from its pedestal by a large flag, it is obvious that the element of contingent risk had not been taken into account so fully as could have been desired.

Miners' Baths and Bath Houses.

AN article by Mr. G. B. Walker in the *Engineering Magazine* gives a well-illustrated account of the facilities provided for bathing and washing by typical British and Continental mining companies. Among examples furnished by this country special attention may be directed to the elaborate bathing establishment of Messrs. Brunner, Mond, & Co., at Winnington, and the baths proposed to be erected for the Wharncliffe Colliery Company from the designs of Mr. L. W. Ensor, A.R.I.B.A. As it is proposed in connexion with the new Mines Bill that similar facilities shall be provided if demanded by the men, this article is one that may be usefully borne in mind by our readers.

Plan of Baths, Winnington, Cheshire. Mr. L. W. Ensor, A.R.I.B.A., Architect.

THE BUILDING TRADE.

DISCOUNTS.

IN a recently-published work Mr. C. R. Ashbee incidentally introduces the question of discounts of the type so generally adopted among manufacturers of building goods, and in so doing displays a misapprehension as to the real purport of this practice which is shared by a large proportion of his professional *confrères*.

It would be idle to contend that discounts have never been used to hoodwink the inexperienced as to the value of an article, but we should be sorry if it were generally imagined that this was the intention and purpose of a system so general in trade transactions. No, the origin of the practice was to provide a quick and easy method of dealing with market fluctuations and it answers this purpose very efficiently. Mr. Ashbee, in his implication that the discount necessarily goes into the builder's pocket as additional profit, is very wide of the mark. Though the lack of uniformity in the practice of architects sometimes results in this, it also not infrequently operates to the builder's detriment.

We may admit the architect is in a difficult position owing to the varied customs among different manufacturers as regards discounts. Suppose he specifies "list price," the builder in his competitive estimate will be bound to allow, say, 25 per cent. off this, while among the various firms the rate of discount may vary from 20 to 33 per cent., and he has no knowledge as to the one whose goods the architect will select. If, on the other hand, "nett" prices are specified there are still firms who will manage to allow the contractor 10 per cent. below the price quoted to the architect as nett. The distinction between "builders' firms" and "architects' firms" is quite well known, but it does not necessarily operate to the builder's advantage. If, for instance, he gives a low price, trusting to secure 10 or 15 per cent. off nett prices, and an "architect's firm" is selected who will allow him nothing, he is short on his estimate by the amount in question, while if the architect is easy-going the builder may make quite a comfortable little sum on the "nett" prices. In either case the element of uncertainty, where the builder and the architect are strangers to each other, is unsatisfactory and liable to produce friction. We are quite sure that both parties would welcome a greater uniformity in practice with a view to the elimination of avoidable risks in contracting. A business in which there are so many unavoidable risks could well be relieved of those which more system and uniformity in business practice would eliminate.

It is easy to say that "nett" means "nett," and no discount will be permitted, but when a manufacturer is not pressed to the utmost competitive limit there is always a temptation to reserve a discount to propitiate a contractor who is probably working on a very small margin of profit, while as a result of this contractors are apt to tender rather lower than they otherwise would, trusting to get a small recoupment from discounts. All may go well unless the architect is one of those tough and unsympathetic specimens who believes in competition all through, pits the manufacturers against each other, until they have had to pare off their discounts, and leaves the contractor at most just the 2½ per cent. for cash. Unless those tendering were well posted in this architect's rigidly conscientious attitude, we may hazard a guess that the profit on the contract will be a disappointing one.

THE PENALTY CLAUSE.

CLAUSE 24 of the conditions of the R.I.B.A. Form of Contract provides that the contractor shall pay the employer a certain sum as damages should he fail to complete his work before a stipulated date, and this is usually referred to as the "Penalty Clause."

Many builders treat this clause lightly on the score that it is very seldom enforced, yet it may lead to a great deal of trouble, if not to litigation. No claim can be made against builder for delay arising from causes over which he has no control, and these are set out in detail in Clause 25 of the contract. It is unfortunate that few foremen are well acquainted with the contract, and a builder would be well advised to draw the attention of his foreman to this clause, so that he should be in a position to prove his non-liability for delay under any of the terms contained therein. A foreman should be careful to keep a record in his diary of the time lost owing to inclemency of the weather, and should not forget that every hour lost is of importance. Very careful note should also be made by him of the loss of time arising through disputes with adjoining owners.

A considerable amount of delay is often caused by the employment by the building owner of sub-contractors whose work is not included in the contract. There are also sub-contractors whose work is included in the contract, and, though appointed directly by the employer, are paid by and become the builder's employee. In these cases a builder should for his own protection insist upon a contract being made between himself and the sub-contractor, and a form of such contract is now issued by the London Master Builders' Association.

Variations on the contract, whether they are in addition or omission from the contract, usually mean a loss of time, and a careful account of the time so lost should be kept. The builder should bear in mind that under the reference to "strikes or lock-outs" in this clause he must at once notify the employer, and that this part of the clause refers not only to his own business, but to every trade that affects him.

The builder should be careful to note Clause 2 of the conditions of the contract, and give the architect notice in writing of all details he requires; delay is often caused by these not being supplied, and the date when all details are received should be carefully noted.

PROJECTED BUILDING WORKS.

A LARGE proportion of the 111 Private Bills for next session contemplate constructive works of some kind or another, such as railways, docks, waterworks, tramways, etc., and a few contain proposals for strictly architectural work. For instance, in the Swansea Corporation Bill Mr. G. T. Hine, architect, is responsible for an estimate of 282,700*l.* for a new asylum, made up as follows: Land, 16,200*l.*; erection of asylum, including the laying out of the grounds, 245,500*l.*; furnishing and equipment, 16,000*l.*; contingencies, 5,000*l.* Mr. G. Moxham, architect, has also prepared an estimate of 13,000*l.* for erecting shops on part of the market property of the Swansea Corporation. It is further proposed in the Bill to spend 225,000*l.* on sewage works and 98,850*l.* on street works, and also to lay down regulations regarding the area of habitable rooms in all new buildings. The floor space of the living-room is to be not less than 132 sq. ft., and of one bedroom not less than 110 ft., and no bed or habitable room is to be less floor area than 70 ft. The Sheffield Corporation seek to spend 294,368*l.* on street works and 60,000*l.* on the conversion of the existing privies into water-closets. The Keighley Corporation are desirous of spending 27,000*l.* on improving the Keighley Institute and 27,150*l.* on street improvements, and have also inserted in their Bill various model clauses dealing with the building by-laws. Amongst other things the Shipley Urban District Council have a clause enabling them to make special rules in regard to the erection of steel and reinforced concrete buildings, and also to lay down the area of habitable rooms. In regard to the living-room the area is only to be 115 sq. ft. The Port of London Authority are asking for compulsory powers to purchase a considerable block of property in Crutched-friars, French Horn-yard, Seething-lane, Catherine-court, Savage-gardens, and Trinity-square, to enable them to build offices, etc., which will involve the closing up of Catherine-court and French Horn-lane. The Hull Corporation ask power to spend 96,000*l.* on a new bridge and 61,000*l.* on street improvements. The City Corporation have an estimate of 17,500*l.* for the construction of subways in connexion with St. Paul's Bridge at Queen Victoria-street and Cannon-street. The Dover Corporation purpose pulling down insanitary property in Pier Ward and widening Limekiln-street, Bulwark-street, and Beach-street. Birmingham Corporation are desirous of erecting a new electric generating station, the cost of which, exclusive of the land and equipment, is set down at 124,000*l.* It is further proposed to erect several new transforming stations and to carry out street widenings, the cost of the latter being 122,300*l.* Hertford Corporation are taking a lease of Hertford Castle from the Duke of Bedford for a term of seventy-five years at a rent of 2s. 6d. a year, and propose adapting it for public uses. The Commissioners of Works are taking lands at Westminster bounded by the Horse Guards'-avenue, the Embankment, and Montagu House and garden for the extension of the public offices; land in Holborn to extend the Patent Office; and part of Clifford's Inn for the extension of the Record Office. The London County Council, amongst other matters, are seeking to rebuild Lambeth Bridge at a cost of 240,000*l.*, and to develop part of the White Hart Estate at Tottenham, which some years ago was acquired for the erection of working-class dwellings on garden city principles. The Manchester Royal Exchange have proposals for acquiring land to extend the Exchange buildings which involves the making of a new street. The Tees Conservancy Board seek to make new roads and raise the river training walls at a cost of 96,000*l.*

THE BUILDING TRADE UNREST.

IN view of the demands put foward by London carpenters and joiners and cabinet-making trades for an increase of 1½d. an hour in wages, a reduction of summer hours, and double pay for overtime, an interview with the Secretaries of the two trade unions concerned will be read with interest. The opinions expressed are those of Mr. S. Stennett, District Secretary of the Amalgamated Society of Carpenters and Joiners, and Mr. Alex. Gossip, General Secretary of the National Amalgamated Furnishing Trades Association—both concurring in the answers given to questions—and may, therefore, be taken as an official statement on the men's case.

"What led up to the alteration of your rules in which you seek for improved conditions?" was the first question.

"In the first instance," was the reply, "the London Building Industries Federation and the branches were asked to send in suggested alterations, and their suggestions, afterwards embodied in the new rules, were agreed to by an almost unanimous vote of the union members of the trades affected. The men are behind the new proposals, and are determined to stand by them."

"But have not both the societies you represent an agreement with the London Master Builders' Association?"

"No; at the present time the cabinetmakers have not an agreement, and during the last few years there have been such a change in the system of manufacture of joinery and fitments that members of both societies work together in a very large number of shops. As a consequence it would be as much to the employers' interest as ours to have an agreement with both societies, so that we do not expect any difficulty in that direction."

"Is it at all possible that other sections of the building trade will seek to improve their conditions?"

"Yes, it is quite possible, as some sections are now taking a vote of their members on the question—such sections as the bricklayers, plasterers, masons, etc."

"Do you think there is a possibility of a strike?"

"No. We have a very good opinion of the members comprising the London Master Builders' Association, and there is no reason to doubt that we shall arrive at an amicable arrangement. We know that the employers themselves are perfectly well aware of the increased cost of living, and that it is absolutely necessary that the standard of life should

n no way reduced. They know from rience that the better paid class of work- are without exception the best producers. was recognised by the Engineers and Ship airers' Association of London when they ted to the joiners working on the Thames amount which we are asking from the er Builders' Association. We consider the reduction of hours is a question of eme and vital importance in these days of dier methods of production and consequent ase in the ranks of the unemployed. is recognised by every thinking man as of the greatest evils which we have to with in this country. It is a well-known that the firms who have adopted the er working day are in a much better posi- to compete than those who work the r hours. This we have on the authority nany large employers themselves. This ion of the reduction of hours of labour the standard of living is, of course, not ed to our trades, but affects the whole ry. A shorter working day means more oyment, a greater distribution of wages, better work."

in view of the tendency to fix a time limit ntracts, how do you propose to obviate ecessity of working overtime?"

Ve think there will be very little difficulty ost jobs in arranging for two shifts of This would be to the interest of both es, and it must be obvious that a man relatively accomplish more work and a r quality of work in eight hours than he is working twelve hours, for which ceives the extra rate."

What is the strength of your unions?"

is almost impossible to say from one to another. There are 110 branches of arpenters' and joiners' societies, and ten hes of the cabinetmakers' societies, and e making new members every week. The ers are realising their position and are ng into the unions."

n the event of a dispute, how many men ikely to be involved?"

would be not merely our own members. he sections of the building industry are ated with the London Building Industries ration, with one exception, and immey one section was involved in a dispute, uld involve all other sections, according s rules of the federation."

Would you be willing to confer with the r Builders' Association on the subject?"

es, we are quite willing to meet them w way to discuss the situation."

A Builder's Views.

Howell J. Williams, builder, of Bersey-street, interviewed on the subject,

think myself the time is not opportune ncede the requests of the societies. The hey ask for is pretty stiff, and, in view state of trade, not very welcome. It is nly not a matter for threats of strike or ng of that kind, but essentially one for ence. There is a certain class of builder, ecial reputation, whose operations are ed very largely to large rebuilding works entral London, who have had a fair nt of work lately. But the building trade not depend upon this class; it depends the enterprise work initiated on speculaines, either in the suburbs or on large or the erection of warehouses or offices. to the difficulty of obtaining finance for ind of enterprise, such work has been g during the last few years. People an aversion to locking up large sums ilding enterprises which are not readily able. Consequently, a large amount of which used to go in building is now diverted to more quickly negotiable ties.

difficulty is now that while some classes lders and their clients can well afford to he rise, there is a very large class of rs and their clients to whom any subl rise would seriously handicap work. tition is so keen amongst the builders ng that the margin of profit has almost eared. The number of failures in the ng trade in the last three or four years that some of the firms who do the most are those who go the sooner to the wall. ly the cautious ones who are just holdeir own. Frequently builders are to for this competition.

sympathies are very much with carrs, because I was put to the carpentering myself, and I think that carpenters ave to find their tools considerably more n most other trades—have some ground reasonable advance, especially having to the absence of continuity in their ment. In any event, it is essential that dard wage for all trades should be in agreement by conference, so that ployers are placed on the same basis. ld be impossible for some employers to concede an advance and others to refuse it, when all are tendering for the same work. I think the question of the overtime is one capable of adjustment when representatives of the men and the employers get round the table.

If a strike came next year, it would certainly give the trade—to the injury particularly of the workmen themselves—a more serious blow than any previous strike, because we are hoping for a revival of enterprise building, upon which, in the main, the building trade really depends. It is for the men to make out their case, and I hope personally it will be met sympathetically."

THE WOOD TRADE.

MESSRS. FOY, MORGAN. & Co., in their wood report for 1911, state that "the importation of sawn and planed wood goods into the United Kingdom has fallen away considerably during the past year, not merely in comparison with the two preceding years, or even with an average of the previous five years, for which statistics are given and on which the decrease amounts to at least seven per cent., but on a wider survey is found to have been by far the smallest recorded during any of the previous fifteen years, with the single exception of 1908. For this result there have been many contributing causes, among the chief of which, the increasing international competition for all kinds of raw materials and the resulting high average cost combined with a low consumption, for which the depression in the building trade is mainly responsible, are at all events not peculiar to the past year, although their influences seem to have been more acutely felt. But in addition to these, the trade has recently had to confront special and unforeseen difficulties, such as the dislocation of trade through the protracted series of labour troubles causing a further restriction in normal consumption, and secondly, the great increase in freights leading directly to an increase in the cost, and eventually curtailing the volume of supplies. These undoubtedly have been the crucial factors in determining the restricted and unprofitable character of the past season's business. The average import cost remains at the high level attained in 1910, which would be remarkable, in view of the admittedly reduced consumption during the past year, except for the fact that the reduction in the supply has more than kept pace with the retrograde movement of the demand, with this result, however, that the ratio between the two is probably more favourable to a steady market during the present closure of the navigation than could have been said to be the case a year ago. High prices, however, particularly when resulting, as is the case now, from causes entirely disconnected with the state of internal trade, are a severe handicap to profitable business while trade remains depressed, and in fact help to perpetuate the evil by encouraging the use of ferro-concrete and those other substitutes which detract from the ordinary demand for wood. The latest returns of the general trade of the country are, however, so encouraging that an extended inquiry for wood may be fairly anticipated in the near future. . . . But no really wholesome impetus in consumption will be forthcoming (without which there can be no great increase in turnover, which is now the great desideratum from the timber-merchant's point of view) until the belated improvement in the building trade has actually taken place. The best indications of such a consummation, although these cannot be accepted as conclusive, are found in the reports by the Board of Trade, showing that the number now unemployed in the building trade is only one-third of what it was a year ago, and still less than two years ago. Some speeding up of the consuming power of the United Kingdom markets in the interval between the present and next midsummer would appear to be a matter almost of necessity if the increased supplies during the coming year, prophesied by some as the consequence of hanging over a portion of the past season's manufacture, are to be absorbed without jeopardy to prices."

GENERAL BUILDING NEWS.

EDINBURGH CHRISTIAN SCIENCE CHURCH

The First Church of Christ Scientist, Inverleith-terrace, Edinburgh, has just been dedicated. The architecture, says the *Scotsman*, is founded upon the late mediæval buildings of Scotland. Simplicity of mass has been aimed at rather than elaboration of detail. On the north front abutting on the terrace, where the principal entrance is placed, the elevation shows a central oblong tower with flanking circular turrets, in which the gallery staircases are placed. In the centre of the main tower is a three-light window, below which is the entrance porch with simple wrought-iron grills. In the gablet of the main tower is carved a cross, surmounted by a crown; at the angles are respectively the Lion of St. Mark and the Eagle of St. John. About the porch are many bits of symbolic carving. Owing to the fall of the ground to the south, towards the Water of Leith, the building is planned in two stories. On the street level, entered from Inverleith-terrace through the porch already referred to, is a vestibule, on each side of which are the staircases to the gallery. Beyond the vestibule, and separated from it by an oak glazed screen, is the hall, 70 ft. in length by 50 ft. in width, and about 40 ft. to the roof. The hall has a large barrel-vaulted ceiling, and is lighted by five windows on each side. There is only one gallery—that at the north end, over the entrance vestibule—so that the whole of the church otherwise is clear of supporting columns of any kind. The flooring is of wood blocks arranged in patterns, and the seating is accomplished by means of cathedral chairs. The platform, with two reading desks, is at the south end of the church. At this end of the building is a large structural arch, 38 ft. across, with flattened panel. Between the piers of the windows the spaces are lined with oak. From the lofty roof depend two rows of electroliers. Beneath the church is a small hall, seated for 130, also eight rooms for use as business and class rooms, and cloakroom accommodation. Annexed to the south end of the building is a small block, which contains two studies for the readers and a small service-room. The church is also fitted with a full service of telephones. In the basement is the heating boiler, the chimney of which has been so designed as to make an ornamental feature of the south-east elevation, where has been placed, approached by a flight of stairs, a subsidiary entrance to the church. Mr. Ramsay Traquair was the architect. The cost of the church, including furniture, fittings, etc., was 9,700*l*.

SCHOOL, DARLINGTON.

The Higher Elementary School, erected by the Darlington Education Authority, in Gladstone-street, was opened by Sir Hugh Bell, Bart., on the 8th inst. The building was designed by the Borough Surveyor (Mr. G. Winter), in the Gothic style in harmony, generally, with the Technical College adjoining. The exterior is built with hand made plastic bricks, with buff terra-cotta dressings. The interior woodwork is of varnished pitch-pine. The floors of the halls and vestibule are formed with marble terrazzo paving, and all the other floors of pitch-pine wood blocks. The accommodation is for 320 scholars, in eight classrooms, in addition to which there is on the ground floor a central hall, 44 ft. by 33 ft., and a manual instruction-room, 58 ft. 6 in. by 24 ft., with accommodation for forty boys, together with the necessary storeroom for same, two teachers' rooms, cloakrooms, and lavatories. On the first floor, which is constructed of fireproof material and approached by two stone staircases, are two landings leading on to a gallery in the upper part of the central hall. Around this gallery are placed five class rooms, together with a chemical laboratory, 35 ft. by 24 ft., with places for twenty-four scholars, balance-room, storeroom, etc., with a lecture-room, 24 ft. by 23 ft., adjoining. The building is lighted throughout with electricity and heated with hot water on the low-pressure system special attention having been paid to the ventilation. The total cost of the building, including large cemented playground, latrines, etc., for same, has been about 8,000*l*., exclusive of furniture. The contractors were:—Excavators, bricklayers, carpenters, and joiners, Messrs. J. Guthrie & Son, Darlington; slating, Messrs. Lancaster Brothers, Darlington; plastering, Messrs. Smith & Boyle, Darlington; plumbing and glazing, Mr. Emerson Smith, Darlington; painting, Messrs. Scott & Armistead, Darlington; smith and founder, Mr. R. N. Golding, Darlington; heating, Messrs. G. Denham & Co., Darlington; electric lighting, Messrs. Cox-Walkers, Darlington; terra-cotta, the Hathern Station Brick and Terra-Cotta Company, Ltd., Loughborough; fireproof flooring, Messrs. Homan & Rodgers, Manchester. The clerk of works was Mr. J. Dalton, of Darlington.

NEW SCHOOL, BLACKBURN.

Messrs. Cooper & Slater are the architects for this school, which is being erected at a total cost of 14,500*l*., and which will provide accommodation for 905 scholars. The contractors for the works are Messrs. Thomas Higson & Son, of Blackburn.

NEW INSTITUTE, LLANYSTUMDWY.

This institute, which is a gift to the village from Mr. Lloyd George, has been erected from the designs of Mr. T. Taliesin Rees, F.R.I.B.A., of Liverpool. The large hall will provide accommodation for over 300

people. The building includes a reading-room, recreation-room, kitchen, and stores. The contract was carried out by Mr. John Humphreys, of Criccieth.

NEW CHURCH HALL, PLYMOUTH.

The foundation-stone of the new hall for the church of St. Matthias was laid last week. The building is being erected from the designs of Messrs. Carder & Carder, architects, of Plymouth. The estimated cost of the work is 3,000*l.*, and the hall will be about 81 ft. by 42 ft., with a portion of the northern end divided into two classrooms. The building will be lit by electricity and heated by hot water.

NEW UNIONIST CLUB, POLRUAN.

The foundation-stone of this club was laid last week by Lady Beatrice Pole-Carew. The building is to be erected from the plans prepared by Mr. C. W. Parkes Lees. The estimated cost of the work is 400*l.*, and the club will include billiard, reading, smoking, and ladies' rooms.

NEW PREMISES FOR ROWNTREE & CO., YORK.

A large building, containing dining-rooms, domestic school, and gymnasia, is being erected for the employees of Messrs. Rowntree & Co. in the district of Haxby road. The plans were prepared by Mr. W. J. Swain, the works architect, and accommodation will be provided for over 3,000 persons. This building will be connected with the factory by means of an 18-ft. wide subway under the Haxby-road.

TRADE NEWS.

Messrs. Ashwell & Nesbit, Ltd., hot water and heating engineers, etc., of Leicester, London, Manchester, and Glasgow, have issued a useful tear-off date indicator.

Under the direction of Mr. Edmund A. Fermaud, architect, 17, Dartmouth Park-road, N.W., the "Boyle" system of ventilation (natural), embracing Boyle's latest patent "air-pump" ventilators and air inlets, has been applied to the Free Library and Institute, Dolgelly.

The Dutton Isolation Hospital, near Runcorn, is being supplied with Shorland's warm-air ventilating patent Manchester stoves with descending smoke flues and grates, by Messrs. E. H. Shorland & Brother, Ltd., of Failsworth, Manchester.

PROJECTED NEW BUILDINGS IN THE PROVINCES.*

BIRKENHEAD.—Proposed baths (8,400*l.*); Mr. C. Brownridge, Surveyor, Birkenhead Town Council.

Birmingham. — Rebuilding scheme, New-street (16,000*l.*); Messrs. Nicol & Nicol, architects, Colmore-row, Birmingham; foundations by Messrs. Barnsley & Sons, 102, Ryland-street, Birmingham.

Blantyre.—Extensions to Calder-street School (2,000*l.*); Mr. James Cowie, architect, 123, Main-street, Wishaw.

Blaydon.—Extensions to school; Messrs. S Fenwick & Co., builders, Northumberland road, Newcastle.

Boothstown.—Alterations and additions to premises for the Boothstown Manufacturing Company.

Broadclyst.—Rebuilding farm buildings for Sir D. T. Acland; Messrs. E. H. Harbottle & Son, architects, Queen-street, Exeter.

Brough. — Police-station and court-house (2,850*l.*); Mr. J. H. Fenwick, builder, 180, Albert-avenue, Hull.

Carlisle.—Additions to Catholic schools, Union-street (2,000*l.*); Mr. H. Foxall, architect, 54, Lowther-street, Carlisle.

Caerlon.—Training college (25,000*l.*); Messrs. A. Swash & Son, architects, Newport; Mr. F. Bond, builder, Cardiff.

Chester-le-Street.—Plans have been lodged by Messrs. J. G. & F. Lawson for 107 houses.

Chorley.—School (500 places); Mr. J. Mills, Secretary, Education Committee, Chorley Town Council.

Darlington.—Hall (2,000*l.*); Messrs. J. Taylor & Minor, 53, Northgate, Darlington.

Dunston-on-Tyne.—Infants' school (4,000*l.*); Mr. W. Rushworth, architect, Shire Hall, Durham.

East Hetton.—School (4,000*l.*); Mr. W. Rushworth, architect, Shire Hall, Durham.

Edinburgh.—Extensions to McLagen & Cumming's factory, Warriston-road (3,500*l.*); Mr A. Hunter Crawford, architect, 10, Randolph-place, Edinburgh.

Falmouth.—Adaptation of market house for post office; H.M. Office of Works, Storey's-gate, Westminster, S.W.

Folkestone.—The following plans have been passed:—Addition to "Erinmore," Shorncliffe-road, for Mr. J. Abbott; addition to the Lodge, Castle-road, Sandgate, for Mr. F. H. Miller; additions to Hermitage, Castle-road, Sandgate, for Mr. M. Van Praagh.

Fort Augustus.—Church for the Benedictine Monks; Mr. A. Gilbertson, architect, 13, Harrington-street, Liverpool.

Fulford.—Eighty two houses; Messrs. Wise & Lansdell, Ltd., builders, Jewry-street, Portsmouth.

Hapton.—Additions to printing works for Messrs. A. Drew & Son, Ltd.

Harsforth.—Proposed enlargement of police-station; Mr. J. V. Edwards, architect, West Riding of Yorks County County, Wakefield.

Hawarden.—School; Messrs. Wright & Son, builders, Hawarden.

Henley.—Grammar school; Mr. H. T. Hare, architect, 13, Hart-street, Bloomsbury-square, W.C.

Horsley Woodhouse.—School (225 places); Mr. E. W. Small, Secretary, Education Committee, Derbyshire County Council, Derby.

Houghton-le-Spring.—Enlargement of isolation hospital (520*l.*); Messrs. Cowieson, builders, Glasgow.

Hove.—Plans have been passed as follows:—Eight houses, Langdale-gardens, for Mr. G. H. Burstow, on behalf of Mr. W. Perrin; garage, Pembroke-crescent, for Mr. S. James, on behalf of Mr. C. Blandford.

Hull.—Warehouse, Whitefriargate, for the Trustees of Trinity House.

Kingseat. — Proposed threshing mill at Asylum; Asylum Committee, Aberdeen Lunacy Board.

Laughton. — Hotel; Mr. W. Edwards, Dinnington, Rotherham.

Leeds.—Factory, Woodhouse-street (6,000*l.*), for Messrs. Jackson Stones, Ltd.; Messrs. Garside & Pennington, architects, Ropergate, Pontefract.

Llanystundwy. — Institute; Mr. J. Humphreys, builder, Criccieth.

Maidstone.—Enlargement of school, Tonbridge-road (1,000*l.*); architect, care of Mr. S. L. Monckton, Secretary, Education Committee, Maidstone Town Council.

Malmesbury Park (Bournemouth). — Additions to school (350 places); Mr. F. W. Lacey, Surveyor, Bournemouth Town Council.

Marple.—Nursing home (3,000*l.*); Secretary, Crippled Children's Help Society, 55, Cross-street, Manchester.

Maryport.—Additions to school (3,000*l.*); Mr. J. Foster, Earl-street, Carlisle.

Methley.—Alterations to Coneymoor Working Men's Club for the Leeds City Brewery Company, Ltd.

Oban.—Kippering houses for Callendar and Oban Railway (4,500*l.*); Mr. A. Paterson, Engineer, Callendar Railway Offices, Buchanan-street, Glasgow.

Oldham.—Six shops, The Market (170*l.*); Messrs. W. Henshall & Son, builders, Barker-street, Oldham.

Penzance.—School (5,000*l.*); Mr. F. Latham, Borough Engineer, Town Hall, Penzance.

Pool (near Leeds).—Corn mill for the Wharfedale Farmers' Trading Association.

Preston.—Catholic chapel (2,500*l.*); Mr. J. H. Mangan, 3, Guildhall-street, Preston.

Rainforth.—School (9,000*l.*); Mr. T. Collinge, Surveyor, Town Hall, Mansfield.

Rotherham.—A plan has been passed for a motor garage in Clifton-lane for Dr. J. R. Anderson.

Reyton.—Cotton mill; Mr. A. Turner, architect, 25, Clegg-street, Oldham.

Sheffield.—Filter house, Low Bradfield (2,235*l.*); Messrs. W. & A. Forsdike, Ltd., 24-32, St. Mary's-road, Sheffield. The following plans have been passed:—Eight houses, Myton and Ribston roads, for Mr. B. Baggaley; additions, Harold Hotel, Harold-street and Hardy-street, also additions and alterations, Weston Park Hotel, Weston and Summer streets, for Messrs. Tennant Brothers, Ltd.; four houses, Horndean-road, for Mr. J. H. Smith; three houses, Manor-lane, for Mr. E. Martin; additions to premises, Jenkin-road, for Trustees of Brightside Primitive Methodist Chapel; warehouses, Cumberland street and Well-lane, for Messrs. T. & J. Roberts; five houses, Chesterfield and Bingham roads, for Mr. A. Davidson; eight houses, Shirland-lane, for Mr. G. D. Wright; additions to premises, Tinsley Park-road, Coleridge-road, West Don-street, and Lock-street, for Sheffield Corporation Education Committee; works, Alma-street, for the Sheffield Forge and Rolling Mills Company, Ltd.

Shotley Bridge.—Hospital; Messrs. Newcombe & Newcombe, architects, Pilgrim-street, Newcastle-on-Tyne.

Skipton.—Warehouse, Belle Vue Mills, for the English Sewing Cotton Company, Ltd.; Mr. James Hartley, architect, Swadford-chambers, Skipton.

Spalding.—Factory for Messrs. Osmond Son (2,500*l.*); Mr. H. C. Scaping, architec Court-chambers, Town Hall-square, Grimsby.

Stockton.—Workhouse infirmary (10,000*l.*) Mr. J. Rodham, Finkle-street, Stockton.

Sunderland.—Rope factory (2,500*l.*); Mr. Eltringham, architect, West Sunnyside, Sunderland.

Thurnscoe (Yorks).—Fire-station, Counc offices, etc. (2,000*l.*); Surveyor, Thurnsco Urban District Council.

Torquay.—Extensions and improvements baths (15,000*l.*); Mr. H. A. Garrett, Enginee Town Hall, Torquay. Plans have been passe for six houses, Redden Hill-road, for Mr. Cruse, and eight houses, Mallock-road, f Messrs. Smith & Johnson. A plan has be lodged for the erection of a parish hall at t rear of Torwood street, for the Council Trinity Church.

Trowbridge. — School, Timbrell - stree (3,690*l.*); Mr. E. Linzey, builder, The Hall Trowbridge.

Truro. — Extensions to post-office; M Leonard Winn, Boscawen-street, Truro.

Wallsall.—A plan has been passed for alter tions to the Rose and Thistle Inn, Wednesbur road, for Mr. J. Cleobury.

Wallsend.—Offices (2,500*l.*); Messrs. Ca Steel, & Caws, architects, 22, Fawcett-stree Sunderland.

Warrington. School, Oakwood-avenue; M J. M. Murray, Secretary, Education Com mittee, Warrington Town Council (architect be appointed).

West Hartlepool.—Power-station: Mr. W Barrs, Engineer, Town Hall, West Hartlepoo

Whitefield (Manchester).—Restoration Stra Paris Church (3,000*l.*); Mr. R. B. Preston, South King-street, Manchester.

Winchcombe (Gloucester).—Alterations workhouse (2,000*l.*); Mr. H. W. Stevens, Cler Board of Guardians, Winchcombe.

Ynysmudw (Pontardawe). — St. Mary Church (2,900*l.*); Mr. J. Cook Rees, architec St. Thomas'-chambers, Neath, Glam.

* See also our list of Competitions, Contracts, etc., on another page.

AUSTRALIAN COMMONWEALTH OFFICES IN THE STRAND.

THE Australian papers to hand contain r ports of the discussion in the Federal Parli ment on December 5 on the following moti with reference to the erection of new Co monwealth offices in the Strand:—

"That this House approves of the purcha of the following site and the erection o permanent building thereon for Commo wealth offices, viz., that part of the Lond County Council's property included wit the Strand, Aldwych, and Melbourne pla London."

The motion was moved in the House Representatives by Mr. J. H. Thom Minister for External Affairs. The site w (said the Minister) practically in the cent of London, being equidistant between t Bank of England and Westminster. T frontage to the Strand was 195 ft. 6 in., Aldwych 197 ft., and to Melbourne-pla 191 ft. 6 in. There were two proposals und consideration in connexion with the proper One embraced the whole block, and cover an area of 24,326 sq. ft. The other co sisted of that part of the block having frontage to the Strand, and covering an a of 13,632 ft. The London County Coun was invited to submit terms on which ea of these areas could be acquired. The pri asked were as follow: For the whole blo leasehold, 14,000*l.* per annum ground re or freehold at twenty-six years' purcha 364,000*l.*; and for the Strand frontage, the same terms, 9,542*l.* per annum, 248,092*l.* The Government, after inqui decided to recommend the larger scheme (the whole block), which provided for the p chase of the freehold for 364,000*l.*, and erection thereon of a block of offices e mated to cost 223,000*l.*, totalling 587,00 or, allowing for contingencies, 600,000*l.* round figures. The purchase money inclu the site of the existing Victorian Gove ment Offices, which had been erected leasehold. According to plans which h been prepared under instructions from High Commissioner (Sir George Reid) building will consist of a basement and se storeys, and would include a congress- and a lecture-room. It was explained in Federal Parliament that the design wo have to be approved by the County Cou but the Commonwealth would certainly build a "skyscraper." The resolution agreed to.

THE SOCIETY OF ARCHITECTS:

ILLUMINATION AS A STUDY FOR ARCHITECTS.

A MEETING of the Society of Architects was held on Thursday evening at No. 28, Bedford-square, W.C., when Mr. John Darch, F.S.I., read a paper on "Illumination as a Study for Architects," of which the following is an abstract :—

"The governing factors of illumination may be classed under the following heads :—(1) Physical; (2) Physiological; (3) Æsthetic; and (4) Economic.

"We have to see what these factors demand and what are the principles deducible therefrom.

"The physics of light in its more modern form is built upon theories essentially different to those which held place in our younger days, and afford a much better explanation of the forces and phenomena involved in illumination. The ever-present difficulty in artificial lighting is the preponderating companiment of heat (or ultra-red) rays, while the activity of the actinic (or ultra-violet) rays; both are invisible, but their power over human economy for good or ill is, nevertheless, very real, while the luminous part of the spectrum of radiation for all illuminants is very small one.

"Dr. Drysdale, in a recent article, has given particulars of the enormous waste of energy principally in heat—necessary for an exceedingly small percentage of light, and which I have put into the following table :—

Energy Expended in	Percentage of Yield of Light (approx.).
Candle	0·1
Oil lamp	0·2
Gas flame	0·2
Incandescent gas	1·0
Carbon glow lamp	2·5*
Nernst ...	5·0*
Metallic filament	10·0*
Ordinary arc	20·0*
Vacuum tube	40·0*
Firefly	99·9

"The last item has been inserted for comparison. If we only knew the firefly's little secret, we should be able to put all our energy into pure light and save both our eyes and our pockets. At the present time our method of getting a larger proportion of luminous rays is to increase the temperature of the radiating body by which the rate of frequencies are increased and forced towards the luminous part of the spectrum.

"Modern life and modern lighting have already given an abundance of work to an increasing army of ophthalmic surgeons, and called a state of things that loudly demands that those who deal with the forces of radiation should understand the powers and powers of that which they handle, and the possibilities of those organs for which it is intended.

"Much information has recently been forthcoming as to the behaviour of the eye under various applications of light, and the architect would find that even a brief inquiry into these matters, particularly that relating to the perception of colour, would be useful to him in his study of the art of illumination.

"We have to realise that the eye, as it is, has been formed under the influence of nature's environment during untold ages, that it is, therefore, easier for us to adapt the lighting to the requirements of the eye than the eye to the lighting. The eye more particularly resents upward or horizontal direction, and low-placed lights may have an effect not unlike snow-blindness.

"The conditions of good artificial lighting, therefore, should approximate to those of day light, which may thus be stated :—A sufficiency of light, perfect steadiness, effective direction, freedom from violent contrasts, a downward direction (preferably oblique), and as near as white as possible.

"Unfortunately, these conditions are violated in nearly every lighting installation, and we suffer more or less, unconsciously suffer therefrom.

"Injury may be caused either by an insufficiency of light or by an excess, which really means an excess of the wrong sort or of wrongly-applied radiation.

"Insufficiency of illumination is a leading cause of eye-strain with its train of nervous disorders. Dr. Kerr, in a report upon some London schools, found that in children under six years of age the eyes of 3 per cent. were defective, at eleven years the proportion rose to 11 per cent., and in the older classes to 25 per cent. It was also pointed out that 18 per cent. of the schools were badly lit. The conclusion is obvious. Amongst the studious, clerical, and the close worker, from 50 per cent. to 70 per cent. have defective eyesight, largely myopia, and yet myopia is said to be unknown in savage life, and rare amongst seamen and farmers.

"Light is a good servant, but a bad master; if properly controlled, we cannot have too much of it, for, in common with any other power distribution, it can be so much more effectively and suitably applied when there is an abundance of power behind.

"Sunlight often reaches 8,000-ft. candles, and we find that a diffused daylight of 2,000-ft. candles is both comfortable and healthy, while from that to 100-ft. candles is our daily experience. Such intensities are far in excess of anything we ever get in artificial lighting, for a general illumination of 5-ft. candles would be considered quite brilliant; nevertheless, if the light is properly diffused, there is no available intensity that is too great, and I quite differ from those who maintain that a high general illumination is necessarily fatiguing. I have sat under 22-ft. candles with comfort and pleasure, and for the same reason that people unconsciously gravitate to the light, so a high diffused illumination will come to be generally appreciated.

"The evils of excess arise chiefly in exposed lighting, and in intensely brilliant surfaces; for while diffuse reflection would seldom exceed 1-candle-power per square inch, the intrinsic brilliancy of sources are, by comparison, excessively high. Thus the

	C.p. per sq. in.
Candle flame	averages 2
Gas flame	,, 3
Oil lamp	,, 4
Incandescent gas ...	,, 25
Carbon glow lamp ...	,, 450
Metallic filament do.	,, 1,000
Limelight	,, 5,000
Flame arc	,, 5,000
Arc lamp crater	,, 20,000
Sun at zenith	,, 600,000

"and it should be remembered that it is the intrinsic brilliancy, and not the total flux, that counts physiologically.

"The infra-red rays reach the retina just as readily as light, and give trouble accordingly, but the more destructive are the ultra-violet rays, the effects of which have been fully detailed in several recent medical essays. Happily, ordinary glass absorbs certain frequencies of these rays, and a special glass all. Glass globes are, therefore, essential to high-power lamps. Quartz glass, however—used for its refractory qualities—is no protection.

"Contrast has an important bearing on the economy of the eye. Sensation, according to Fechner's law, is relative and not absolute. A bright light against a white background may be, at least, tolerable, and in the daylight it may even pass unnoticed; but the same light on a dark background would, probably, be very painful. In such circumstances, the pupil of the eyes is alternately endeavouring to open to discern surrounding details and spasmodically closing against the bright light, fatiguing both the muscles and the retina. Professor Weber gives 100 to 1 as the safe limit of contrast.

"Æsthetics are frequently the sole *raison d'être* of an architect's employment, and that would be for the satisfaction of one sense only sight; and seeing that form and colour are a mental sensation due entirely to illumination, it follows that the character and direction of that illumination entirely governs the situation.

"Let it be noted (1) that a white light and that only will reveal a complete range of colours; (2) that flat decorated surfaces require a uniform and sufficient illumination and so as to avoid gloss; and (3) that the natural means of exhibiting architectural features and sculpture is a partly diffused downward or oblique light.

"The Greek architects well knew that it was upon the lights and shadows that their superb art depended. An architectural feature in any other light than that for which it was designed becomes an abortion; and yet how often do we apply ourselves with painful precision to design features that never will and never can be seen as drawn. Go into any church or public hall at night, and proceed to study the architectural features by its artificial lighting, and see what a travesty stands before you. When we illuminate an interior, our obvious duty is to apply a literal "lamp of truth," so that we may not only see all that is intended to be seen, but that it may produce its intended effect. The advice of an architect who could so illuminate an important building as to clearly and readily display its true character and full beauty would be very valuable.

"The commercial instincts of both makers and users of light lean to that which affords the most economical results, and while both the gas and electrical engineer have recently shown us how we can treble our output of light without further cost, there is no one to show that there is also an economy of distribution and application, to say nothing of the personal factor. The art of illumination teaches how to save waste of light by methods of calculation and tests that, so far, have been seldom applied.

"There is another aspect of economy which some employers of labour have already put into practice, viz., on the principle that "the health of the worker is the wealth of the employer," that money spent in good illumination is a profitable investment by reason of the better quality and quantity of work turned out.

General Principles.

"The whole case of good lighting is embodied in a very simple axiom, viz. :—The purpose of artificial lighting is to make readily and properly visible the things required to be seen.

"This may be made more definitive by the following rules :—

1. The lamps or other sources of light to be so disposed that they do not occupy the field of vision.
2. The illumination to be sufficient to cause the objects to appeal at once and with comfort to the eye.
3. For general illumination the light to be well diffused with a preponderating downward direction, freely flooding ceilings and walls.
4. Local lighting to such as desks, benches, exhibits, etc., to be specially suitable and in most cases adjustable in position and power.
5. The colour to be as pure and white as possible. Monochromatic light, as a rule, to be avoided.

"The relative merits of general and local lighting have been the subject of much discussion. Thus, a bank may have a general illumination sufficient for desks and all purposes, or the desks may be locally illuminated with desk lamps, from which a small amount of light may escape into the gloom overhead; or, again, there can be a combination of both. Daylight has been quoted as an exemplar in favour of general lighting only, but when it becomes practicable to provide artificial light equal in quality and abundance to that of freely admitted daylight, nothing could be said against it. It is a question of sufficiency of light and of what has to be illuminated; each case needing special consideration. In the average public hall general lighting only would be the best, because the illumination at the working level, which would usually be sufficient at 1-ft. candle, could easily be obtained, and because it is desirable to exhibit the decorative features. A school or reading-room would be a different matter, for 3-ft. to 5-ft. candles would be necessary, and to get this in general lighting may mean a fatiguing blaze of light and a large expenditure, while any varying local needs could not be met. There are cases where all needs are best met by local lighting only, but the most economical and satisfactory results are usually obtained by a small measure of general lighting combined with an adequate and well-shaded local lighting.

"General illumination may be broadly considered as of two kinds, direct and indirect, but there may be modifications and combinations of both.

---

* 1 is in lamps only, and is exclusive of loss in ion from coal to electric mains, which will t it 80 or 85 per cent.

Direct lighting is that in which the light radiates immediately from the source to the objects to be viewed. Where glass shades are used it would still be considered direct lighting. This method is usually economical and convenient, but it should be used only where it can be made to accord with the foregoing rules, as for example :—

(*a*) Ceiling lights in lofty rooms, where the eyebrows, which are designed to screen the eyes from the sky, will serve the same purpose at night, and in such cases no lights should subtend an angle greater than 30 deg. from above the eye.

(*b*) Direct lighting would also be used in places that are normally viewed in one direction, as shop fronts, churches, public halls, picture galleries, etc., in which the lamps may be recessed or screened.

(*c*) In any circumstances where the lights do not come before the eyes.

The art of shading consists in the use of shades that will afford complete protection to the eyes, with a minimum loss of total light, to produce better illumination and to increase visual acuity.

The word "shade" implies some protection, but what are commonly called "shades" are ridiculous misnomers. They may be classified into transparencies, diffusers, and real shades.

It must be obvious that a globe, bell, or screen of glass that is transparent, or so lightly figured or finished as to be nearly so, can afford no protection to the eyes, particularly to those who seek to find something "pretty" in it; and yet, the greater part of the stock of the average fittings manufacturer consists of this sort of thing.

In diffusers and translucencies the object is to distribute the intrinsic brilliancy of the light over the visible area of the globe or shade. Nothing does this more perfectly than opal glass, although with considerable loss by absorption. Prismatic glass aims at the same object, and, although it passes more light, is usually less successful. Frosted or ground, iced, opaline, and the like are improperly counted as diffusers, for the light remains as a brilliant centre.

Real shading is effected by opaque or semi-opaque screens—the latter passing not more than one-tenth candle-power per square inch—just enough to cover the bare lights and no more. By far the greatest proportion of light will, by this means, fully and directly flood the ceiling, walls, and other objects, and the practical result will be a pleasing and soft effect with easy discernment of detail.

Indirect lighting is that in which the illumination is obtained from surfaces illuminated by concealed lights. It usually presupposes a white ceiling and upper walls or other extensive diffusing surfaces—the larger the better. The results are great uniformity of lighting, approaching practical daylight more nearly than with any other system, while admitting of greater distinction of vision and affording comfort to the eye.

It has been objected to this form of lighting (1) that it has a cold and cheerless effect; (2) that there is a flatness and an unpleasant absence of shadow; and (3) that light is wasted by absorption.

With regard to the first, if by "cold" is meant whiteness of light, it is a point gained; nothing but prejudice could prefer coloured light; the ruddy glow of evening may be very beautiful, but we should not like to have it all day.

As to the second, that it is flat and shadowless, it is really not true. Indirect lighting does no more than to relieve the blackness of shadows just as daylight does, while it puts a soft gradation on reliefs.

With regard to the last, it is a fact that of the total flux of light a considerable percentage is absorbed, but it is also a fact that more light enters the eye than by a higher intensity of direct illumination and, as stated, vision is much easier.

The means that may be employed are arc lamps—providing they are of the right kind—tungsten glow-lamps or incandescent gas in inverted bowls or reflectors on pendants or brackets, or lights may be hidden behind cornices, screens, or in many other forms. Where there is not a suitable ceiling, downward reflectors will be required, but to maintain the principle they must be large and with a diffusing surface. It is absurd to put them under a good ceiling as is often done.

Photometry and Illuminometry.

Photometry, as we have known it for a good many years, has been confined to the laboratory, and consisted mainly in the determination of the candle-power of lamps; but in respect of illumination the practical work of the architect or illuminating engineer has been much facilitated by the recent introduction of very convenient measuring instruments known as "illuminometers." There is one, almost pocket size, by which the intensity of any illumination falling on a surface may be ascertained from any distance by directing the telescope towards it, when the intensity of the illumination in foot-candles may be read directly from a scale. Surface brightness or reflection and the candle-power of lamps may be just as easily obtained. The value of this and other similar instruments must be obvious from the following :—

Case 1.—In giving instructions for a lighting installation the architect may, and should, specify in foot-candles the actual illumination he wants on desks, walls, or working surfaces, and with such an instrument he can see that he gets it. The present procedure is for the engineer to provide him with a schedule of lamps which affords him no information.

Case 2.—In preparing reports of premises it will provide the architect with definite data.

Case 3. In ancient light cases, the rule of thumb methods of determining amounts of light that creates such contradictory expert evidence can now give place to indisputable fact.

Case 4.—In rendering legislation intelligible. At present the Factory Act Regulations of 1908 require that certain rooms be "efficiently" lighted, an expression that is better adapted to bewilder a magistrate than to be of service to any building. Had those Regulations required a minimum illumination of 1-ft candle or otherwise, the illuminometer would have placed the matter beyond dispute.

Standards, Units, and Nomenclature.—We have two illuminating engineering societies, respectively in London and New York, each with a large Continental membership, where gas and electrical engineers meet and smile on each other, and architects and ophthalmic surgeons confer with both. Amongst other good things, they have done much to unify and establish a common and international understanding upon standards, units, and nomenclature—a primary necessity to discussion.

In England, America, and France the international candle (the bougie decimale has the same value) is the standard; in Germany it is the Hefner candle (HK). On the Continent the lux or meter candle is used in measuring illumination; in England and America the foot-candle.

Lamps and Polar Curves.

Where the choice of an illuminant is possible, preference is largely a matter of circumstances, and not always one of cost. The hygienic question, so much disputed, may be set aside, for, while there are cases where gas would be objectionable, there is nothing to fear therefrom in the ordinary ventilated room.

Although the lamp is an engineering device it is so intimately concerned with architectural considerations that the onus of its choice should be upon the architect, and he would therefore do well to acquaint himself with the various distinguishing features of the leading lamps now before the public. To set out comparisons would create dispute, but the architect is advised to accept no statement from interested parties without guarantee of independent proof.

Then there are the sizes of the lighting units to be decided upon, not on mere opinion however experienced, but on carefully prepared figures. Finally, there is the form of lamp and the question of polar curves.

The nominal candle-power of a lamp although correct in one direction, affords no idea of its total yield; hence the actual duty of a lamp is more truly stated in mean spherical candle-power or given in lumens.

Fig. 1 is a polar diagram of the light from an ordinary glow-lamp. The light flux in a horizontal section may be taken as symmetrical, but in vertical section the intensity varies greatly. The nominal value of the lamp is 16-candle-power; this has been found to be correct in a horizontal direction only; directly upwards it is nothing, because of its own shadow; downwards it is but 7-candle power, and in other directions the intensity marked off on the radial lines enables the polar curve to be drawn, as shown, and which indicates the distribution at a glance. The mean spherical candle-power is 13·2. Metallic filament lamps have an even greater diversity, 23-candle-power, horizontally, having been found to give but five downwards. The polar curve of any lamp is much modified by frosting or by the use of shades or reflectors, hence, a lighting unit should include the lamp and its adjuncts.

Fig. 2 is a polar curve of an ordinary open arc-lamp, showing how preponderating is the light in an oblique downward direction.

Polar curves can be made of any kind of light, and purchasers of new types of lamps should demand a polar curve from the manufacturer.

In lighting a large room it may be desirable to obtain a general illumination on a working plane, say 3 ft. from floor. This, obtained from a given number, candle-power and polar curve of lamps should be marked on a plan in foot-candles at convenient intervals, or in contour lines if preferred. The intensity of local lighting on platforms, desks, etc., if any, should be also stated. In working it out the first result may need to be adjusted until it is satisfactory, but this done the architect may know beforehand exactly what he is going to get at any point and the expenses of experiments and rectification of failures should become a thing of the past.

Effective lighting depends upon two factors :—(1) The illumination as expressed in foot-candles or lumens, *i.e.*, the light falling on a surface, irrespective of the nature of that surface; and (2) the light-absorbing power of the surrounding surfaces.

Practical Application.

In conclusion, a few notes on the practical application of the foregoing to church

LIGHT AROUND GLOW LAMPS.

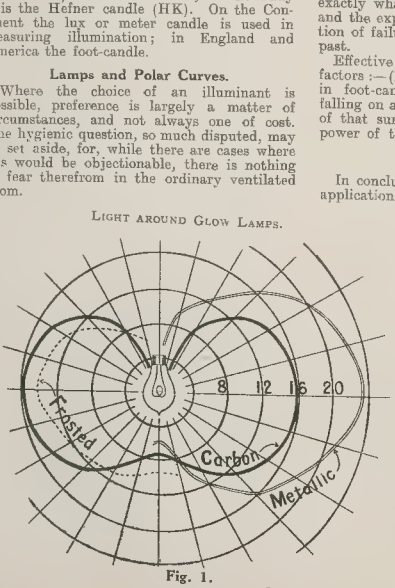


Fig. 1.

Polar Curves.

OPEN ARC.

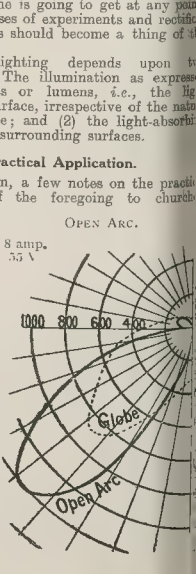

Fig. 2.

…, hospitals, public libraries, and …es may be of service. The important …of domestic illumination was too large …ncluded in this paper.

… simple-minded person would suppose …the beautiful decorations of many …es are placed there to be seen; but go …e first church you may meet during …vening service, and you will probably …at the upper two-thirds will be lost in …n that is heavy and depressing, while …wer third will be largely obscured by …g points of light, and the chancel …y visible; every face will have a hard, … appearance due to want of diffusion, … the preacher is at all interesting two …ble pulpit lights will send you home …marting eyes. It is not a question of …t lighting *versus* the mystic gloom, …some architects have advocated as con…to worship. The "dim religious light" …horning service may have its charms, …usually relieved by softly-illuminated …s that can be seen with comfort; but …curity of an evening service, pierced …nsively brilliant points that dominate …ng and refuse a haven of rest to the …eyes, is not likely to be helpful to …—excepting by way of penance. This … one point of consideration amongst …be found in church lighting.

… number of modern board schools I …und the artificial lighting to be (*a*) …ent: (*b*) too uneven, having usually …r gas or six electric glow lamps to a … forty children, and these too near …re of the room; (*c*) in the classrooms …ected lights in nearly every case in the …ange of vision of both scholars and …; and (*d*) the blackboard, which …more, really had less light than else…

…g with the classroom only, there are …ethods of lighting, either of which …made satisfactory: (1) Indirect illumina… high-power lamps illuminating a white …t and frieze. Direct lighting from …lights pendant about 2 ft., to get … light from ceiling and not placed …t, but nearer the left-hand window. …ants, reaching to 6 ft. 6 in. or 7 ft. … or, are continued to be used, there …be eight or ten of them where there … four or six, and each should have …shades in which the light can be …recessed. The desks should have a …n of 3-ft. candles. For pencil draw… needlework special desks or tables …ave an illumination of 8-ft. candles.

… been my privilege to inspect many …rincipal London hospitals with special …to their lighting arrangements, and …verything else is so very admirable. …icial lighting reminded me of Miss …gale's trenchant observation that "the …g requirement in a hospital is that it …to the sick no harm." There is, …, a universal want of discrimination …nodes of lighting, the fittings were … found to be inappropriate, and the … afforded no relief to the stinging …f light exposed to the eyes of the … patient.

… the ward unit of, say, twenty beds …e provided with a general illumina…bout 0·5-ft. candles, with protected …ect illumination. The sisters' and …ables should have lamps adjustable …k dusty cords—to from 3-ft. to 8-ft. … the latter for dark needlework. …k shades that will entirely recess …—preferably dark green opal. The … lights are too often conspicuous by …ence, the nearest light, usually a …w or gas lamp, being 12 ft. or 14 ft. … There should be a screened light at …of each bed, placed low behind, and …de of the head, giving an illumina…-ft. candles, and adapted for use for …xamination.

…pensary is usually the worst served; … have complained of the worry of …he prescriptions in the inadequate …le many bottles stand in semi-gloom. … light, giving 4-ft. or 5-ft. candles, …d to each man; the shelves should …nated with screened lights, while …ilities are desirable for reading the … measuring glasses.

…rating theatre calls for special con… for there is a large amount of …ork done after dark. Here, again, there is no established form of lighting; each hospital having its own arrangement, not all satisfactory. The essentials to success may be thus summarised:—(*a*) White ceilings and walls, pale grey or green dado, and darker floor; (*b*) separate general illumination, with screened lamps over the sinks and sterilisers; (*c*) the lights to the operating table should not be clustered together as they commonly are—forming black shadows—nor be placed directly over the table whereby the surgeon's work is obscured by his own head and hands; (*d*) lamps must not radiate heat on the patient or on the surgeon's head; and (*e*) all septic risks must be avoided; therefore, there must be no dust-creating cords and pullies or fittings, and glass must be smooth and easily cleaned. Well-made arc lamps may be used, either (*a*) direct lighting white flame arcs placed over a diffusing ceiling light, or, where there is no skylight, indirect lighting … both affording a splendid light. There is an excellent scheme in practice in Germany, wherein isolated beams of light are concentrated on the table from a projector lamp outside the room, whereby dust, heat, and the intrusion of workmen are quite precluded.

There is perhaps no greater tax on nervous energy than continuous reading of educational literature; it is important, therefore, that in libraries the further burden of eye strain should not be imposed on the reader by misplaced and inadequate lighting. Better the plainest building where the books can be read in comfort than a marble mausoleum of literature that chills enthusiasm and worries the eyes of the student. I have seen many handsome libraries, but not one properly illuminated. The ordinary library requires a small measure of well-diffused general light …ng—0·5-ft. to 0·75 ft. candles. The principal feature, however, is the local lighting, which should consist of (1) a separate light to each reader—on his left—with an opaque or semi-opaque shade; (2) every desk lamp should be adjustable so as to permit of a modification of from 2-ft. to 10-ft. candles, and under the reader's control anxious librarians may have them made "fool-proof"; and (3) the reader should be expected to switch on and off his own light, which would effect a great saving.

Holland is the only country that has framed an Act that properly stipulates the amount of light to be provided, and where such as embroiderers, jewellers, and draughtsmen are required to have a minimum of 15 bougie metres (about 1½-ft. candles), and all others 10 bougie metres. British legislation is confined to enamelling shops and underground bakehouses, which are respectively to be "efficiently" and "adequately" lighted, expressions which mean nothing in particular, and are therefore useless. Definite legislation is urgently necessary, for there is still an overwhelming majority of workers under conditions that are ruinous to eyesight and health. In machine shops the majority of accidents are said to occur after 4 p.m., and no wonder, for brilliant points of light against a dark background must baffle the eyes and deceive as to distances. What is wanted is a well diffused general light, aided by whitened and illumined ceilings and walls. Nothing is better for this purpose than indirect lighting. Screened local lighting should then be added to all points requiring the attention of operatives, and to benches, desks, etc.

In conclusion, I am glad to have had the opportunity of bringing this subject before the members of this Society, for I am convinced that until the architect makes the subject his own little good will be done. True progress is at present blocked by the rivalry of competitive systems and the jealousy and greed of commercialism. The client needs an independent authority, and who more suitable than an architect who thoroughly understands the art of illumination, for, as no one can better know how to light his picture than the artist who painted it, so no one can better appreciate good lighting of an interior than the architect who designed it."

THE GALLARD ALMSHOUSES, SOUTHBOROUGH.

These almshouses are being erected from the plans prepared by Mr. W. Harmer, architect, and the buildings will consist of three blocks, the centre block for four married couples, one outside block for men, and one for women. The houses are being built under the will of the late Mr. John Gallard, who was a builder and contractor, of Southborough.

SOUTHWARK CATHEDRAL.

We are glad to know that the proposal put forward by Mr. A. H. Henderson-Livesey for opening up Southwark Cathedral is assuming practical shape, and that a Committee is being formed with the Bishop of Southwark at its head with a view to obtaining the necessary financial support to enable the work to be commenced.

The proposal is to clear a well-defined area several acres in extent immediately surrounding the Cathedral, and bounded on the north by the river, on the east by the southern approach to London Bridge, and on the south and west by the railway viaduct in its curve from London Bridge to Cannon-street.

The proposal does not involve any interference with the railway.

The entire area of the ground which it is proposed to clear is not entirely covered by permanent structures; it is on the northern part of the site, along the river front, that most of the clearing would have to be done. To the south and south-west of the Cathedral the land is in the occupation of the Borough Market, and the only structures are zinc sheds of a quite temporary character.

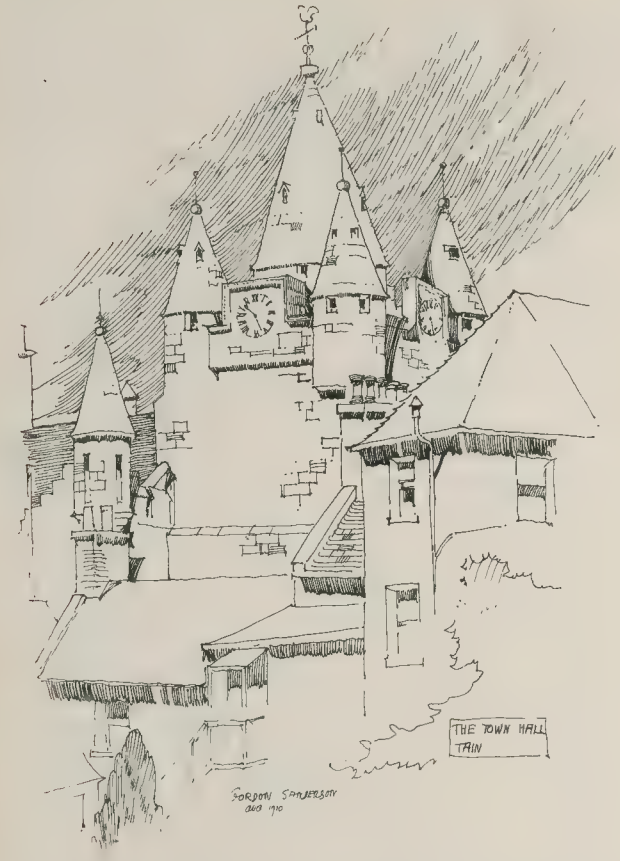
It is a remarkable fact that only a very few Londoners are aware of the existence of Southwark Cathedral, and yet a large portion of the existing structure is considerably older than Westminster Abbey, and ranks in point of age immediately next the White Tower of the Tower of London and the Choir of St. Bartholomew at Smithfield among the ancient buildings of London. The building itself is in an excellent state of repair, over one hundred thousand pounds having been spent on its careful restoration during a comparatively recent period, but for all the beauty of the structure itself and for all its intensely interesting historical association it is not and cannot be adequately appreciated by the people of the country until its sordid environment is swept away.

The part of Southwark in which the Cathedral is situated, although known as South London, is geographically the very centre of the metropolis, and no really comprehensive plan for the improvement of London as a whole can be carried out without affecting this neighbourhood. It is much to be desired that when the details of the scheme are widely known the response to the appeal of the promoters will be adequate to enable them to carry out what will certainly constitute a splendid London improvement.

OBITUARY.

Mr. R. M. Brereton, C.E.

The death, on December 7, at Woodstock, Oregon, U.S.A., is announced of Mr. Robert Maitland Brereton, C.E., aged seventy-seven years. Mr. Brereton, a son of the Rev. C. D. Brereton, Rector of Little Massingham, Norfolk, was a pupil of Brunel, and was his assistant in the construction of the terminus at Paddington and the line of the Great Western Railway. In the interval, 1857-70, he was employed upon the Great Indian Peninsula Railway. He then practised as a consulting engineer in Nevada and California for mine-irrigation and other works. Returning to England, he became County Surveyor for roads and bridges, Norfolk; in 1886-9 he was Commissioner to the late Duke of Sutherland, and a director of the Highland Railway Company. He then went back to America and resumed practice as a consulting engineer for irrigation and mining undertakings and landed properties in the States, British Columbia, and Canada.



FOREIGN AND COLONIAL.

Works in Spain.

Tenders will be opened on February 9 at the offices of the "Alcaldía Constitucional de San Sebastián," San Sebastián, for the erection of a building intended for the courts of justice. The upset price is put at 560,759 pesetas (about 21,000*l.*).

The *Gaceta* of December 20 notifies that the Ministry of Fomento will open tenders on January 25 and 27, respectively, for making the permanent way of the first and fifth sections of the Ripoll to Puigcerdá railway, province of Gerona. The total upset price is put at 3,078,000 pesetas (about 114,000*l.*).

Although the contracts will doubtless be awarded to Spanish firms, the carrying out of the work may necessitate the importation of certain materials from abroad.

AN OLD HIGHLAND TOWN.

THE architecture of the Highlands is full of interest, especially to the Englishman. Tain, which may be instanced as a typical North of Scotland "burgh," is full of charming architectural features. The town itself centres round the Town Hall, which, with its conical spire and circular angle turrets, is a most striking piece of work. There are some nice old churches in the vicinity, one of these at Portmahomack being especially interesting. Bolone Castle is also worth a visit. The domestic architecture is, like the inhabitants, reposeful and unobtrusive in its character. Unfortunately, many of the old cottages are not in their original state. Thatch has given place to corrugated-iron, and the absorption of small holdings into larger farms has resulted in the abandonment of the smaller old houses, and their consequent decay.

BOOKS.

Reinforced Concrete Construction in Theory and Practice. By HENRY ADAMS, M.Inst.C.E., and ERNEST R. MATTHEWS, A.M.Inst.C.E. (London: Longmans, Green, & Co. 1911. Pp. 311. 10s. 6d. net.)

IN this volume the theory of reinforced concrete construction is somewhat lightly treated, theoretical principles being discussed only to the extent required to enable the reader to follow the calculations necessary in practical design. The greater part of the book is occupied by a collection of particulars relating to examples of construction embodying the chief British, American, and Continental systems, and covering the typical buildings and structures coming within the province of architects, as well as structures occurring in engineering practice. The illustrations are very numerous, but many of those reproduced from photographs might have been omitted without disadvantage, as mere pictures are of little or no practical value. It should be made clear, however, that a large proportion of the illustrations have been taken from working drawings, and, in most cases, the illustrations are accompanied by brief details of the actual construction. The authors have obviously spent a considerable amount of time in the collection of information, and the records presented will undoubtedly be found of service for the purposes of reference and comparison.

Reinforced Concrete Compression Members Diagram. By CHARLES F. MARSH, M.Inst.C.E. (London: Constable & Co. 3s. 6d. net.)

THIS diagram has been prepared to facilitate the design of columns and struts in accordance with the recommendations and formulæ contained in the R.I.B.A. Committee's Report and the regulations proposed by the London County Council. One good feature of the diagram is that it is of such dimensions that values can be read with sufficient accuracy for practical requirements. Although termed a diagram, the sheet really contains four diagrams, three of them combined for convenient use and the fourth printed separately. The diagrams are accompanied by instructions for use and two tables, and can be employed either for designing or for checking members already designed. Those who have frequent occasion to apply the formulæ mentioned should find this series of diagrams of considerable value.

Reinforced Concrete Construction: Elementary Course. By M. T. CANTELL, Lic.R.I.B.A. (London: E. & F. N. Spon, Ltd. 1911. Pp. 136. 4s. 6d. net.)

As a simple presentation of the general principles of reinforced concrete construction, this little book is one that can be readily followed by the beginner in the class of work indicated. In addition to chapters on materials, the work includes formulæ for beams with single and double reinforcement, and for columns under axial and non-axial loads. There are numerous worked examples, making quite clear the application of the formulæ, which are very conveniently summarised near the end of the book.

Architectural Hygiene. By BANISTER F. FLETCHER and H. PHILLIPS FLETCHER. Fourth Edition, revised. (London: Whittaker & Co. Pp. 269. Illustrations, 30. 5s. net.)

THIS book is now so widely known that the publication of a fourth and revised edition comes as no surprise; in the continual developments which are taking place in every branch of building science the sphere of hygiene has attracted very large attention, and the authors have taken advantage of the opportunity afforded by reprinting to bring the book thoroughly up to date. In the legislative section, for instance, reference is made to the Housing and Town Planning Act of 1909; under floor construction, reinforced concrete is touched upon, and air-gas, perfected since the last edition of the book was published, is now included in the artificial light section.

Dealing as it does with a subject directly ffecting the lives of the people, the book ppeals to a large public, and we have no oubt that this latest edition will receive the elcome which it deserves.

resses and Thrusts. By G. A. T. MIDDLE-TON, A.R.I.B.A. Fourth Edition, revised and enlarged. (London: B. T. Batsford. 1911. Pp. 209. 4s. 6d. net.)

the present edition of this book, hapter VII., on the "Method of Designing Steel-Plate Girder," and Chapter IX., on Framed Cantilevers," have been consider-bly revised, and additional matter in hapter VIII. deals with the design of a eel joist used as a stanchion. A noteworthy dition is represented by Chapter XIV., iving fully detailed calculations for a steel of, and will prove valuable to students eparing for the R.I.B.A. Licentiateship amination. The book is even better adapted the requirements of architectural students an its predecessors.

emistry for Engineers and Manufacturers. By BERTRAM BLOUNT and A. G. BLOXAM. Vol. I. Second Edition. (London: Charles Griffin & Co. 14s.)

his volume is divided into two parts. art I. discusses the chemistry of the chief aterials of construction, the chemistry of the rces of energy, the chemistry of steam sing, and the chemistry of lubrication and bricants. Part II. is devoted to metallurgy, d contains information concerning the pro-ction and uses of the common metals. It o includes some interesting paragraphs ating to the rarer metals, such as tungsten, talum, and vanadium.

The first chapter of the book is of most erest to the majority of the readers of this rnal, for it is this chapter which deals h the chemistry of iron, steel, brass, stone, te, concrete, and the preservation of build-materials.

The book is written in an interesting style, thout the use of complex formulæ, and with-much theorising, and will therefore be ful to architects, builders, and engineers o have only a superficial knowledge of emistry. The authors are chemists of high ute in the commercial world, and we find this second edition of their book abundant dence that they have kept themselves well ormed with regard to the developments ich have taken place in industrial chemistry ring the last decade.

ler Draught. By H. KEAY PRATT, M.I.Mech.E. (London: Constable & Co. 911. Pp. 138. 4s. net.)

PARENTLY recognising the fact that what is monly termed natural draught has already n sufficiently discussed in technical litera-e, the author devotes the greater part of manual to artificial draught, and its lication to land and marine boilers. The information collected is distinctly useful as a review of modern apparatus for producing forced and induced draught, and its value is augmented by a comparison of the three principal methods of producing draught steam for boilers.

Smoke Prevention and Fuel Economy. By WM. H. BOOTH and JOHN B. C. KERSHAW. Second Edition, revised and enlarged. (London: Constable & Co., Ltd. Pp. 224. Illustrations, 79. 6s. net.)

THE subject of smoke prevention is one of vital importance to the city dweller, who has suffered so much from breathing smoke-laden air, and few of us can afford to ignore possible means of effecting economy in fuel; but this book, first published seven years ago, is designed primarily to assist the manufacturer and heating engineer. The domestic fire problem is referred to only very briefly, the greater part of the book being devoted to the generally-employed and more recent methods of burning, stoking, draught regulating, etc., which are all dealt with in an extremely clear and practical way with the help of a large number of well-drawn illustrations.

There is a chapter on the legal position of the movement, and of the work of voluntary agencies, which demonstrates the necessity for a thorough revision of the existing law before the public can hope to secure the benefits which scientific methods have now made possible.

Bricks and Tiles. A Rudimentary Treatise on Their Manufacture. By EDWARD DOBSON. Twelfth Edition, revised and enlarged. By ALFRED B. SEARLE. (London: Crosby Lockwood & Son. Pp. 273. Illustrations, 118. 3s. net.)

THE methods employed in brickmaking have undergone so many changes during recent years that there is constant need for new books on the subject in order that those who control the selection and use of bricks in building operations may be able to equip themselves to specify the brick best suited for its purpose and to detect any attempt wittingly or unwittingly made to substitute in use a brick of inferior quality.

Mr. Searle has submitted this book to a very full revision; some of the chapters have been entirely rewritten, descriptions of processes no longer used are eliminated, and much new information, especially regarding the use of machinery, is added. The various operations ordinarily necessary in brick manufacture and the processes peculiar to particular localities are well described, and chapters are included on firebricks, tiles, encaustic ware, land drains, and special bricks. The arrangement of the matter is not ideal, and there is some repetition, but the information given is just such as is needed by those who, as architects or engineers, are indirectly interested in the art of brickmaking.

The Manufacture of Varnishes and Kindred Industries. Vol. III.—Spirit Varnishes and Materials. By JOHN G. MCINTOSH. Second Edition, revised and enlarged. (London: Scott, Greenwood, & Son. Pp. 490. Illustrations, 64. 12s. 6d. net.)

THE publication of a greatly enlarged edition of this book, of which the first English issue appeared in 1899, will add a valuable contribution to the bookshelf of the specialist and manufacturer; but the nature of the subject matter is of too highly technical character to appeal to those whose interest is in the building trade as a whole, and these will find it useful only as a book of rare reference. The first three parts of the book treat in great detail of the nature and application of the materials used in the industry; the fourth with the processes of manufacture and the recipes of the various classes of varnish; and the fifth with tests and analyses. Besides a full general index there is an index of recipes which greatly adds to the usefulness of the book, and the numerous illustrations included leave nothing to be desired.

Pyrometry. By CHARLES R. DARLING, Wh. Ex., F.I.C. (London: E. & F. N. Spon, Ltd. 1911. Pp. 196.)

BASED on a course of Cantor Lectures delivered by the author before the Royal Society of Arts. this treatise is welcome as embodying a discussion of pyrometry from the practical standpoint. Rapid advances have been made during recent years in the construction of pyrometrical instruments, and the increasing number of those called upon to measure and control high temperatures is a sufficient justification for this useful book, where the reader will find particulars and illustrations of numerous pyrometers, together with an explanation of the fundamental principles of each type.

The Stereophagus Pump and Special System of Pumping. By the Hon. R. C. PARSONS, M.A., M.Inst.C.E. (Published by the author.)

THIS is a pamphlet describing and illustrating a special form of centrifugal pump capable of raising liquid containing large quantities of solid matter, and it also describes the application of the pump to the drainage of level districts, where the flow of sewage and drain water by gravitation is impracticable. It is claimed that the Stereophagus system is superior to the hydraulic and pneumatic systems of drainage hitherto employed for draining level areas, in respect of first cost and operating expenses.

Butterworth's Workmen's Compensation Cases. Vol. IV. (New Series). Edited by His Honour JUDGE RUEGG, K.C., and DOUGLAS KNOCKER, Barrister-at-Law. (London: Butterworth & Co. 1911.)

THE fourth volume of this useful "annual" comprises the cases determined under the Workmen's Compensation Act between November, 1910, and October, 1911. That litigation arising out of this Act is not diminishing seems proved by the fact that this volume contains some 150 cases, the report of which are comprised in 444 pages. In our review of Vol. III. of this series we commented upon the arrangement of the cases, as in that volume they were grouped according to the date of hearing, and neither alphabetically nor following the sequence of the sections of the Act. In this latest volume we are pleased to see that this slight defect has been overcome by the introduction of an outline digest, the references to such sections of the Act as have been construed by decisions being set out in the order in which they appear, with the names of the cases and references to the pages in this volume printed beneath. The names of all cases reported in both series of these reports are given in the table of cases, but the index is confined to cases reported in this volume. The comprehensive index to all the volumes has not been continued in this volume or in Vol. III. Possibly, now the volumes number thirteen, this form of index or digest would prove too bulky, and the older cases on the Acts which preceded that of 1906 are not now so important. These reports are a valuable guide to the intricacies of this branch of the law, and the only matter for regret is that two or three statutes should have involved such a mass of case law.

Ship Wiring and Fitting. By T. M. JOHNSON. (Constable & Co. 1s.)

THIS is a compact pocket-book giving hints on installations for lamps, telephones, ventilators, etc., on ships of average size. It does not cover special appliances used on warships. Difficulties of vibration and penetrating spray are considered, and other points are explained with the help of diagrams.

LEGAL COLUMN.

Acts in Interference of Trade.

An interesting point arising out of some of the recent strikes was raised before the Police Magistrate at Hull. The defendant was charged under sect. 7 of the Conspiracy and Protection of Property Act, 1875, as having, "with a view to compel any other person to abstain from doing or to do any act which such other person has a legal right to do or abstain from doing," done certain acts in contravention of sub-sect. 3, which makes it unlawful with the above objects for any person to "hide any tools, clothes, or other property owned or used by such other person, or deprive him of, or hinder him in, the use thereof." The complainant was conducting a lorry and horse, and had been hindered by the defendant, who had cut the ropes which held the cattle cake, with which the lorry was loaded. It was contended that the above sub-section only applied to things *ejusdem generis* with those specified in the sub-section "tools and clothes"; but the Magistrate declined so to limit the words "other property," which, he decided, embraced any property which was capable of being hidden, or of which a person might be deprived of the use of, or hindered in the use of, and therefore applied to this horse and lorry. This decision is of importance, as there must be some remedy for acts of interference with trade of the above description, and this was clearly not an act protected by the Trade Disputes Act, 1906, as done by way of peaceful picketing.

LONDON COUNCILS.

Battersea.—The roadway of Ramsden-road, between Thurleigh-road and Nightingale lane, is to be repaired with granite macadam at an estimated cost of 110*l.* No objection is to be raised to the proposal of Messrs. T. & W. Farmiloe, Ltd., to erect a building in Kirtling-street, for use as a colour factory.

Ealing.—The Borough Surveyor reports that he had had a satisfactory interview with the Local Government Board with reference to sanction to a by-law specifying Portland cement as one of the constituents for concrete for the foundations of houses, and had also, since the interview, arranged with the Surveyors of the four surrounding districts to go into the whole matter of the by-laws with a view to submitting same to the Local Government Board, to be either improved or approved, so that there should be a general by-law in operation throughout the four districts.

East Barnet.—Plans have been passed for Mr. Noakes for additions to the tie factory in Leicester-road.

Finchley.—Tenders are to be invited for the provision and erection of a refuse destructor, and tenderers to be requested to submit designs of the proposed work with the usual guarantees of efficiency. TO CORRESPONDENTS.

NOTE.—All communications with respect to literary and artistic matters should be addressed to "THE EDITOR" (and not to any person by name); those relating to advertisements and other exclusively business matters should be addressed to "THE PUBLISHER," and *not* to the Editor.

All communications must be authenticated by the name and address of the sender, whether for publication or not. No notice can be taken of anonymous communications.

The responsibility of signed articles, letters, and papers read at meetings rests, of course, with the authors.

We cannot undertake to return rejected communications; and the Editor cannot be responsible for drawings, photographs, manuscripts, or other documents, or for models or samples, sent to or left at this office, unless he has specially asked for them.

All drawings sent to or left at this office for consideration should bear the owner's name and address on either the face or back of the drawing. Delay and inconvenience may result from inattention to this.

Any commission to a contributor to write an article, or to execute or lend a drawing for publication, is given subject to the approval of the article or drawing, when received, by the Editor, who retains the right to reject it if unsatisfactory. The receipt by the author of a proof of an article in type does not necessarily imply its acceptance.

N.B.—Illustrations of the First Premiated Design in any important architectural competition will always be accepted for publication by the Editor, whether they have been formally asked for or not.

PRICES CURRENT OF MATERIALS.

* Our aim in this list is to give, as far as possible, the average prices of materials, not necessarily the lowest. Quality and quantity obviously affect prices—a fact which should be remembered by those who make use of this information.

THE LAND TAXES AND BUILDING.

We seem nowadays to argue on financial and commercial subjects in a vicious circle. If any security or any industry is said to be in a depressed condition and suffering from some special cause, however much the subject is ventilated no attempt is made to analyse the causes or to remove the impediment, but the only reply forthcoming is that other securities or other industries are also depressed. The building industry is one of the principal examples of this; it has been in a continuously depressed condition for a longer period than any other trade in the country. Its members have borne this long-continued adversity with unexampled patience and without resorting to the militant methods which find favour in so many quarters, yet when the condition of this important industry is brought to the notice of Parliament the only result is either a blank negation of facts which can be proved by official statistics, or an entirely irrelevant comparison with other trades or industries.

This attitude is especially to be deplored at the present time, because events have occurred in the past two years which have affected the building trade far more than any other industry in the country, its raw material, the land, has been subjected to a special system of taxation, and the production is also similarly taxed, so that both supply and demand are checked. If this had been the case with any industry which was subject to foreign competition it may be asked, without fear of contradiction, whether careful inquiry would not at once have been made as to the effect produced by the new taxes? We know the excitement produced by the mere suggestion of a protective tariff; but the building trade is not connected with international industrial questions, and hence its condition obtains no attention. The authorities either simply deny that it is prejudicially affected at all, or it is even calmly asserted that building securities are but in the same position as other securities. It is interesting to compare such statements with those made when it was sought to introduce the new land taxes. The public were then informed that one of the objects of such a system of taxation was to develop the land of the country—one of the taxes was even christened the "Undeveloped Land Duty"—and to facilitate the supply and demand for house property. At the time the Bill was being introduced we pointed out that to tax land indiscriminately and house property in particular, to complicate the system of land transfer and to place landowners and householders in an invidious position as to the valuation and taxation of their property was a curious way of encouraging

any industry, and events have fully justified the observations we then made.

The callous attitude which we have referred to above might to some extent be justified were the building trade a trade in a normal position suffering depression from inherent causes; but this is no longer the case, since it is peculiarly affected by the novel principles of taxation and its position is unique.

Holders of consols are owners of a depressed security, and manufacturers of certain articles may suffer from trade depression, but they have not been informed that the value of their security or the selling price of their business is to be arbitrarily fixed as from a certain past date and that any rise in value which may occur since that date will as to some 20 per cent. be confiscated in taxation, whilst at the same time the transfer of the stock or of the business is to be clogged by vexatious conditions.

It may be argued that, as at present the land taxes have only yielded some 600,000*l.*, the taxes levied cannot seriously have affected values; but this is really beside the point. The Report of the Commissioners of Inland Revenue stated that 11,000,000 hereditaments in the United Kingdom had to be valued to determine the site value, a task which the Commissioners estimated would occupy several years. What would be the effect on any other class of security if a tax, uncertain in amount and requiring a technical valuation of the security, were placed upon it as from April, 1909, but which could not be definitely ascertained for five or six years? That security would be seriously depreciated, and if it was not actually unmarketable, dealings in it would be few, and precisely the same result ensues in the case of land and buildings. This class of property liable to an uncertain charge is not dealt in, and the unwillingness of persons to hold it is increased by the vexatious methods of valuation. The Commissioners stated that 10,500,000 copies of Form IV. alone had been served; many of these forms have since been held invalid by the courts, and it is clear that such a chaotic condition of affairs offers little encouragement to investment, and progress in laying out building estates is seriously discouraged.

Thus far we have only denoted general considerations which speak for themselves, as under such conditions enterprise cannot but be checked, and where a trade is depressed it is difficult to deal with the exact loss of business or shrinkage in values due to a specific cause, but we may briefly refer to some of the evidence available.

In the review of the estate market for the year 1911, recently published in the *Times*, it is stated:—"A diminution of capital value is the inevitable result of new taxation of the kind which has in the last year or two been imposed. Mortgagees have called in their money, and in other ways there has been considerable pressure to sell. . . . Investors have an exceptionally wide range of choice, and they are invariably resolved to buy only at prices which amply discount the effect of the recent taxation and of legislation which decreases the advantages of ownership. . . . The increased cost of labour and the rise in the price of commodities have both begun to make their influence felt, and the more so in that the imposition of the new taxes had for some months practically stopped the development of building estates."

The land which has been sold has been principally agricultural land, which is exempt from the new taxes.

The recent Report on Building Societies showed an exceptionally unsatisfactory position.

The plans deposited with the principal urban authorities, according to the latest return available at the time of writing for the first nine months of 1911, showed a shrinkage of expenditure (exclusive of the County of London, as to which figures are not given) of 310,116*l.* compared with the same period in the previous year, a diminution which occurred mainly in connexion with dwelling houses, shops, and other business premises.

With the question of unemployment we recently dealt in our issue of December 29 last. The returns from the *Labour Gazette*, which are so frequently quoted to support the contention that the building trade has not suffered from the new taxation, are not exhaustive, and chiefly refer to trade union joiners, carpenters, and plumbers, and do not take account of such men even of these classes who have dropped out of employment and become so poor that they have suspended their contributions to the unions. The Chancellor of the Exchequer is constantly quoting these figures, but he must be aware that they do not fully represent the case, since, in the actuarial report made for the purposes of the Insurance Act, it is stated that these returns take no account of any persons to whom unemployment benefit is not paid, and do not include bricklayers, plasterers, painters, labourers, etc. The importance of this becomes at once apparent from a study of that report, for the actuary, taking all classes together, estimated the percentage of unemployment as double that of carpenters and plumbers. We dealt with this question in our issue for May 26, 1911.

There is yet one other aspect of the question which can only be briefly referred to here. The site values, when ascertained, although they are calculated on a purely artificial and imaginary basis, are being used, or are proposed to be used, for other purposes, estate duty is being assessed upon them, and a proposal is on foot to use them for rating purposes. As one of our correspondents recently pointed out, the apathy of those affected is somewhat remarkable. No organised movement has been instituted to protect property from a policy which is crippling the building industry, and the example of the medical profession in connexion with the Insurance Act might well be taken to heart by the professions and trades so seriously affected. What is the conclusion of the whole matter? A repeal of the land taxes can hardly be hoped for, but an inquiry into their working has practically been promised, and it behoves those concerned to agitate for the early fulfilment of this promise, and to make some organised and strenuous effort to bring their case fairly and fully before any body that may be appointed to hold such an inquiry.

THE TEACHING OF ART.*

THE remodelling of the scheme of instruction in art proposed by the Department of Education has induced Mr. C. R. Ashbee to anticipate a more comprehensive work on which he is engaged, entitled "The Man and the Machine," by the issue of that portion of his studies in this subject dealing with education.

"Should We Stop Teaching Art?" is the title Mr. Ashbee gives to his essays, and, to put the matter briefly, the conclusion he arrives at is that the right method of encouraging the arts is the endowment of craftsmanship.

Mr. Ashbee is, as we all know, a firm believer in the workshop as the best school, and his experience in the training of the craftsman entitles his opinions to respectful consideration. The subject is introduced by means of a series of axioms mainly concerned with the relationship between life, the arts, and machine production; these recognise the necessity of the latter, but, as one might expect, endeavour to define it within the bounds which, if exceeded, are harmful.

With the main lines of the author's contentions most artists will find themselves in agreement, but when he lays it down as an axiom that a craft cannot be taught in the school we feel that he loses sight of the marked tendency in recent years for the school to approximate to the conditions of the workshop. There is essentially no line of demarcation to be drawn between the two, except that the workshop is, presumably, organised on a profit-earning basis, while the school is not. As this question of profit in no way affects the remaining aspects of the case, we fail to see why the school should be condemned when its methods are in other respects indistinguishable from those of the workshop.

Of course, if Mr. Ashbee intends to limit his definition of the school to those with a different method to this, he is entitled to his axiom, and most will heartily agree that there is no better training than that on the lines of the workshop. The question then becomes, Is it the better course to remodel our school methods or to drop the schools and devise a scheme for the encouragement of the workshop?

Mr. Ashbee is emphatically for the latter alternative, and appears to consider the former as quite out of the question. We think that this attitude is hardly a fair one, as many of the merits he claims as appertaining to the workshop are not unattainable in a skilfully-conducted school. It is stated that "All the school can ever do in craftsmanship is to train character, to point out a method or to provide a formula." We confess we cannot appreciate the justice of this limitation, but, not to labour the point, let it be assumed that Mr. Ashbee refers to schools that have not developed their methods, and whose teachers are not those skilled in workshop practice. As the majority of schools come within this

* "Should We Stop Teaching Art?" By C. R. Ashbee. (London: B. T. Batsford. 1911. Octavo. 3s. 6d.)

category, there is something to be said for his view that:—

"To this teaching of the arts a new vitality must now be given, and the plan which it is the purpose of this book to set forth is *that we should gradually change the system of endowment of our art schools into a system for the endowment of small artistic workshops*, or as I should prefer to put it, that we should transform our art school system into a Guild system, and to these associated workshops the art teaching of the country should be delegated."

Leaving the more general aspects of the question, Mr. Ashbee has something to say to the architect in particular. After referring to the lack of organisation in placing information at the disposal of the profession, the author continues:—

"The profession of architecture is still wedded, and rightly, to the apprenticeship system. As in other occupations that deal with the τέχναι the apprenticeship system is worn out, and all who have gone through it in architecture know that they cannot get from it what they need. The pupil ekes out his lack of knowledge here and there at an institute, or by attending lectures, or going through examinations. *What he really suffers from most is a lack of systematised study and training.* The routine work of the office does not give it him, for it is routine; the Royal Institute examinations do not give it him, for they are examinations; the Polytechnic—even the Central School of Arts and Crafts—classes do not give it, for they are classes; and finally, the art school does not give it, for it is just an art school. What, then, is to be done?

For the great directive art of architecture under modern mechanical conditions we need a special method of training, and we need it so devised that the principle of association, and wherever possible the collegiate principle, is of the essence of our method. Let us postulate to begin with that a certain amount of public money, liberated by the decentralisation of the art schools, will be available for architectural teaching. This money should be allocated by the State to the different schools or faculties of architecture, whether at the Universities or not, that work with the Royal Institute of British Architects, and to this the Universities and the Royal Institute might be asked to contribute. The reasonableness of having the work done in conjunction with the Royal Institute will, I think, be evident if we admit, what to me and I believe to all practising architects is vital, viz.: that *the ultimate direction of architectural teaching should be vested in the architects themselves, not in the State, and not in any senate of university professors.* It should be with the men in whose hands is the shaping of the art. It is they who are working out the problem of architecture in the life of the people, and it is they therefore who should guide the teaching."

Further on, the position given to architecture in the American Universities and the care that is there devoted to this art as a need in national life is eulogised. The respect for architecture as a subject touched by the Humanities is illuminated by a quotation from a lecture delivered by John Ruskin in 1867:—

"There is an impression on the public mind that in order to recover the national power in art some knowledge of its practice should be diffused through the mass of the people. Now what is really wanted is very nearly the reverse of this. It is not to teach the body of the nation to know something of art, but to teach the artists of the nation to know much of other things. It is not to give an artist's education to the populace, but a gentleman's education to the artist."

We must pass rapidly over the remedies suggested for the present unsatisfactory condition of affairs in this country. In brief, Mr. Ashbee recommends, first, study of the progress made in Germany and America; second, closer touch between the art schools and employers of labour; third, the Registration of and combination by *bona fide* craftsmen; fourth, the exhibition of craftsmen's work; fifth, the linking up of the industrial arts with the small holdings; sixth, the extension of the South Kensington circulation department; seventh, drastic revision of the inspection of schools; eighth, endowment of craftsmanship. The exigencies of space preclude us from giving the details of these proposals, and we can only refer our readers to the book itself.

NOTES.

The Villa d'Este. It is announced in Vienna—and there seems good reason for believing the news to be correct—that the Villa d'Este, at Tivoli, is to be given to the Austrian authorities to afford for Austrian artists and students a *pied-à-terre* analogous to the French Academy in the Villa Medici, and, as we hope, our own in the Exhibition building to which we referred a few weeks ago. It has been known for some time that the Archduke Francis Ferdinand, who inherited the Villa from the last Duke of Modena, has found it too expensive to maintain even in a very imperfect manner. There has been talk of selling it, a course discountenanced in high quarters. So that the probability now is that the Archduke will make a generous donation, for which he will be rewarded indirectly, and in a way not relevant to our interests.

The Honours List of the World. The world's greatest men cannot be named to the satisfaction of everyone, and a symposium in the current *Review of Reviews* is the latest proof. Mr. Carnegie's list of twenty is challenged by Mr. Frederic Harrison, whose own list is not beyond criticism. Lord Rayleigh gives us hope when he suggests that sculpture, painting, and music should be represented. Some of the other contributors, who include Leonardo da Vinci and Michelangelo, do not say in what capacity they are named, though we are inclined to say that their work as architects was not considered; for in the epitome of votes, Michelangelo, halfway down, is described as "painter and sculptor." Is this more evidence of the general unconcern about architecture, or cannot an architect be found to rank with the engineers, inventors, soldiers, statesmen, authors, and others who have caught the public eye?

Manitoba Parliament Buildings Competition. We understand that considerable dissatisfaction is felt by Canadian architects with the conditions of this competition, and that there is a probability that the various architectural societies in the Dominion will endeavour to get them amended, failing which the competition may be barred. The time limit is considered altogether inadequate, exception is taken to the method of judging, and to conditions governing the lighting and heating. We gather that there is a reasonable probability of the time limit being extended, so making it possible for English architects to compete, but at the same time there is no doubt that the action of the Government of Manitoba in fixing so short a time limit tends to throw doubt on the *bona fides* of their wish to obtain designs from the best architects in the whole Empire. We shall await further developments with interest.

Burford Priory. We are glad to note that Burford Priory has fallen into such sympathetic hands as those of Mr. E. J. Horniman. Having fallen into a ruinous condition, it was rescued from this state by Colonel B. de Sales La Terriere, its former owner, who did not, however, find it practicable to reconstruct the whole of the house and restore it to its original state, but took in hand the portion still standing and treated it in a conservative spirit, remodelling the arrangements only where necessary to meet the demands of convenience in the use of the house as a home of to-day. The Priory existed in the XIIIth century as an offshoot of the Abbey of Keynsham. The Harman family converted it into a lay residence, and it eventually passed into the hands of Sir Lawrence Tanfield, who was admitted to the Inner Temple in 1597. While Sir Lawrence lived there he entertained James I., and this was commemorated by a great heraldic panel of the Royal Arms, which is in excellent preservation. A later owner was William Lenthal, Speaker of the Long Parliament. After the Restoration Charles II. dined at the Priory, and William III. was also a visitor there. Some measured drawings of Burford Priory, by Mr. H. Tanner, appeared in our issue for October 28, 1899.

The Railways and Socialism. A circular has been issued to the shareholders of the Metropolitan Railway by one of that body inviting his fellow-shareholders to co-operate with him in forming a committee to support the Anti-Socialist Union of Great Britain in its campaign against this branch of Socialism. It is an unfortunate feature of the present methods of labour organisations that they call for counter-organisation on the part of employers and owners of property not only for the purposes of traversing misleading statements circulated by the representatives of labour, but also for resisting actual physical violence. The movement proposed in this circular is directed to the first of these two objects, and some of the statements complained of are dealt with in the circular. The writer addresses himself in particular to a statement originally made in 1907 in "The Census of Wages," by Mr. R. Bell, that "there are over 100,000 employees on the railways of the United Kingdom whose standard wage does not exceed 1*l.* a week." This is characterised as a misstatement; but we venture to think it might more correctly be described as a suppression of the truth. In the Board of Trade returns for 1910 it is stated that information was received by the department which enabled the wages of 90 per cent. of those employed to be estimated, and the average weekly earnings of these 463,000 employees amounted to 25s. 9d. a week per head. Among the employees there are some 43,000 boys and also men employed on light and totally unskilled labour; therefore, although it is possible that there

may be 100,000 persons receiving less than 1*l.*, it is quite obvious that the service is a well-paid one, with extra privileges not computed in earnings, and that the statement in question is a *suppressio veri* calculated to convey a wholly false impression.

Railway Nationalisation.

THE circular also draws attention to a statement by Mr. Ramsay Macdonald that he and his supporters intend by their action to depreciate the value of railway stock until it suits them to consider purchase, and to the fact that the Socialist groups within the railways are really striving by their methods to accomplish nationalisation. The Trade Union Congress has repeatedly passed resolutions in favour of nationalisation, but it remains to be seen whether the action of our own Government in connexion with the recent strike, as well as the action of foreign Governments where strikes have occurred on State-owned railways, may not open the eyes of trade unionists to the fact that a Government Department may be less supine in its methods than public companies. However this may be, it is well that employers and property owners in this country should take steps for the better instruction of the public in such matters and should realise that a *laissez-faire* policy can be carried too far in the face of militant agitation.

THE ROYAL SOCIETY OF PORTRAIT PAINTERS.

THE twenty-second exhibition of the Royal Society of Portrait Painters, which is now on view at the Grafton Galleries, is not restricted to works which have not been exhibited elsewhere. As a matter of fact, most of the prominent portraits have been exhibited elsewhere. We make no complaint about this; we are indeed glad to renew acquaintance with works to which their authors obviously attach more than passing importance. There is, for instance, Mr. Sargent's portrait of Lady Faudel-Phillips, which must be ranked among his most sincere work; there is Mr. Strang's "Milady's Maid," in which the artist discovers harmonies in his definite and uncompromising statement of line and colour which in some of his other pictures strikes us rather as a concession to a sort of didacticism, to a sounding of the war note in a battle against loose drawing and a mitigated use of colour; there is Mr. J. J. Shannon's portrait of two ladies "on the Dunes," and there are other pictures which we are also glad to see again. Sir Edward Poynter's preliminary study for the portrait of King Edward VII. only goes to illustrate an argument in favour of the exhibition artist's first impressions which we have often used in the *Builder* in our criticism of pictures. This is a very finished and accomplished first impression, it is true, and probably the result of even earlier elaboration and arrangement, but what a difference between this small picture, as a work of art, and the large affair at the Academy! Sir Lawrence Alma Tadema's Mr. Whitaker Thompson, a recent portrait, is a perfectly plain and unaffected presentment, painted with the elaborate finish and care which distinguishes all his work. Mr. Lavery has sent some characteristic portraits, and so has Mr. William Nicholson. As Mr. Lavery is a school unto himself, and as Mr. Nicholson is essentially a derivative and eclectic painter, we are unable to envisage either of them in a brief note; any more than we are able to dwell upon the always interesting work of Mr. Greiffenhagen. There is also the portrait by M. Besnard of a French ambassador at a foreign court. As M. Besnard appears to be the only foreign artist of distinction represented we are a little at a loss to explain his presence, but he is welcome. The portrait may be somewhat histrionic, but as a piece of decoration it is the most complete thing at the exhibition. That is to say, you could not very well hang this fine quixotic-looking gentleman, with his cloak and official costume, with his ample background, in any space that was not designed for the purpose. At the same time we have rarely seen any portrait more typical of the dignified and picturesque phase of diplomatic life.

THE ROYAL INSTITUTE OF BRITISH ARCHITECTS:

THE EXAMINATIONS.

The Final: Alternative Scheme of Testimonies of Study.

IN accordance with the notice already published in the R.I.B.A. *Kalendar*, the alternative Scheme of Testimonies of Study for the Final Examination will come into operation at the option of the candidates in November next, and after the end of the year 1913 the existing Testimonies of Study for this Examination will be abolished. Six alternative Problems in Design will be set by the Board of Architectural Education each year, and candidates for the Final Examination must submit designs in answer to at least four of these problems. These alternative problems will be published twice a year—three sets in January and three in July. This is done for the convenience of candidates, but it must be distinctly understood that the time for sending in the designs in answer to these problems is strictly limited. Thus the designs for Subject I. must be sent in to the Secretary R.I.B.A. or to the Secretary of the Allied Society for the district in which the candidate is working by February 29, 1912; those for Subject II. by April 30, and those for Subject III. by June 30. (This time will be extended for students in the Colonies: see dates following list of subjects below.)

The drawings to be on imperial sheets.

The subjects for the first half of the year 1912 are as follows:-

Subject I.—(*a*) A large monument, to commemorate King Alfred's refounding of London one thousand years ago, for a public place in the City, not to cover more than 500 super. ft.

All drawings to be ½-in. scale and shaded.

(*b*) A terrace of five houses 20 ft. frontage, each six stories high, including basement, facing the parade of a small watering-place. Detailed construction of one house to be given and a design for the complete terrace.

Drawings required to be ⅛-in. and ½-in. scale.

Subject II.—(*a*) A large monument to an explorer, to be placed against the wall of a public building.

Shaded drawings required to be ½-in. scale.

(*b*) A cloister with external entrance gateway or tower to a collegiate building round a courtyard 100 ft. square.

Drawings to be ⅛-in. scale, with ½-in. details of the complete construction of one bay.

Subject III.—(*a*) A detached ballroom to a large country house, to be connected with the house by a covered way. The decorations should be specially considered.

Shaded drawings to ½-in. scale, showing both interior and exterior, and a detail of decorations.

(*b*) A landing stage to a river or lake with a restaurant.

Drawings to show complete construction ⅛-in. scale and ½-in.

Dates for Submission of Designs in 1912.

	Subject I.	Subject II.	Subject III.
United Kingdom	Feb. 29	April 30	June 30
Johannesburg	April 30	June 30	Aug. 31
Melbourne	May 31	July 31	Sept. 30
Sydney	May 31	July 31	Sept. 30
Toronto	March 31	May 31	July 31

Construction and Shoring: Memorandum to Masters of Architectural Schools.

The Board of Architectural Education have received a communication from the examiners to the effect that many of the candidates at recent examinations have shown weakness in the subject of construction generally and shoring in particular. They would, therefore, direct the attention of the Masters of the Architectural Schools to the importance of impressing on their students the necessity of studying more carefully this important branch of architectural education.

Institute Prizes and Studentship.

Works have been received for the Institute Prizes and Studentships, 1911-1912, under motto, device, or signature. For the Institute Silver Medal and 25 guineas (Essays), subject: "The Principles to be Observed in Designing and Laying out Towns, treated from the Architectural Standpoint," twelve essays were received.

For the Institute Silver Medal and 10 guineas (Drawings), subject: "Measured Drawings of Ancient Buildings in the United Kingdom or Abroad," five sets of drawings were received; and for the Sloane Medallion and 100*l.* (for Continental travel), subject: "Design for a Guildhall," thirteen sets.

The Owen Jones Studentship (certificate and 100*l.*, for travel, and study of colour).—Application and drawings have been received from Noël H. Leaver and Geo. W. Mason.

For the Pugin Studentship (Silver Medal and 40*l.*, for travel in the United Kingdom), sets of drawings have been received from: 1, C. Peake Anderson; 2, A. M. Durrant; 3, Joseph Hill; 4, W. J. P. Jones; 5, J. R. Leathart; 6, Charles Waite; 7, Jas. Macgregor; 8, R. Norman Mackellar; 9, F. H. Swindells.

For the Tite Prize (certificate and 30*l.*, for travel in Italy), subject: "Design (according to the methods of Palladio, Vignola, Wren, or Chambers) for the Central Courtyard of a Royal Exchange covered with a Roof," eleven sets of drawings have been received.

For the Arthur Cates Prize (40 guineas), drawings have been received from J. B. F. Cowper, Claude V. Hodges, and Maurice Lyon.

For the Grissell Gold Medal and 10 guineas (for Design and Construction), subject: "Design for an Isolated Exhibition Building," four sets of drawings have been sent in; and for the Godwin Bursary (Silver Medal and 65*l.*), drawings have been received from Geoffry Lucas and A. F. Wickenden.

The Annual Exhibition of Designs and Drawings submitted for the Institute Prizes and Studentships opens on Monday, January 22, in the R.I.B.A. Galleries, 9, Conduit-street, W., and closes on February 5.

THE ROAD BOARD AND ROAD CRUSTS.

In a circular addressed to the County Councils of England and Wales the Road Board communicate their Minute of December 8 (which will extend to applications from Scotland), relating to road crust improvements. In making contributions in that behalf the Board will confine their grants to, say, 75 per cent. of the extra cost of improvement after provision out of maintenance account of the cost of renewal. They express their desire to assist the improvement of surface crusts by the use in the future of superior and more durable material, and by the substitution of a bituminous-bound for water-bound material. Their Advisory Committee have framed a code of general directions for surfacing existing roads with steam-rolled, water-bound macadam, which can be obtained, price 6d., post-free, from Messrs. Waterlow & Sons, London-wall, E.C. During the last three months the Board have made advances to a total amount of 33,787*l.*, including 29,045*l.* in respect of road crusts; the total of grants up to the end of last year is 428,834*l.*, inclusively of 347,407*l.* for improvement of road crusts. They have, further, indicated grants aggregating 490,413*l.* to highway authorities towards works of improvement of which the details are still under consideration.

THE ordinary general meeting of the Architectural Association was held at Tufton-street, Westminster, on Monday, Mr. Gerald C. Horsley presiding.

Mr. Hall (Hon. Secretary) announced that the second Spring Visit would take place on January 27, to the new Polytechnic Regent-street, W. (Messrs. C. F. Mitchell and F. T. Verity, architects.)

The President announced that Mr. Theodore Fyfe had been elected to serve as a member of the Council.

On the motion of the President, votes of thanks were accorded Mr. Niel Koch for presenting a book, entitled "Viennese Architecture," by Professor Otto Wagner, together with eight volumes of "Academy Architecture," and to Mr. W. H. Ward for presenting six volumes of "Academy Architecture" to the Library.

ALFRED STEVENS.

Mr. E. F. Strange then gave an address on "Alfred Stevens," his remarks being illustrated by a large number of slides of sketches and models now in the possession of the South Kensington Museum. He said that Alfred Stevens was born on December 30, 1817, at Blandford, and was the son of a house decorator. He began to copy pictures at about the age of ten, and made a most wonderful and excellent portrait of himself reputably at the age of fourteen. These works, of course, in a small town attracted a considerable amount of notice from his neighbours, and one of them introduced him to the Rev. Samuel Best. It was of some little interest to know who it was who was actually responsible for giving Stevens his chance in life; it was a Mr. Henry While, or White. He had seen the name written on two occasions, and it seemed to him that, although the "t" was not crossed, yet it probably was "White." This gentleman introduced Stevens to Mr. Best, whom White mentioned as his principal benefactor, and who seemed to have provided the small sum of money with which Stevens was sent to Italy in October, 1833. He went to Naples first, but the accounts given of his first few years in Italy were not generally correct. Stevens himself stated that he spent eight years working at the Academy of Florence in two periods of five years and three years, with an interval between. Stannus said that Stevens arrived at Florence in the autumn of 1836. In July of 1836 Mr. White wrote to the Director of the Academy stating that he had introduced Stevens to Mr. Best, and he had promised to write home every month, but that for a year they had heard nothing about him, and his parents were naturally distressed. The importance of this from the historical point of view was that Stannus was wrong in saying he arrived at Florence in 1836. Presumably he had been in Florence for considerably more than a year at that date. The Director, in reply, said that Stevens had been working there, although he was not a registered student of the Academy, but at the particular time he was away with Mr. Kinloch, the American sculptor. This again disposed of the idea that Stevens met Kinloch in Rome and accompanied him to Florence, where Kinloch fell sick and died. It also disposed of a further statement that Stevens's father took little interest in him after he had once got rid of him. Stannus also said that Stevens went out to Italy with the advice that he should study Salvator Rosa, but that when he saw his work the badness struck him so forcibly that he would have nothing to do with it. The Director of the Florence Academy, however, said he did copy a picture of Salvator Rosa. During the time he was in Italy Stevens managed to visit the chief towns and to study most of the work that was to be seen in them, and many of the studies and sketches he made were in various collections. Proceeding to deal with the slides, Mr. Strange first showed an authentic picture of Stevens, an Italian landscape in water-colours, a study of rocks at Puzzuoli, and some pencil studies of frescoes. The next slide was that of a black charcoal drawing on brown paper. It was known that Stevens contributed to the second fresco competition for the decoration of the Houses of Parliament, his contribution being a scene from the play of "Richard III." Amongst the drawings which the Museum had acquired from the late Mr. Townrow were four drawings by himself in black chalk on brown paper, and there was a note on one of them to the effect that these were his copies from studies by Stevens for the Houses of Parliament competitions, the originals of which had been destroyed, so that his copies were the only records remaining. In another parcel, however, he found two very battered fragments, which he now reproduced on the screen, which were greatly superior to Mr. Townrow's copies, and at the same time were obviously the things he copied from. Therefore he ventured to think they had got two of Stevens's sketches or studies for the Houses of Parliament competition. But then the question arose—Which competition? The four figures shown represented figures for four corners of a circular composition. The two upper ones were angels, and the two lower ones crouching figures in heavy drapery. Obviously these were not the figures which would have been accepted to decorate a scene from Shakespeare's plays. He went back to the catalogues of the original competition, which was announced in 1842 for full-sized cartoons to be executed in charcoal on brown paper of subjects to be chosen from Milton's "Paradise Lost," Spenser's "Faerie Queene," or English historical subjects. The copy of the catalogue at the Museum belonged to that old collector Mr. Smith, who had the most praiseworthy habit of making pencil notes in the margin, and he found against No. 53 in the competition the pencil note, "Stevens." The subject was the "Expulsion of Sin and Rebellion from Heaven":

> "Headlong themselves they threw
> Down from the verge of Heaven. Eternal wrath
> Burned after them to the bottomless pit."

That, of course, was not conclusive, but he looked further amongst various contemporary periodicals, and in the *Art Union* for August, 1843, he found that the writer of an article had taken the trouble to collect all the names of the competitors, and he wrote as follows:—"No. 53, 'The Expulsion of Sin and Rebellion,' Stevens—a number of headlong figures grouped circularly, as if designed for a bas-relief; the *vis cadendi* is, however, wanting; this and much else has been sacrificed to neatness of arrangement. The features are deficient of all expression of pain, confusion, defeat, and consequent infernal ire and disappointment; as opposed to this, the glory of the Messiah pursuing is insufficiently upheld." That must have been one of the first works exhibited by him on his return from Italy, and before he got his appointment as master of the School of Design. With regard to his position at the School of Design, there was not much to be said about it which had any influence on his later work. Stevens held it only for two years, and left in sympathy with the headmaster. The chief value to them lay in the evidence he gave on the committee of inquiry which was held. Stevens was examined specially on the question of training. With respect to his own training, he said he studied at France with a view to ornamental design, but he emphasised the fact that there was but one course in the Academy—a course intended for painters, and consisting mainly of the study of the human figure. There was no instruction in design. He said, "Pupils generally enter the Academy with the intention of becoming artists; the study of the human figure is therefore the great feature of their education. Some of these towards the completion of their studies are, by their natural disposition or by circumstances, led to turn their attention to ornament with their already acquired knowledge; but little special study is sufficient to make such men excellent ornamentalists. In this manner Italian designs are made. At the Italian academies the average period of studentship was ten years, and in the course of the inquiry this point also was considered. One of the witnesses, Mr. Townsend, had said he thought two years long enough for the acquirement of a sufficient degree of technical skill for the purposes of a designer. Stevens was asked his opinion, and he gave a remarkable and decisive answer. He said, "If by technical skill be understood the power of being able to copy well, either in drawing or painting, a form which is put before you, it appears to me that when a man has attained that he has finished his studies." Again he said, "I think that technical skill depends upon the knowledge of a pupil. I think a pupil will never be able skilfully to put down either in painting or drawing any form which he is not perfectly acquainted with. I hardly think that manual dexterity comes from anything but from a boy being very certain in his own mind what he is about to do." He also said that a preliminary school course of four years at least was necessary for the young designer. One would like to emphasise the insistence which Stevens put on "form," for one of the great characteristics of the whole of his work was his conception of that quality. It was specially interesting to them now, when they saw rather a disposition to make clever drawings for their own sake as drawings, and not as drawings which should specifically represent a particular form. One might spend a whole evening discussing theories of art education, but he would go on and show how Stevens applied the principles he had so clearly formulated in his mind. This evidence was given before he had achieved any single work of any public importance. In 1847, however, he obtained a commission to decorate a portion of Draysbrook House, West Derby. The story was told that Collman, who had the ordering of the work, gave Stevens the commission, and the work had to be finished at a certain time, but only a fortnight remained when he was induced to go to the house. Stannus said that Stevens arrived with a few sketches and set to work with most marvellous dexterity, and finished three rooms within the time, which were certainly amongst the most noble examples of mural decoration in this country. So many careful studies were executed for that work that one was disposed to doubt the statement as to the time spent on it, but Mr. McColl, who had made a special study of the Draysbrook decorations, would doubtless tell them something about it. Having shown a number of sketches for the decoration of Draysbrook, Mr. Strange exhibited a sketch of the design for the doors of the Geological Museum in Jermyn-street—a splendid project which unfortunately never matured. He thought this one of the most splendid pieces of design that Stevens produced. When Stevens first came back from Italy he appeared to have endeavoured to obtain his living as a portrait painter, and at the inquiry he had referred to he was described as a painter. He drifted, partly from necessity and obviously because it was his natural bent, into various forms of design, design in a small sense and design in the very noblest sense in which the word could be used. Some of the things he did were certainly open for criticism. The rose-water sprinkler shown on the screen was beautiful in its detail, but one could not feel that it was good design as a whole. Stevens's use of the figure in industrial design was one of the strongest and most interesting of his characteristics, and certainly no Englishman had ever used the figure in that way to greater advantage, nor had any Englishman ever used it to such

(

ordinary purposes as did Stevens. The speaker showed a table-centre in silver where extraordinarily skilful use was made of the figure, although from their modern view they would say the ornament was too elaborate for design for practical purposes. Stevens applied his talents to all sorts of curious purposes, and they would see designs on the screen for a whole series of Indian knives, one of which was exhibited in the 1851 Exhibition. Several succeeding slides showed designs for candlesticks, and when enlarged it could be seen that one of them was of a monumental character. They were extremely interesting as an example of how fond Stevens was of the device of arranging figures round the central stem, which he used with splendid effect in the memorial of the 1851 Exhibition and several other occasions. Stevens's designs for street-lamps had not been very prominently brought before the public up to the present, but he hoped within the next few weeks to have a whole series of them, which ought to attract a certain amount of attention. Stevens designed some very beautiful street-lamps, and obviously studied proportion very carefully; but he supposed designers of modern street-lamps had to include motor-omnibuses in their calculations. He did not know whether any of the designs were actually carried out, but would be glad to learn if they were. In 1850 Stevens went to Sheffield and made designs for an old firm, which was still flourishing—Messrs. Hoole & Sons. He designed a number of grates and fireplaces and stoves, and things of that kind. Several designs of fire-grates, including the one which made a sensation at the 1851 Exhibition, were exhibited, and also that of the grate and two fire-dogs now in the Victoria and Albert Museum. One of these was absolutely utilitarian, but with the most masterly execution of relative proportions. The other could only be described as the best of the sculptor's art in one of its highest phases—a most exquisite piece of modelling. Two designs for blue-tile panels for a fireplace was exhibited, the effect of which Mr. Strange said was very striking indeed. The original designs were in the Tate Gallery at the present time. Slides were then shown of bronze finger-plates for doors, a lion design for a door-knocker, and the lion design for the British Museum railings, which was probably the best known of Stevens's work. It had also been placed round the Wellington Monument at St. Paul's. Mr. Strange next showed a slide of the original plaster model, designed for the door-knocker at Dorchester House, and also the same design in bronze by Mr. J. Clayton. It lost undoubtedly in the reproduction, and he was afraid the same thing must be said of not a little of Stevens's work. In his designs and sketches and in his models almost up to the last point the execution of Stevens was magnificent, but it must be admitted that sometimes the final result when the work was carried out in the destined material did not entirely fulfil the anticipations which the magnificent sketches had raised. Dorchester House, as they knew, was a splendid mansion, and had come before the public lately in connexion with the fine reproduction of the Stevens chimney-piece which had been placed in the Tate Gallery. Mr. Holford made the acquaintance of Stevens, and gave him the commission to decorate portions of the house, not, as had been stated, in 1858, but in 1856, which was a year before the Wellington Monument controversy had arisen. But he was not such an entirely unknown man as people were led to suppose, for in the *Art Journal* of that day were the following remarks :—

"We are much rejoiced to hear that the internal decoration which is now about to enhance and complete the structure is likely to be in the hands of an Englishman, and of one who we are quite sure will perform his part worthily. Mr. Stevens, 'of Kensington,' is already entrusted with the decoration of the dining-room, with respect to which he is given a 'carte blanche,' and this with the full concurrence with the architect, which speaks well for that gentleman's liberality of feeling. Under these circumstances, there is no fear as to the result, nor, we should think, that the whole of the apartments will not eventually be placed in Mr. Stevens's hands. The exterior of the edifice is highly effective in its unity, and is harmonious and complete in itself from one feeling pervading the whole. The same advantage should be accorded to the interior. We have often had occasion to speak of Mr. Stevens's work in ornamental art with high praise. The style in which he is strongest is Italian (so called), the most appropriate, on the whole, for English edifices of the class of Mr. Holford's house, yet he is no servile copyist—his compositions, though fully imbued with the full and fervid character of the Italian school, are yet no more *refacciamente*—he thinks for himself. In any other European State he would have achieved by this time a much wider celebrity than has as yet fallen to his lot. This arises from no shortcomings on his part, but from the fact of there being no proper 'status' yet for an ornamentalist in this country—at least, for a British one. We trust, however, this will ere long cease to be the case, and that ornament without a strong feeling for which, we reiterate, as we have often done, there can be no true union of the other arts, will have its due rank acknowledged. The success we predict in the present instance will give its aid, which we reckon on, inasmuch as our own impression would not hesitate to venture Mr. Stevens's powers in his own style by the side of those of any living ornamentalist, and this notwithstanding that he may be more generally known to the public by the assistance he has given in the best class of ornament connected with stoves and grates than by his other compositions."

They had to remember that Stevens had come very prominently before the country, and had been bitterly attacked in the House of Commons in regard to the agitation over the National Gallery administration, and there was no doubt his work for the 1851 Exhibition greatly enhanced his reputation. When Stevens came, as he did almost at once, to the performance of some of the great works on which his fame really rested, he was anything but an unknown man. He had not exhibited at the Royal Academy, unless the entry in the 1846 catalogue, "For the Interior of a Church," by "A. Stephens," might be attributed to him, although the name was spelt differently. One trifling matter which seemed to suggest that it might have been him was that he was the only exhibitor of the year who did not take the trouble to communicate his address.

The Dorchester House decorations were not carried so far as the writer of the notice hoped. Not being an American subject, he (the speaker) had unfortunately been unable to obtain admission to Dorchester House, although he had tried very hard. He supposed no one wanted a crowd of people over his house every Saturday afternoon, but, at the same time, it did make one wish that such decorative work as that of Stevens might be made more accessible to the public. He hoped they would give all the assistance they could in the efforts being made for the preservation of Stevens's own house at Haverstock Hill and of Draysbrook House. Another very interesting experiment in design for decoration, and one by no means well known, was the scheme for a pavilion for Queen Victoria at Paddington Station. They had several of Stevens's drawings of this. One was at South Kensington, and Mr. Phené Spiers had the alternative scheme. They were characteristic of the author, but for some reason the work was never carried out. In this matter Stevens was associated with Digby Wyatt. For the Crystal Palace Stevens executed two ceilings in the Italian Courts, and what would be the future of these would also be a matter for serious searchings of heart amongst those who did not want to see good work destroyed. Another of Stevens's activities was found in making designs for Majolica ware. The Museum possessed some specimens of this ware, which they bought in 1864. Stevens was also responsible for the design of the table in the refreshment-room of the Museum, with the exception of the marble top and one of the large heating coils. He did no work for the decoration of the Museum itself, but he had been told that he used to come in almost surreptitiously in the evening and talk with "his boys" and give them hints, and it might be that much of that which was the best of the decoration was due to his suggestions. Mr. Strange showed a reproduction of the Exhibition certificate of 1862, which must have taken considerable trouble, and which he considered the best certificate design ever made. The original design was not adhered to, for Queen Victoria was so affected by the two mourning figures at the bottom that they were omitted, and he thought the final design lost by the omission. Several original sketches for the 1851 Exhibition memorial were reproduced on the screen, for which Stevens was unfortunately not successful. The model which was at South Kensington was one of the most beautiful things Stevens ever did. After all, the chimney-piece at Dorchester House was only one part of the design, and the Wellington Monument was designed in relation to its surroundings. In the model, however, they had Stevens's conception of what a great isolated monument should be. It represented four continents linking hands round a central shaft, and it gave perhaps the finest form in which his favourite device of placing figures around the shaft could be realised. Some criticism had been made as to the size of what might be termed the eaves towards the bottom, but Stevens intended to have a fine series of bas-reliefs running round the shaft, and these eaves were undoubtedly intended to protect them. Moreover, he would undoubtedly have had a much more important base than was shown in the model. They had a plaster model of the famous chimney-piece at Dorchester House at South Kensington, and the figures he looked on as the second best piece of sculpture which Stevens ever made. Whether when used in that way one would like to live with them was not quite certain. To his mind, they conveyed an impression almost of discomfort. He had never felt quite happy in considering the chimney piece as a design, but its execution was simply marvellous. The next slides showed alternative designs for the decoration of the dome of St. Paul's and a tracing made by Professor Stannus, which the speaker thought gave an idea of how magnificent Stevens's conception was. He was not sure, however, how he would have managed the lighting of the dome, and they had been told that Stevens was disappointed in that respect with his "Isaiah" which was executed. Whether Stevens could have really carried out a scheme of colour decoration which would have been effective in that great, magnificent, dusky cap he did not know, but, at all events, he left them some most splendid studies. Mr. Strange proceeded to exhibit a large number of cartoons of the proposed decoration, and said the labour disposed on them must have been enormous. Some of these studies were kept by his pupils and had become the great treasures of collections, but hundreds must have been destroyed. Coming to the Wellington Monument, the speaker said that a sum of about 25,000*l.* was left over from the State vote for the funeral of the great Duke, and the proposal came for a memorial at St. Paul's. There was another sum of 5,000*l.*, and in the first instance Gibson, Baily, Folley, and Marochetti were invited to compete. Gibson was in Rome and refused, and Marochetti was so certain of getting the commission that he did not trouble to compete. The other two sent in competitions, which were not accepted. Then someone woke to the fact that there was the 25,000*l.*, and a new competition was organised, open to the world. Eighty-three competed, with the result that Calder Marshall obtained the first premium, with F. Woodington the second and E. G. Papworth the third. Stevens got one of the lowest premiums of 100*l.* It was very amusing at this time to read what contemporary writers said. One paper said :—

"Mr. Alfred Stevens's is one of the faultiest designs in the competition. An open arch rises upon a picturesque cluster of twelve columns, supporting a rich pedestal, high above which stands the bronze statue of the Duke. Two groups of sculpture at the sides represent Truth crushing Fraud and Valour quelling Cowardice, the two vanquished figures being flung out from the pile with a boldness and terrific spirit. Still, this monument is in the main architectural. It is in three stages—the first an enriched basement made up of twelve insulated columns, which support an entablature bearing an enriched frieze, from which rises a semicircular-headed arch, the soffit of which is elaborately panelled. Over this arch the next stage is supported by four moulded columns, and from the ends of this stage are flung the strange figures we have referred to. Above this stage, on a plain

entablature, but enriched pedestal, is an equestrian statue of the great Duke. If, however, the monument is to be placed beneath one of the arches of St. Paul's Cathedral, this design—arch within arch—will be objectionable. The decoration of this monument is very elaborate, but we do not admire the selection or arrangement of the objects upon the sides of the sort of altar tomb upon which is placed the recumbent figure of Wellington."

Another critic said :—

"A fine piece of Venetian architectural splendour, most admirable in its restrained richness, and well studied in its light and shade. Erected in a provincial square, it would be the pride and crown of the place. The bronze statue high in the air, the open arch below, the pillars, the crown, the crushed figures of war squeezed under his shield, are full of spontaneousness and originality."

That was a serious criticism, and many people took the view that the monument should have been placed in the open air. Having shown the model, Mr. Strange said it was not carried out as it appeared, and he was bound to say he thought it lost seriously in the operation. It might, of course, be unfair to compare a small-scale model with the huge mass now in St. Paul's Cathedral, of which they could hardly get a good view without getting on a staging. In the complete monument the two magnificent groups did not appear to have anything like the value which Stevens must have intended them to have, and the story below the equestrian figure seemed to have become rather heavy, whilst the moulding seemed likely to seriously obscure the effect of the equestrian statue which would be placed there. Mr. Strange showed a photograph of the statue with the model of the equestrian figure in position, and said his point was the piece underneath seemed to have got too heavy and the bronze figures seemed to have been somewhat thrust into the air. He went the previous day to the Cathedral, and came away a little disappointed and with the conviction that one would like to see the whole thing in the open air. He was not sure whether it would not have been better to have left the monument in the Chapel, where it was placed in the early stage of the proceedings. The proposal was to make that a Wellington Chapel and place the monument in the centre. Penrose, who had everything to do with the selection of Stevens to execute the memorial, was to have made the surroundings of the Chapel suitable for the memorial, and artists of eminence were to have executed paintings in it. The actual plaster models for the magnificent groups had been placed in the central hall of South Kensington, and he did not think anything finer was to be seen in any museum in London. Stevens's sketches showed how he was always working through his eyes and his mind. He had so far avoided mentioning the one artist whom it was almost inevitable in any appreciation of Stevens, but he must show at least one piece of Michelangelo's work, which to his mind had more in common with Stevens's finest work and was absolutely free from any possible idea of having suggested any single figure which Stevens ever drew. This was the tomb of Lorenzo de Medici, one of the most beautiful things which Michelangelo ever executed, very much in Stevens's spirit. He put it that way because it was not a question at all of imitation of style. Stevens arrived at the effect of ideality and of abstraction which was not altogether inferior to that of Michelangelo. But he worked under very different conditions. He would say nothing of the troubles of the criticisms he received, but whereas Michelangelo worked in the midst of a community of artists at the most glorious period of Italian art, Stevens was Early Victorian. If ever there was a voice crying in the wilderness it was that of Alfred Stevens. Almost a recluse, a man who lived but for his own art—an art which knew no nationality or geographical bounds—he arrived by a purely natural and personal process at this elevated pitch. Stevens finished very little; he over-studied his subjects; he was hopeless as a business man. Other artists besides Michelangelo and Stevens had these qualities. But Stevens had the love of his own art, and, not unworthily, after the Lorenzo he thought they might look at his superb group on the Wellington Monument.

Sir Charles Holroyd,

in proposing a vote of thanks to Mr. Strange, remarked that he was afraid Michelangelo was rather solitary with regard to the artists he worked with. He hoped that they would be able to save Draysbrook, but they could not do so unless they got the money. The beautiful design, which Stevens was always playing with, of the two children linked together he thought he got from the Sistine ceiling at Rome, and he thought he got his first conception of the twining figures round the candlesticks from the big candlestick in the right transept of St. Mark's. With regard to the Dorchester House fireplace, he always felt he would like to see the model at South Kensington illuminated by the electric light or something. The appreciative notice of Stevens which Mr. Strange had quoted might have been written by Digby Wyatt. So far as the figures of the women on the Dorchester House fireplace were concerned, he would certainly like to live with them, but he would like them in bronze. The only thing which struck him about the Wellington Monument was that the seats ought to be taken away.

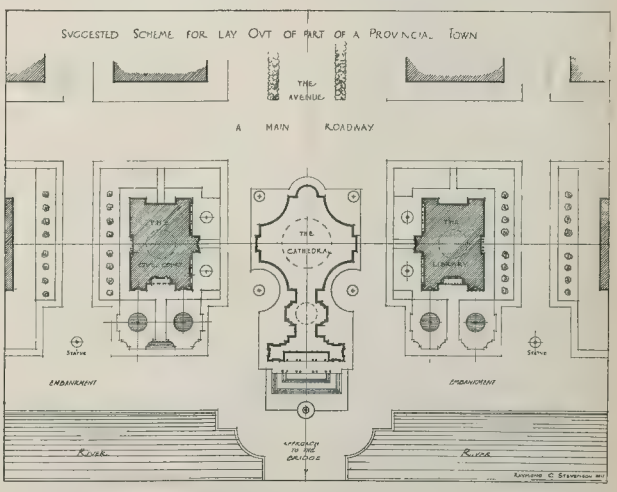
Mr. McColl,

in seconding, said that undoubtedly Stevens made careful studies of his Draysbrook work before going to the house, and, having arrived at the conception, he was able with two assistants rapidly to proceed with the work. He agreed as to Stevens overloading his smaller work, but if he was given a big thing to do it came out clear and magnificent in the end. He thought the figures around the candlesticks foreshadowed the big monument of the 1851 Exhibition. Recently Mr. J. Whitelaw, who took the Silver Medal of the Royal Institute of British Architects, came back to England full of what he had seen in Italy, and then went to St. Paul's, and was so overwhelmed with the beauty of Stevens's work that he had made a series of drawings and presented them to the Stevens Society. He agreed that there was a certain gauntness about some of the Wellington Memorial, and one was inclined to think his first design was finer; but it must be remembered that the first intention was for the whole thing to be in bronze, and when marble was decided on it had to be readjusted. Another thing was that he wished to bring the memorial into relationship with Wren's work, and also, knowing that the equestrian figure was not to be allowed at the top, he thought it necessary to move up the side groups a little to make the thing provisionally complete. Further, a certain amount of bareness came from the fact that the face of the arch was to have been covered with bronze hangings.

Mr. W. Strang

said Stevens had one quality which was certainly the rarest in this country, which was that he was a great draughtsman. The other thing which struck him was that, being so much more of a sculptor than a painter, he was the great draughtsman he was. In this country sculptors were prone to put down their ideas quickly in clay.

Mr. Colton



remarked that Stevens did so much in design and colour that if he had a weak point it was probably that he was not very skilled in the final production in marble or other material. He did not think many sculptors would have accepted the British Museum lion railing as a reproduction of their work, for it was cut most brutally in the iron, and he thought Stevens must have been bitterly disappointed. He had a plaster model, which was much more beautiful, and would like to know whether it was one of the original models for the railing. There was, of course, a great difficulty in the sculptor imagining what his design would be when it was enlarged. He thought the genius of Stevens was wonderful in the barren time in which he lived—he was more an idealist, a great designer. For years sculptors and architects had been quarrelling about the matter of scale. Sculptors thought the sculpture should be placed boldly, and the architect wanted to decorate his building with small sculptures for the sake of making it large and broad. It seemed to him they got a criterion for what Stevens did, for he always made his work important, bold, and free, and did not cramp it up in little niches. If they did that they would arrive at something more fine than at the present time.

Mr. Strange briefly replied, and said Mr. Drury had told him that Dalou had criticised Stevens's work with great admiration, but said it always struck him that Stevens did his sculpture like a painter. Stevens always had two admirable friends at Court —Cockerell and Penrose.

ARCHITECTURAL ASSOCIATION SCHOOLS.

THE accompanying plan, by Mr. Raymond C. Stevenson, shows a scheme in outline for the disposition of three public buildings. The central position is occupied by a cathedral, while the two flanking ones might be used as a library and Civil Court respectively. The elevations represent a suggestion for the architectural treatment of the library only.

The style of the design is on lines inspired by certain modern English work, French and Roman methods being employed. An effort has

Lay-Out Scheme. By Mr. Raymond C. Stevenson.
(Architectural Association, 1911.)

Design for Town Library. By Mr. Raymond C. Stevenson. (Architectural Association.)

been made to get the Greek spirit of refinement into the detail generally.

The main entrance façade faces the river, and the flanking pavilions are kept plain to preserve a feeling of dignity and restraint.

On the front facing the cathedral a similar central pavilion projects forward, and is supported on either side with side wings treated with colonnade and arched openings after the Roman method.

The Mansard roof treatment was considered suitable for a library owing to the simplicity in planning and lighting it affords.

The other elevation represents the river front again, but treated in the Grecian-Doric manner.

ARCHITECTURAL SOCIETIES.

The Society of Architects

The third annual meeting of the Society of Architects for the Session 1911 12 was held at 28, Bedford-square, W.C., on Thursday, January 11. Mr. G. A. T. Middleton, A.R.I.B.A., Past Vice-President, presiding.

The ballot was taken and the following candidates were declared to be duly elected :—

As Members.

James Burns, Blackpool.
William Stanley Dean, Bournemouth
Robert Donnelly, Dublin.
Theodore Moorhouse Ellis, London.
Thomas Holt Fogg, F.S.I., Chippenham.
David John Jones, Port Talbot.
Daniel Andrew Levie, Rochestown, Co. Cork.
Frederick Matthews, Stoke Newington.
Thomas Reid Peacock, Quebec.
Brian Edward Fitzgerald Sheehy, Limerick.

As Students.

Albert Leigh Abbott, Upper Norwood.
Donald Henry Butt, Stonehouse.
Francis Clemes, St. Albans.
Charles Henry Elkins, Winchester.
Sydney Fritz Evershed, Northampton.
Alfred Stephen George, Gloucester.
Lawford Raymond Gower, Briton Ferry.
Evan Daniel Jones, Cwmllynfell.
Daniel Roy Lyne, Gloucester.

Mr. John Darch, F.S.I., then read a paper, an abstract of which appeared in our last issue, on "Illumination as a Study for Architects," which was illustrated by diagrams and lantern slides.

Mr. H. Freyberg, F.S.I. (London), in proposing a vote of thanks to the lecturer, said he thought it would be impracticable to have a light for each reader in a library open to everybody and to trust to the readers to switch the lights out when finished with.

Mr. B. R. Tucker, M.R.San.I. (Past Hon. Treasurer), seconded the vote of thanks, and said that one of the chief points which architects had to take into consideration was the question of cost. They were limited to a certain expenditure by their clients, and that limit left very little to be devoted to any special scheme of lighting. Light in its travels diminished in an inverse ratio to the square of the distance, and they could not afford to provide the amount of light necessary for lighting a room by reflection from the ceiling, owing to the great amount of light lost. It might do for public buildings, but for private habitations it was out of the question.

Mr. Justus Eck said, as an electrical engineer, it was to be regretted that Mr. Darch had not referred to daylight illumination. Beautifully decorated buildings were seen to great advantage by daylight, and it was important that the effect produced on the eye should not be destroyed or minimised by artificial light. His experience, when approaching architects with a view to the use of arc lamps, was that they invariably declined to consider their use owing to their appearance, although he saw no reason why arc lamps should not be made an artistic feature.

Mr. H. Mackinnery said that architects could have every confidence in the illuminating engineer, even if they were experts in one particular direction. There was a difference between the actual effect of day light and illumination by artificial light. In daylight the surroundings were very bright and exercised a controlling influence on the aperture of the pupil of the eye, whereas to artificially illuminate a room with many foot-candles would mean the use of a concentrated light producing very dark surroundings.

Mr. J. S. Dow said he felt that there must be many instances where an architect required a certain arrangement of lights on account of the architectural features of a building, and such arrangement would be governed by quite different factors to those which illuminating engineers usually employed.

The Chairman then put the motion to the meeting and it was carried unanimously.

Mr. Darch, in reply, said that the architect was the man who held the key to the situation. If he would turn his attention seriously to questions of lighting he could do more for them than any other person. They would do more good by spreading the gospel of illumination among architects. Mr. Freyberg had suggested that readers could not be trusted to switch off the lights, but he (the speaker) thought they could. Many large public libraries at the present time were fully lit for one or two readers, and he thought that was a greater waste than if one or two were left on by readers under the system he proposed. Mr. Tucker has said that indirect lighting could not be adopted in many cases owing to its cost, but he was of opinion that light for light and effect for effect it could be installed at an equal cost with direct lighting. It was not the fact that light lost by reflection within a room. There were, of course, slight variations, but inside a sphere it had been proved that light was not lost, whatever the size of the sphere. He had also said very definitely that day light should be the guide to artificial lighting.

Leeds and Yorkshire Architectural Society.

A general meeting was held in the Society's Room at the Leeds Institute on January 11, the President, Mr. S. D. Kitson, F.R.I.B.A., in the chair. An interesting paper was read by Mr. G. C. Workman on "Reinforced Concrete Applied to Buildings."

The lecture was illustrated by many slides showing both constructural problems and architectural treatment to interiors and exteriors.

The lecture was concluded by a discussion on which many practical details were debated upon.

A vote of thanks was passed on the motion of Mr. G. S. Grundy, seconded by Mr. W. H. Thorp, F.R.I.B.A.

Nottingham Architectural Society.

Twenty members of this Society attended the third meeting of the Designing Club, held on Tuesday, January 9. As the President was unable to attend, Mr. A. E. Heazell, Past-President, took the chair.

The subject set was "A Detail of a Façade for Business Premises," and six designs were submitted.

Mr. W. R. Gleave, A.R.I.B.A., who had kindly prepared the conditions and set the subject, gave an interesting criticism, which was followed by a general discussion in which the juniors and competitors were especially invited to take part. At the close Mr. Gleave placed the first three as follows : "Dorion" first. "Carbon" second, and "Rooster" third.

The Chairman tendered to Mr. Gleave their best thanks for his criticism, and remearked upon the increasing excellence of the designs submitted in these competitions.

The Ulster Society of Architects : Annual General Meeting.

This Society held its annual general meeting on Monday, January 8. There was a good attendance of members and Associates, including, among others :—Messrs. R. M. Young, F.R.I.B.A.; W. J. Gilliland, F.R.I.B.A.; J. J. McDonnell, J.P.; N. Fitzsimons, F.R.I.B.A.; H. Seaver, B.E.; W. C. Maxwell, A.R.I.B.A.; T. Houston: and J. St. J. Phillips, A.R.I.B.A., Hon. Secretary.

Routine business being disposed of, the Report of the Council for the year 1911 was submitted, discussed, and adopted, as follows :—"During the year 1911 the Council held six meetings of Council, which were well attended. In addition, three general meetings were held, to which all the members, Associates, and students were invited. We regret that these general meetings were not better attended, and the Council hope that in future the members and Associates will give practical support to the Society by taking an active part in the discussions and business arranged for the general meetings.

During the year we received three resignations. It is therefore strongly urged on our junior members that those Associates who are qualified for full membership should seek to be enrolled as "members" and take their proper place and standing in the ranks of the profession.

At no time in the history of our Society has there been greater need, in the interest of the junior members, for co-operation and combined effort, with a view to improving the conditions of architectural practice, particularly in the interests of the younger members of the profession. Every week brings reports of the actions of the numerous district and urban councils who are carrying out, or proposing to carry out, small building schemes for labourers' and workmen's dwellings, and larger schemes for technical and municipal buildings and schools. In the great majority of cases the architectural work in connexion with these schemes is entrusted to road surveyors, builders' clerks, and county surveyors' assistants, or others equally unqualified and incompetent in carrying out the duties of architect. The Board of Works and other controlling Government bodies have sanctioned and approved of such incompetent persons being employed as architects, thus frustrating the purposes and intentions of those who originally framed the provisions of the Labourers' Act. The results of such policy on the part of the Local Government Board are to be read in the report of badly-designed and badly-built houses, necessitating an excessive annual outlay in repairs or reconstructions.

With such warnings in view, we find that during this year several rural and urban district councils have rescinded previous resolutions and have appointed as architects assistant county surveyors, who had already accepted office on condition that their full time should be devoted to their duties as surveyors. Such appointments are remunerated at rates that would be a positive loss to any qualified person who would faithfully and conscientiously carry out the duties attached to these appointments.

During this year the Belfast Corporation Bill has passed Parliament and will in due course result in a revision of the building by-laws in force in this city. Such by-laws

will be likely to affect architectural practice and the interest of building owners. It is of extreme importance, not only to architects, but also to building owners, that competent consideration should be devoted to the framing of such by-laws which will have far-reaching results, either for good or evil, on the future progress, both architectural and commercial, of our city. We have been assured that your Society will have the opportunity of considering the draft by-laws before the same are presented to the City Council for final adoption.

The interests of the members will be safeguarded as far as possible by your Council, but it is earnestly requested that every member of the Society will loyally co-operate with and support the Council in every possible way.

The matter of affiliation with the R.I.B.A. has been further pressed, and it is hoped that within a reasonable time this will be accomplished.

We have to record our acknowledgments to Mr. W. J. Gilliland for his lectures on "Reinforced Concrete Construction" and for a visit to works in progress.

An additional member was added to the Council as a representative of the Derry Corresponding Committee."

The Hon. Treasurer, Mr. Houston, submitted statements of accounts for the year, which showed the Society to be in a satisfactory financial position.

A discussion arose as to the best means of furthering the objects of the Society, and some recommendations were made to that effect to the incoming Council.

Reference was made to municipal undertakings, as the proposed Art Gallery and the proposed competition for workmen's dwellings.

Mr. McDonnell referred to the candidature of Mr. Gilliland for membership of City Council and proposed—"That the Society learns with pleasure of the candidature of W. J. Gilliland, F.R.I.B.A., for Victoria Ward, knowing, as it does, the attention and expert knowledge he will bring to further all the interests of the city in the large expenditure about to be entered into in municipal undertakings, and the Society trusts that Mr. Gilliland will be successful in his candidature."

The motion was seconded by Mr. Seaver and passed with acclamation.

Ballot papers for officers for the coming year were then opened by the scrutineers, resulting in the election of officers as follows—President, H. Seaver, B.E. Vice-President, J. J. McDonnell, J.P. Council: W. J. Gilliland, F.R.I.B.A.; R. M. Young, F.R.I.B.A; and N. Fitzsimons, F.R.I.B.A. Associate Members of Council: T. W. Henry and J. Seeds. Auditors: F. H. Tulloch and James Ferguson. Hon. Treasurer: E. R. Kennedy, A.R.I.B.A. Hon. Secretary: Thomas Houston, Kingscourt, Wellington-place.

The Corresponding Committee of Derry Architects to elect two members of Council in addition to above.

ENGINEERING SOCIETIES.

The Institution of Civil Engineers.

At the ordinary meeting of this Institution on the 9th inst. new members, Associate members, and Associates, transfers of Associate members to members, and admissions of students were reported. There were six elected members, *i.e.*:—L. H. Fry, London; C. H. Gadsby, London; E. Hall-Brown, Govan, Glasgow; E. P. Richards, Madras; G. D. Snyder, New York; Professor E. Wilson, King's College, Strand, W.C. Of elected Associate members there were forty-seven.

GENERAL NEWS.

Professional Announcement.

Messrs. Pepler & Allen have moved to Howard House, 4, Arundel-street, Strand, London, W.C. The telephone number and telegraphic address will not be changed.

British Museum.

Dr. Kenyon, Director of the British Museum, has been appointed a foreign corresponding member of the Académie des Inscriptions et Belles Lettres.

Oxford University.

Canon Driver and Professors Macdonnell and Margoliouth will represent the University at the Congress of Orientalists to be held at Athens on April 7-15, and Mr. D. G. Hogarth will represent the University at the celebration of the seventy-fifth anniversary of the foundation of the University of Athens on April 7. Miss Mary Wallace Shillito has given a sum of 10,000*l.* for the endowment of a Readership in Assyriology.

The Villa d'Este at Tivoli.

It is stated that the Archduke Francis Ferdinand is about to present the Villa d'Este at Tivoli, formerly the seat of the Dukes of Modena, to the Austrian State with a view to the establishment therein of an academy for Austrian art students in Italy, somewhat after the lines of the French Academy of Art in the Villa Medici on the Pincio.

Lincoln College, Oxford.

Mr. George A. Macmillan, Hon.D.Litt., of Lincoln College, and author of a "Short History of the British School at Athens," as founded by the late Professor Jebb, has been elected to an honorary Fellowship at Lincoln College.

Rochester Cathedral.

At his own charges, 200*l.*, Canon J. Wood has caused the marble pillars of the transepts, choir, sanctuary, and presbytery of the Cathedral to be restored to their original beauty. The marble has been cleaned and polished by the removal of the disfiguring black paint applied in 1730, and the treatment reveals some excellent specimens of Purbeck, Petworth, and Bethersden marbles.

Offices for the Insurance Commissioners.

The Office of Works have acquired the lease on behalf of the Insurance Commissioners of the Wellington House Hotel, Buckingham gate, S.W. The premises were erected in 1908-9 by Mr. Charles Gray, of Kensington, at a cost of about 55,000*l.*, from the designs of Messrs. Palgrave & Co. The island site occupies an area of 12,272 ft. superficial, having frontages of 174 ft. and 143 ft. to Buckingham-gate and York-street. The undertaking was bought two years ago by Wellington House, Ltd., at a valuation of 83,700*l.*, exclusively of furniture and equipment; the ground rent is 1,500*l.* per annum.

A College Garden, Dundee.

A college garden, the first of its kind in Scotland, has been opened near Dundee, where the St. Andrews Committee for the Training of Teachers have taken a lease of 4 acres for practical courses in gardening, and have equipped the ground with a lecture hall, hot-houses, and potting-sheds. The scheme is intended mainly for teachers in rural districts and to qualify them to give instruction in gardening to their pupils.

A Museum for Dudley.

In terms of the testamentary dispositions of the late Mr. Brooke Robinson, M.P., of Barford House, Warwick, and Chapel-street, Belgrave-square, S.W., who died on October 20, a trust is erected in respect of two adjoining houses in Wolverhampton-street, Dudley, for the preservation and exhibition of the testator's art collections, to be endowed with his bequest of 30,000*l.* in that behalf which may be applied to the purchase of more land or buildings, or the erection of new buildings, and the general upkeep of the museum.

Local Improvements, Bournemouth.

The County Borough Council have formulated a revised project for the erection of a pier pavilion, upon the site of the Belle Vue Hotel, at a cost not exceeding 60,000*l.*, inclusively of equipment and the laying out of the grounds; the hotel was bought by the Council for 40,000*l.* The Council are carrying out an extension over 5,000 ft. in length to Boscombe of the Marine-parade and Undercliff-drive, with bathing-stations, shelters, and pleasure gardens, and they will proceed with the building of new law courts and auxiliary works, after plans and designs prepared by Mr. F. W. Lacey, F.R.I.B.A., M.Inst.C.E., Borough Architect.

London Schools.

The scheme for the reduction of the size of school classes has, at a conference between the London County Council and the Board of Education, been arranged to be carried out within a period of fifteen years. The report on the subject presented to the Education Committee on Wednesday stated:—

"The Committee will realise that one of the most important points for consideration is the period of years which should be allowed for the completion of the proposed scheme. With regard to this point we are of opinion that a period of fifteen years should be a reasonable one from the Council's point of view, and we have reason to believe that the Board will be willing to agree to this period on certain conditions. These conditions would probably relate to the completion, within a period of from three to five years from the present time, of certain new schools, enlargements of existing schools and reconstructions of old schools to which the Council is already committed, and also to a periodic review by the Board of the progress made by the new scheme. We therefore propose that the Council shall now be asked to instruct the Education Committee to submit a scheme for the completion of the proposed reform within a period of fifteen years from March 31, 1912, provided that the Board will agree that, so long as the Council makes satisfactory progress with the new scheme, the Council shall be immune, during the period named, from any new regulations introduced by the Board reducing the present maximum size of classes.

The Committee are aware that whilst sixty on the register is now the maximum size of the classes in the schools, the average size of the class is much smaller. It is true that in order to keep the size of the classes within the maximum of sixty allowed in Article 14 it is necessary at present in certain schools to utilise the halls as classrooms, and in some other schools to use large classrooms for two classes. The additional school accommodation which has already been sanctioned will, however, enable the Council to dispense with these unsatisfactory temporary expedients, and if an agreement is reached between the Board and the Council on the lines now proposed it will render it unnecessary to have recourse to such expedients in the future.

With regard to the financial aspect of the matter, it may be stated that the "sites and buildings" programme during the proposed period of fifteen years will involve an estimated expenditure of about 4,500,000*l.* on new schools and the enlargement and structural improvement of existing schools. Of this amount, about 2,500,000*l.* may be regarded as expenditure which the Council will incur in any case, as it will be needed for the provision of new school accommodation which the Council has already decided to provide or which will be required to meet the future increase of population in certain districts, and for the modernising of the old schools which have still to be dealt with. The remaining 2,000,000*l.* will be required for the provision of the additional accommodation needed in connexion with the scheme now under consideration for the reduction of the size of classes. We should, however, add that it is possible that we may find it desirable to make some readjustment in the method on which the amount of accommodation required is calculated, and this may result in an increase in the expenditure up to 500,000*l.*"

International Exhibition of Fine Arts, Rome.

The Society of Lovers and Students of the Fine Arts will hold this year in Rome the Eighty First International Exhibition of Fine Arts. The Society set aside a sum for a fixed number of prizes to be spent upon the purchase of submitted works, and—in terms of the bequest of the late Professor Müller the German Embassy in Rome will apportion 480*l.* to the purchase of one or two exhibits by German artists. A large sum is also devoted by the Minister for Public Education to buying works for the National Gallery of Modern Art in Rome. Exhibits will be received in the interval January 25-February 10 at the Palace of the Exhibition of Fine Arts.

The Royal Sanitary Institute.

At an examination in Sanitary Science as applied to Buildings and Public Works, held in London on December 8 and 9, seventeen candidates presented themselves. The following two candidates were granted certificates:—Messrs. S. E. Allen, Kew, and S. T. Puzey, Philbeach-gardens. At an examination in Hygiene in its bearing on School Life, held in London on December 8 and 9, three candidates presented themselves for the certificate, and twenty for only part of the examination. At an examination for Inspectors of Nuisances, held in London on December 8 and 9, seventy-one candidates presented themselves. Thirty-six candidates were certified, as regards their sanitary knowledge, competent to discharge the duties of Inspector of Nuisances under the Public Health Act, 1875.

COMPETITION NEWS.

Design for a Pavilion.

Messrs. Packer & Co., of Bristol, recently instituted a competition for a pavilion on their Recreation Grounds. The cost of the building was not to exceed 3,000*l.* The successful designs are by Messrs. Paul & James, of Bristol. In consideration of the amount of work involved, Messrs. Packer & Co. have decided to give the sum of 5*l.* 5*s.* to each of the next six competitors, namely: Mr. D. A. Beveridge, Liverpool; Mr. W. J. Stenner, Bristol; Mr. G. Walesby Davis, Darlington; Mr. A. J. Dunn, Birmingham; Mr. R. A. Churchward, London; and Messrs. James Brooks, Son, & Adkins, Richmond.

MAGAZINES AND REVIEWS.

THE *Art Journal* begins its seventy-fourth yearly volume, and the articles are of varied interest. From them we quote from "The Work of William Kent at Rousham": -

"The combination of Jacobean with early Georgian Gothic is, with its fine gardens, the special interest of Rousham. The main portion of the house must have been built soon after 1635, but in the peaceful early years of the Georges, 'when everybody was mad on building who could afford it,' General Dormer employed the fashionable architect William Kent to make alterations. Kent's additions consisted of two wings stretching east and west on each side of the central block, to which they were connected by corridors ornamented with the ball-topped finials he so often used. Walpole, when he went to Rousham in 1760, was pleased with its appearance. 'It reinstated Kent with me,' he wrote; 'he has nowhere shown so much taste.'" He also admired the "perfectly classic" gardens, and we give an illustration of the Portico built there.

The *Burlington Magazine* has a brief editorial on Mr. Witt's book "The Nation and Its Art Treasures," and suggests the compromise that 10,000*l.* per annum should be voted for the National Gallery in lieu of the present 5,000*l.*, and that half a million (bearing interest at 3 per cent.) should be allocated on the understanding that the capital sum may be drawn upon for the purchase of a certain selected list of masterpieces should they come into the market. Articles in this magazine deal with Italian medals, Korean tomb wares, tapestries, and other subjects.

Architectural landscape takes up a large proportion of this month's *Studio*. Water-colours by Sir Alfred East, etchings by Mr. Lester G. Hornby, and paintings by Felix Ziem for the most part deal with this class of subject. "Recent Designs in Domestic Architecture" include Staplefield Place, Sussex, by Messrs. Clayton and Black, and some typical modern German work. The work of the Russian sculptor, Innokenti Joukoff, displays marked individuality and a highly metaphysical temperament.

Mr. D. S. McColl in the *Nineteenth Century* reviews, in a well considered article, Mr. Witt's brochure on the National Collections. In the course of his remarks he makes some important suggestions as to the management of the National Gallery. He proposes that:—

"Instead of appointing a keeper and a clerk under the director for the purely business side of the administration when new appointments come to be made, at least two keepers or assistant-directors should be appointed, chosen for their interest in and knowledge of art, to which should be added some technical practice in painting and in the processes of cleaning and varnishing pictures. They should be encouraged to write upon their subject, because that is one of the best ways of learning it, will raise the level of criticism, and will supplement their income. The field of painting, moreover, is so wide that it requires such subdivision. If the director takes Italian art as specially his province one keeper might be responsible for German, Flemish, and Dutch, another for Spanish, French, and modern art, or this order might be reversed. Incidentally this would help to solve the very pressing problem of a supply of curators for provincial galleries. With notable exceptions the status of these men with their committees is at present a mean one, because they have no special-training knowledge or taste to give them authority. Such a rearrangement, by dividing the duties of the present keeper, need cost little more than at present, and would, I believe, secure efficiency, continuity, and authority in the future direction of the National Gallery. Under it the present dependent position of the director would insensibly be changed for one of greater freedom, while the Board would fall back into the position of general control at present exercised by the Board at the British Museum. On one point I am opposed to Mr. Witt's, and, perhaps, to the general view in the matter of the trustees: I mean the proposal to add to or substitute for the present Board a number of experts. The position of a director, however difficult under the present system, would be intolerable, controlled by the votes of rival authorities on his own subject. The proper relation of such

William Kent's Seven-Arched Portico at Rousham.

(From the *Art Journal*.)

experts to the director is that of a consultative group (not committee), to any one of whom he may apply for a confidential opinion when a picture is before him, and it would be an excellent thing, and would strengthen the administration, if some honorary title were applied to the chosen advisers, such as "Associate of the National Gallery." Many willing helpers might be named who would take their place on this list, not excluding dealers, who are ready, to an extent not realised, to aid the Gallery with their knowledge and experience."

In the *National Review* Mr. Austin Dobson gives us a short biography of Philip James de Loutherbourg, R.A., whose versatility is reflected in the varied activities of his career. To us he is best known as a battle painter, but to his contemporaries in England he may have loomed larger in his imaginative treatment of stage scenes. Born in Germany in 1740, he came to Paris in his teens, and became an Academician at the age of twenty-seven. Four years later he migrated to England, and after designing the scenery and effects for several plays at Drury Lane, in addition to exhibiting annually pictures of such merit as to secure him election as A.R.A. in 1780 and R.A. in 1781. Shortly after this he devised the ingenious Eidophusikon, representing by means of scenery any illumination, landscape and locality as subjected to all the changes of light and darkness, heat and cold. His vivid imagination seems to have produced some remarkable scenes; but after a time the public tired of these, and De Loutherbourg returned to his easel. After dabbling in mesmerism and following Cagliostro in a search for the philosopher's stone he once more took up his brush, and remained faithful to his art till his death in 1812.

Scribner's contains a illustrated article on the last mural paintings executed by the late E. A. Abbey, R.A., whose illustrative work, now to be seen at the Royal Academy, has raised so much discussion. Mr. Cortissoz refers particularly to the eight mural decorations executed for the State Capitol, Harrisburg, the great enterprise to which all the previous experience of the artist had led :—

"His programme was framed on an heroic scale, and it is no wonder that he left it unfinished at his death. Looking at it from the point of view of ordinary human effort, the eight paintings put in place in 1908 would seem, by themselves, to fill space enough and to make a monument impressive enough for one man. They adorn the rotunda in the centre of the building. Four of them are gigantic lunettes, placed midway between the drum of the dome and the piers supporting the latter. The other four are set in circular panels in the pendentives. In this part of his work Abbey dealt in general ideas, localised. In the first of his big lunettes he symbolises "The Spirit of Religious Liberty" in a fleet of old sailing ships guided westward by angels. In "Science Revealing Treasures of the Earth" blind Fortune, gliding on her wheel between images of Peace and War, is poised above a group of miners just descending into the earth. The third lunette, entitled "The Spirit of Light," points to the discovery of oil, a host of figures with flames on their uplifted finger-tips soaring into the night against a background filled with the familiar gaunt derricks of Pennsylvania. To show forth "The Spirit of Vulcan" Abbey paints in his fourth lunette a number of brawny labourers in a steel foundry, with their tutelary genius reclining upon a cloud above. Single figures occupy the medallions in the pendentive, figures respectively directing attention to the forces of Religion, Law, Art, and Science. In the rotunda it was his *rôle* to touch the imagination of every one entering the building with a sense of what Pennsylvania has owed to divine inspiration and to the bounty of the earth. These large motives belonged on the threshold, and in the Capitol's grandest, most aerial chamber. The very concrete, personal issues dealt with in the later decorations are explained by their positions. He had now to embellish the walls of the House of Representatives, and there he decided to confront the legislators with paintings recalling those who had before them laboured for the State. Above the rostrum of the speaker he chose to place "The Apotheosis of Pennsylvania," which is really a painting in praise of famous men, a record of high endeavour. For the unification of his noble company of explorers, sea-captains, soldiers, religious leaders, and other constructive pioneers he had to devise some linear web that would not only hold them together, but bind them in the harmony of a room whose scale and character had already been fixed. Across the middle of his canvas and well back of his figures he drew, in a shallow and very beautiful curve, the lines of a classical entablature. Above them he unrolled a spacious sky, thus gaining at once the necessary depth and largeness of atmosphere. We feel rather than see the colonnade enclosing the actors in his scene; it unites them, but does not distract attention from them. So it is with the "Genius of State," enthroned beneath a cupola against the sky, at the apex of the composition. This presence manifests itself, and is, in fact, indispensable, but it is so placed and so kept down in the colour scheme that it leaves Abbey's men to stand forth with no diminution of individuality. Neither are they dimmed nor are their messages muffled by the return to architectural motives in the foreground, by the fluted pillars which mark, as it were, an entrance to the colonnade. Like the latter, these pillars, surmounted by eagles, enormously contribute to the orderliness of the assemblage while they leave it free." A further article on "Labour Exchanges in Germany" contains some valuable figures and information.

In *Harper* an article by Cyrus C. Adams deals with the progress of the international map of the world to a scale of one-millionth. The leading nations of Europe and the U.S.A. having, at the London conference of November, 1909, come to an agreement as to uniformity in method, and Argentina, Brazil, Chile, and Venezuela having since signified their adherence, considerable progress has been made. The meridian adopted is that of Greenwich. Metric measurements are employed, but the various national equivalents may be added in brackets. Shades of blue show the depth of water, and green, buff, brown, violet, and white the altitude of the land. The size of the sheets will demand 2,642 to cover the earth's surface, but, as much of the sea is hardly likely to be required, it is estimated that some 1,500 will suffice. The first of two articles on "Socialism," by H. G. Wells, will interest students of our social organisation on account of the breadth of view displayed. Many will feel their ideas clarified and their opinions better defined who may not necessarily agree with Mr. Wells's views as to the trend of movement in the social organism.

CORRESPONDENCE.

The Policy of the R.I.B.A.

SIR,—Upon the natural assumption that by the inclusion of the two special articles in the *Builder* of January 5 and 12, on "The Policy of the R.I.B.A.," this is a matter of general interest, I venture to ask for the consideration in your columns of the following criticism of one item in your criticism.

In your special article of January 5 appears this expression of opinion :—"We cannot help feeling that the whole situation is somewhat out of drawing and lacking in proportion, and that the older Associates in established practice and eligible for the Fellowship are viewing the matter from a somewhat false position. They might set it in truer perspective if they viewed it from the position to which their qualifications entitle them."

Now, sir, as one of that particular section of the R.I.B.A alluded to, I desire to thank you for the possible compliment (in my own case) conveyed in that subtle phrase—"to which their qualifications entitle them." Further, I should greatly like to express my admiration for the appositeness of the simile employed. Yet, much as it appeals to me in its ability to bring home to the reader the actual or "fancied" issue, it appears to me in the light of a good simile "gone wrong."

How would one like it expressed, then?

Well, something after this style :—"We cannot help thinking that the real trouble lies in that the Council of the R.I.B.A. has not got the real perspective of the matter"; or, differently expressed, "That a 'too adjacent' point of view has been chosen by them, with the undesirable result that certain 'component parts absolutely necessary' for a successful whole have been 'crowded out,' and it would consequently appear more than desirable, *i.e.*, imperative, that the Council should 'recede considerably' in order to enlarge the horizon and by so doing bring in 'certain factors' which (one believes and hopes) would make for the best result."

Well, sir, so much for that.

Is it, one wonders, too much to expect of those whom we have helped to vote into positions of trust and power that they will read between the lines of this letter? Personally speaking, I sincerely hope so. Much more—very much more—could be advanced with reference to your arguments in the two articles I have adverted to, but the calls upon your space forbid my trespassing too far upon your courtesy. Before concluding, however, there is one matter I feel myself forced to hazard an opinion upon, as without it I should not feel I had exhausted to the full criticism upon the particular passage I have quoted.

An old proverb has it that "In the middle course lies safety."

Then, sir, holding this opinion, and strongly, I would postulate the following proposition as one well calculated to advance the best interests of the R.I.B.A., viz. :—That the ranks of the Council should, by a speedily-passed by-law, be increased by the inclusion of at least twenty-four Associates of the standing and qualification suggested in your expression of opinion. Such men, standing in a position midway between the successful close of a matured professional career, on the one hand, and the hope but generally not commission—ful aspirations of the newest created Associate would, in the opinion of many others besides myself, be much "better fitted" and more likely to "hold the scales level" than would or could (by virtue of the disability I have suggested) those of the "superior class."

K. GAMMELL.

The Lay Press and Architecture.

SIR,—As the writer of the article published in the *Evening Standard* on "Architecture in 1911," I have to thank you, sir, for your fine appreciation of my humble efforts in criticism, and for the "blessing" you are god-like enough to bestow. For your knowledge of the classic in literature is only second to your knowledge of it in bricks and mortar, and encouragement from such a quarter must satisfy anyone, let alone a plain architect who has to take, from the lips of giants, such phrases as "petrified music" to express certain qualities in architecture. It is gratifying to find that your august authority is not dismayed by some of my own poor phrases and that you find them distinguished enough to quote at length in your valuable columns. But why write *(sic)* after "Paul's dome"? It would, I doubt it not, have been a more obvious course to have described St. Paul's Cathedral in the diction of a builder or bricklayer. Unfortunately, I did not take it; I was thinking at the time of architecture and not what the Builder would think of it.

J. M. W. HALLEY.

Inigo Jones and the Porch of St. Mary's, Oxford.

SIR,—In reference to Mr. W. E. D.-Milliken's letter in your last issue, the entry regarding Stone is well known, and, as your correspondent probably knows, the same difficulty occurs with the York Gate and also the Dudley Digges monument, at Chilham. The reprinted pamphlet "Jaco Chilham. The reprinted pamphlet "Jaco-Jones in the Eastern Style" will have as frontispiece a large block of the frontispiece of St. John's College, and your correspondent may be able to study the comparative detail therein.

It is worth while to walk direct from the porch to the frontispiece and study this point. Attention may be directed to the pedestals of the porch columns and also to working out of the entablature on the returns. The architectural handling in both instances is unlike the work of a sculptor like Stone. The semi-mediævalism of some of the porch sculptures is, however, analogous to the feebleness of the lions on the York Gate. Stone's powers seem to be somewhat limited in range. Your correspondent does not give an address, but he is probably well acquainted with the doorway of St. Helen's, Bishopsgate, and the idea of proportion that it displays. The idea of St. Mary's porch and that of the monument to Sir Dudley Digges seems to me fairly attributable to Inigo Jones. ARTHUR T. BOLTON.

EDITORIAL SUMMARY.

"Land Taxes and Building" is the title of our leading article, in which the effect of recent legislation on the building trade is considered.

"The Teaching of Art" is the title of a second article, which appears on p. 58. It is a review of Mr. C. R. Ashbee's work, entitled "Should We Stop Teaching Art?"

In Notes columns (p. 59) will be found some observations on: "The Honours List of the World"; "Villa D'Este"; "The Railways and Socialism"; "Railway Nationalisation"; "Manitoba Parliament Buildings Competition"; "Burford Priory."

Some particulars as to the R.I.B.A. Examinations, etc., will be found on p. 60.

A meeting of the Architectural Association was held on Monday, when Mr. E. F. Strange delivered an illustrated lecture on "Alfred Stevens." Our report will be found on pp. 61-63.

Included in our notices of recent meetings of architectural societies (p. 64) will be found: "The Ulster Society of Architects"; "Leeds and Yorkshire Architectural Society"; "The Society of Architects."

Notices of some of the magazines of the month appear on p. 66.

In Correspondence columns (p. 67) will be found letters on: "The Policy of the R.I.B.A."; "Inigo Jones and the Porch of St. Mary's, Oxford"; "The Lay Press and Architecture."

Book Reviews (p. 68) include: "The National Insurance Act, 1911."

The Monthly Illustrated Historical Review (p. 69) includes: "Church of St. George in Oxford Castle"; "Monumental Brasses"; "British School at Athens"; and Notes.

The Building Trade Section (p. 76) includes: "State of the Building Trade"; "Hours and Wages in the Building Trade"; "Time Clause in Building Contracts"; Projected New Buildings in the Provinces," etc.

A meeting of the Tribunal of Appeal under the London Building Act was held on January 11 to hear the parties interested in the decision of the Tribunal respecting the building line in the Euston-road. An appeal by Mr. W. G. Allen and Mr. H. G. Norris against the certificate of the Superintending Architect of Metropolitan Buildings was heard on Friday. Reports appears on p. 79.

In Legal Column (p. 80) will be found observations on: "Workmen's Compensation."

In Law Reports (p. 80) will be found short notices of the following cases: "Harries *v.* Wright"—damage to buildings by poplar-trees; "Measey *v.* the Lord Bishop of Norwich"—accident to workman.

MEETINGS.

FRIDAY, JANUARY 19.

Royal Institution.—Professor Sir J. Dewar, M.A., LL.D., D.Sc., on "Heat Problems." 9 p.m.

Battersea Polytechnic (Lectures on Illuminating Engineering).—Mr. J. S. Dow, B.Sc., on "Illumination and its Measurement." 7.30 p.m.

Glasgow Technical College (Architectural Craftsmen's Society).—Mr. J. M'Kissack on "Rothenburg on the Tauber." 7.45 p.m.

Institution of Mechanical Engineers. 8 p.m.

Institution of Civil Engineers (Students' Meeting).—Paper to be read: "The Turbo-Blower and Turbo-Compressor," by Mr. George Ingram, Stud.Inst.C.E. 8 p.m.

Leicester and Leicestershire Society of Architects.—Address by the President, Mr. W. M. Cowdell. 8 p.m.

SATURDAY, JANUARY 20.

Aberdeen Architectural Association.—Mr. Albert Auer on "Electric Lighting in Town and Country." 7.30 p.m.

Junior Institution of Engineers.—Visit to the works of the Western Electric Company, Ltd., Woolwich 9.30 a.m.

MONDAY, JANUARY 22.

The Royal Institute of British Architects.—(1) To read the deed of award of prizes and studentships for 1911 12. (2) To read a paper on "Coloured Decoration" by Sir Alfred East, A.R.A., and Mr. Edgar Wood. 8 p.m.

University of London (Victoria and Albert Museum).—Mr. Banister Fletcher on "Belgian and Dutch Renaissance." 5 p.m.

Royal Academy of Arts.—Professor W. R. Colton, A.R.A., on "Ideals and Ethics of Sculpture"—I. Lantern slides. 4 p.m.

The Surveyors' Institution.—Mr. Julian C. Rogers (honorary member) on "An Evening in the Institution Library." 8 p.m.

Royal Society of Arts (Cantor Lecture).—Mr. Vaughan Cornish, D.Sc., F.G.S., on "Ocean Waves, Sea-Beaches, and Sandbanks" I. 8 p.m.

TUESDAY, JANUARY 23.

University of London (British Museum).—Mr. Banister Fletcher on "Roman Circular Temples and Basilicæ." Lantern illustrations. 4.30 p.m.

Northampton Polytechnic Institute.—Mr. A. C. Jolley on "Photometry and the Measurement of Light." 7.30 p.m.

The Institution of Civil Engineers.—Ordinary meeting. Papers to be further discussed: (1) "Reinforced Concrete Warves and Warehouses at Lower Pootung, Shanghai," by Mr. S. H. Ellis; (2) "The Direct Experimental Determination of the Stresses in the Steel and in the Concrete of Reinforced Concrete Columns," by Mr. W. C. Popplewell, M.Sc., Assoc.M.Inst.C.E.; (3) "Composite Columns of Concrete and Steel," by Mr. W. H. Burr, M.Inst.C.E. On the conclusion of the discussion, time permitting, the following paper will be read: "The Central Heating and Power-Plant of McGill University, Montreal," by Mr. E. J. Durley, B.Sc., M.Inst.C.E. 8 p.m.

WEDNESDAY, JANUARY 24.

Royal Institute of British Architects.—President and Council's "At Home." Exhibition of drawings submitted in competition for the Royal Institute prizes and studentships, 1912

The Institute of Builders. Dinner, Whitehall Rooms, Hotel Metropole, W.C. 6.30 p.m

Carpenters' Company, London-wall (Lectures on Arts Connected with Building).—Mr. Thackeray Turner, F.S.A., on "The Unity and Difference in Art and Craft" 7.45 p.m.

Royal Society of Arts.—Mr. W. J. Gee on "A New Process of Hydraulic Separating and Grading." 8 p.m.

The Institution of Civil Engineers. Students' visit to the L.C.C. Southern Low-level Sewer Works, New Cross and Camberwell.

THURSDAY, JANUARY 25.

Royal Academy of Arts.—Professor W. R. Colton, A.R.A., on "Ideals and Ethics of Sculpture"—II. Lantern slides. 4 p.m.

Society of Antiquaries 8.30 p.m.

The Institution of Electrical Engineers.—Mr. Miles Walker and Mr. H. D. Symons on "The Heat Paths in Electrical Machinery." 8 p.m.

FRIDAY, JANUARY 26.

Royal Institution.—Professor B. Hopkinson, M.A., F.R.S., M.Inst.C.E., on "The Pressure of a Blow." 9 p.m.

Battersea Polytechnic (Lectures on Illuminating Engineering).—Mr. J. S. Dow, B.Sc., on "Shades and Reflectors." 7.30 p.m.

BOOKS.

The National Insurance Act, 1911. By ORME CLARKE, Barrister-at-Law; with an Introduction by SIR JOHN SIMON, K.C.V.O., M.P., Solicitor-General. (London: Butterworth & Co. 1912. Pp. 338. 12s. 6d.)

THE Insurance Act which, unless it be postponed by Order in Council, will come into force on July 15 next, is an enactment which it is extremely difficult to master; indeed, it has recently been asserted that the effect of its provisions is only really comprehended by comparatively few of those who have assisted in its passage; therefore, when the author of the work now before us asserts that his aim has been to give a clear and accurate exposition of the principles, together with an elucidation of the details, he has set himself a difficult task, and we can only inform our readers of the methods he has adopted, leaving them to judge of the result.

The Solicitor-General, in an introduction of slightly over two pages, asserts that to express a well-founded opinion on the Act it is necessary to devote "a quite inordinate amount of time and trouble to studying it—not less time and trouble than a lady would spend in choosing a new dress, or a man in selecting a new motor-car." We can only observe that if such a comparison were accurate both the millinery trade and the motor-car trade would soon be moribund. He also gives a somewhat belated reason why it is desirable that health insurance and unemployed insurance should come into law not by separate Acts, but in one enactment. Sickness benefit, he says, implies incapacity for work; unemployed benefit, capacity for work; and therefore, if the scheme had been divided, there would have been a temptation for men to declare themselves incapable of work in order to obtain sickness insurance, whilst now they can claim unemployed benefit. Any more open admission of the tendency of this Act to encourage malingering we have never read, and the argument itself is unsound (or should we say "sick"?), for the two parts of the Act do not cover the same classes; unemployment insurance only applying in certain specified trades. The scheme of the work itself is to explain the Act generally in an introductory summary, which is followed by the text of the Act, set out in the order the sections occur, with notes to each section. These notes should prove helpful, and appear to us well arranged and carefully written. On numerous points which will arise under this Act decisions have been given under previous statutes, as, for instance, on such questions as what constitutes a "contract of service," what constitutes "residence," etc., and these decisions have been collected and explained in clear and concise language. Although the schedules are set out in full at the end of the Act, the author has, in our opinion, wisely printed such portions as are material in the text where reference to them is essential, and these and the cross references to other sections are of considerable assistance in construing the Act. Lastly, there is an index, and that alone is of value in mastering the provisions of a new and complicated Act of Parliament.

The author is, moreover, very early in the field, and should be congratulated on the appearance of a work so thorough in so short a space of time. Although the Royal assent was given to the Act on December 16, the author states the final numbering of the sections could only be ascertained by December 24.

It is no use pretending that this Act is a simple measure. It is extremely complicated, and will, no doubt, necessitate considerable litigation before its provisions can be construed with certainty; but the volume before us will prove a useful guide to the Act which will, we imagine, be acceptable to the very large public affected by this measure as well as to the legal profession.

Drainage Work and Sanitary Fittings. By WILLIAM H. MAXWELL, A.M.Inst.C.E. Third Edition. (London: St. Bride's Press, Ltd. 1911. Ddo. Pp. 127.)

THE third edition of this useful handbook for the borough surveyor and sanitary inspector contains additional sections relating to concrete sewers, sewer ventilation and flushing, and the Public Health Acts Amendment Act, 1907. The illustrations throughout are clear and easily read, and the information systematically arranged.

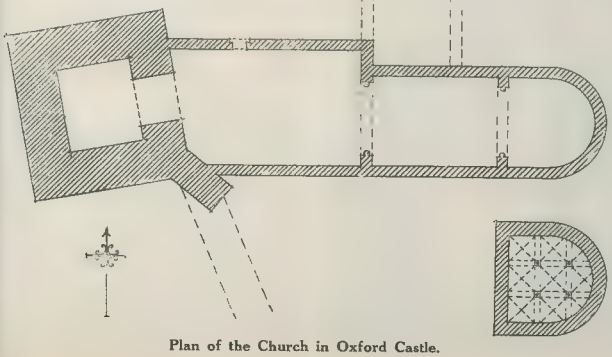
MONTHLY HISTORICAL REVIEW.

THE CHURCH OF ST. GEORGE IN OXFORD CASTLE.

AT Oxford Castle, under a range of buildings running east from the well-known tower, is a vaulted crypt with early Norman columns. These columns formed part of the Church of St. George, built within the Castle enclosure in 1074. They are thus remnants of considerable interest, for few, if any, of our Norman structures have so early a date. The crypt, which is four bays long and three wide, does not agree with a smaller crypt round-ended to the east, which is described in King's "Vestiges of Oxford Castle." Mr. C. Lynam, in an interesting article on Norman Crypts in the current number of the *Archæological Journal*, seeks to fit the apsidal crypt on to the four-bayed crypt, and to show that the whole formed an undercroft to the chancel and apse of the old church. This incidentally involves raising a doubt as to King's accuracy when he said that the apsed crypt was about 70 ft. away from the tower.

As it happens that I have also been interested in this crypt, I venture, without arguing the matter point by point, to bring forward another view.

In the *Proceedings* of the Oxford Historical Society for 1886 is reported an account of the Castle Crypt, given by the late Mr. Parker, in which he said that it must be borne in mind that the old stones had been reset, and that it was only due to a governor of the gaol that they were preserved. "The architect's design involved sweeping everything away. It would not have cost more to have left the crypt standing *in situ*, but in 1805 all was swept away."



This account agrees entirely with that given by King himself, who says:—"In order to carry on the new building Mr. Harris [the builder] was obliged to disturb the whole [crypt]. He has, however, *replaced the pillars in a modern cellar* as near the spot as possible, and as far as might be in the same relative situation, only in consequence of a new round tower the present little crypt is now made convex inwards instead of being convex as the original was. And each pillar stands about 1½ ft. removed from its pristine situation; the plan will explain the then situation of the remains as they originally stood."

All this will be made quite clear by a reference to Mr. Lynam's accurate drawings. It appears that the old apsidal crypt was destroyed, but that its four columns were refixed in a new four-bayed cellar, and that these columns stand near their old positions. There was originally only the small apsidal crypt at a distance of about 70 ft. from the tower, and, as this position falls within the modern cellar, it is easy to see how some of the refixed columns can be only 1 ft. 6 in. away from their old positions.

King describes the original crypt as having had arches of wrought stone, but "the rough groins [the vaults] were turned with a mixture of rough stone and very hard-burnt brick or, rather, tiles, 9 in. square and 2 in. thick, and there were many such odd bricks in the walls, and others of still more strange dimensions." This is an interesting record of the use of brick as old material so early as 1074. Either these bricks were of Saxon make or they were Roman, but no finds of Roman foundations have ever, so far as I know, been recorded in Oxford.

On the site of what had been the nave of the chapel (about 40 ft. by 25 ft.) were found portions of its pavement "of tiles of different colours with ornamental bearings." What may have been the original nave door still remained in the north wall. The nave is described as "undoubtedly Norman." The part of the work between the nave and the apsed crypt (*i.e.*, the chancel) was said to have been more modern, as well as the chapel over the crypt (that is, the upper story of the apse, which, according to King, had been made into a complete chapel at a later time when the nave was taken for other purposes). The chancel was about 30 ft. long and as wide as the apse—that is, 20 ft. Old views show that the upper apse had three round-headed windows, as in a typical Norman apse, so we may doubt whether it was any more modern than the crypt over which it stood.

W. R. LETHABY.

Plan of the Church in Oxford Castle.

ARCHITECTURAL DETAILS IN MONUMENTAL BRASSES.—I.

BY J. S. M. WARD, B.A., F.R.Hist.Soc.

MONUMENTAL brasses frequently contain a considerable amount of architectural detail in their composition.

Often they were placed on altar tombs below stone canopies, but it is of those details depicted in the brass itself that the author has to speak.

Canopies are by far the most important group, and the magnificence of some of these can be but faintly realised from the illustrations included in this article.

The earliest follow the Decorated style (in fashion when they were laid down).

The first type consists of slender shafts supporting a pediment, of which the upper sides are straight, forming a triangle ornamented with crockets, and terminating in a bunch of foliage. The arch under is trefoil, and the cusps are filled with foliage. This form lasted from *c.* 1300 to *c.* 1325, but unfortunately only one example now survives, that of Joan de Cobham, Cobham, Kent, *c.* 1320. The side shafts are missing (probably they have now been restored), but the rest of the canopy is intact.

This is the second lady to be depicted on a brass, and she leads the magnificent series of nineteen brasses at Cobham. This parish church is unique in its display of really splendid brasses, and well repays a visit. There is no other place where anything like this number can be found. But this low pediment form was soon superseded by

Fig. 1. Archbishop Waldeby, 1397 (Westminster Abbey).

the "ogee" arch, rising to a great height. This is supported by equally tall side shafts.

Robert de Waldeby, Archbishop of York, 1397, who lies buried in Westminster Abbey, is a good example of the simpler form of this canopy (Fig. 1). He was an important man in his time and tutor to Richard II. Above the arch will be seen the arms of England impaling those of Edward the Confessor, who was the patron saint of Richard II.

Part of the marginal inscription is lost. Waldeby wears the pall bestowed by the Pope on archbishops, in addition to the

Fig. 2. Laurence de S. Maur, 1337 (Higham Ferrers, Northamptonshire).

ordinary vestments of a bishop, which have been described in a former article.

The next development was to widen the side shafts so as to form panels or niches containing a canopied saint. Often these are carried above the central arch to a super-canopy.

The brass of Laurence de St. Maur, Rector at Higham Ferrers, Northants (Fig. 2), is a very early example of this type. Canopied over priests in Mass vestments are very rare, and this is by far the finest.

It had six pairs of saints in the shafts and a super-canopy of five. The central arch is this is ogee, like the main arch, but all the others are straight-sided.

The figures are—in the centre, God the Father, with the soul and two angels; on his right St. Peter and St. Andrew; on his left. St. Paul and St. Thomas.

The four evangelists, with their emblems beneath them, occupy the four corner panels of the shafts. Then comes St. Gabriel, with probably the Virgin opposite; St. John the Baptist, St. Stephen, with probably St. Laurence opposite; and the Abbot St. Maur opposite St. Christopher, whose bare feet stand in the river.

The two dogs quarrelling over a bone are unique.

This is an appropriate point at which to refer to the famous brass at Balsham (Fig. 3). It measures 8 ft. 9 in. by 4 ft. 1 in., and commemorates John Blodwell in cope. Its canopy is embattled, with a single arch rising from broad shafts, which each comprise four niches containing saints, viz., St. John the Baptist, St. John the Evangelist, St. Peter, St. Andrew, St. Asaph, St. Nicholas, St. Bridget, St. Winifred.

This cope also has saints in embattled and canopied niches down the orphreys:—St. Michael, St. Gabriel, two archbishops—perhaps St. Augustine, St. Thomas (Cantua)—two bishops: St. Catherine, St. Margaret.

Another development was in place of a single arch to have double or triple arches.

The former type was used almost exclusively where two persons were commemorated; the latter was sometimes used for three, but more often was over a single figure. Often the triple canopy would support a tabernacle.

Thus in the brass of Sir Nicholas Hawberk, Cobham, Kent (Fig. 4), there is a shrine with the Holy Trinity, and further on either side are niches with St. George (slaying a very small dragon), and the Virgin and Child.

It should be noticed that God the Father is supporting the Son on the Cross, but the Holy Ghost (a dove) has been omitted. This is often the case.

This brass should be compared with the Tudor one from the same church to which reference occurs later on. Sir Nicholas's son stands beside him on a pedestal. Shields hang on either side of the shafts. The armour belonged to the Camail mail period. The date is 1407. The total length of the brasses is 7 ft. 6 in., the width 2 ft. 10 in.

The splendid tomb of the Duchess of Gloucester (1399) in Westminster Abbey is another example. There is no tabernacle, and the three canopies are more pronounced than in the Hawberk brass. She was a vowess, *i.e.*, a widow, who entered a nunnery.

But not only the finest in this group, but of all the English brasses now extant, is the monument to Thomas Nelond, Cluniac Prior of Lewes, 1433, at Cowfold, Sussex (Fig. 5).

Not only has this a tabernacle with the Virgin and Child, but the finials of the other two arches support St. Pancras and St. Thomas of Canterbury. Further, the central arch is also triple, and the shafts are supported by side shafts and connected by flying buttresses, as also is the tabernacle.

The whole is very graceful, and reminds one of the lantern at Ely. Its total length is 10 ft. 2 in. by 4 ft. 3 in.

The Prior of Lewes was an important man in his day, as he was head of all the Cluniac priories in England, he alone being responsible to Cluny.

Monastic brasses are rare, probably because most were laid down in the Monastic churches which were destroyed when the monasteries were dissolved.

Mention should also be made of the other great canopied brass at Balsham, 1401, which belongs to this group.

A SHORT HISTORY OF THE BRITISH SCHOOL AT ATHENS.*

THE short history of the British School at Athens, prepared to mark the twenty-fifth anniversary of its foundation, is a document of exceptional interest to all engaged in the study of classical antiquity.

Perhaps the most striking feature brought out by this summary of the work of the School is the wide range of study admissible under its auspices. The science of comparative archæology is represented by such able exponents as Mr. Ernest Gardner, the first student and afterwards Director, and Mr. D. G. Hogarth, another early student, while the architectural side was taken up in those days by Mr. R. W. Schultz, Mr. Sidney Barnsley, and Mr. Elsey Smith.

The following remarks from Mr. Macmillan's short history will be of interest:—

"In October, 1887, a special fund was established, under the auspices of the Hellenic Society, for carrying out excavations in the island of Cyprus. The discoveries made in this and the following session, first on the site of the temple of Aphrodite at Paphos, and afterwards at Polites Chrysochou, the supposed site of the ancient Arsinoe, and at Salamis, if they did not quite come up to the most sanguine expectations, were at any rate quite important enough to justify the enterprise and added prestige to the School. It was during the same two sessions that two other students, Mr. R. W. Schultz, Travelling Student of the Royal Academy, and Mr. Sidney Barnsley, began the work on Byzantine architecture in Greece, which afterwards bore such excellent fruit in their admirable monograph, with abundant illustrations in colour and in black and white, on the monastery of St. Luke, at Stiris, in Phocis, and of Salonica, and also of a series of full-size drawings of Greek mouldings made by Mr. Schultz, was unhappily prevented at the time by lack of funds. In the session 1890-1891 excavations were undertaken by arrangement with the Greek Government on the site of Megalopolis, and were continued for three years. The discoveries made excited great attention, and led to an animated controversy as to whether or not there had been any raised stage in the original Greek Theatre. The final results were published by the Hellenic Society, as a supplementary volume, well supplied with illustrations. When the work at Megalopolis had been completed the School next—in 1892-3—undertook excavations on the site of Aegosthena. The results, which were less important than had been anticipated, were afterwards published in the *Journal of Hellenic Studies*. In the following year the site of Abae, in Phocis, was excavated, but without much result. Mr. J. L. Myres, who had already made some preliminary researches in Crete, on finding that the time was not yet ripe for excavations in that island, transferred his energies to Cyprus, where he made excavations on several early sites near Nicosia, Salamis, and Larnaka, and also compiled a catalogue of the Nicosia Museum.

During these early years a solid foundation was laid, both by gifts and by purchase, for the Library, which forms so essential a part of the School equipment. The most important addition was due to the generosity of Sir Charles Newton. In 1890 a fund was raised for the purpose of presenting Sir Charles with a testimonial in recognition of his eminent services to classical archæology. Part of this was used for a bust to be placed in the British Museum, but the balance, amounting to upwards of 400*l.*, was, at his particular request, placed at the disposal of the School. The Committee decided to expend part of this sum on the purchase of a complete set of the Annali and Monumenti of the German Institute at Rome, to be inscribed with Sir Charles Newton's name. The rest of the money was applied as a Newton fund for purposes of research.

We now come to the year 1895, which proved to be a welcome turning point in the affairs of the School. The financial difficulties which constantly hampered its work had for some time past engaged the attention not only of the Committee, but of all who had the welfare of the School at heart. More than once the idea of an appeal for Government support had been mooted privately, but had met with no encouragement. The School, however, had an invaluable friend in Mr. (now Sir) Edwin Egerton, the British Minister at Athens, and it was largely at his instance that the Committee at last decided to make an appeal to the Treasury, which resulted in a grant of 500*l.* per annum for five years.

But this most welcome addition to its funds did not exhaust the good fortune of the School

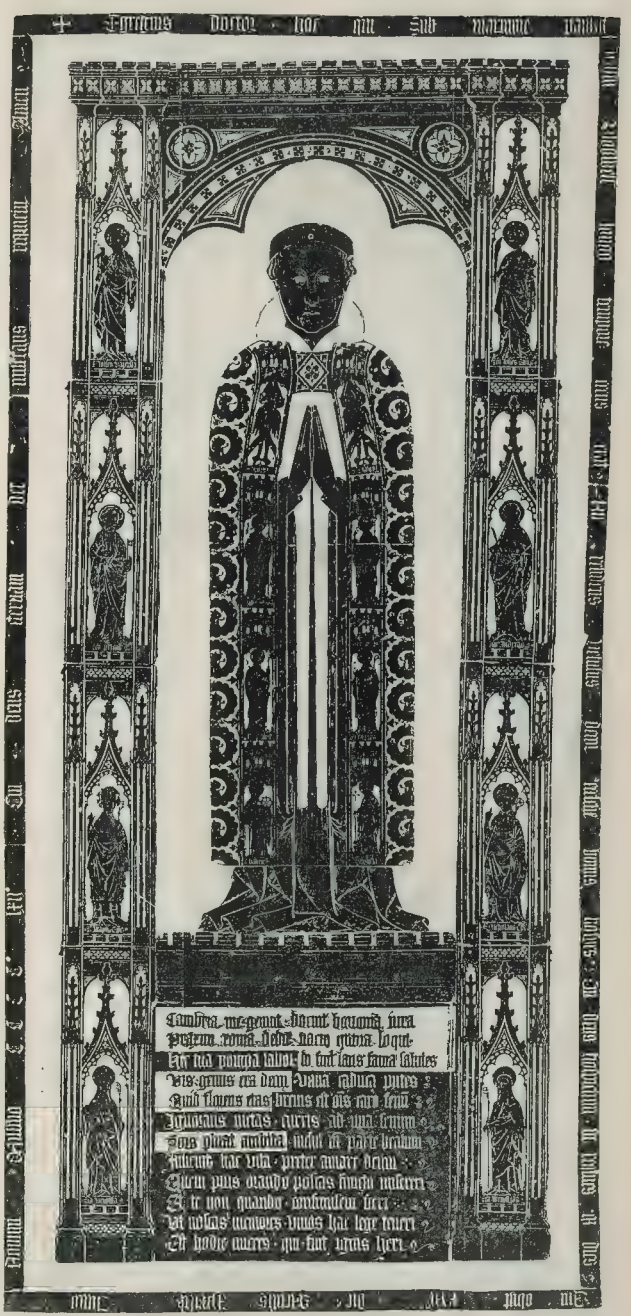


Fig. 3. John Blodwell, 1462 (Balsham, Cambs.).

* By George A. Macmillan, Hon. D.Litt. (Oxon). London: Macmillan & Co., Ltd.

Fig. 4. Sir Nicholas Hawberk, 1407 (Cobham, Kent). (*See page 70.*)

in this its *annus mirabilis*. While the result of the appeal was still very uncertain Mr. Egerton had been working for its benefit in another direction, and had succeeded in persuading H.R.H. the Prince of Wales, who had given the School its first start by a meeting at Marlborough House in 1883, to summon another meeting with the object of improving its financial position. It was at this meeting that the promised grant from the Treasury was first publicly announced, but the meeting itself yielded fresh annual subscriptions for limited periods to the amount of 300*l.* (including 25*l.* from the Prince of Wales) and donations to the amount of 800*l.* It was also during this year that the University of Cambridge first made their annual grant of 100*l.* to the funds of the School.

To inaugurate the new era the Committee were fortunate enough to secure the services as Director of Mr. (now Sir) Cecil Smith, who had received his training in the Department of Greek and Roman Antiquities under the eye of Sir Charles Newton. The Trustees of the Museum granted Mr. Smith leave of absence sufficient to enable him to hold the post for two sessions, which were memorable in the history of the School for two important developments—the building of a Students' Hostel in the precincts of the School and the foundation of the School *Annual*.

It must not, however, be supposed that Mr. Cecil Smith's energies as Director were confined to these two undertakings which specially mark the period of his rule. The ordinary work of the School was carried out with zeal and success, important additions were made to the Library, and its contents were re arranged, while fruitful excavations were undertaken in Athens, on the site of Kyno sarges, and also on the site of Phylakopi, in the island of Melos.

When Mr. Smith's brief term of office came to an end he was succeeded by one of the most distinguished of the early students of the School, Mr. D. G. Hogarth, who held office for three years. During this period the excavations at Phylakopi, which lasted from 1896 to 1899, were completed, with results of the first importance for the study of prehistoric art and civilisation in Greece. The Director was ably assisted in the work by Mr. Duncan Mackenzie and Mr. C. C. Edgar, who had previously worked on the site under Mr. Cecil Smith, and by Mr. T. D. Atkinson, who was specially appointed as architect to the expedition. The final results were published by the Hellenic Society in 1904.

In the session 1898-9, besides the completion of the work at Phylakopi, excavations were undertaken upon the site of Naucratis, by the help of a generous contribution from the Society of Dilettanti and smaller grants from the Ashmolean Museum, at Oxford, and the Fitzwilliam Museum, at Cambridge. The excavations at Naucratis did not last many weeks, as part of the site had been previously explored by Mr. Flinders Petrie and Mr. Ernest Gardner, but the site of the great Hellenion was found and identified, while a deposit of fine Vth-century terra-cottas, relics of an Aphrodite cultus, was unearthed in the enclosure, together with some very interesting early sculpture and vase fragments.

It was during this session also that plans were laid for those excavations in Crete which have since led to such marvellous discoveries mainly associated with the name of Mr. (now Sir) Arthur Evans, who had already made preliminary researches in the island, and marked out and secured the most promising sites. The change in the political situation, whereby the Greek law of excavation came into force, at last made it possible to begin operations. It was felt that the work was likely to be on a larger scale than the School could undertake single-handed. Accordingly, a "Cretan Exploration Fund" was formed under the joint management of Mr. Evans and Mr. Hogarth, as Director of the School. In order to set the Director free to devote himself to this important work an old student of the School, Mr. R. Carr Bosanquet, was appointed Assistant Director for the following session with special charge of the ordinary work in Athens.

The session of 1899-1900 was memorable for the discoveries made in Crete. Mr. Hogarth, after some preliminary and fruitful work on the site of Knossos, turned his attention to the cave at Psychro, which he identified without doubt as the far-famed Dictæan Cave. In it were found masses of bronze statuettes, implements, weapons, gems, and articles of personal adornment, while even the natural niches in the stalactite formations were in many cases stocked with votive axes, blades, needles, and the like. But even these remarkable finds were thrown into the shade by Mr. Arthur Evans's discovery, on another part of the site of Knossos, of the remains of the great prehistoric palace, presumably of King Minos, with wall-paintings and painted vases, which opened a new chapter in the history of art, and with upwards of 1,000 inscribed tablets, which may yet prove an important contribution to the science of language.

Before leaving the session of 1899-1900, and entering upon a new century, one or two other events of the year deserve mention. The first was the gift made to the School Library by Mr. W. H. Cooke, the surviving executor, of the library and antiquities collected by Mr. George Finlay during his long residence in Greece.

This year also saw the publication of the monograph on St. Luke's Monastery, at Stiris, in Phocis, which represented the first instalment of the valuable studies on Byzantine architecture in Greece, made by Mr. R. W. Schultz and Mr. Sidney Barnsley while they were students of the school from 1887 to 1891.

Lastly, an application for the renewal of the Government grant, supported by a full account of the work done by the School during the past five years, and by a list of subscribers, which showed that Government aid had in no way checked the flow of private generosity, met with a favourable response from the

Treasury, and the letter from "My Lords" announcing that the grant would be made for a further term of five years was couched in the most gracious terms. Twice since then the grant has been renewed for the same term, and so long as the School maintains its present high standard of work there can be little fear that this support will be withdrawn.

In 1900 Mr. R. Carr Bosanquet succeeded Mr. Hogarth as Director. Assisted by Mr. R. D. Wells as architectural student, and by other students, he successfully excavated the site of Praesos in Eastern Crete, where tombs were opened ranging from the geometric period to the fourth century B.C., and vases of various periods were found.

Among the achievements of this session, 1901-2, may be recorded the preliminary excavation of the site of Cyzicus by Mr. F. W. Hasluck, who received a grant of 90*l.* from the Craven Fund at Cambridge to cover the expenses. The work was continued in later sessions, and the results were finally published in book form by the Cambridge University Press.

Meanwhile, the Director, Mr. Bosanquet, made preliminary excavations on the early site of Palaiokastro in Eastern Crete, with the assistance of Mr. Heaton Comyn, architectural student. The results were sufficiently promising to justify more thorough excavations in succeeding sessions.

During the session 1903-4 the work on the new Library, which was executed by an Athenian builder after the design of Mr. Heaton Comyn, the School Architect, proceeded steadily, and the building was nearly completed before the winter of 1904.

The excavations at Palaiokastro were continued by the Director with the help of Mr. Dawkins, Mr. Comyn, and Mr. Currelly. The most important find was an inscription, which contained the text of an ancient hymn to the Cretan Zeus, and so confirmed the theory that a temple of Ζεὺς Δικταῖος had stood in classical times on the ruins of the Minoan town at Palaikastro. The language of the hymn was thought by Sir Richard Jebb to belong to the VIth or VIIth century B.C. More of the town was uncovered, and a Late Minoan Palace or Government House was found. Adjoining storehouses yielded painted pottery and terra-cotta figurines, while minor finds were made in cemeteries and on sites close at hand.

In the course of the session M. Cavvadias, the Ephor-General of Antiquities, offered the School the opportunity of exploration and excavation in Laconia, and, the offer being gladly accepted, a preliminary survey was undertaken on the site of Sparta.

The session 1904-5 was marked by the fact that in April the first meeting of the newly-established International Archæological Congress was held in Athens and drew together a remarkable gathering of scholars and archæologists from all parts of the world. The various Schools took an active part in the organisation of the Congress, and the British School came into special prominence because it was arranged that the formal opening of the new Penrose Memorial Library should form part of the programme.

After the Congress the School once more resumed its labours in the field, and the excavation at Palaiokastro was completed under the Direction of Mr. Dawkins. After the site of the temple of Zeus had been worked over, and its terra-cotta decoration had been recovered, including a frieze of chariots and metopes adorned with the head of Medusa, buildings of the Bronze Age underlying the temple proved to be especially rich in objects of the fine "Palace Style," which is known to have flourished in Crete during the Egyptian Eighteenth Dynasty. In a slightly older stratum a quantity of bones of oxen, which seemed to mark the position of an early place of sacrifice seemed to show that this lonely Hellenic temple, which stood a thousand years later on the ruins of the prehistoric town, occupied, whether by chance or by some direct religious survival, a site of immemorial antiquity. Terra-cotta models of bulls' heads and masses of painted pottery of the Late Minoan I. period were succeeded still lower by a quantity of "Early Minoan" pottery, while on a site not far distant Mr. Dawkins discovered a two-roomed house, with primitive pottery, bone needles, stone axes, etc., which, for the first time in the Ægean, gave a definite idea of a Neolithic homestead.

Fig. 5. Prior Nelond, Cluniac Prior of Lewes, 1433 (Cowfold, Sussex). (See page 70.)

Meanwhile the work of exploration in Laconia had been seriously begun. Tentative excavations on the site of Thalamai, famous in antiquity for its oracular shrine of the Goddess Ino, did not yield much, as the site had been constantly ransacked for stone in the Middle Ages, but Mr. Guy Dickins discovered and photographed some interesting sculptured marble capitals and screens.

In 1905-6 the main work of the School in the field was devoted to the site of Ancient Sparta, and the results of the first season were decidedly encouraging. The walls which enclosed the ancient Acropolis were traced in their entire circuit, and proved to be of late Roman construction after the sack of Sparta by the Goths, although its materials were drawn from the Agora and other ancient buildings. The front of the Greek theatre was incorporated in the defences, but the lower rows of seats were well preserved, and the orchestra floor was reached at a depth of 19 ft.. The Greek city wall, enclosing a far larger area, with a circuit of six miles, was also traced. It was 9 ft. thick, built of sun-dried bricks resting on a substructure of polygonal limestone blocks, and dated from the IIIrd century B.C. Various Hellenic remains were found along the bank of the river within these walls, but by far the most important discovery was the famous Sanctuary of Artemis Orthia. The first clue to the site was given by a large series of small leaden figures, but on the second day an inscription with the name Artemis Orthia made identification certain. The difficulties of working the site were enormous, including the diversion of a millstream, which flowed right through the temple. A solid wall, which extended far inland from the river bank, proved to be the substructure of a Roman theatre. The complete excavation had to be deferred to the following season, but two principal strata had already yielded a rich harvest. The older, characterised by geometric pottery and exquisite carved ivories, analogous to those found at Ephesus, extended to the VIIth century B.C. The latter, which had already yielded some 12,000 lead figurines and grotesque terra-cotta masks ranged from the VIIth to the Vth century. The lead figurines, in their endless variety of types, furnished a most valuable survey of archaic art in the Peloponnese, while the large series of masks revealed the gradual development of a vigorous naturalism.

Besides this central work at Sparta, the remains of the Byzantine and Frankish periods in Laconia occupied the attention of Mr. Sejk and Mr Traquair, by whom plans, measurements, or drawings were made of the citadel of Geraki, with its churches, and of the churches of Monemvasia, and the castles of Passavá, Maina, and Chelefz.

The session of 1906-1907 was again one of great and varied activity, in which the Director and Assistant Director were helped by nine very capable students, and also by the Secretary of the School, Mr. Baker Penoyre, who had a year's leave of absence in order to travel and make researches in Greece, the Ægean Islands, and Asia Minor.

Next year the main object was to complete the exploration of the precinct of Artemis Orthia, at Sparta. The Roman theatre (the "Circus" seen by Leake in 1830) was completely excavated, and a careful plan and restoration made by Mr. Walter George, the architectural student. The general course of the wall of the city was determined by means of the stamped tiles made for it, though few stones remained *in situ*. It included within its circuit all the villages of ancient Sparta. On April 4, when the first trial pit was sunk on the Acropolis of Sparta, the famous sanctuary of Athena Chalkioikos was identified beyond doubt.

During the session 1907-1908 the work at Sparta was again vigorously prosecuted with the help of a munificent donation of 1,000*l.* from Mr. W. W. Astor. The Artemision was the main objective, and here the primitive temple coeval with the archaic altar was found, and proved to have been a building of mud brick, resting on a foundation of undressed stones, and held together by a framework of wooden beams, while a row of wooden columns ran down the centre. It seemed probable that this was the earliest Dorian building on record.

It had been felt for some time that a determined effort was needed to throw more light on the chronology of the early civilisation of Northern Greece, and on its relationship to other cultures. During this session, therefore, Messrs. Wace, Droop, and M. S. Thompson excavated at site called Zeralia, near Almyro in Southern Thessaly. The hope of identifying the site with Itanos, by discovering the temple of Athena Itania, proved vain. But a rich prehistoric deposit was found from 6 to 8 metres thick and comprising no fewer than eight successive settlements.

During the year a Byzantine Research and Publication Fund was established in association with the School, a step which was all the more welcome to the Committee because they had long regretted their inability, on financial grounds, to publish much of the admirable work done in this field by their former distinguished students, Mr. R. W. Schultz and Mr. S. H. Barnsley. A balance of sums already contributed to the School for this purpose was made over to the new Fund, and it was arranged that students coming out under its auspices should be entitled to election as students of the School. Mr. W. Harvey, Gold Medallist and Travelling Student of the Royal Academy, accordingly visited Greece during the session, and while principally engaged on Byzantine studies also gave valuable help as draughtsman in the excavations at Sparta.

During the session 1908-9 the work at Sparta was brought to a conclusion, for, after completing the Sanctuary of Artemis Orthia, and excavating the Menelæum, trial pits on the more promising parts of the site of the ancient city seemed to show that no site of importance remained to be excavated.

During the session 1909-1910 a month's work was done at Sparta, mainly in identifying the site of the Eleusinion. In Thessaly excavations were carried out on the sites of Tsangli, between Pharsala and Velestino, and Rachmani, halfway between Larissa and Tempe. The results, compared with those of previous seasons, seemed to justify the division of the prehistoric remains of Thessaly into four periods:—I., Neolithic, marked by the occurrence of red on white painted pottery; II., Neolithic, marked by the presence of Dimini and similar wares; III., Sub-Neolithic, with the remarkable encrusted ware; and IV., Chalcolithic, with unpainted pottery, apparently contemporaneous with Late Minoan II. and III.

The narrative of the first twenty-five years of the life of the School ends with the session 1910-1911. The chief event has been the renewed excavations on the site of Phylakopi in the island of Melos, which has added materially to previous results, especially in relation to the discoveries made in Crete.

It will be seen that the last year of the period under review shows the School in full activity and doing admirable work in a variety of fields."

HISTORICAL NOTES.

The Capital of Ancient Assyria.

THE *Illustrated London News* recently contained an account with illustrations of the results of Dr. Andrae's explorations at Kalah Sherghat, on the right bank of the Tigris, the site of the ancient Asshur, which was founded not later than 2500 B.C. as the capital of the first Assyrian Empire, and though it had sunk to a subordinate position, remained fairly prosperous till after the Christian era. The exploration, which has been carried out since 1903 under the auspices of the German Oriental Society and has been chronicled from time to time in the *Proceedings* of that body, is a model of thorough and scientific methods. Its rich results are summed up in the article in question as follows:—"What Dr. Andrae has accomplished in these eight years is the clearance of most of the northern part of the site, where, round the main temple of Asshur, whose *ziggurat* is the central feature, were grouped the other principal shrines. Among these he has done his chief work in the fane of Anu and Adad, the divinities of heaven and of storm. Their temple, which he has cleared completely, is of comparatively late date—of Shalmaneser II., in the IXth century B.C.; but, by tunnelling underground with extraordinary patience, he has explored also the underlying building of the XIIth century, thus obtaining for the first time a knowledge of the development of Assyrian temple architecture. Though unable to dig out the central temple of Asshur, because the Turkish barracks occupy its site in part, he has bare many of the outlying chambers of great structure, whose foundation goes b to about 2000 B.C. Besides examining the huge fortifications which surround the and line the river bank, the Germans h explored a labyrinth of house remains of periods. The lowest stratum of the earl days of the Second Empire still keeps cobble-paved streets and courts, house wa and bathrooms in better preservation than upper, which is late Assyrian, and suffe much in the Parthian period. Among th house remains many vaulted tombs w found. The much-denuded ruins of seve palaces of various epochs, and the be preserved remains of an extra-mural building whose colonnaded garden the "Spring Sacrifi was held, should be mentioned as well. Thou Dr. Andrae did not find very much of note the houses, his reports enumerate a long of statues, of written tablets, of enamel terra-cotta wall decorations, and of vari votive objects found in the temples palaces."

Millenary Celebration, Oxford.

IT is proposed to celebrate July next year the millenary the first authentic mention Oxford with an exhibition its antiquities, lectures u the foundation of the city and Univers and pageants at each of the four corners, four gates of the city wall. We may here re the discovery some years ago in the erection the new Schools of remains of a hut villa clearly indicative of a pre-historical settlem at Oxford. In 912 King Edward gained for h self Oxnaford and Lundenbyrg, after the de of Æthelred, ealdorman of the Mercians, had held the valley of the Thames, and fr that time the true story of Oxford beg Domesday cites four churches SS. Mary, El Michael, and Peter. Before the Conquest th were 721 houses; at the time of the Survey o 243 houses within and without the wall paid g and 478 were vacant and ruined. Vol. XLV fourth series, of "Collectanea," Oxford Histor Society, contains the first detailed sur of the city in the Hundred Rolls of 12 edited by Miss Graham. It is generally belie that the most ancient college is Merton, foun by Henry III.'s Lord High Chancellor, Wa de Merton, in 1264, just twenty years bef Bishop Hugo de Balsham established, after same model, Peterhouse at Cambridge. our issue of January 3, 1891, we published late H. W. Brewer's drawing of media Oxford, in which one may trace the circumva tion of the later wall with Robert d'Oy Castle, near the West Gate, and the Cathed by the South Gate, with Merton, Univers Queen's, and New Colleges to the east; remains at Merton and New Colleges probably, of King Edward the Confessor's ti

Egypt Exploration Fund.

DURING the current sea the excavation of the Osire at Abydos, will be contin under the directions superintendence of Profe E. Naville, with the assistance of Mr. T. E. P late Craven Fellow. The work was begun 1 years ago by the Egyptian Research Accou under the conduct of Miss Petrie and Miss Murray and the general supervision Professor Petrie. Tombs of the interval fr the Ist dynasty to the Roman period h been opened in the cemeteries: in the sand been found a woman's skeleton, presum of the XIIth dynasty, with a scarab of ameth and two alabaster vases containing koh cosmetic for the eyes.

A Photographical Record of Old London.

MR. JOHN TODD, Dist Surveyor for the City London (East), has preser to the Bishopsgate Insti a valuable collection of ph graphs taken by him buildings which have recently been, or s will be, pulled down in the City, inclu the old property on the western side of Bish gate Without, lately incorporated Bishopsgate for postal purposes.

Proposed Museum, Southampton.

TUDOR HOUSE and King Jo Palace, Southampton, situ in Bugle-street and West esplanade respectively, ar be purchased by the T Council, subject to the financial assistanc the Local Government Board, and conve into a museum for antiquities.

Mediæval Concrete Roadways. In his topographical work on the lower town of Boulogne-sur-Mer the Abbé Haignère refers to the discovery of a concrete-paved roadway, which seems to be the ancestor of our modern concrete floors. This roadway, although of rudimentary character, has given proof of great resistance by remaining intact through several centuries. In addition to the roadway mentioned, there have been found in various streets the remains of ancient paving, formed by slabs of cement containing a large proportion of iron dross and consolidated by numerous copper pins.

According to the Abbé Cochet, analogous paving has been discovered in the old streets of Rouen. In his book, "Les Origines de Rouen d'après l'Histoire et l'Archéologie," this pavement is described as consisting of concrete, composed of flints broken to the size of large walnuts enveloped in slag or iron dross mixed with fragments of copper and bones. This mixture, thoroughly consolidated by traffic, forms a species of concrete harder than stone masonry and which cannot be broken by the pick. Unfortunately, this early pavement long ago excited the attention of amateur archæologists, by whom we are told every trace of it has been removed.

Ancient Scandinavian Iron Furnaces. RESEARCHES undertaken at Hedesunda and Pernebo, in Sweden, by Professor Odelstjerna in the hope of discovering the remains of ancient iron furnaces have been rewarded by success. Several furnaces have been found at both places, consisting of cavities lined with stone and provided with a hard-burned bottom of clay mixed with slag. These furnaces, which are believed to date from more than two thousand years back, show the great antiquity of the Swedish iron industry.

Inca Ruins in Peru. A REMARKABLE discovery of the remains of Inca civilisation was reported recently to the Royal Geographical Society. Professor H. Bingham, who is in charge of an expedition under the auspices of Yale University, came during last summer upon extensive ruins, which he identifies as those of the city of Pitcos, mentioned by old Spanish writers. They are situated on an all but inaccessible ridge in Peru several days' journey north-west of Cuzco, and have hitherto been known only to Indians and two or three Peruvians. They are largely overgrown with jungle, but the very cursory survey, which alone has yet been possible, has revealed work of a remarkable order, equal in interest to that at Cuzco and very superior to that of other sites visited. One building, according to Professor Bingham, contains the largest and most beautiful windows that he has seen in Peru. Some of the buildings contain blocks upwards of 10 ft. in length, while the masonry generally is very carefully wrought with accurately squared angles. It is hoped to carry out a full survey next season.

Relics of Old London. SEVERAL interesting items of news in connexion with the antiquities of London have been chronicled in recent numbers of the *City Press*. One of these relates to an addition to the architectural interests of St. Bartholomew the Great in the return after eighty years' absence of two carved bosses (one representing a mermaid), which originally formed part of the vaulting in the early XVth century cloisters. An old print is extant showing the exact position they occupied before they fell from the ruinous remains in 1833. They then passed into private hands, and have now been restored to the church by Mr. Paul White, into whose possession they had come; but the cloisters having been already restored some years ago, it is not possible now to replace them in their original place in the structure.

Our contemporary further gives an account of the objects found in the course of excavating for a new building in Tudor-street on the site of the Royal Palace of Bridewell. The most interesting of these from the structural point of view are some of the piles on which it was carried: "the trunks of young elm-trees, pointed at the base, but otherwise scarcely touched by hatchet or saw. They are still perfectly sound and strong, and . . afford a curious example of how green wood sometimes lasts longest. In order to remove them they have been sawn into sections."

A third item is the discovery, at a depth of 20 ft., in the course of digging for a foundation on a site between Pudding-lane and Fish-street-hill last autumn, of the base of the Roman city wall, 5 ft. deep and some 8 ft. wide. It rests on baulks of timber about 2 ft. square and 5 ft. long, with short upright piles between them; and consists of two courses of rough Kentish rag masonry, and, above that, of three courses of tiles embedded in mortar mixed with tile dust. The wall was originally from 20 ft. to 30 ft. high. This discovery settles the position not hitherto accurately known of the wall at this point. One of the piles has been secured for the Guildhall Museum.

Hittite Remains. MANY pressing claims on our space prevented us last month from calling attention to the interesting statement made by the authorities of the British Museum (as quoted in the *Antiquary* for November), that "the excavations conducted during the past spring and summer on the site of Carchemish, the ancient Hittite capital on the Euphrates, have brought to light considerable additions to the extant remains of Hittite civilisation, but so far the key to the Hittite writing has not been discovered. The British Museum Trustees have the concession of the site for another year, and it is hoped that important contributions may yet be made to the history of this somewhat enigmatic nation.

Among the finds during the last season are a great stairway leading from the lower to the upper city, and flanking what appears to be a building of some importance, which awaits further investigation. Lesser discoveries included the longest known inscription in Hittite pictographs and a quantity of pottery, the chronological sequence of which can, it is believed, be determined."

Excavations in the Sudan. MR. JOHN GARSTANG'S excavations at Meroe and Kabushia are making great progress, writes a correspondent to the *Times*, and the work on the Royal city is revealing a large number of buildings. The Palace near the Temple of Amon, which has now been cleared, contains over forty chambers and a large court. Important reliefs have been brought on the foundations. Three hundred natives, with a staff of trained Egyptians, are now employed, while a light railway and an aerial cableway have been constructed to facilitate the removal of the excavated material.

The Old Bridge of St. John's, Cambridge. THE old bridge lies between Trinity Bridge and the other St. John's Bridge, the Bridge of Sighs; it attracts less notice than the Bridge of Sighs because it is not a connecting thoroughfare between the old and new portions of the college. It was built at the end of the XVIIth century, being attributed to Nicholas Hawksmoor, after designs by Christopher Wren. The background of the illustration shows part of the additions made to the college buildings during the XVIIth century.

The Old Bridge of St. John's, Cambridge.
From a Drawing by Mr. S. Aveling.

THE BUILDING TRADE.

THE TIME CLAUSE IN A BUILDING CONTRACT.

NEARLY every building contract contains a clause under which the work in hand must be completed within a certain time. It is probable that this clause is a more frequent source of litigation than all the other clauses in the contract put together. With a view to preventing disputes as far as possible the architect usually has power to extend the time within reasonable limits, but notwithstanding this the builder sometimes becomes liable to penalties.

In these circumstances it may be of interest to discuss the time clause in the light of some of the recent decisions of the courts.

Difficulty occasionally arises as to the meaning of clauses as to time. If work is to be completed within so many days "from" a particular date, there is no general rule that the day is to be included or excluded; and to get ride of uncertainty it is always wise to specify the exact day on which the work is to be completed. Where the term "month" is used it means lunar months, unless the context shows or it is otherwise proved that calendar month was intended.

The true severity of the penalty clause in some contracts begins to be felt when the works are not completed within the contract time. Thus in some circumstances penalties may be exacted although the delay is caused by alterations required by the employer. In the case of Jones *v.* St. John's College, Oxford (L. R 6 Q B 115) it was agreed by a building contract that the plaintiff should, before a certain date, completely finish, according to certain specifications, a farm-house and buildings, but subject to extras, alterations, or additions which might be made as mentioned in the agreement. It was also stipulated that if the work was not done by the day named penalties might be deducted by the defendants from the amount owing from them to the plaintiff. Alterations were ordered, and the plaintiff failed to carry out the works within the time specified. The defendants having accordingly deducted penalties, the plaintiff brought an action to recover on his contract. It was decided that he had undertaken to execute not only the works specified, but also all alterations, within the time prescribed in the contract, and that it was no implied condition of the contract that the alterations should be such as could be reasonably completed within the time. Since, and as a result of, this case few contracts have been signed in which the builder has consented to complete extras within the contract time.

Where, as is generally the case, the architect has power to extend the time, but has not exercised it, and there is delay, the builder or manufacturer must not be mulcted in penalties. In the case of Westwood *v.* The Secretary of State for India (1863, 7 L. T. 736) the plaintiff contracted to build a ship. The time of completion was fixed. The contract provided that alterations might be ordered, and that the engineer was to have power to allow an extension of time for them. Failure to complete within the time fixed or extended time was to subject the plaintiff to certain penalties. The engineer ordered various alterations, but the time for completion was not extended, with the result that the shipbuilder exceeded the time specified in the contract. In an action brought by the shipbuilder for the cost of the alterations the Secretary of State for India entered a counterclaim for penalties. By way of answer to the counterclaim it was pleaded that the alterations ordered had made it impossible to complete the work within the specified time. The Court held that this afforded a good answer to the claim for penalties.

Where, however, delay is caused by the intervention of the employer, a waiver of the penalties clauses will be implied. Thus when the employer (as must often happen) during the progress of the work orders alterations to be carried out within reasonable time, and these alterations are so mixed up with the work contracted for that it is impossible to separate them, a waiver of the penalty clause may take place. In Thornhill *v.* Neats the plaintiff agreed to build six houses by a certain day, and was placed under penalty if they were not completed. Before the date fixed for completion, it was agreed that the plaintiff should perform other work in and upon the houses, this additional work to be done within reasonable time. In an action brought by the builder for work and labour done the building owner set up in answer a claim for penalties for non-completion within the time specified. It was held that there was a good legal answer to the claim for penalties for non-completion within the time specified on the ground that the defendant had in effect waived the penalty clause by agreeing that the entire work should be done within a reasonable time.

Again, in Russell *v.* Sa Da Bandeira (1862, 13 C. B. N. S. 149) a clause respecting penalties in a contract for the building of a ship imposed a penalty of 5*l.* a day on the shipbuilder for every day after a certain day if the ship should not be then delivered. The ship was not delivered until long after the day appointed, but a large portion of the delay arose from the interference of the building owner or his agent. It was decided that no sum in the nature of a penalty was recoverable by the employer. Similarly, if the time for commencing the work is delayed through no fault of the builder he will not be liable to pay penalties. Thus, in the case of Holme *v.* Guppy (1869, 3 M. & W. 387) the plaintiffs contracted to do for 1,700*l.* the carpenter's work in a brewery which was being built for the defendants. The work was to be completed within four and a half months from the date of the contract, and in default of completing within the said four and a half months the plaintiffs were to forfeit 40*l.* per week each week during which the carpenter's work was delayed beyond August 31, 1863, the expiration of the four and a half months. The defendants did not give the plaintiffs possession till four weeks after the contract was made. The plaintiffs did not complete until five weeks after August 31. The defendants claimed to set-off five penalties of 40*l.* against the last instalment of the contract price. It was decided by the Court that they could not do so; that the undertaking to complete was put to an end by the defendants' default in not giving the plaintiffs possession at the proper time; and that there was no evidence of a new contract to complete at any other time than August 31.

Again, where there was delay in setting out the ground for building and in providing the necessary plans the builder was excused.

Even when delay is caused by a strike for which he is in no sense responsible the builder may suffer from infraction of the time clause.

Thus it was decided in the case of Budgett *v.* Binnington & Co. that prevention due to causes other than the employer's intervention, such as a strike of workmen, is not an excuse for failure to complete within the proper time. This principle and the frequency with which strikes have in the past prevented the fulfilment of important engineering contracts has given rise to the insertion of a strike clause in every contract of importance. It should be observed, however, that where there is such a clause the strike may, nevertheless, be of so prolonged continuance as so to alter the conditions of the contract and the arrangements of the parties to it as to amount to a determination of the contract.

The power of granting an extension of time, which, as we have seen, is frequently conferred upon the architect, must be exercised by him in strict accordance with the terms of the contract between the parties.

Hitherto we have dealt only with penalty clauses; there is another clause often inserted in building contracts, the administration which depends very largely upon the arch tect. We refer to the "bonus" clause. contract sometimes provides that a bon shall be paid to the contractor for expeditio If there is such a clause, and the archite has power to extend the time, this powe according to a New Zealand case, is not be exercised by the architect for the purpo of enabling the contractor to earn the bon but, on the contrary, to save him fro penalties. In the case in point (Ware Lyttelton Harbour Board, 1882, 1 N Zealand L. R. 1882, S. C. 191) it was agre by contract that "The Board will gra the contractors a bonus of 100*l.* per we for every week or part of a week in whi the contract shall be finished within t specified time." The contract was to co plete certain specified works, and additio or extra works if properly ordered. T date for completion was April 7, 1882. T plaintiff completed six weeks before t appointed day, and received 600*l.* bon They claimed further bonus for time take as they alleged, by extra works. T engineer had power to extend the time. was held that the clause only applied in ca the engineer should consider that the co tractors could not complete within the tin to save the contractors from penalties, a not to give them additional bonuses.

STATE OF THE BUILDING TRADE.

WE take the following, by Mr. J. J. Jarv Managing Director of Messrs. J. Jarvis Sons, Ltd., Hackney-road, London, N.E., a Director of the Imperial Property Investm Company, Ltd., Basinghall-street, E.C., fr the *Chamber of Commerce Journal Ann Trade Review*:—

"Last year will be recalled with little sa faction by those connected with the build trade. Although spasmodic bursts of activ in different centres seemed to hold out ho of better times to come, it cannot be s with truth that the year has held ma encouraging features. In contrast with so recent "bad" years, some slight improvem has been noticeable, but, speaking genera the prevalent conditions have been by no me satisfactory, and the general outlook is caus some anxiety in many quarters.

The primary cause of depression is continued slump in the property mark There can be no doubt that the investor thoroughly frightened by recent legislation will have no dealings in real estate. T result is that house building no lon flourishes and builders of this class h practically ceased to build until better tir . . . .

Another important reason for the contin depression is the crushing burden of taxati This was referred to in last year's report a far from showing signs of amelioration, r taxes are springing up in bewildering overwhelming fashion. . . .

Nor has the continued higher level of pri for materials assisted business—it is cheaper at the moment to buy than to bu and those who have the option prefer to neither.

The fact is, despite the alleged improvem in trade, the country is living to the extent of its means. The higher cost of livi additional taxation, increased opportunities spending, are all contributing their quota larger expenditure; as the result the availa margin is reduced to the vanishing-point, on this account the building trade of neces suffers. . . .

The recent labour unrest did not affect building trade in 1911 to any very gr extent. The carmen's strike caused a days' inconvenience, and the railway troul proved annoying for a short time, but, on whole, definite disputes with any branches the trade have been few. During the v secret ballots have been taken by certain of trade unions to ascertain their members' vi as to a general demand for increased wa in 1912, and at one time there seemed sc possibility of prospective trouble. It can, h ever, be prophesied with some certainty t there will be no strike of importance dur

the new year. Whilst the increased cost of living naturally encourages the desire for higher wages, the wiser leaders of the men see that any demand of this kind can only be successfully made when the general conditions are more satisfactory than those at present obtaining.

The National Insurance Act is not by any means popular with either masters or men. The former view with some concern the trouble and expense that will devolve upon them. Neither reason would be of weight were the results likely to prove in any sense commensurate with the cost and inconvenience. The workmen, also, feel that they are being asked to pay far more than the benefits warrant. In the writer's company a sick fund has been in existence for nearly twenty years that for 2d. weekly gave 12s. to 15s. per week in sick pay, 5l. 5s. at death, and the privilege of receiving hospital letters and admission to convalescent homes owing to subscriptions from the fund to these institutions. Needless to say, it has not paid its way at 2d. per week, but at 3d. it would have shown quite a satisfactory profit. Under the new Act, funds of this kind can no longer exist, and in the particular instance mentioned the men are wondering why it is impossible to give for 9d. the benefits that have been theirs for something less than 5d. Of course, the building trade is a particularly healthy one, and whilst the men would raise no objection to paying rather more than their share if they felt it would be helping their fellow-workers engaged in some less satisfactory trades, there is a general feeling that the Act yields a very poor return for the payments made. To that more casual type of labourer who seems to need assistance most the Post Office scheme appears likely to prove a delusion and a snare, and there can be no doubt that whilst the principle of insurance is universally accepted as good, the present hurried legislation stands in considerable need of further consideration and amendment.

It is customary at the conclusion of an annual report to assume the *rôle* of a prophet. No more difficult task ever confronted a trade writer than to anticipate the trend of events in the coming year. The building trade is unique in that it depends for prosperity on an unusual variety of reasons—political, social, economic. But it is tolerably safe to predict that there can be no settled improvement until confidence is restored in the property market, some effort is made to lighten the burden of taxation, and unquestionable improvement is noticeable in the general trade of the country. To many this happy state of affairs must await the millennium, but to just a few there are signs—small, but significant—that this threefold condition may prevail before another year has ended. And the writer may be numbered amongst the optimists."

HOURS AND WAGES IN THE BUILDING TRADE.

THE Management Committee for the London district of the Amalgamated Society of Carpenters and Joiners, as has already been announced, have given notice to the Council of the London Master Builders' Association of demands for an increase of 1½d. per hour in wages, double pay for overtime, and a reduction of summer hours from fifty to forty-seven a week. Notices to expire during the course of the present year have, says the *Times*, been tendered in thirty districts of the country, including Ireland. These are Abertillery, Bacup, Barrow, Bath, Beverley, Bolton, Bradford, Cardiff, Cheltenham, Coventry, Derby, Dewsbury, Dundalk, Ebbw Vale, Grays, Hasingden, Leeds, London, Manchester, Newport (Monmouth), Portsmouth, the Potteries District, Rawtenstall, Rotherham, Selby, Spen Valley, Stockport, Sutton Coldfield, Watford, and York. Both the working hours and the rate of wages vary in different parts of the country, but the demand in each case is for an improvement in existing conditions.

The Amalgamated Society of Carpenters and Joiners has 770 branches in the United Kingdom, with a membership of between 50,000 and 60,000. There are also branches in the United States, Canada, New Zealand, Australia, and South Africa, bringing up the total number of branches to 977 and the membership to over 67,500. So far as the United Kingdom is concerned, the funds at present amount, it is understood, to something over 2*l.* a member, or roughly about 120,000*l.* These can be readily augmented by levy should necessity arise.

In the London district, a term which means a twelve-mile radius from Charing Cross, the claim for higher pay is based on the increased cost of living. This claim, it is urged, has been already recognised by the Engineers and Ship Repairers' Association of London, when they granted to the joiners working on the Thames the amount which is now being asked from the Master Builders' Association. That body, through its Council, has received the letter of notice of the executive of the men. The notice does not take effect in London till June 8. In the meantime conferences will doubtless be arranged between representatives of masters and men. So far as present indications can be ascertained, while the executive of the men are hopeful that an amicable arrangement may be arrived at, the masters are not likely to take so comfortable a view. The rise asked for is, it is felt, a very serious one, and in view of the state of trade the time is not considered opportune. In the event of a dispute the conflict would not be confined to the members of the Amalgamated Society, but would involve other sections of the building industry which are federated with the London Building Industries Federation. At the present time, it may be added, the bricklayers', plasterers', and masons' sections are taking a vote of their members on the question of seeking to improve their conditions.

GENERAL BUILDING NEWS.

NEW SCHOOL, HEOLYCYW.

This school was opened last week, and has been erected at a cost of 3,515*l.* from the designs of Mr. Pugh Jones, F.S.I., the county architect. The accommodation of the building is for 204 children, and the contract was carried out by Mr. W. A. Jones, builder, of Barry.

PROPOSED SCHOOL, WORTHING.

At a meeting of the West Sussex Education Committee it was decided to provide a new secondary school with accommodation for about 150 pupils at Worthing. Mr. Haydon P. Roberts, the Committee's architect, is to be instructed to prepare plans for this purpose.

ELEMENTARY SCHOOLS, POOLE.

The new elementary schools erected in Southroad, Poole, by the Poole Town Council, at a total cost of 9,148*l.*, have just been opened. The schools, which have been built by Mr. H. W. King, of Springbourne, from designs by the Borough Surveyor (Mr. S. J. Newman), are situated on about an acre of land forming a portion of the site of the old foundry, between South-road and Green-road. The accommodation is for 290 boys and 290 girls, a total of 580. The boys' entrance is from South-road and the girls' from Green-road, the latter children occupying the classrooms on the first floor only. The exterior is of South-Western Pottery white-faced bricks, with terra-cotta dressings by Messrs. Carter & Co. The roof is tiled. The school consists of five classrooms on the ground floor for boys, with cloakroom accommodation, lavatories, teachers' room, storeroom, etc. The first floor, which is reserved as the girls' department, is approached by a staircase of granolithic material, and contains similar classrooms, etc., to those in the boys' school. In each school three classrooms are arranged to be thrown into one by the removal of folding partitions. Throughout the school there is a glazed tile dado, and the walls above it are coloured a light green. The floors are of maple wood-block. The heating is on the low-pressure hot-water system and has been carried out by Mr. Hayden, of Trowbridge. Electric lighting has been installed by Mr. A. G. Strudwicke, of Branksome. The first floor is of fireproof construction, by Messrs. Homan & Rogers, and outside a fire-escape staircase is provided.

SECONDARY SCHOOL, BLYTH.

Messrs. Robson & Waddle, builders, of Blyth, are carrying out the erection of this school, which will provide accommodation for 280 scholars. The school includes a central hall, art-rooms and laboratories, and maple flooring is being used in all teaching-rooms and main corridors. The architect for the work is Mr. Edward Cratney, of Wallsend.

NEW SCHOOL, INCHTURE.

Mr. A. G. B. Nicolson, of Edinburgh, is the architect who has superintended the extensions to this school, the total cost of the work being 1,500*l.* The contractors were as follows:—Builder, Mr. Edward M'Kearney, Perth; joiners, Messrs. D. & J. Anderson, Perth; plumbers, Messrs. Frew & Co., Perth; slaters, Messrs. William Brand & Son, Arbroath; plasterer, Mr. J. Lyburn, Dundee; heating engineers, Messrs. A. L. Peacock & Co., Dundee; painters, Messrs. G. R. Douglas & Son, Perth.

NEW ASSEMBLY ROOMS, NORWICH.

Mr. E. J. Trench is the architect for this new building, which includes a ballroom with an area of nearly 5,600 ft., including a stage with dressing-rooms at the back; a supper-room, capable of seating 200 guests; and winter gardens, which are about 120 ft. in length. The construction was carried out under the direction of Mr. A. W. Chasteney, of Messrs. Wicks & Sons, Ltd., and the heating arrangements are by Messrs. Barnes & Pye.

TERRITORIAL HEADQUARTERS, YORKHILL.

These new buildings have been erected at an estimated cost of 26,000*l.* from the designs of Messrs. Brand & Lithgow, architects, of Glasgow. The buildings comprise quarters for the Yeomanry and Royal Army Medical Corps, also a riding school.

NEW BUILDINGS IN LONDON.

Mission church, East Ham, E. (2,000*l.*); Mr. E. D. Hoyland, 2, Walbrook, E.C. Mission church, Rotherhithe, S.E. (2,300*l.*); Messrs. Simpson & Ayrton, 3, Verulam buildings, 3, Gray's Inn-road, W.C. Schools, Senrab-street, E.; Architect, London County Council Education Committee, Victoria-embankment, E.C. Warehouse, Gray's Inn-road, W.C.; Mr. W. Matts, Birkbeck Bank-chambers, High Holborn, W.C. Extensions to school, York-road, Lambeth, S.E.; Architect, London County Council Education Committee, Victoria-embankment, E.C.

TRADE NEWS.

Under the direction of Messrs. Thomson & Bristow, architects, Victoria-street, S.W., the "Boyle" system of ventilation (natural), embracing Boyle's latest patent "air-pump" ventilators and air inlets, has been applied to the Secondary School, Whitby.

The Church of England Schools, Padiham, are being ventilated by means of Shorland's patent exhaust roof ventilators and special inlet ventilators supplied by Messrs. E. H. Shorland & Brother, Ltd., of Failsworth, Manchester.

The Church of England school at Burwash, Sussex, has recently been fitted with D. O. Boyd's "Hygiastic" ventilating school stoves, supplied by Messrs. O'Brien, Thomas, & Co., Upper Thames-street, London, E.C., and Excelsior Works, South Bermondsey.

The Elstree Brick and Tile Company, Ltd., Boreham Wood, Herts, have recently had some of their bricks tested at Messrs. Kirkcaldy's, with the result that they show a resistance of 233 tons per square foot before cracking, and 257 tons per square foot before crushing. These bricks are made from the London clay by Staffordshire brick mills and machines, being pressed automatically in a plastic condition and burnt in the ordinary way. The tests for ordinary building bricks is very good and the porosity, 9·07 per cent., is also good for such bricks.

TRADE DINNER.

The annual dinner of the staff, to the number of over sixty, of Messrs. Thomas Parsons & Sons, varnish and colour manufacturers, took place on January 6 at the Horseshoe Hotel, Tottenham Court-road. The chair was occupied by Mr. P. Gilliard, the senior traveller present. The toast of "The King" having been honoured, Mr. Gilliard proposed the toast of "The Firm," coupled with the names of Mr. George and Mr. William Parsons. Mr. V. W. Theobalds, the Works Manager, responded in suitable terms on behalf of the firm.

PROJECTED NEW BUILDINGS IN THE PROVINCES.*

ABERDEEN.—Reconstruction of eastern wing, extensions to art school, and erection of science and engineering school; Architect, care of the Committee of Robert Gordon's Technical College. Additions to works of Mr. J. P. Kilgown, also additions to 472, Union-street, for Mr. P. E. Farquharson (1,500*l.*); Messrs. Sutherland & George, 26, Crown-street, Aberdeen.

Amesfield (Dumfriesshire).—Technical school (4,500*l.*); Messrs. James Halliday & Sons, builders, Leafield-road, Dumfries.

Annbank-by-Ayr.—School (5,000*l.*); Mr. John Eaglesham, architect, Wellington-street, Ayr.

Auchendoir. — Extensions to Glenbogies House (2,250*l.*); Mr. W. L. Duncan, architect, Hallhill House, Turiff.

Axminster.—Public hall; Messrs. Symes & Mudge, architects, Somerset House, Chard.

Ayr. — Business premises, Main-street (3,000*l.*); Mr. W. Cowie, architect, Alloway-street, Ayr.

Banff. — Administrative block, Superintendent's House (1,850*l.*); Mr. James Christie, jun., architect, Fife-street, Banff.

* See also our list of Competitions, Contracts, etc., on another page.

Batley.—Picture palace, Commercial-street, for Jenkins' Pictures, Ltd.

Bix (near Henley).—Rectory (2,000*l.*); Mr. C. W. Smith, architect, 16, Finsbury-circus, E.C.

Blyth.—School (8,000*l.*); Messrs. Fenwick & Watson, Pearl-buildings, Newcastle.

Bootle.—Proposed additions to hospital (7,220*l.*): Mr. B. J. Wolfenden, Surveyor, Bootle Town Council.

Bridgton.—Extensions to works for Messrs. Whitehouse Brothers, Ltd.

Cambridge.—School (11,325*l.*); Messrs. Kidman Brothers, builders, Cambridge.

Carlby.—Proposed workmen's houses; Mr. T. Lake, Surveyor, Bourne Rural District Council.

Castleford.—Proposed chapel, Carlton-street (5,000*l.*); Trustees, Carlton-street, Wesleyan Chapel, Castleford.

Catchgate (Durham).—School (9,000*l.*): Messrs. Marshall & Tweedy, architects, 17, Eldon square, Newcastle.

Chertsey.—Twelve houses (152*l.* each); Mr. F. W. Greig, Surveyor, Chertsey Rural District Council

Colchester.—Extensions to asylum (82,965*l.*); Messrs. H. Arnold & Son, builders, Printing Office-street, Doncaster.

Crook.—School (5,000*l.*); Mr. J. G. Murrell, Market Place-chambers, Durham.

Croydon.—Residence, Stamford-road (4,000*l.*); Mr. H. C. Pegg, Alnwick House, Thornton Heath. Hospital, London-road: Mr. F. Windsor, architect, 1, High-street, Croydon.

Dartford.—Extensions to Phœnix Works for Messrs. Burroughs, Wellcome, & Co. Houses, Priory-road, for the proprietors of the *Daily Telegraph*.

Darwen.—Summhurst Kiosk; Messrs. Lloyd & Millward, builders, Blackburn-road, Darwen, Lancs.

Dukinfield.—Extensions to workshop for Messrs. Driver, Goodier, & Co., Ltd.

Dundee.—Extensions to King's Cross House (16,000*l.*); Mr. James Thomson, engineer, 91, Commercial-street, Dundee.

Ecclesall Bierlow.—Enlargement of school, Western-road (450 extra places); Mr. G. S. Baxter, Secretary, Education Committee, Sheffield Town Council.

Elgin.—Additions to Binghead and Keams Public School (2,500*l.*); Mr. John Wittett, architect, 81, High-street, Elgin.

Exmouth.—School, Exeter-road (2,100*l.*); Mr. E. Crocker, Bank-chambers, Exeter.

Falkirk.—Extensions to electricity works; Mr. F. Ransome, electrical engineer, Electricity Works, Falkirk.

Farden Mont.—Asylum (56,000*l.*); Mr. G. A. Hutchins, County Surveyor, Welshpool.

Forth.—Slaughter-house (3,000*l.*); Messrs. Traill & Stewart, architects, 38, High-street, Lanark.

Gallatown.—Shops and houses, etc. (2,300*l.*): Mr. J. F. Smith, 210, High-street, Kirkcaldy.

Godalming.—Additions and improvements at police-station (1,500*l.*); Mr. A. Dryland, Surveyor, Surrey County Council, County Hall, Kingston-on-Thames.

Greet.—Proposed electrical sub-station, Percy-road; Mr. R. A. Chattock, Electrical Engineer, Birmingham Town Council.

Hackbridge.—Extensions to school (450 extra places): Mr. Ramsey Nares, Secretary, Education Committee, Surrey County Council, Kingston-on-Thames.

Hambledon.—Additions to school (2,800*l.*): Mr. H. Littler, architect, Ribblesdale-place, Preston.

Horwich.—Extension to premises (to accommodate one hundred extra looms) for the Lion Manufacturing Company.

Huntly (N.B.).—Shops, houses, etc. (2,000*l.*); Mr. T. G. Archibald, builder, Old road, Huntly.

Kirton (near Boston).—Town hall (1,100*l.*); Messrs. J. Langley & Son, builders, Kirton.

Leith.—Extensions, Sawnfield Roller Mills (4,000*l.*), for Messrs. J. Wilson & Co.

Lincoln.—Extensions to works, Firth road, for Messrs. Cannon & Co.

Linslade.—Proposed enlargement and improvement of St. Barnabas' Church (10,000*l.*); the Vicar.

Llanelly.—Adaptation of premises, Murray-street, into club; Secretary, Liberal Club, Llanelly.

Lower Wadsley.—School (840 places); Mr. G. S. Baxter, Secretary, Education Committee, Sheffield Town Council.

Lowestoft.—Additions to St. John's School; the Managers. Plans have been passed for fifteen houses, Dene-road, for Mr. F. Jarvis.

Nelson.—Mission hall, Goit Side; Trustees, Central Gospel Mission.

Newcastle.—Banking premises, Grey-street; Mr. W. H. Brierley, architect, Lendal, York; Mr. J. Lumsden, builder, Jarrow.

Newchapel.—Additions to parish church (1,000*l.*); the Vicar, Newchapel.

Newport (Mon.).—Theatre; Mr. W. H. Longworth, architect, 4, St. Mary's-passage, Manchester; Messrs. Jordan & Sons, builders, Harrow-road, Newport.

Nordrach-on-Dee.—Extensions to sanatorium (3,000*l.*); Mr. W. E. Gauld, 11a, Dee-street, Aberdeen.

Norwich.—St. Giles Hall (1,200*l.*); Messrs. Morgan & Buckingham, architects, 1, Upper King-street, Norwich.

Okehampton.—Police-station (2,000*l.*); Mr. S. Ingram, County Surveyor, Exeter.

Paisley.—Drill hall for Royal Engineers (2,000*l.*): Messrs. J. Craig, Barr, & Cook, architects, 13, St. James'-place, Paisley.

Parkhead.—School; Messrs. Fleeming & Son, architects, 10, Queen-square, Wolverhampton.

Portishead.—Generating-station for the Portishead and District Lighting Company.

Portree.—Additions to school (2,000*l.*); Mr. R. I. McBeth, Queen's House, Inverness.

Portslade.—School (4,000*l.*); Mr. F. J. Wood, Shire Hall, Lewes.

Preston.—Parish-room (400 places), Vicar, St. George's Church, Preston. Sunday and parish rooms (2,500*l.*); Mr. W. P. Gilbertson, 9, Winchley-street, Preston.

Rastrick Brighouse.—Free library (2,000*l.*); Mr. R. Rogerson, Henry-street, Brighouse.

Sheffield. Extensions to Ellesmere-road School: Mr. F. E. P. Edwards, Architect, Town Hall, Sheffield.

Southampton.—School, Mousehouse-lane (6,000*l.*); Mr. C. L. Crowther, Engineer, Town Hall, Southampton. Erection of handicraft and cookery centres (1,517*l.*); Mr. J. Nichol, builder, 19, Buller-road, Bitterne Park, Southampton. Additions to Ascupart School (1,360*l.*); Messrs. H. Stevens & Co., builders, 126, Above Bar, Southampton. The following plans have been passed:—Six houses, Ampthill-road, for Messrs. Watson & Burnett; three houses, Oxford-road, for Mr. D. J. Crook; additions, Mount Hermon, Church-lane, for Messrs. Udall & Co.; four houses, Four Posts-hill, and six houses, Station-road, for Mr. W. Wheeler.

Stockport.—Addition to hat works, Chestergate and King-street West, for the Chestergate Hat Manufacturing Company, Ltd.

Stretford.—Plans have been passed as follows:—Five shops, Moss-road, for Mr. G. W. Unsworth; store, First avenue, for Mr. Thomas Maiden; reconstruction of Dog and Partridge Hotel, Chester-road, for Messrs. Walker & Homfray, Ltd. Plans have been lodged for a motor garage, Humphrey-street, for Messrs. W. J. Brookes & Sons.

Swansea.—Shop, stores, etc. (2,000*l.*); Mr. A. Williams, architect, Wharton-street, Cardiff.

Teddington.—A plan has been passed for a cinematograph theatre in Kingston-road for Mr. S. J. Waters.

Troon.—Shop (2,800*l.*), for Ailsa Shipbuilding Works.

Twickenham.—A plan has been passed for the conversion of Richmond Rink into motor garage for the London General Omnibus Company.

Underbank.—Additions to school (3,000*l.*); Mr. J. H. Gilmore, School Board Offices, Lesmahagow, N.B.

Watford.—Alterations to grammar school (1,740*l.*); Messrs. George Wigg & Son, builders, 90, St. Alban's-road, Watford.

Wellingborough.—Sunday-schools (2,000*l.*); Trustees, Wesleyan Methodist Church, Wellingborough.

Weston Mill (Devonport).—Church (5,000*l.*); Mr. A. Bazeley, architect, 21, Prices-street, Plymouth; Messrs. Lapthorne & Co., builders, Citadel-road, Plymouth.

Weybridge.—Enlargement of cottage hospital; Architect, care of the Trustees.

Whitburn.—School (4,500*l.*); Mr. F. Graham, 124, George-street, Edinburgh.

Yarmouth.—School (4,355*l.*); Mr. B. G. Beech, builder, Yarmouth. Enlarging infirmary (3,000*l.*); Mr. A. S. Hewett, architect, 23, Regent street, Yarmouth. The following plans have been passed:—Houses, Windsor-avenue, for Messrs. J. & R. Chaston; five houses, Priory-gardens, for Mr. J. Eastoe; rebuilding warehouse, Beech road, Gorleston, for Mrs. Burdock.

LONDON COUNCILS.

Barnes.—Plans have been passed for Messrs. G. W. F. Bates for four houses, Lower Richmond-road, also for Mr. E. J. Partridge for six houses in Treen-avenue.

Barnet.—The Surveyor has been instructed to prepare an estimate of the cost of repaving the alleyways leading from High-street to Strafford-road. Sanction has been received from the Local Government Board to borrowing of 4,800*l.* for the erection of wo ing-class dwellings. The Board, however, pressed the opinion that smaller cottages be let at lower rentals than at present c templated were needed, and asking the Cou to inform them whether they would underta to provide same at an early date.

Bermondsey.—A plan has been passed the erection of Roman Catholic schools George-row, for the Convent of Mer Arnold's-place, Deckhead. The architect Mr. R. L. Curtis, 10 and 12, Finsbury-squa E.C. The Cubitt Concrete Construction Co pany, 260, Gray's Inn-road, W.C., are contractors for the concrete foundations.

Camberwell.—The London County Council to be requested to connect the Council's lo sewer in Ivydale-road to the County Counc new main sewer, in course of construction fr Nunhead to Brockley, at an estimated cost 185*l.*, to be paid by the Borough Council

Deptford.—The tender of Mr. E. G. Rays 27, St. Donatt's-road, has been accepted 193*l.* for repair works to the Council's Knot terrace property and 47, Tanner's-hill.

Ealing.—At the last meeting of the Cou Indurated Victoria, Croft Adamant, Aberde Adamant, and Brooks' Adamant makes stone were approved as the list to be attach to all specifications to be issued in future the making-up of private streets.

East Barnet.—At the last meeting of Joint Isolation Hospital Committee, held the District Council offices, a Committee w appointed to go into the question of erection of an observation block and oth alterations at the hospital.

East Ham.—The Works Committee have proved the amended tender of the Alph Custodis Chimney Construction Company, Lt at 1,164*l.*, for excavations, foundations, a erection of a chimney-shaft at the refu destructor works. Plans have been passed Mr. E. R. Fenwick and Mr. J. Harding the erection of six houses, Green street, a four houses, Plashett-lane, respectively. T following plans have been lodged:—Mr. Harber, four houses, Macaulay-road; Mr. Clark, sixteen houses, Kimberley-avenu Messrs. Lupson & Hirst, four houses, Dicke road; Mr. F. Hamlett, thirty-nine hous Montpelier-gardens.

Esher and Ditton.—The Council have decid to make up Imber Park-road.

Friern Barnet.—Plans have been passed Messrs. Hodges & Son for the erection eight houses in Hilton-avenue.

Lewisham.—The following plans have be passed:—Mr. A. W. Vidler, eight hous Codrington-hill and Brockley-avenue; M James Watt, eleven houses, Bellingham-roa Mr. T. A. Boughton, pavilion, Bellingha road.

Marylebone.—During the financial ye 1912-13, Old Cavendish-street and portions eleven other roads are to be repaved w wood at an estimated cost of 15,193*l.* T present pavings in portions of four other roa are to be substituted with wood at an es mated cost of 5,137*l.*, and Upper Marylebo street and portions of two other streets w asphalt at an estimated cost of 8,699*l.* Duri the same period seven streets and portions eight other streets are to be laid with t macadam at an estimated cost of 4,175*l.* T asphalt carriageway of Bird-street is to renewed at an estimated cost of 283*l.*

Richmond.—Hill-street from a point oppos the Town Hall to its junction with Petersha road, and Petersham-road to the almshou at Petersham, are to be paved with creosot deal blocks at an estimated cost of 5,600*l.*

Shoreditch.—The carriageway of Bridpo place is to be repaved with 2-in. compress asphalt on 6-in. Portland cement concrete an estimated cost of 3,000*l.*

Southgate.—Application is to be made the Local Government Board for sanction borrow 1,050*l.* for the construction of fo paths and 1,750*l.* for the drainage at t Grovelands public park.

Tottenham.—The following plans have be passed:—Messrs. Warren & Stupart, buildi at gum factory, Paxton-road; Mr. W. Riley, Superintending Architect, Lond County Council, Spring gardens, S.W., fif one houses, Tower Gardens-road, Mess Rowley Brothers, garage at Boundary Wor Crawley-road.

West Ham.—The Education Committee ha accepted the tender of Mr. W. J. Maddis 487*l.*, in lieu of that of Messrs. Barker Co., for the construction of a new handicr centre and covered playground at Russell-ro School.

Westminster.—Maintenance works are to carried out in Haunch of Venison yard at approximate cost of 100*l.*

TRIBUNAL OF APPEAL UNDER THE LONDON BUILDING ACT.

The Euston-road Building Line.

On Thursday, January 11, the Tribunal of Appeal under the London Building Act sat at the Surveyors' Institution to hear the parties interested in the decision of the Tribunal respecting the building line in Euston-road, between Osnaburgh-street and Hampstead-road, regarding the stating of a case for the High Courts on the application of the London County Council. Mr. A. A. Hudson presided. Mr. C. Daldy represented the London County Council; Mr. A. Bethune appeared for the Metropolitan Railway Company; Mr. Hyde, K.C., and Dr. Herbert Smith for Leslie's Trustees; and Mr. A. F. Wootten for the owners of the "Adam and Eve" public-house. A large number of other owners of property were represented, either by solicitors or personally, and Mr. Blair, Borough Engineer of St. Pancras, represented the Borough Council.

The Chairman said that the London County Council had given notice asking the Tribunal to state a case, and notice had also been given to Leslie's Trustees. A draft case had apparently been attempted to be settled between the Council and Leslie's Trustees, but they were unable to agree, and the Tribunal was asked to settle it, and it then appeared there was a cross appeal introduced, in which the Metropolitan Railway was concerned. The Tribunal wrote to the County Council asking if they intended to prosecute the appeal, and were told that they did; and then the County Council requested that notice of the appointment before the Tribunal should be given to all persons who were before the Tribunal when the cases were heard, and notices had accordingly been served.

Mr. C. H. Love (Clerk to the Tribunal) gave a list of the persons to whom notice had been sent.

Mr. Daldy said it did not follow that because as a matter of expediency notice had been given to a number of parties, all the persons who were concerned in the settlement of a case would be entitled to be heard in the Court above.

Mr. Wootten pointed out that if the London County Council went further with the appeal as clients, the freeholders of the "Adam and Eve" public-house, would be the most interested parties in opposing. Apparently they were not parties to the original proceedings.

Mr. Bethune said the Metropolitan Railway Company were perfectly contented with the order of the Tribunal, and did not want a case stated at all. He submitted that no point of law was involved in the decision so far as his clients were concerned. The Tribunal found on a matter of fact, against which there could be no appeal.

The Chairman said that might be so, but the County Council had asked that a case could be stated, and the only question was whether it was desirable to state one case in respect of all the appellants or whether separate cases should be settled.

Mr. Bethune submitted that even if there was a question of law in the case of the Metropolitan Railway it ought not to be considered with other questions of law which would arise in regard to other points dealt with in the Superintending Architect's decision. Each of the appeals against the certificate of the Superintending Architect was a separate and independent case. It was true that for convenience, and with the consent of all parties, the Tribunal heard the cases together; but that did not prevent them being separate proceedings.

Mr. Hyde, K.C., urged that a separate case could be stated in regard to Leslie's Trustees. The Trustees had granted a building lease, and the building tenant had erected one building, partly erected another, and wanted to go on with a third. The tenant complained that in consequence of the decision of the London County Council he would be unable to carry on anything like the buildings for which he took the land, and was claiming large compensation from the Trustees. It would be seen that it was a matter of vital importance to the building tenant, and consequently to the building owner. In form they were appealing against the decision of the Tribunal, but they knew that this decision was one which the Tribunal were bound to give in consequence of the decision of the High Court. They wished to distinguish their case from other cases, and in consequence asked that a separate case should be stated.

Mr. A. W. Bell supported the application. Mr. Wootten on behalf of the owners of No. 5, Hampstead-road, which, he pointed out, the Tribunal held were not in Euston-road, and also of the owners of 288 and 290, Euston-road.

Mr. O. L. Thomson, on behalf of the owner of 318, Euston-road, one of the original appellants, asked that he might be struck out of the case, so that his clients would incur no liability in regard to costs.

Mr. Norman also made a similar application on behalf of his clients, and Mr. C. Tyrrell Lewis, on behalf of Messrs. Boots, Ltd., supported the contention for separate cases to be stated.

Mr. Daldy argued at length that there should be one case only stated, and contended that by the House of Lords' decision in the case of Lilley *v.* Skinner it was laid down that when one proceeding was settled it settled the building line once and for all.

The Chairman pointed out that there were four separate appeals in the Lilley *v.* Skinner case.

Mr. Daldy demurred to the use of the term appeals, although he agreed that there were four defendants in the case.

The Chairman pointed out the injustice which might arise. There might be a building on 50 or 60 ft. frontage in a road, and the Superintending Architect might define a line three or four miles long. They recently had such a case of over a mile long.

After further argument, the Chairman said the view of the Tribunal was that this case lent itself to three cases. There was the middle block, the Hampstead-road end, and the Metropolitan Railway end. Three separate arguments would apply to those lines. He was sure it would be an injustice to the Metropolitan Railway Company if they had to be involved in the whole of the proceedings.

Mr. Daldy said that under those circumstances he would have to apply to the Divisional Court to decide whether they should be separate cases or one case.

The Chairman said they thought it desirable there should be three cases.

Mr. Wootten suggested that Mr. Daldy should first satisfy the Tribunal that there was a point of law on which there was a case to be stated.

The Chairman thought Mr. Daldy had better stick to the one point now. At the hearing they were taken back as far as 1750.

Mr. Daldy said they might treat that as an application to the Tribunal to state one case for the purposes of the application to the Divisional Court.

The Chairman said that Mr. Daldy was asking them to state in one document an appeal by Leslie's Trustees, with the London County Council as respondents; an appeal by the London County Council, with the Metropolitan Railway as respondents; and a third appeal by the London County Council, with the owners of the "Adam and Eve" as respondents. The only question was that the owners of the "Adam and Eve" made no appearance at the hearing.

Mr. Wootten said his clients were prepared to be made respondents in the appeal.

Mr. Daldy asked if he would be allowed to state in his application to the Divisional Court that he had asked the Tribunal to state one case on the whole proceedings and they had refused.

The Chairman said they were willing to state three cases, but having regard to the circumstances they did not consider it desirable to state one case only, because it might cause injustice to the parties. For that reason Mr. Daldy must take it that they refused to state the case in the form he had asked it.

Mr. Daldy put it that if the proceedings were attended by eight or ten different persons, and there were eight or ten different appeals, then the Tribunal would state eight or ten different cases.

The Chairman said the Tribunal did not want to be put before the Court in an unreasonable light. There were not ten appeals. They thought there should be three, but they would not have it put upon them that there were ten or fifteen appeals. They knew more about the facts than anybody, and they did not think it fair to the parties that the cases should be mixed up. If they were wrong, the Court would set them right.

The case then stood adjourned, pending the application to the Divisional Court or subject to meeting on the application of either of the parties.

Allen & Norris *v.* London County Council.

The Tribunal sat at the Surveyors' Institution on Friday to hear an appeal by Messrs. William Gilbert Allen & Henry George Norris, against the certificate of the Superintending Architect of Metropolitan Buildings dated December 2, 1911, defining the general line of buildings on the western side of Fulham Palace-road, between Bishop's Park-road and Brandenburgh-road. Mr. H. Courthope Munroe and Mr. Clarke appeared for the appellants, and Mr. Macmorran, K.C., and Mr. Daldy represented the London County Council.

Mr. Munroe said the whole point of the case was whether the Superintending Architect had taken an abnormal length of road in fixing the general line of building. The appellants were builders and had developed a large area of land in Fulham in the last twenty years or so. Twenty years ago the road was an old country road about 20 ft. wide, and then a considerable area of land east of Crabtree-lane was built on, the houses being of a small class, with gardens in front. Then his clients bought land west of Crabtree-lane, the road there being practically unbuilt upon for a considerable distance, with the exception of a school belonging to the County Council and four shops erected some years ago. They erected four shops, which were structurally finished in July, 1911, and paid the District Surveyor's fees. In August, when they were completing the internal decoration, they were told that they had been built beyond the building line, and they were asked to pull about 9 ft. down. His submission was that the points to be taken for the general line of buildings should have been between Crabtree-lane and Brandenburgh-road, or even if they went beyond Brandenburgh-road to Hammersmith he did not mind. If the Tribunal took a shorter length of road and omitted the shops built some years ago there would be no line of building at all, whilst if they took in the shops and school the buildings of the appellants were well within the building line. He contended that the mistake the London County Council had made was in trying to get something for nothing from his clients, and he put in a plan showing that the Council were prepared to agree to the buildings being retained where they were (except for a few inches), on condition that the appellants threw a strip of land into the public way.

The Chairman said that all the Tribunal had to do was to define the general line of buildings; but it looked as if the parties had got nearly to terms. The Tribunal might find there was no general line of buildings, in which case the builders could build right up to the street; but they might, on the other hand, find that the Superintending Architect was right, in which case it would be a very serious thing for the builders. In view of the two alternatives, he thought it would be well if the parties could get to terms.

The parties discussed the possibility of getting to a settlement on the basis of the buildings remaining where they were, and the appellants giving up a strip of 5 ft. of their land for the public; but it was pointed out that the difficulty was with regard to the cellars and cellar lights, as the Borough Council would not allow cellar lights in the public way, on account of their liability in case of accident.

Mr. Munro said that the appellants owned 5 ft. of land in front of the main wall of the buildings they had erected, and 2 ft. 6 in. of this was occupied by the cellar flaps and lights. They were prepared to throw the other 2 ft. 6 in. into the public way, but he was informed that if the whole 5 ft. was given up it would considerably affect the letting value of the property.

Mr. Macmorran said he could not accept this.

Mr. H. G. Norris, one of the appellants and the present Mayor of Fulham, said that in 1900 his firm developed the land from Crabtree-lane to Harbourd-street. Last year they bought the estate between Crabtree-lane to the County Council school. The decision would affect not only the shops they had put up, but also those they wanted to put up. They took the shops at Parfrey-street as defining the building line, and told the District Surveyor so at the time they deposited the plans. Witness bore out the statement of Counsel.

In cross-examination, Mr. Macmorran put some letters to witness which had passed in May between the London County Council and a Mr. Poole, then acting for the appellants, and who had since died, and witness said this had relation to some projecting bays and not to the general line of buildings.

The Chairman said that, reading the letters, it did seem that they might be taken to apply only to the bay windows, and it did seem extraordinary that the County Council should have been in communication with the District Surveyor in regard to the buildings, and yet that the builders should have been allowed to go on and complete the buildings.

Mr. Macmorran said he was informed that Mr. Poole had an interview with the officers of the London County Council in regard to the whole matter.

In re-examination, witness adhered to the

statement that the first time he heard that they had done anything wrong was on August 1, when they had spent 2,000*l.* on the buildings.

Mr. Charles Botterill, formerly Surveyor to the late Fulham Board of Works, said he considered the building line ought to be taken from Crabtree-lane to Queen-street, Hammersmith, which was near the Broadway.

Mr. J. C. Radford, A.M.Inst.C.E., who was for twenty-five years Surveyor to the Wandsworth District Board of Works, said he had known the neighbourhood for thirty-five years. He agreed with the last witness as to what portion of the road should be defined, and considered that the appellants' buildings were as near as possible on the general line of buildings.

In cross-examination, witness said he could start the line at Crabtree-lane because the road from that point was of a different character.

The further hearing of the case was adjourned provisionally till January 22

TRADE CATALOGUES.

Messrs. C. & R. Light, Ltd., of Curtain-road, E.C., forward us their current stock list of hard-woods, comprising consignments of Louisiana, Red Cypress, whitewood, plain and figured oak, and satin walnut.

A new edition of their catalogue of stable, cowhouse, and piggery fittings has reached us from the Carron Company. It would be superfluous to enlarge on the importance of proper drainage and ventilation in the stable; the "Carron" stabling is the outcome of the experience of over a century. Any of our readers who may be engaged in the designing of stable buildings would do well to consult the Carron Company in the matter of fittings. The catalogue before us is singularly complete; in fact, a veritable encyclopædia of the needs of the horse.

The Seyssel and Metallic Lava Asphalte Company, of 42, Poultry, London, E.C., enclose us a pamphlet about Seyssel asphalt, including a list of works done twenty-four years ago. The limestone contained in Seyssel asphalt is a genuine asphalt stone composed of carbonate of lime in such a state of natural purity that, it is claimed, no artificial production, under the most favourable conditions, can equal its reliability. Impure limestones, which are composed of carbonate of magnesia or similar elements, do not respond so readily to the saturating action of bitumen, and the melting process required to produce mastic asphalt, frequently reverse the very ingredients that should be firmly united. The following are a few among many important buildings where Seyssel asphalt has been employed and has triumphantly stood the test of time: The Vegetable Market, Shoreditch; the Central Fish and Poultry Market, Municipal-buildings, Sheffield; Winchester House, Old Broad street, E.C.; and the London, Tilbury, and Southend Railway Company's goods depôt.

Messrs. Arden Hill & Co., the "Acme" Gas-Stove Works, Birmingham, forward us their latest catalogue of "Acme Gas Fires." The "Olak" and "Kalo" are the firm's latest productions, and their leading features comprise the "Helium" radiant (a single column radiant), patent removable firebrick lining, and detachable burner, fitted with their "Simplex" gas and air adjuster. A gas fire of sufficient width to replace wide coal-fires in large apartments has long been a desideratum; the "Versailles" gas-fire, with a fire width of 21 in., has been designed to meet this difficulty. The most noteworthy of the gas-heaters and boilers manufactured by Messrs. Arden Hill is the "Domus" patent gas-heated steam boiler for heating garages, greenhouses, etc., and designed to be placed outside, and connected to hot-water radiators or pipes inside the building.

LEGAL COLUMN.

Workmen's Compensation.

A case of some importance to employers, Phillips *v.* Vickers, Son, & Maxim, not hitherto noticed by us, is reported in the current "Law Reports." On August 26, 1909, a workman was injured by accident, and the employers by correspondence admitted the accident and agreed to pay half his wages as compensation upon the certificate of their own medical man so long as incapacity lasted. On January 31, 1911, the workman applied to have a memorandum registered. In this memorandum, as drawn up, no mention was made of the certificate of the doctor. The County Court Judge ordered the memorandum to be registered, but the employers appealed. The Court of Appeal allowed the appeal, holding that the agreement to pay compensation was conditional on the employers' medical man certifying that the incapacity lasted, not an absolute agreement, as stated in the memorandum, to pay compensation during incapacity.

The result of the decision may be that an arbitration will have to be held to determine whether or not the man is entitled to recover compensation owing to continuing incapacity, so little has been gained by this particular form of agreement. Assuming that the doctor had withheld his certificate, that would not have concluded the matter, because it is hardly likely that the man would accept the employers' doctor's decision of the case as final.

The Master of the Rolls suggested that the best form of agreement was that adopted in the case, Jones *v.* Great Central Railway Company:—"We are paying you the full weekly allowance, and these payments will continue during disability"; but even under such an agreement there might be a question as to the degree of incapacity.

The Courts are anxious not to discourage employers and workmen from mutually agreeing in such matters, but there is considerable difficulty in coming to satisfactory agreements without the assistance of the Courts, unless the incapacity is of a kind that can hardly vary, *i.e.*, from the loss of a leg, etc.

We have repeatedly cautioned our readers in insuring under this Act to be careful to read the conditions contained in their policies. In a case heard by the Court of Appeal, December 20, Bradley *v.* The Essex and Suffolk Accident Indemnity Society, the assured only employed one person, his son. This man was injured by accident, and the assured put in a claim against the insurers in respect of the compensation paid to his son.

The policy was stated to be "subject to adjustment as hereinafter provided," and there was a clause which stated that the first premium and all renewal premiums should be regulated according to the amount of wages paid to employees, and that a wages book should be kept. No wages book was kept, and the assurers contended that they were not liable under the policy, as this was a condition precedent. The Court held that this was not a condition precedent, and in case of ambiguity the policy ought to be construed in favour of the policyholder; but Lord Justice Fletcher Moulton dissented.

LAW REPORTS.

Harries *v.* Wright.
Damage to Buildings by Poplar-Trees: Injunction Granted.

THE action of Harries *v.* Wright was heard before his Honour Judge Sir C. Selfe at the Marylebone County Court on Tuesday, January 9.

The plaintiff, Mrs. Harries, is the owner of 118, Dartmouth-road, Cricklewood, N.W., and she claimed that her premises had been damaged by the roots of certain black poplar-trees which had been planted at the bottom of the garden of No. 116, Walm-lane, adjoining her house. She claimed an injunction to restrain further damage and 100*l.* damages. Mr. A. Neilson (instructed by Messrs. T. Richards & Co.) appeared for the plaintiff, and Mr. Lightwood (instructed by Mr. J. H. Waterman) appeared for the defendant.

The evidence for the plaintiff was to the effect that a wall had subsided near the poplar-trees, and that in excavating for the purposes of underpinning and restoring the wall large quantities of poplar-tree roots were found in the trenches, and these proceeded from the poplar-trees planted by the defendant. The plaintiff's witnesses further stated that similar injury had occurred to the same house in 1908 from the same cause, but that no claim had been made then. It was also stated that black poplar-trees were well known as being dangerous to buildings near to which they were planted.

The evidence on behalf of the defendant sought to attribute the damage to the exceptionally dry summer which had been experienced in 1911, to the nature of the soil, and also to the method of construction of the walls which had been affected. It was also alleged on behalf of the defendant that the roots were not so numerous as the plaintiff's witnesses alleged, and that they could not have done any harm.

Counsel for the parties having addressed the Judge, his Honour Judge Selfe analysed the evidence and came to the conclusion that on the facts the plaintiff had established that the damage done to her building was, in fact, caused by the poplar-trees having been planted near to her boundary and by the roots pe trating and undermining the soil on which t wall was erected.

It appeared that no former case h occurred in which an injunction had be granted against damage occurring by the trusion of roots of trees, but principles h been laid down in decided cases whi warranted him in granting an injuncti against the continuance of the trespass co plained of.

He therefore gave judgment for the plaint for 100*l.* damages and an injunction, wi costs.

Accident to Workman at Bishop's Palace.

THE case of Measey *v.* The Lord Bish of Norwich came before Mr. Justice Br and a common jury in the King's Ben Division this week.

In this case the plaintiff, a hot-water fitt in the employment of the firm of Mess Samuel Owens & Co., who were engaged fit up an apparatus at the Bishop's palace Norwich, claimed damages for personal injur received as the result of an accident.

It appeared that, on the instructions of t foreman of the firm, a trench was open across a corridor on the ground floor by local builder named Smith, by who according to the terms of the contract, t work was to be done free of charge. Th trench was covered with boards, one of whi slipped while the plaintiff was passing over the result being that the plaintiff fell a fractured his leg.

The defence was a denial of liability; fir because there was no evidence of negligen against the defendant, either personal through his servants. Secondly, it was co tended, on behalf of the defendant, that t plaintiff was in the employment of Mess Samuel Owens & Co., who were independe contractors, and that if there was negligen on the part of one of their men the doctri of common employment applied. Thirdly, was contended that, as the plaintiff h received money under the Workmen's Co pensation Act, he was estopped from obta ing damages in the present action.

On behalf of the plaintiff it was submitt that the defendant, as the occupier of t palace, could not escape liability for t act of those to whom he had delegated t work. In the present case the defendant h delegated work, both to Messrs. Samuel Owe & Co. and to Mr. Smith, and it did not mat which of them negligently caused the accide the defendant was, in the circumstances, liab

Mr. Justice Bray held that in the circu stances the defendant was not liable, withdr the case from the jury, and entered judgme for the defendant with costs.

Mr. Booth and Mr. Gibbons appeared the plaintiff, and Mr. J. Sankey, K.C., a Mr. Malcolm Macnaghton for the defendant

PATENTS.

List of Competitions, Contracts, etc.

For some Contracts still open, but not included in this List, see previous issues. **Those with an asterisk (*) are advertised in this number:** Competitions, iv.; Contracts, iv. vi. viii. x.; Public Appointments, —; Auction Sales, xxii.

Certain conditions beyond those given in the following information are imposed in some cases, such as: the advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in.

*** It must be understood that the following paragraphs are printed as news, and not as advertisements; and that while every endeavour is made to ensure accuracy, we cannot be responsible for errors that *may* occur.

METROPOLITAN ASYLUMS BOARD.

AT the fortnightly sitting of the Metropolitan Asylums Board on Saturday the following matters amongst others were dealt with:—

Leavesden Asylum.—A letter was received from the Local Government Board asking for further information with regard to the proposal to provide six two-tier bridges at this asylum at an estimated cost of 7,000*l.*

Darenth Asylum.—For the fencing-in of buildings at this asylum the tenders of Messrs. Bayliss, Jones, & Bayliss, Ltd., of 452*l.* 12s. 6d., and of Messrs. Steavenson & Co., of 125*l.*, were accepted. The Asylums Committee submitted a report with reference to the further inquiries made by the Local Government Board as to the proposals for roofing in the upper yard, and suggesting as an alternative the construction of a wide verandah round three sides of the yard. The Committee suggested a modification in the original scheme, which would reduce the cost from 700*l.* to 595*l.*

Reflooring Work.—It was decided to relay in oak the floors of certain wards in the South Western Hospital, and in terrazzo the floors of the lavatories, bathrooms, etc., of the hospital, at a cost of 620*l.*, and also to overlay two more floors at the Eastern Hospital with "Durato," at a cost of 240*l.*

FOREIGN AND COLONIAL.

Works in Austria-Hungary (Bosnia-Herzegovina).

With reference to the notice on pp. 630-1 of the *Board of Trade Journal* of December 28 relative to a Bill submitted to the Bosnian Landtag providing for the construction of railways from Tuzla to Brcka, Bjelina, and Raca, from Banjaluka to Jajce, and from Bihác to Novi, at a total cost of some 3,400,000*l.*, H.M. Consul at Sarajevo (Mr F. G. Freeman) reports that the Bill also provides for the expenditure of a further 1,479,000*l.* on railway improvements; 808,000*l.* on roads and bridges; 132,000*l.* on hospitals, etc.; and 419,000*l.* on schools.

Building Materials, etc., in Congo State.

The *Moniteur Belge* of December 31 states that the extraordinary expenditure to be included in the Congo Budget for 1912 amounts to 18,618,660 francs, of which 4,100,000 francs are for the building of houses and other buildings, and also barracks, etc.

TO CORRESPONDENTS.

NOTE.—All communications with respect to literary and artistic matters should be addressed to "THE EDITOR" (and not to any person by name); those relating to advertisements and other exclusively business matters should be addressed to "THE PUBLISHER," and not to the Editor.

All communications must be authenticated by the name and address of the sender, whether for publication or not. No notice can be taken of anonymous communications.

The responsibility of signed articles, letters, and papers read at meetings rests, of course, with the authors.

We cannot undertake to return rejected communications; and the Editor cannot be responsible for drawings, photographs, manuscripts, or other documents, or for models or samples sent to or left at this office, unless he has specially asked for them.

All drawings sent to or left at this office for consideration should bear the owner's name and address on either the face or back of the drawing. Delay and inconvenience may result from inattention to this.

Any commission to a contributor to write an article, or to execute or lend a drawing for publication, is given subject to the approval of the article or drawing, when received, by the Editor, who retains the right to reject it if unsatisfactory. The receipt by the author of a proof of an article in type does not necessarily imply its acceptance.

N.B.—Illustrations of the First Premiated Design in any important architectural competition will always be accepted for publication by the Editor, whether they have been formally asked for or not.

TENDERS.

Communications for insertion under this heading should be addressed to "The Editor," and must reach us *not later than* 10 *a.m. on Thursday.* [N.B.—We cannot publish Tenders unless authenticated either by the architect or the building owner; and we cannot publish announcements of Tenders accepted unless the amount of the Tender is stated, nor any list in which the lowest Tender is under 100*l.* unless in some exceptional cases and for special reasons.]

*Denotes *accepted.* †Denotes *provisionally accepted.*

PRIZE DESIGNS AT THE R.I.B.A.

THE withholding of the Soane Medallion must always be a great disappointment to those immediately concerned and a matter of some regret to everyone interested in the future of architecture, as it is generally regarded as an indication that the work of the year is not up to the usual standard.

Although the Exhibition, taken as a whole, includes some very creditable work, yet no design submitted for the Soane appears to be of such outstanding merit as to suffer any grave injustice by the reservation of the prize.

We imagine, however, that the Council in taking this course were prompted not so much by a deliberate intention to express disappointment at the general level of the designs as by some little difficulty in choosing between the rival claims of the two designers, Mr. William Friskin and Mr. Piet de Joug, to each of whom has been awarded a certificate of Honourable Mention and a sum of 50*l.* This difficulty seems to be largely of the Council's own making. The subject set was a guildhall situated in a public park. Although it may perhaps be maintained that there is no reason why a guildhall, or any other building, should not be placed in a public park, yet it might be contended with equal, or even greater, force that there is no reason why it should. A guildhall is not one of those buildings that demand a site in a park. This is not just the most characteristic position imaginable. A guildhall suggests the civic centre, which is not usually a park.

But however this may be, the fact remains that the position of a building influences its lay-out and general treatment. The provision of a site not usually associated with the type of building desired is apt to confuse the student and to cause him to hesitate as to the treatment to be adopted, and to wonder how far it is permissible to vary the characteristic arrangements of any building in order to take full advantage of an uncharacteristic site. Competitors may well have thought that it was not quite clear whether the intention was simply to provide an unrestricted island site on which the building could develop its natural and characteristic form, and be given proper setting and approaches, or whether the park site was of the essence of the conditions—given with the deliberate intention of provoking those modifications of convenience and of accepted arrangements which would be necessarily entailed if full justice was to be done to the opportunity.

Be this as it may, the result is that most of the competitors show but little appreciation of the opportunity, and produce designs which might equally well have been placed in any open island site in the heart of a city. The principal

exception to this general rule is the design by Mr. William Friskin, which, taking the park site seriously, and making some definite attempt to show the influence of such a site and surroundings, and to solve the peculiar problem involved, creates, in so doing, a problem for the judges, which they, for their part, have attempted to solve in the same spirit of compromise as is displayed in Mr. Friskin's design.

The scheme by Mr. Piet de Joug is more compact, better arranged for the circulation of the public at receptions, more "practical," worked out better, perhaps, and, if there is anything to choose between them on this score, it may possibly show more technical accomplishment; but in its general lay-out, massing and grouping, and scale of feature it makes no special affort to take advantage of the character of its site or to express the influence of its environment. It is not altogether a solution of the exact problem involved. On the other hand, the design by Mr. Friskin does make a definite attempt to show the modifications of arrangements and of general lay-out suggested by the important fact that the building stands in a park. The idea may not be so well worked out in some respects—the junction of the circular hall with the main building, for instance, is not altogether happy—but it seems to be a more correct idea, and this is the first and most important factor in a competition of this description, and one which the judges are bound to take into consideration.

The fact that Mr. Friskin's design is less convenient and less compact is balanced by the fact that it is well spread out—a virtue on a park site, compactness being more appropriate to a compact or confined site. If this quality is essential to a guildhall the suggestion naturally presents itself that a park site is not. Indeed, we seem driven to the conclusion that what is a virtue in a park building is a vice in a guildhall, and that the problem is one which, if it is capable of satisfactory solution at all, is certainly most subtle and difficult, a refinement of expression needing a master hand; hardly suitable, therefore, as a subject for the Soane Medallion.

If the Council in stating the conditions of the programme attached any definite meaning to the site in a park and intended it to be a special problem, then we think Mr. Friskin's design would have won as being the best design which makes any serious attempt to solve it.

The fact that the Council have compromised between Mr. Friskin and Mr. Piet de Joug suggests that they attached no special meaning to the word and did not realise the significance or the possibilities of their own programme till they saw the different ways in which it could be interpreted by the students, when they found themselves in the position of not being able to award the prize to either one of the two best designs without injustice to the other.

The whole incident is unsatisfactory, and suggests that the programmes for these competitions are perhaps drawn up in too casual a manner.

Although there seems little doubt that the money prize has been divided between the two most meritorious designs, the reasons that prompted the selection of the other Honourable Mentions are not quite so obvious. Mr. Bertram Lisle has a good practical scheme, more pleasing perhaps than that by Mr. C. A. Harding, but both of them seem to be somewhat lacking in character. This perhaps is due to the fact that they have not made a special feature of the hall.

Where, as in this case, the programme consists of one principal hall round which the lesser ones are grouped the most characteristic effects can be obtained by frankly and clearly expressing this arrangement on the elevations. The hall itself provides the dominant feature. Where, however, as, say, in the Palais de Justice at Brussels, the scheme consists of several halls or courts of more or less equal importance, they can be grouped together in accordance with their relative functions, and the expression of the whole can be gathered up by one central dominant feature. This method of expression, being more characteristic of large and elaborate schemes, hardly seems suitable to such a simple subject as this. From this point of view most of the other designs are superior. "Fraternity," "Sign of the Black Fish," "Dragon," "ΟΥ ΤΟΠΟΣ," "Guild," and "Vitæ" are all designs which, whatever their defects, show a simpler and more straightforward solution of the problem. "Experientia Docet" is a design in which much individual character and feeling appears to be wasted on an impossible idea. If this design, more than any other submitted, suggests that ability without right principles only runs to waste, the thought is immediately followed by the reflection that the responsibility for wasted energies lies on those who are in a position to direct and control our system of education.

The value of a sound training is aptly illustrated by the design of Mr. Louis de Soissons, which carries off the Tite Prize. We consider that this design for the covered courtyard of an exchange attains to a higher standard of technical excellence than any other in the Exhibition. It may or may not show the greatest natural gift, but, taking it all round, whether as design or as draughtsmanship, we are inclined to think it the finest achievement.

An Honourable Mention goes to Mr. T. H. Chalkley for a well-worked-out circular plan. "Gregalah" has some interesting coloured drawings. "Dum Spiro Spero's" design is delicately rendered, and "Black Cat" submits a creditable scheme; but none of them have a chance against such a mature and accomplished design as that by Mr. De Soissons.

It must have been no easy task to select the winner of the Pugin Studentship. The prize goes to Mr. James Macgregor for good and careful drawings and sketches. Honourable Mentions are awarded to Mr. C. P. Anderson, Mr. J. R. Leatheart, Mr. R. Norman Mackellar, and Mr. W. J. P. Jones, all of whom submit excellent work. It is interesting to note how the brush is superseding the pen as a medium for rendering Gothic work. Such drawings as the studies of Durham Cathedral by Mr. Mackellar show that the special style and character of Gothic need not suffer in the process.

The Silver Medal and ten guineas are awarded to an excellent set of coloured drawings of Compton Wynyates by Mr. A. E. Maxwell. These are most carefully and successfully carried out, and, with the accompanying notes, amount to a complete monograph of the building.

An Honourable Mention goes to Mr. W. M. Keesey for a straightforward set of drawings of San Spirito, Florence, finished in ink and slightly tinted; and another to Mr. A. B. Allen for a complete and interesting study of the octagonal lantern of Ely Cathedral. "Sphinx" submits tinted drawings of the entrance front of the Male Prison at Cork.

The Owen Jones Prize is won by Mr. N. H. Leaver with a set of drawings which show considerable power for the realistic representation of examples of coloured decoration. We cannot help wondering, however, whether the careful, exact, and forcible rendering of each minute tissue of a fragment of antique mosaic is exactly the best form of study to improve our colour sense or to teach one the principles of colour decoration. Mr. Mason, the other competitor, has some extremely good studies of heads from tempera wall decorations by Raphael.

The Grissell Prize for construction is awarded to Mr. T. Braddock for a well-worked-out scheme on somewhat usual lines, while "Blanc Mange" submits a more novel and up-to-date suggestion into which the æsthetic element is introduced in an interesting and suggestive manner.

The Cates Prize, being given for a miscellaneous collection of "testimonies of study," must also be rather a difficult one to award. Mr. J. B. F. Cowper wins it with some excellent drawings.

The general impression that we carry away from this Exhibition is that the supply of energy, enthusiasm, and ability in those who will carry on the traditions of architecture in the future is unfailing, but that these qualities do not get a fair chance owing to the lack of a thorough and systematic training in the first principles of architecture. Progress in this direction is, however, apparent, and, though slow, may perhaps on that account be all the more sure.

NOTES.

New Zealand Parliament Buildings.

We are glad to see that the recent competition for new Parliament Buildings in New Zealand has excited much local interest in architecture, and that our contemporary, *Progress: The Scientific New Zealander*, has thought the occasion of sufficient importance to warrant the publication of a selection of the designs. In an appreciative leading article it points out the necessity of obtaining the highest skill available, but does not appear to realise that the New Zealand Government, by limiting the competition to local architects, hardly went the best way to work to secure this result. Referring to some dissatisfaction with the interpretation of the conditions and with the method of assessing, our contemporary asks whether it would not have been much better to have sent the whole of the plans away to England to be judged by a member nominated by the R.I.B.A., and adds,

"There could have been no question then of any but fair treatment." Considering the nature and importance of the scheme, we think the New Zealanders would have been better advised to have done as the Manitoba Government proposes to do and throw the competition open to the whole of the Empire, in which case the arrangements for judging the designs would no doubt have been placed on a similar footing.

Colour as Applied to Decoration.

LAST Monday's papers at the Institute provided material for useful discussion. It is good for the arts of architecture and painting to find their representatives on the same platform adumbrating principles which are of equal importance to either art. The opinions of Sir Alfred East and Mr. Edgar Wood were scarcely ever at issue. Both architect and painter recognised the disadvantages which the dominating influence of the easel type of picture has on the outlook of a painter when he has to face a subject suitable for a mural painting. Sir Alfred East expressed himself entirely in sympathy with the architectural view that decoration should assist, rather than diminish or conceal, the structural qualities of a building. And he evolved interesting theories with regard to the influence of special forms in the appeal of colour, which were not wholly without a significance made prominent by the Post-Impressionists. His references to the decorative qualities of Japanese painting and the means by which they are attained—the relation of colour weight to colour area, and so on—were particularly illuminating, and worth the consideration of all decorative artists, whether painters or architects. His allusion also to the difficulties with which the painter may have to contend when the subject for a decorative painting, not susceptible of decorative treatment, is chosen not by the architect, but by some outside authority, is certainly worth attention. Mr. Edgar Wood admirably presented the architects' point of view, and, while expressing a difficulty in finding words to make explicit impressions which in their essence "defy language," as he said, he nevertheless managed to convey his views in phrases which justified the medium of language in subtle matters of interpretation. His appreciation, for instance, of the colour qualities of St. Mark's at Venice was one of the happiest justifications of the use of colour for its own sake that we have ever heard.

The Royal Academy Lectures on Sculpture.

THE first Royal Academy lecture on Sculpture this year was delivered on Monday by Professor W. R. Colton, A.R.A., the subject of the course being "Ideas and Ethics of Sculpture." The first lecture covered much of the ground of Professor Colton's recent Carpenters' Hall lecture, the first part being directed to a condemnation of the tendency to let ornament run riot in our public buildings, especially where, as in the "Keystone treatment," construction is sacrificed to ornament. The lecturer made some pertinent criticisms also on the Post-Impressionist sculpture fashionable in some places, but the best part of the lecture was in reference to our public monuments. Generally speaking, he said, England was a country of great intentions which were rarely carried out. Our bridges were left without ornamentation, and the art of sculpture was neglected by the public authorities. Foreign capitals were greatly superior to our own from the artistic point of view, and in this connexion the lecturer instanced the fine decorative approach to the Pont Alexandre III. in Paris. It was to be hoped that when the new St. Paul's Bridge came to be constructed the authorities would rise to the occasion. Our fault was that as a nation we were too utilitarian. We should be quite capable of putting kitchens inside our statues; anything to make them pay. The English grudged money for objects that appealed to the decorative sense alone. They failed to realise that miserable surroundings made miserable human beings. The few decorative objects we had in our thoroughfares were neglected and allowed to become coated with soot and sulphuric acid. As a nation we had become drab-grey, and all through the continual outcry in favour of utility.

Wood Engraving.

THE City and Guilds of London Institute Report for Session 1910-1911 on the City and Guilds South London Technical Art School, in commenting on the fact that at one time the Institute's School included in its work a successful class in wood engraving, "when that art provided the only means of illustrating books and periodicals in the text," tells how the art of wood engraving was gradually superseded by the discovery and perfection of mechanical processes by which artists' drawings could be reproduced in the form of blocks, and used in much the same way as wood engravings for illustrations capable of being printed along with ordinary type. As the Report says:—

> "The wood engraver, whose art consisted in interpreting artist's drawings and paintings on wood so that they might be printed in large numbers, was superseded by mechanical processes in which photography played the more important part."

The truth of this is, unfortunately, only too well known, and all artists and art workers must regret it, even while they are compelled to admit the inevitableness, once the mechanical process was started, of a loss which has rendered a fine craft more or less obsolete. We are glad to note from the Report that a very successful and useful work is being carried on in the School.

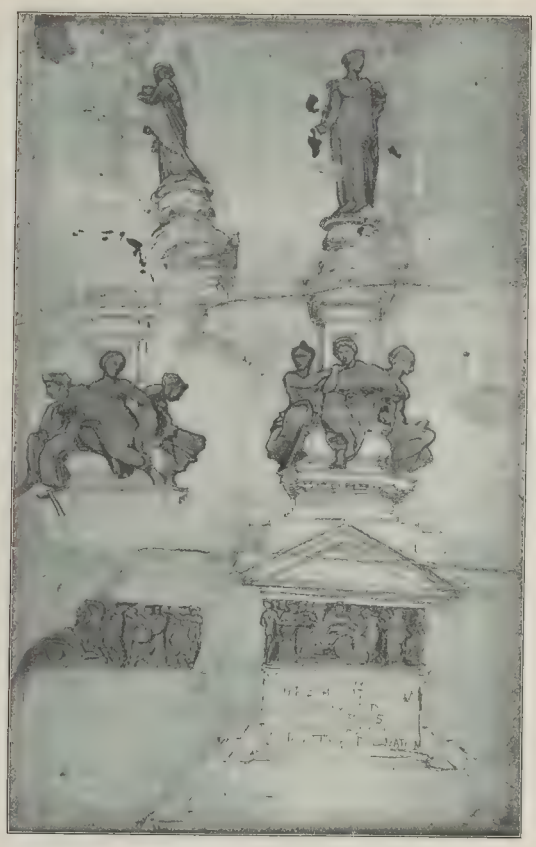
Hampton Court Palace.

MUCH satisfaction will be felt at the action of the Office of Works in carrying out a thorough scheme for the proper protection of Hampton Court Palace against fire. Probably no building of the magnitude and character of the Palace, used as this building is, can ever be altogether safe against fire; but so much can be done in these days of high-pressure water supply, electric fire alarms, telephonic communication, and efficient fire brigades, to render our national treasure-houses more or less proof against fire, that everything should be done on the most approved lines and regardless of cost. We welcome the action of the Office of Works and hope that other public buildings will not be forgotten.

The Carpenters' Hall Lectures.

WE should like to call attention to another course of free lectures on "The Arts Connected with Building," which has been arranged by the Worshipful Company of Carpenters in their Hall in London-wall, the first of which was delivered on Wednesday. The course has nothing to do with the more popular, though none the less useful, Thursday series, beginning this year on February 15, but it is arranged with the idea of interesting and instructing craftsmen and art workers, though the range is not limited, as will be seen by a perusal of the subjects and a glance at the list of able lecturers. Such a course deserves to be supported, and we hope the efforts of the Company, who are doing such excellent work both in London-wall and in Great Titchfield-street, will be appreciated by good attendances.

The R.I.B.A. "At Home."

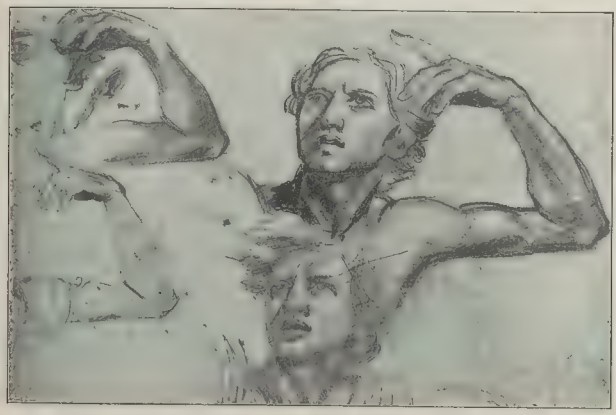


THE "At Home" given by the President and Council of the Royal Institute of British Architects at the Institute Galleries on Wednesday was a well-attended and successful function. Beyond the opportunity afforded for social intercourse, the object of interest on this occasion was the collection of drawings submitted in competition for the Royal Institute Prizes and Studentships, which were seen to advantage in the galleries of the Institute. The collection as a whole loses some of its interest from the fact that the Council have not been able to award the Soane Medallion this year, but the drawings are sufficiently attractive to interest the guests for the whole of a very pleasant evening.

LARGS MEMORIAL.

The designs of Mr. J. S. Kay, of Glasgow, architect, have been accepted for the erection of a memorial, in the form of a round tower after the Scottish mode, upon the foreshore at Largs.

CHURCH BUILDING SOCIETY.



The Incorporated Church Building Society held its usual monthly meeting on the 18th inst. at the Society's House, 7, Dean's-yard, Westminster Abbey, S.W. Grants of money were made in aid of the following objects, viz.:—Building new churches at Barnfield, St. Paul, Accrington, 100*l.*; Beckenham, St. Barnabas, Kent, 50*l.*; Colne, Holy Trinity, Lancs., 120*l.*; Goodmayes, All Saints, Barking, Essex, 100*l.*; Hollinwood, Emmanuel, Chadderton, 80*l.*; Hurst Green, St. John, Oxted, Surrey, 70*l.*; Kentish Town, St. Silas, Middlesex, 150*l.*; Watford, St. Michael and All Angels, Herts, 120*l.*; Bristol, St. Ambrose, 125*l.*; Forest Town, Mansfield Woodhouse, Notts, 100*l.*; Langley Mill, St. Andrew, Heanor, Derby, 150*l.*; and Mitcham, St. Barnabas (City of London School Mission), Surrey, 175*l.*; rebuilding the Church of St. Stephen, Sneinton, Notts, 100*l.*; and towards enlarging the Churches at Pleasley Hill, St. Barnabas, Notts, 25*l.*; and Plumstead, Church of the Ascension, Kent, 100*l.* The following grants were also paid for works completed: South Tiverton, Church of the Ascension, near Bath, 250*l.*; Walton, St. Mary, Suffolk, 15*l.*; Layer Marney, St. Mary Kelvedon, Essex, 60*l.*; Canford Cliffs, Church of the Transfiguration, near Bournemouth, 25*l.*; and Grimsby, St. Hugh, 40*l.* In addition to this the sum of 170*l.* was paid towards the repairs of fifteen churches from Trust Funds held by the Society.

Sketch for a Monument to the 1851 Exhibition. By Alfred Stevens.

ALFRED STEVENS.

THE name of this artist is to the fore at the present time with the instructive exhibition at the Tate Gallery, which was to have closed on January 14, but which will remain open until the latter part of March, and with the revived controversy regarding the expediency of completing the Wellington Monument in St. Paul's. The sketches in the Victoria and Albert Museum (Department of Engraving, Illustration, and Design) are of much interest, among them being the three which we reproduce this week. To these sketches and to the models in the Museum Mr. Edward F. Strange alluded in his paper read recently before the Architectural Association and reported in our issue of last week. The bronze equestrian statue completing the Wellington Monument in St. Paul's Cathedral has been placed in position. It was modelled by Mr. Tweed from the unfinished sketch by Alfred Stevens.

A Sketch by Alfred Stevens.

COLOUR AS APPLIED TO ARCHITECTURE.

THE usual fortnightly meeting of th Royal Institute of British Architects wa held at No. 9, Conduit-street, W., on Monday Mr. Leonard Stokes presiding.

Mr. H. T. Hare announced the decease o Mr. Bloomfield Bare, of Liverpool, electe Fellow, 1888.

Two papers on "Colour as Applied t Architecture" were then read, the first b Sir Alfred East, A.R.A., who, in the cours of his remarks, said :—

"The architect is, or should be, respon sible for the absolute completion of an public building, and it is unfair to criticis him if some local authority assumes th responsibility of its decoration. We know the difficulties which surround this question It may be that the painter does not interes himself sufficiently, and has not been able t identify himself thoroughly with the aims o the architect, or that the architect approache the question of decoration with preconceived ideas engendered by examples of the past which may be in themselves very beautiful but totally unfitted for the purpose he has before him. I would not claim that the architect should be necessarily instructed in the technical qualities of the various methods of painting, nor can it be expected that the painter should make himself acquainted with the constructive side of architecture, but a knowledge of each of their aims should be mutually understood.

It is a source of the greatest satisfaction to see that during the last generation the architect has taken the sculptor more thoroughly into his confidence, and I would like to see the same confidence extended to the painter. For I am under the impression that the place of the mural painting should have been considered by the architect in the creation of his plan as much as that of the sculptor. Neither are required for the actual structural qualities of the building, but both are a necessity for its perfect completeness. I do not think anyone would dispute the assertion that the noblest work of man is the combination of all the arts in perfect fitness, the combination of these arts into a building that would be devoted to, and best adapted for, the expression of the other arts of music or literature. Such a building would not be altogether dominated by the architect, to the exclusion of the sculpture and painting, but would be one that in its completeness was perfectly adapted to the purpose of its creation. Unfortunately, the opportunity of so expressing the unity of the arts is rare. But one such building in any country would mark it as exhibiting the highest understanding of the real purpose of art.

I believe that in all public buildings the architect should be held responsible for their entire completion, but what shall I say to the architect who designs a private house in which he leaves no place either for sculpture or painting? I think one of the causes of the decline in the purchase of easel pictures arises from the fact that neither the architect nor the commercial decorator ever considers that it is possible for the cultured man to be interested in the arts of painting and sculpture.

The fitness of colour for decorative purpose is a question that has never been adjusted by any rule except that rule which is applied equally to the architect and sculptor. The first and most important is the sense of scale. A responsibility rests

sometimes with the architect, who may not have considered the space suitable for the work of the painter or sculptor in his design. The great problem of the application of colour to decoration has been solved in some instances with success, and in every case that success has been achieved by the perfect sympathy of those concerned in its production.

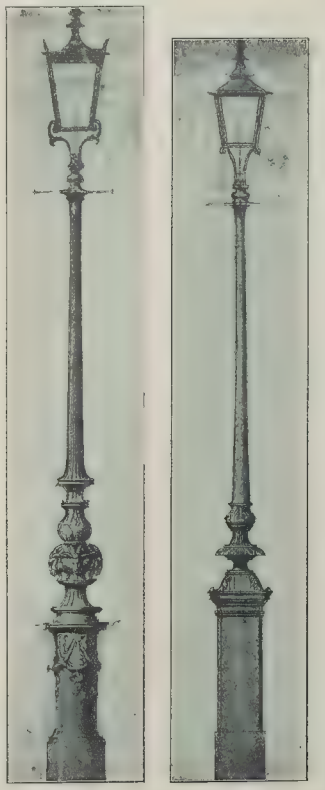
Colour is entirely altered in its decorative quality by the shapes and sizes of its display. A certain arrangement of colour of certain sizes in conjunction may completely destroy the object of the architect, and yet the same series with a different arrangement may be perfectly satisfactory. Colour expressed in angular forms must convey a different decorative sense from the same colour displayed by rounded forms.

All form is expressed by the figures of the straight line and the curve. We have associated the conjunction of straight lines, the simplest figure possible having the triangle as a symbol, not only because it is the simplest figure possible in the use of lines, but because it is suggestive of something which lies outside, and points to the outside and beyond. The curve, on the contrary, completes its figure alone. The circle it describes is associated with completed things, and is materialistic; the incomplete always suggests possibilities. The complete is final.

I have pointed out the difficulties of the mural painter, and where the building has no history to record on its walls, but reserves its history for its literature, he might be asked if it were not possible better to satisfy the claims of the architect if he substituted decorative landscape in place of the illustration of an incident. It would give the painter a wider scope for a more personal expression, and he would be free from the conditions that so often make decoration a failure, for his materials are more at his discretion, both in form and colour, and, if he succeed, he will not fall into the difficulty of attracting unduly the attention of the spectator from the beauty of the architecture. I have known decorations which would, by their dominancy, suggest that the whole effort of the architect was to furnish him with a setting for his picture, whereas it should be considered from an entirely opposite point of view. And, in conclusion, I would appeal to those who have the responsibility of designing a great public building to bear in mind the conditions which must govern the mural painter, and, on the other hand, to the mural painter to consider that the architect has a right to expect that he should be supported in his architectural ideal."

Mr. Edgar Wood, F.R.I.B.A., contributed the second paper. He said that "a comparison between the Greek or Gothic use of colour as compared with that of the East resolves itself into a conflict between two opposing and antagonistic expressions, the expression of form and the appeal of colour, antagonistic because they represent two irreconcilable intentions. Colour is emotional, appealing to us by its emotional and sensuous faculties. It comes to us before form, representing nothing in itself, dependent upon the emotional feeling it produces and its rightful appeal to sensuous sensibility, whilst form is intellectual and its appeal is the outcome of reason.

Greek work as known to us is restrained on the emotional side, nor has it any touch of mysticism. This was always secondary to form, just as music was subordinate to poetry in songs, this tendency fitted in naturally with the general character of Greek art. In the East this is entirely the reverse; the emotional instinct proved too strong, and all is sacrificed and surrendered in order that colour may become the all-powerful appeal, for the very essence of the East consists in two dominant distinctions. Colour is there used for colour alone. It is not only richer, more powerful, more intense, but is convincing and satisfying by the quality of colour alone. In their hands it leaves no void of unfulfilment in its directness and intensity of appeal. It is vital colour, leaving the impression of colour as distinct from things coloured. Thus, again, it is not used merely to define the shape and object of things, and this great revision was accomplished by the assistance and employment of light and shade by which form was so lost, so controlled that it not only relinquished its ascendancy, but immediately became sufficiently pliable as to be dependent upon the power of this triumphant colour supremacy.



It was thus that the great colourists employed their great emotional appeal, and of which Venice is rich in its illustration. We recognise it amongst its painters, where the colour and glow of a Titian and a Tintoretto are precisely the same in purpose as the interior of the great basilica of St. Mark's.

Turning to domestic work, one problem that all architects have to consider is the right or the best treatment of the walls that will assist the easel picture, or, as some would say, to minimise the defects of the same.

It is the instinctive desire of all dealing with structure to give their work a lasting and permanent effect, to avoid any sense of detachment, unfixedness, or looseness, that the line shall be drawn sharply and logically between structure and portability, and that the dominant note shall always be that of structure, reducing as far as possible the degree and extent of the movable.

Many, I know, urge that the easel picture properly considered and placed in its right relationship to its surroundings by judicious treatment and hanging may be the acme of decoration, that its relation to a scheme of decoration may be like that of a jewel in a dress; but in this comparison a convincing one? The jewel in such positions is logical with the dress and wearer, because all are portable.

That thoughtful consideration in hanging, framing, and fixing can minimise much of the objection is admitted, as is shown in some of the rooms of the Ducal Palace at Venice, and also in those of the Vatican; but, however well marked, there still remains sufficient of the difference of aim and habit of mind of the two intentions, of the fixed aim of the architect or constructor, and the divorced and isolated thought of the painter.

Designs for Lamp-posts. By Alfred Stevens.

"The portability," Mr. Walter Crane writes, "of the easel picture has much to do with its unrelatable character. Destined for nowhere in particular, as a rule it goes out on tour—a member of a performing and often very diverse company"; and Mr. Furst says:—"The painters often resemble tailors making clothes which are not ordered and do not fit but accidentally."

I can think of no stronger guidance to decorative effect than the influence upon the painter of the walls themselves, provided he will allow their unconscious appeal its full scope by executing the work upon the site.

The Japanese method of showing one picture at a time is only a mitigation of the objection, and assists the problem but little, as the Japanese surroundings themselves are not so antagonistic to portability, being often themselves composed of movables having but little structural quality.

My own preference is towards the judicious employment of drapery as frequently offering a satisfactory compromise, the principle based upon the acceptance contained in the dress and jewel suggestion.

In thoughts upon the use of colour there is always to be remembered, though all-important the form and shape that an architect has given to his work, the surface alone derived from it always represents a large area, and all surface means colour, either of material or applied, and, therefore, the treatment of it remembered as quantity alone has an importance that should justify the architect in his legitimate desire to control the decoration.

I have the impression that colour of an enduring type, decoration even of an intending permanency, is still the unfortunate exception, not only in domestic work which can be partially excused by existing social conditions, but in our public and devotional buildings, where no such conditions exist. I do not only recall the absence of great mural decorations from which these buildings so lose the occasion of a great appeal and the opportunity of a great impression, but the same absence of colour and pleasure in colour is also missing in the minor surroundings.

Have the painters deserted us because they have other and better things to do, that decorative art has become the poor relation, that they have forgotten that 'the best sculpture yet produced has been the decoration of a temple front, the best painting the decoration of a room," that portable art expressed by the easel picture, "independent of all place—to-day over the sideboard, to-morrow between the windows," can never supplant in importance the work of a fixed position. The more they are portable the more they become unsuitable; their offence often increases with their merit of realism.

In conclusion, architects should encourage opportunities to bring back the painter to their assistance, that the neglected art of great decoration shall be, so far as we are able, a neglected craft no more, but shall continue to embellish our efforts of the future as it has formerly jewelled and crowned others of the past."

Mr. Gerald Moira,

in moving a vote of thanks to the authors of the papers, said that one thing he enjoyed in Sir Alfred East's paper was that the author spoke up for his own job. He certainly thought that landscape painting, when done in the way that Chavannes did it, was the most beautiful decoration possible. He felt that at the present day more mural work was being used in buildings than at any previous period of their own time, and painters owed a great deal to architects. The great difficulty, however, was the length of the client's purse, and if they could only club together and do things a little more economically then, he thought, work might be done in the George V. era which would be of interest to future generations.

Mr. J. D. Crace,

in seconding the motion, said he would like to dwell a little on the architectural side of the question. Both authors had said how painters and architects desired to sympathise with each other, and that undoubtedly was necessary, but there were two or three kinds of sympathy. There was a very platonic sympathy and a real genuine and helpful sympathy. What was wanted in decoration

was not so much subtlety of mural painting, but that the architecture should be expressed. The great difficulty was that the modern English painter was not sufficiently versed in architecture to understand what the architect was longing for. The architect naturally was very unwilling to have his architectural effort destroyed by the location of colour in the wrong places. Sir Alfred East spoke of the architect providing spaces for the decorative painter, but the decorative painter had the building for his spaces, and the great thing was that he should select for his colour such distribution as would express the constructive form, and accept the spaces which the architect would naturally distribute in such a way as also to express structural form. In the execution of the mural painting itself there was much to be borne in mind with respect to the architectural aspect of the building. If they took the period between 1300 and 1600 they would see that the painters never left their paintings alone on the wall, but they always supported them with such accessories as would fit them to the building itself; and that was a point which appeared to be entirely overlooked by the modern painter. The scheme of the decoration of a building must not limit itself to paintings in certain positions, whatever their good qualities might be, but it should be to distribute colour in the building in such a way as to make the picture part of the architectural structure as well as a work of art. To illustrate what he had in his mind Mr. Crace exhibited a series of reproductions of the work of Giotto in the chapel of Padua, the frescoes of Domenico Ghirlandaio in Santa Trinita, at Florence, the interior of the Piccolomini Library at Siena, and of San Domenico at Siena. He pointed out that in all these cases the paintings had been welded into the buildings, and not left as isolated pictures on the walls. Architecture was made use of in the paintings themselves to convey the idea of stability.

Mr. H. H. Statham

said he thought the basis of the consideration of colour in architecture should have been a consideration of the colour which might be got for the architectural materials themselves, which was much neglected at the present day. They were content to build buildings in monochrome when they might have a great deal of colour by the use of various coloured materials. That was a much less intellectual side of the subject to that to which they had listened, but, still, from the architect's point of view, it was very important. Then he thought there was an unjust criticism of what was called the easel painting. At present there was a very confused use of the word "decoration." They used to think that decoration was painting treated in a somewhat conventional manner in order that the painting should not take away the idea that the surface was a wall. Now they had people telling them that this was nonsense, and that all painting was decorative painting. In a way it was, for every figure must be designed to have a harmony of line, and landscape was distinctly decorative in that sense. But he mentioned that there was a distinction between the decorative painting properly so called and the painting which depended upon itself. The latter was often one of the greatest efforts of art, and was a thing they looked upon as a poem in colour quite separate from its surroundings. Titian's picture of "Bacchus and Ariadne" in the National Gallery was not a decorative picture, but it was a splendid piece of colour, and it would assert itself independently of any surroundings they put to it. He said it was untrue of the great art of painting to say that it only came to its highest when it was conventionalised by its surroundings. Ford Madox Brown had been mentioned, but his best work was the picture of "The Last Sight of England," at present in the Tate Gallery. What he wished to see admitted was that painting had a claim for itself, apart from the merely decorative, and it ought not to be sneered at simply because it could be carried about and looked at.

Mr. H. G. Ibberson

said that Sir Alfred East's subject divided itself into two parts. He could understand what he said about architects bearing the picture in mind from the very first, but he did not grasp the mystical part when he said that colour suggested certain forms—that circular forms suggested materialism and straight lines spirituality. He would have liked a few more definite instances as to that. He thought if they had the opportunity of getting the assistance of such a great painter as he who decorated the Sistine Chapel he would not bother about the architectural features. He knew himself that if he could get Sir Alfred East to come into one of his houses he would not bother him about the architraves and cornices, but would let him loose on the plain surfaces. Then, with regard to colour, he would have liked to have had a definite instance of the form which scarlet suggested. Scarlet suggested no form to him except perhaps a form of political activity, with which he had not much sympathy. He noticed that the room they were in had a curved ceiling, whilst the room behind had a straight ceiling, and, therefore, according to Sir Alfred East's view, and, letting their President typify spirituality, ought they not to have held the meeting in the back room and brought the cakes and ale into this one?

The motion having been passed,

Sir Alfred East

said that if painting was taken out of their lives their lives would be very poor indeed. The fact that painting did not decorate a house was the fault of the architect, who did not make a place to fit it properly, and the sooner architects recognised the fact that they should have pictures in the house the better. There were many things which they hung on the wall which could be removed, and were they to be turned out of a house for that reason? Movability was the expression of life. It was the dead things which remained permanent, and that was why so much architecture was dead.

Mr. Edgar Wood

remarked that he never intended to say there was no use for the easel picture, but he did feel that the highest ideal of decoration and the finest result had never been brought about by the easel picture. Let them go to the finest picture galleries in the world and compare the impressions they got with those they received after seeing the work at the Sistine Chapel at the Vatican or at Florence, and anyone would feel that decoration intended for a place would always convey the greater impression than the greatest of easel pictures. The question of what was decoration was difficult to define—one could feel things which one could not define. He agreed that there was a place for what might be called the easel movable picture, such, for instance, as the altar.

Prizes and Studentships.

The Secretary then read the Deed of Award for the Prizes and Studentships—

The Essay Medal and 25 *guineas.*—Subject, "The Principles to be observed in Designing and Laying-out Towns, Treated from the Architectural Standpoint." Twelve essays were received. The Council have awarded the Medal and 25 guineas to Mr. T. Harold Hughes ("Redundancy").

The Measured Drawings Medal and 10 *guineas.*—Subject, "Measured Drawings of Ancient Buildings in the United Kingdom and Abroad." Five sets of drawings were received. The Council have awarded the Medal and 10 guineas to Mr. Arthur E. Maxwell ("Zeta"). Certificates of Hon. Mention have been awarded to Mr. A. Bayliss Allen ("Shopeinshoudes"), and to Mr. W. M. Keesey ("Arno").

The Soane Medallion and 100*l.*—Subject, "Designs for a Guildhall." Thirteen sets of designs were submitted. The Council have been unable to give the prize to any competitor, but the following awards have been made:—Certificates of Hon. Mention and 50*l.* each to Mr. W. Friskin ("Circle City") and Mr. P. de Joug ("Antæ"). Certificates of Hon. Mention to Mr. C. A. Harding ("Sailing Ship") and Mr. B. Lisle ("Vista").

The Owen Jones Studentship Certificate and 100*l.*—Two applications were received, viz., from Mr. Noël H. Leaver (to whom the Studentship was awarded), and from Mr. G. W. Mason.

The Pugin Studentship Silver Medal and 40*l.*—Nine sets of drawings were received. The Council have awarded the Studentship to Mr. James Macgregor. Certificates of Hon. Mention have been awarded to Mr. C. Peake Anderson, Mr. W. J. P. Jones, Mr. J. R. Leathart, and Mr. R. Norman Mackellar, who were bracketed as equal.

The Tite Prize, Certificate, and 30*l.*—Eleven sets of designs were received for "The Central Courtyard of a Royal Exchange covered with a Roof." The Council have awarded the prize to Mr. L. de Soissons ("Red Lion"), and a Certificate of Hon. Mention to Mr. T. H. Chalkley.

The Godwin Bursary Medal and 65*l.*—Drawings were received from Mr Geoffry Lucas (to whom the Bursary was awarded), and from Mr. A. F. Wickenden.

The Arthur Cates Prize, 40 *guineas.*—Drawings were received from Mr. J. B. F. Cowper (to whom the prize was awarded), from Mr. Claude Y. Hodges, and from Mr. Maurice Lyon.

The Grissell Gold Medal and 10 *guineas.*—Four sets of designs were received for "An Isolated Exhibition Building." The Council have awarded the prize to Mr. T. Braddock.

The Ashpitel Prize.—The Council have awarded the prize to Mr. P. D. Hepworth.

Travelling Students' Works.—The drawings by Mr. J. B. F. Cowper, Pugin Student, 1911, have been approved by the Council.

A speaker asked if the *bona fides* of the designs would be inquired into.

The President: Have you anything to tell us?

The Speaker: Some of the designs were made in Architectural Schools. Is this fair?

The President: Will you communicate with me?

The Speaker: I communicated with the Prizes Committee, and received no reply.

The President: I think you had better communicate with me. If you will, come and see me in my office to-morrow.

It was announced that the next meeting of the Institute would be held on February 5, when the President's address will be delivered, and a criticism of the designs and drawings will be given by Mr. Gerald Horsley. The presentation of the prizes would be made at the meeting.

BASING HOUSE.

It is probable that few castles or mansions have played so important a part in the history of our land as Basing House; its siege alone constituting an interesting chapter in history.

Standing about 2 miles out of Basingstoke, with the weed-grown channel of the Basingstoke canal running by the old wall and octagonal dovecote, and past the "loftie gate-house with foure turrets looking northwards," the ancient pile is near one of the great trunk roads to London, and formerly, by reason of its strength and commanding position, practically held the key to the West of England. Originally it comprised two parts, a castle and a mansion, of which the oldest portion—the former—dated from 1261. The residential section of the structure was erected in 1509, and combined they formed the largest residence in England, regarding which old Thomas Fuller wrote in the XVIIth century:—"The greatest of any subjects' House in England, yea larger than most of the King's Palaces. The motto *Love Loyaltie*, well practised in it when, for resistance on that account, it was lately levelled to the ground."

The commencement of the Civil War found Basing House in the possession of John Pawlet, Marquis of Winchester, a devout Catholic and cavalier, who with a garrison of 800 men, vowed that he would hold the castle for the King, even though every other piece of land in England be wrested from him. The Parliamentarians quickly recognised the advantages attaching to the possession of the fortress, and for four years the gallant Pawlet withstood the Puritan siege, when, in 1643, Sir William Waller began two formal assaults, both of which, however, proved futile. Two years longer the stout old pile held out, and then Cromwell, his patience exhausted, determined to bring the "rebels" of Basing House to book. In October, 1645, he commenced operations with a train of siege guns, which took three days effectively to mount. The besieged scornfully refused to

[*Photo. by H. A. Aylward.*

The Dove Cote, Basing House.

surrender, and for two days the guns kept up an incessant fire. Eventually two wide breaches were made in the walls, and the Ironsides commenced to loot and plunder the citadel. Over 100 of the besieged were slain, and among those taken prisoners were Pawlet himself, Sir Robert Peak, and Inigo Jones, then a very old man. The castle was thoroughly ransacked, and jewels, gold, plate, and tapestry to the value of 200,000*l.* carried off and sold. In the midst of this wild scene of devastation and pillage flames were seen to burst forth, though what originated the conflagration has never been determined, and in a few hours the once lordly mansion lay a heap of smouldering ruins. In this condition it continued to remain for over two centuries, its battered defences covered with hawthorn, its earthworks hidden under a growth of ivy and herbage, until Lord Bolton, the present owner of Basing, decided to clear away the rubbish and restore what yet remained of the once famous "Loyaltie House."

During the excavations many interesting finds were brought to light, comprising shot, shells, bones, pottery, pipes, tiles, skulls, etc.

Perhaps the first thing that strikes the visitor now that the ruins have been laid bare is their great extent. According to Lady Winchester's diary of the siege, the castle "was in forme circular, encompassed with a brick rampart lyned with earth, and a very deep trench but dry," while the fortifications around it must have been very strong and formidable. In the centre of the fortress was a courtyard with two large wells, one of which was said to be the deepest in all England. The guard-room, kitchens, cellars, and larders are still in an excellent state of preservation, and on the walls of the cells drawings and letterings, evidently the work of prisoners, are still quite legible. In another portion of the ruins, the dining hall, chapel, and State apartments of the old structure can easily be traced.

Thanks to Lord Bolton, not a stone or brick of the ruins has been removed, and one may now walk over the same flint cobbles and quaint old pavement of kidney stones that existed before the direful conflagration reduced to ruins one of the finest piles of old-time England.

GENERAL NEWS.

Professional Announcement.

Mr. H. Bedford Tylor, Lic.R.I.B.A., for sixteen years architect and surveyor on the Bournville Estate, is now in practice on his own account at 20, Linden-road, Bournville, and care of Messrs. Mayhew & Darling, solicitors, 38, Waterloo-street, Birmingham.

The New Capital of India.

The *Times* Calcutta correspondent cables:—"It is officially stated that until the best European architect and sanitary engineer obtainable, both to be selected by Lord Crewe, have visited Delhi before and during the rains, the Government will select no site for the new capital, but will merely acquire land. A committee will subsequently sit to supervise the plans that have been agreed upon."

Paisley Abbey.

Towards the restoration of Paisley Abbey 8,000*l.* is being given by Mr. Robert Allison, merchant, of Paisley, for the erection of the great central tower, and 2,000*l.* by Mr. A. F. Craig, of Paisley, and his wife for the building of the cloisters. Recently, Mr. J. Stewart-Clark, of Dundas Castle, and his sisters gave 30,000*l.* for the restoration of the ruined choir, and only a small sum, it is stated, now remains to be subscribed to complete the scheme.

The Old Cottages at Guildford.

As a result of the expression of opinion at the recent meeting of the Surrey County Council, it is expected that the Highways and Bridges Committee will recommend the county authority to release the Town Council of Guildford from their undertaking to widen Farnham-road, and so obviate the necessity of demolishing the picturesque old cottages, the fate of which has been the subject of recent correspondence in the *Times*.

South American Project for Kingsway Site.

A scheme is on foot, it is stated, which will result in a combination of South American Republics for the purpose of erecting a large edifice on one of the Kingsway sites in which all their interests can be housed. The idea is to make the ground floor a great hall for the exhibition of products of the Republics, while on other floors will be reception-rooms, lecture-rooms, and offices.

Proposed Canadian Offices in London.

In the Canadian House of Commons Mr. Bradbury urged the erection of suitable offices in London for the High Commissioner and the immigration staff. In reply, Mr. Borden, the Premier, said he was in favour of the construction of a building worthy of Canada and the Empire, and he had noticed the satisfactory effort made by Australia in this respect. But it would be necessary, he considered, to have further data before entering upon the project.

Statue of William III., Petersfield.

The Urban Council, Petersfield, have appointed a Committee, of which Mr. H. Inigo Triggs, of Liphook, Hants, is the Hon. Secretary, for a restoration of the fine leaden equestrian statue of King William III. The memorial was erected in the market-place a long while ago at the charges of William Jolliffe, M.P. for the borough, and ancestor of the Lords Hylton. An appeal is made for contributions to a sum of 350*l.*, the estimated cost of the work.

Reredos, Christchurch Cathedral, St. Louis, U.S.A.

A reredos and high altar, one of the most important works of the kind erected in the U.S.A., was dedicated on Christmas Day at Christchurch Cathedral, St. Louis. The reredos and high altar, which were made in the studios of Messrs. Harry Hems & Sons, of Exeter, were conveyed from Exeter without injury, and were fixed by the firm's own men. The material is of Caen stone, and the height of the work is 35 ft. to the top of the cresting. The architects were Messrs. Tully & Clark, of St. Louis.

Antiquarian Discovery at Hatfield.

During the work of reconstruction of Goodrich House, Hatfield, which is now being carried out for Mr. F. W. Speaight, there has just been discovered the remains of a XVth century timber building, which has been hidden by brickwork for over two hundred years. A large number of silver and copper coins, dating from the time of Charles II. to George II., have also been found. The property was originally a portion of the Manor of Hatfield, and was sold in 1792 by the first Marquis of Salisbury to the Hart family, from the executors of which family it was purchased last year by Mr. Speaight, whose residence practically adjoins it on the south, Hatfield Park forming its northern boundary.

Dearer Coal—Cheaper Gas.

Coincident with a rise in the price of coal, the price of gas has been reduced 1d. per 1,000 cubic ft. by the Gas Light and Coke Company. This reduction—following upon a similar lowering of price each January for four successive years—brings the charge down to 2s. 6d. a 1,000 cubic ft. As the lower price for the consumer will mean higher dividends for the shareholders and bigger bonuses for the employees (under the company's scheme of co-partnership), the announcement will be the subject of very general congratulation.

The Royal Sanitary Institute.

The President of the Local Government Board, the Right Hon. John Burns, the Medical Officer, Dr. Newsholme, and Mr. Willis, Assistant Secretary, visited the Royal Sanitary Institute, 90, Buckingham Palace-road, London, S.W., on the 23rd inst., where, in addition to the permanent exhibits in the Parkes Museum relating to hygiene and public health, a special exhibition has been arranged of plans and models of shelters for tuberculose patients.

COMPETITION NEWS.

Winnipeg Legislative Building Competition.

The Secretary of the Royal Institute of British Architects has received from the Minister of Public Works, Manitoba, the following cablegram with reference to this competition :—"Date for acceptance of plans extended to March 31." We understand that Mr. Leonard Stokes, President of the R.I.B.A., has been appointed assessor in this competition.

Rochdale Infirmary Extensions.

Eleven sets of plans and designs were sent in by nine firms of Rochdale architects in the recent limited competition for the above extensions. They were adjudicated upon by Mr. Alexander Graham, F.S.A., F.R.I.B.A., of London, who made the following awards :—

First premium (50 guineas), Mr. Hugh Healey, A.R.I.B.A., of Rochdale and Manchester.

Second premium (30 guineas), Messrs. Sykes & Evans, of Rochdale and Manchester.

Third premium (20 guineas), Messrs. Butterworth & Duncan, of Rochdale.

Arrangements are to be made shortly for the exhibition of the drawings to the public.

New Church, Carrington.

Mr. Edward S. Prior, F.S.A., F.R.I.B.A., is the assessor in the competition for the new Parish Church of St. John the Evangelist, Carrington, Nottingham, the estimated cost of which is 9,000*l.* Designs by the twelve architects selected to compete were sent in on the 22nd inst.

Halifax Town Planning Competition.

Professor Adshead has recently given his award in the Halifax Town Planning Competition, the premiums in which were offered by Mr. J. Whitley, M.P. for the Borough, and the result, which was announced at a meeting in the Mayor's parlour, is as follows :—

First premium (100 guineas), Messrs. Longbottom & Culpan.

Second premium (30 guineas), Messrs. Medley Hall & Son.

Third premium (20 guineas), Messrs. C. F. L. Horsfall & Son.

Eight schemes were submitted in the competition, which was limited to Halifax architects.

Mr. Whitley stated that it would not be convenient for the drawings to be publicly exhibited forthwith, but he presumed that he might take it that the competitors would not mind leaving the plans in his hands for a few weeks until an exhibition could be arranged.

BOOKS.

Cathedrals of Spain. By JOHN ALLYNE GADE. Fully Illustrated. (London : Constable & Co., Ltd. 15s. net.)

THE cathedrals considered in this volume are Salamanca, Burgos, Avila, Leon, Toledo, Segovia, Seville, and Granada—some of the finest in Spain—and the author makes an interesting study of them in a happy blending of a not too technical and picturesque description. His intention is best described in the Preface, in which he says that certain buildings, and especially cathedrals, cannot be properly studied quite apart from what surrounds them, or from their past history. "To look comprehendingly up at cathedral vaults and spires, one must also look beyond them, at the city and the people and times that created them," and some such setting is here attempted, "in the hope it will not prove too technical for the ordinary traveller, nor too superficial for the student of architecture." If we are able to answer for the two classes of readers, we think we can claim for the author that he has achieved his object, for his work contains many pages of sound and interesting description which will be appreciated by the architectural reader, while the educated "ordinary traveller" with a love for ecclesiastical architecture will find his interest stimulated by a perusal of Mr. Gade's book. The richness of the country in great ecclesiastical buildings is well understood, and, though Spain is not as well known to the traveller as France or Italy, it is the ambition of most students of art to travel and see the architectural masterpieces of the country, and with this book in his hands the traveller will be helped to a proper appreciation of some of the great cathedrals there. The spirit in which the author writes will be realised from the following sentences referring to the monuments of Spain's greatness :—"If nowhere else in the world can one find such glorious works of art surrounded by such squalor, let us draw from the past the promise of a revival in Spain of all that constitutes the true greatness of a nation. . . . When the Spanish people have once more made education as general as it was under the accomplished Arabs . . their cathedrals will then stand in an environment befitting their grandeur, a society which will help them to transmit to coming generations the noblest, imperishable hopes of humanity."

Penmanship of the XVIth, XVIIth, and XVIIIth Centuries. A series of typical examples from English and foreign writing books. Selected by LEWIS F. DAY. Critical notes by PERCY J. SMITH. (Batsford. 18s.)

THE late Mr. Lewis F. Day, interested in everything which concerned the craftsman, made a special study of lettering, his books on the subject testifying to his judicial outlook. Mr. Day contemplated a book on penmanship, and put aside many illustrations which, since his death, have been studied by Mr. Percy J. Smith and supplemented for the purpose of the present book. Consisting mainly of reproductions, the book is not a difficult one to assimilate, and it gives food for thought in two directions. Firstly, we are astonished at the flexibility which was attained by the best writers of past centuries; secondly, we wonder to what extent the printing press influenced the art of penmanship. In many of the writings that exist there is a regularity and machine-like precision which must have been the cause of infinite labour to the scribe, without adding much to his reputation. Such painstaking work is marked by little individuality in design, and once the scheme of lettering was fixed upon the only faculties needed to produce page after page of MS. were a steady hand, a correct eye, and an abundance of patience. The type-like character of such work suggests that the scribes were endeavouring to emulate the mechanical qualities of machines. Yet we would dispense willingly with such methodical penmanship, and we turn to the less-perfect results achieved with the press and early movable types, through which design in the best sense was achieved.

Some scribes, however, understood exactly the advantages of deviation from mechanical penmanship, and, when the writing was placed on the page with due regard to area and construction, a beautiful result was attained. The good penman had no use for meaningless flourishes, but in the employment of graceful curves and rhythmical scrolls he found means to decorate his page, weaving around his words the most suitable embellishments.

While it is difficult to enter into the spirit of the work of less-hurried days, we can see the advantages of legibility and grace of outline. In modern printing there is ample room for the application of design, both as regards founts and display; and in the revival of good lettering, in which Mr. Lewis Day played so conspicuous a part, there is hope that inferior work will ultimately disappear. To attain this end the printer himself must be the true successor to the artistic scribe and learn the possibilities of the allied crafts. One of the most satisfactory results of the foundation of art schools is that in many cases opportunities are taken to learn the rudiments of design and the application of it to printing. The periodical exhibitions at the L.C.C. Central School, for instance, show the vitality of this branch of study.

To architects and their assistants this book on penmanship should prove suggestive. Beautiful writing gives distinction to architectural design, and drawings which are attractive throughout lose nothing in force.

CORRECTION.

In our issue of January 12 (p. 43) we referred to the baths erected at Winnington, Cheshire, for Messrs. Brunner, Mond, & Co. The name of the architect is given as Mr. L. W. Ensor, A.R.I.B.A.; it should have been Mr. A. E. Powles, F.R.I.B.A. We regret the mistake. Mr. Powles informs us that the special zig-zag bath cubicles and internal fittings were designed and carried out by the Leeds Fireclay Company.

CORRESPONDENCE.

The Policy of the R.I.B.A.

SIR,—As a good many letters have la been published about the Policy of R.I.B.A., may I draw attention to a p which, I think, needs a little considerati

There are many young men who, betw the ages of twenty and twenty-five, i Registration Bill was passed might themselves stranded through no fault of t own, unless special provision was made them. For instance, many of these h entered architects' offices as pupils at se teen. On completion of their articles, du which they may have passed the R.I.B Preliminary Examination, not being abl take special courses of instruction owing lack of funds, and in some cases because t must earn something to help pay their liv expenses, they go on as assistants until g opportunities come to set up on their account.

Now, if a Bill were passed these wo have to take the Intermediate and Fi Examinations, at least so it seems at prese and to pass these means either attend special classes, which needs cash, or using every minute that can be spared a office hours in working up the subjects aided, which is no light task, especially no opportunities were given at school learn mechanics, etc.; and if they do use all that spare time their health is sure suffer from lack of exercise.

At the universities and in the Services believe, candidates are allowed to take s examinations in two and sometimes th parts. Could not the Council of the R.I.B make some arrangement on similar lin It would also help those who, from reas of health, cannot live in London or the towns, and so cannot benefit from the m excellent classes held to prepare for th examinations. Correspondence courses m be suggested for these, but, with all respect to the gentlemen who run these, hour of good teaching in a class goes mu farther than a week's hard working un the correspondence system, because in former mistakes are corrected at once, wh in the latter a week must elapse, by wh time the student has partly forgotten wh it was about.

If such a plan as I have ventured to s gest could be arranged, it would be bet in every way; for an intending candid could do his office work without trying hurry over it, and in his spare time we up three or four subjects far more thoroug in six months than he could the whole sev and also find time for that one hour's healt exercise, which would keep him fit. Co he not be allowed to take each examinat in two parts, provided he took Part within six months of passing Part 1?

I only make this suggestion because th are many young fellows who are anxious pass these examinations if they could, h who cannot owing to causes which I ha pointed out, and also because the prese time seems to be a good one for the purpo

A READER

SIR, I am afraid that a reader of yo article published on January 12 might thi that the reason the members of the R.I.B. refused to sanction the scheme for amalgan tion with the Society of Architects w because they did not improve the draft Reg tration Bill.

A verbatim report in the *Journal* w shortly be sent to every member, and th it will be seen that there were several oth reasons which influenced the rejection of t scheme by an enormous majority. This w also be made clear by the conversation the end of the meeting; the proposer a

seconder of the amendment were asked if they limited the reference to the one point of the draft Bill, and the answer was that it must be referred back on every point.

I feel sure you would not like a false impression to be created in the minds of your readers, and consequently I ask you to kindly publish this letter.

SYDNEY PERKS, F.R.I.B.A., F.S.A.

The Clerk of Works and H.M. Office of Works.

SIR,—All H.M. Office of Works Clerks of Works of a certain number of years standing should be placed on the establishment without any reduction in salary, and given a pension at retirement.

A clerk of works is an officer holding an important trust; his services surely are at least twice as valuable as the most skilled mechanic on a building, and therefore his salary should never be less than twice the mechanic's wage, or, in other words, 4*l*. 10s.

Too frequently it is 3*l*. 3s. to 3*l*. 10s.; it sometimes reaches 5*l*. 5s. to 7*l*. 7s., but not often.

The duties of an Office of Works Clerk of Works are far more arduous and need more skill than one who is employed by an independent architect.

He has numerous sub-contractors (I had fourteen on one job) to supervise, and has to value the work weekly, the contractor being paid on his certificate. Every variation requires an estimate as to saving or extra, and every account has to be signed by him.

If he is honest his banking account increases but slowly, and when he is of no further use to his employer he has only Heaven or the workhouse to go to.

Seeing that a clerk of works is a poor man usually drawn from the ranks of mechanics, has to possess a deal of highly-skilled knowledge, has to keep up an appearance, remain honest in face of temptation, is liable to periods of unemployment, the least the Office of Works can do is to give a pension and a permanent office to those who have given satisfaction in the past.

Until quite recently His Majesty's Office of Works did not even pay the cost of removal when sent from one job to another, perhaps 150 miles apart. ONE OF THEM.

Architectural Assistants and the Office of Works.

SIR,—Does "Fiat Justitia" in your January 12 issue desire your readers to infer that this Labour Member, so generously advocating the cause of the "Architectural Assistant" class, has been misled by one of its members, because if even one statement made were proved to be "exaggerated" or "unfounded" all others would remain under suspicion? But I find a marked unanimity of opinion existing in the numerous letters that have appeared for a considerable period, not only in your valuable medium, but also in the *Civilian* and other journals to which I would refer your correspondent; and I do not consider the statements I have read can be so described; and, seeing that the class is numerically small, it cannot be the expression of the "small minority," as he avers. But perhaps my own opinions as an onlooker for more than fifteen years, and in more than one branch, may have some weight. I have known the class termed "Junior Assistant Architects" long before any of the present generation existed, even as "Draughtsmen," and I have certainly not observed the "harmony" "Fiat Justitia" speaks of. I have observed, however, the absence of spirit displayed by the unestablished men, even the seniors, when ordered to do certain work which the chief has given to the established juniors to do themselves, who appear to imagine that establishment, amongst other things, gives them the power to act thus; although I must say I know of nothing in the regulations to this effect, and I have more than once expected to see it resented. But, for this purpose, they have been suitably impressed with the word "temporary." Also I have observed their "prescriptive right" to occupy, for the greater portion of the official day, a certain pattern of the chief's carpet, if he is there, with the object of the exclusion of the other class, who, until a few years back, took their instructions direct from him.

I believe the Architectural Assistant class feel strongly that justice would not have been withheld from them until now, in establishment and better pay, if this other class had not been willing so to act, and thus obtain by one leap a position over the heads of these seniors. This knowledge cannot readily be effaced even by the present overtures of their "sympathy."

The fact that the Junior Draughtsmen (afterwards Junior Assistant Architects) have been in most cases taught by the Senior Draughtsmen (now "Architectural Assistants") has been known and stated all these years, and this is the first time I have known it denied. I don't know who else there would be, unless it be the chief of the branch!

But I am glad to agree with "Fiat Justitia" as to the justice of the claims of the "Architectural Assistants" class, and it is to be deplored if anything is being done to jeopardise his individual efforts on behalf of the cause, which, we are assured, he is "trying to advance." TECHNICAL CLERK.

SIR,—When reviewing the answer given by Mr. Dudley Ward, representing the First Commissioner, in the House of Commons on November 24 last, who promised "to consider establishments for a professional class, numbering forty, termed 'Architectural Assistants,' employed for years past in his department," he spoke of "the consequent sacrifice of income demanded by the regulations" when passing from the unestablished to the established ranks, to pay for pensions, etc.; it should be understood that the "Assistant Architects'" Civil Service examination (the present unsatisfactory method of recruiting the established professional class) was altered from an open to a nominated one restricted to "Draughtsmen" in the department, in 1902, by reason of the inferior artistic material previously obtained, but by which, of course, all the present heads of the Architects' Division have entered, and that this was to be regarded as an opportunity expressly intended in future as some recognition of the efficient services of the "Senior Draughtsmen" class (termed "Architectural Assistants" since 1907) who were in receipt of 165*l*. and upwards per annum, and the salary was fixed for the successful candidates at 150*l*. per annum (subsequently 200*l*.), and so the Treasury rule referred to would have been met to the extent of 15*l*. or more. But, seeing that these senior men whilst engaged upon their daily duties had already been most thoroughly examined for years past by their Board, they naturally expected establishment without further test, and did not respond to the invitation to be nominated; and so for the past ten years the Treasury rule has been ignored by the department, for "Junior Draughtsmen" have been nominated mostly with short service (some only just attained the minimum age of twenty-three and some with only six months' service), and the successful ones have thus had their salaries increased, not diminished, and to the extent of some 70*l*. to 120*l*. per annum plus their pensions, etc.

Thus we observe the anomalous feature of a junior leaving one week-end at the rate of 30s. and returning the following week at 4*l*. plus "extras" to do the same work for the same employer. Is this consistent with true business method or common sense? *Ipso facto*, he was either underpaid before or overpaid after.

But the "Architectural Assistant" class look to their First Commissioner for justice when placing them upon the established list (and for precedent one of this class was established last year without "sacrifice") by a sympathetic consideration of the past injustice meted out to them, in the manner now recorded, and their long professional service with inadequate pay, to merit at the least equivalent rank with the "Assistant Architects'" class, constituting an increase to the majority and not a sacrifice of their incomes. JUSTICE.

[*** This correspondence must now cease.—ED.]

Skeleton-Frame Buildings.

SIR,—We shall be glad if you will kindly allow us the use of your columns in order to make an announcement that will, we feel sure, be of considerable interest to architects and others concerned in steel-frame buildings.

It is enacted in sect. 22 of the London Building Act (Amendment) Act of 1909 (9 Edward VII., cap. cxxx.) that, when it is proposed to erect a skeleton-frame building, copies of all the plans, sections, and calculations in detail shall be deposited with the district surveyor.

As it will manifestly be convenient alike to the architect, engineer, and district surveyor that these drawings and calculations shall be submitted upon a uniform basis, thus greatly reducing the labour of making and checking the calculations, the District Surveyors' Association (Incorporated) have, with the co-operation of the Science Standing Committee of the Royal Institute of British Architects and others, drawn up a scheme to be adopted by persons depositing plans, sections, and calculations with the district surveyor.

This scheme is now completed, and copies may be obtained of the Association's publishers, Messrs. Merritt & Hatcher, Ltd., 2, Grocers' Hall-court, E.C., price 2s. 6d. net.

The scheme provides for a uniform system of nomenclature, the adoption of uniform symbols, and uniform calculation sheets for pillars, beams, and foundations. It also contains the formulæ necessary for making the calculations, a schedule of weights of materials, and a number of tables of value. Samples of the various forms are attached.

(Signed) WILFRED J. HARDCASTLE, President,
BERNARD DICKSEE, Hon. Secretary,
District Surveyors' Association (Incorporated).

Dorton House, Bucks.

SIR,—I noticed in the Appendix No. I. of Mr. A. T. Bolton's list of dates on Jacobean Architecture in your issue of December 22 that the date of Dorton House, Bucks, is not ascertainable. I find on looking up the history of Dorton House that it was erected in 1627 upon foundations of an earlier structure.

The church which stands in the grounds is of the Decorated period. HUGH ROWDON.

INTERCOMMUNICATION COLUMN.

Workmen's Compensation and the Insurance Act.

SIR,—I should be glad if you can give me any information on one or two questions.

First of all, I am a bricklayer, and when I have not a job as foreman I sometimes take sub-let work. Now, I have an offer of a job—a good large one in London—and I am desirous of knowing if I should be responsible under the Workmen's Compensation Act (as sub-contractor for labour only), or if the contractor would be responsible for insurance against accident; if I should, could you give me the name and address of a good office.

Secondly, should I, as sub-contractor, be responsible for the employers' contributions, sickness and unemployment, to the national scheme? I take it that I should.

DAVID J. EAST.

[*** It is impossible to answer your question with any exactitude without knowing the exact terms of the contract under which you will be engaged. If you not only supply the labour, but the men are under your control, and are paid by you, you would appear to be an employer within the meaning of the Workmen's Compensation Act, and liable to pay compensation to an injured workman, or, if he claims compensation in the first instance from your principal, you may be liable to indemnify him under sect. 4. Therefore, if you exercise any independent control over the men you should insure. We cannot advise you by naming any particular office. Nearly all the old-established insurance companies undertake this branch of insurance on moderate terms. With regard to your second question, the Insurance Act does not come into force until July 15 next, and may be postponed to a later date by Order in Council. As regards health insurance, in determining who is an employer liable to pay contributions, the same considerations appear to arise as under the Workmen's Compensation Act, the power of control, power to select and appoint, power to dismiss and payment of wages; but in the case of employment insurance, regulations may be made by the Board of Trade under sect. 91, sub-sect. (f), which may affect this liability.—ED.]

EDITORIAL SUMMARY.

A critical review of the R.I.B.A. prize designs is given in our leading article.

In Notes Column (p. 86) will be found observations on : "Colour as Applied to Decoration" ; "The R.I.B.A. 'At Home'" ; "Wood Engraving" ; "Hampton Court Palace" ; "The Royal Academy Lectures on Sculpture" ; "The Carpenters' Hall Lectures" ; "New Zealand Parliament Buildings."

Three sketches by Alfred Stevens appear in this issue (pp. 88 and 89). They are given in connexion with Mr. E. F. Strange's lecture before the Architectural Association last week and printed in our last issue.

At the meeting of the Royal Institute of British Architects on Monday two papers were read on "Colour as Applied to Architecture," by Sir Alfred East, A.R.A., and Mr. Edgar Wood. At the same meeting the announcement was made of the names of the successful students in the annual competition for prizes and studentships (p. 88).

Book notices (p. 92) include : "Cathedrals of Spain" ; "Penmanship of the XVIth, XVIIth, and XVIIIth Centuries."

In Correspondence columns (p. 92) are letters on : "The Policy of the R.I.B.A." ; "Skeleton-Frame Buildings" ; "Architectural Assistants and the Office of Works" ; "The Clerk of Works and H.M. Office of Works" ; "Dorton House, Bucks."

Notices of meetings of architectural societies (p. 94) include : "Nottingham Architectural Society" ; "Manchester Society of Architects" ; "Leicester Society of Architects."

Our Monthly Illustrated Review of Engineering (p. 97) includes : "Reinforced Concrete in Great Britain"—I., by Mr. W. Noble Twelvetrees ; "Regent-street Polytechnic—III." ; "Reinforced Concrete Applied to Buildings" ; and Notes.

The Building Trade Section (p. 101) includes : "The Institute of Builders' Dinner" ; "Government Contracts" ; "The London Building Trade" ; "Projected New Buildings in the Provinces" ; "Applications under the Building Act, 1894-1909" ; "Mahogany and Hardwood," etc.

A meeting of the Surveyors' Institution was held on Monday, when a paper was read, entitled "An Evening in the Institution Library" (p. 105).

The Tribunal of Appeal under the London Building Act sat on Monday to consider further the appeal by Messrs. W. G. Allen and H. G. Norris against the certificate of the Superintending Architect of Metropolitan Buildings defining the general line of buildings on the western side of Fulham Palace-road. A report appears on p. 106.

Our Law Reports (p. 107) include : "Ramsden & Carr *v.* J. Chessum & Sons"—building dispute ; "Hallett & Langdale *v.* Cowdell"—building ownership dispute.

MEETINGS.

FRIDAY, JANUARY 26.

Royal Institution.—Professor B. Hopkinson, M.A., F.R.S., M.Inst.C.E., on "The Pressure of a Blow." 9 p.m.

Battersea Polytechnic (Lectures on Illuminating Engineering). Mr. J. S. Dow, B.Sc., on "Shades and Reflectors." 7.30 p.m.

Leicester and Leicestershire Society of Architects.—Mr. H. F. Traylen on "The Architecture of Stamford." Lantern illustrations. 8 p.m.

SATURDAY, JANUARY 27.

Architectural Association.—Visit to the New Polytechnic, Regent-street. 2 p.m.

The Builders' Foremen's Association.—Eighteenth annual dinner, Holborn Resturant, King's Hall, W.C. 6.30 p.m.

MONDAY, JANUARY 29.

Architectural Association (Combined Meeting with the Camera, Sketch, and Debate Club).—Paper by Mr. A. G. R. Mackenzie, entitled "That Modern House Planning Tends to be Over-Elaborate." 7.30 p.m.

Royal Academy of Arts.—Professor W. R. Colton, R.A., on "Ideals and Ethics of Sculpture"—III. Lantern slides of ancient and modern works. 4 p.m.

Royal Society of Arts (Cantor Lectures).—Mr. Vaughan Cornish, D.Sc., on "Ocean Waves, Sea-Beaches, and Sandbanks"—II. 8 p.m.

Royal Sanitary Institute.—Mr. Charles Porter, M.D., B.Sc., on "Sanitary Law (a) : Introductory Remarks," etc. 7 p.m.

Manchester Society of Architects. Mr. Raymond Unwin on "The Town Extension Plan." 8 p.m.

University of London (Victoria and Albert Museum).—Mr. Banister Fletcher on "Spanish Renaissance Architecture." 5 p.m.

TUESDAY, JANUARY 30.

Royal Society of Arts (Colonial Section).—Mr. W. A. Legg on "Irrigation in South Africa." 4.30 p.m.

Northern Polytechnic Institute (Lectures on Illuminating Engineering).—Mr. F. M. Denton on "The Production of Electric Light and its Distribution."

Nottingham Architectural Society.—Mr. Arthur Marshall on "Pencil Sketching." 8 p.m.

University of London (British Museum).—Mr. Banister Fletcher on "The Roman Thermæ." Lantern illustrations. 4.30 p.m.

The Institution of Civil Engineers.—Paper, "The Central Heating and Power-Plant of McGill University, Montreal," by Mr. R. J. Durley, B.Sc., Ma.E., M.Inst.C.E. 8 p.m.

WEDNESDAY, JANUARY 31.

The Carpenters' Company (Lectures on Arts Connected with Building).—Professor Beresford Pite on "London : an Architectural Syllabus." 7.45 p.m.

Royal Sanitary Institute.—Mr. Charles Porter, M.D., B.Sc., on "Sanitary Law (b) : Public Health (London) Act," etc. 7 p.m.

Incorporated Institute of British Decorators (Painters' Hall).—The drawings submitted in competition for the Travelling Studentship will be exhibited. The awards will be announced and the meeting addressed by Sir William Richmond, K.C.B., R.A. 8.30 p.m.

THURSDAY, FEBRUARY 1.

Royal Academy of Arts.—Professor W. R. Colton, A.R.A., on "Ideals and Ethics of Sculpture"—IV. Lantern slides of ancient and modern works. 4 p.m.

Society of Antiquaries.—8.30 p.m.

FRIDAY, FEBRUARY 2.

Royal Sanitary Institute.—Mr. Charles Porter, M.D., B.Sc., on "Sanitary Law (c) : Factory and Workshop Acts," etc. 7 p.m.

Glasgow Technical College (Architectural Craftsmen's Society). Mr. J. A. Lanchlan on "A Cistercian Monastery." 8 p.m.

Battersea Polytechnic (Lectures on Illuminating Engineering). Mr. J. S. Dow, B.Sc., on "Daylight and Artificial Lighting Compared." 7.30 p.m.

The Institution of Civil Engineers.—Lecture on "Steam-Turbines : Some Practical Applications of Theory," by Capt. R. Riall Sankey, R.E., M.Inst.C.E. 8 p.m.

SATURDAY, FEBRUARY 3.

Aberdeen Architectural Association.—Paper by Mr. A. J. Wood, entitled "Under Italian Skies." Illustrated. 7.30 p.m.

ARCHITECTURAL SOCIETIES.

Manchester Society of Architects : Construction and Design.

On Wednesday, the 17th inst., Sir Charles A. Nicholson, Bart., read a paper on "Construction and Design." The President, Mr. Edgar Wood, occupied the chair.

Good construction and good design, Sir Charles Nicholson said, are equally necessary elements of our art, and therefore it is worth while to turn our attention to well-known buildings where the union of the two elements can be easily followed. He would confine his remarks that night to Gothic work. One point became obvious, that, as cathedrals were built in a leisurely way, each section, and even each bay, had to be structurally independent and self-supporting. Norman buildings lent themselves to this gradual method, but in Gothic structures strong temporary abutments had to be provided. The weakness of Norman buildings was due to the bad material rather than to thrusts ; the collapses of Winchester, Chichester, and Ely towers were due to this cause. The weakness of Gothic structures was that they were maintained in a precarious state of equilibrium which approached instability.

Sir Charles then proceeded to very minutely analyse the development of Gothic construction, first as regards the relation of buttresses to the vaults they supported, then as to the development of the vaults themselves, and finally the evolution of the apse plan, paying special attention to the parallel process of evolution in England and France. Many points of interest in the construction of Wells Cathedral were instanced, and a section of the tower which was thrown on the screen was specially interesting, showing how the upper stages had been built as light as possible, and how the piers below had been strengthened by the well-known Strainer arches and the solid rood-screen, and how the tower was latterly stiffened by the filling up of the long lancet windows of the lantern. The ingenious way of augmenting the thrust of the eastern flying buttresses was illustrated ; the lower portion of the buttresses, which are received by the slender marble shafts in the Lady Chap are built with courses oversailing towar the west. After a survey of the period fan vaulting, the lecturer came to t application of the principles which could discern in the old work to mode construction. How modern materials shou be treated was a question still awaitin solution. Slides of ferro-concrete buil ings, where the concrete was honestly show and the monolithic nature of the structu expressed, were shown and much appreciate by the audience, most of whom recognise Sir Charles's own work in Jamaica. In co cluding, the lecturer said that the prese generation of architects was capable evolving artistic solutions of each fresh co structive problem that arose, but they shou make use of the large supply of knowled to be gained from the stupendous works the old masters of our art.

Leicester Society of Architects.

The 1912 session of this Society w opened at the Society's Rooms in S Martin's East on the 19th inst. The Pres dent, Mr. W. M. Cowdell, F.R.I.B.A., w in the chair, and gave an interesting a dress. He alluded with regret to the rece illness of the late President, Mr. Keites, ar expressed thanks to Mr. Keay for the attra tive programme which had been arrange for the session, and also thanked the Ho Secretary, Mr. Clement Stretton, for th earnest and thorough work he had done f the Society. He alluded to the fact that member of the Society, Sir J. Tudor Walter had received the honour of Knighthood. H congratulated Messrs. J. B. Healing, Wilfre Oxley, F. H. Morley, and C. J. M. Cowde on their success in the R.I.B.A. Final Exam nation, qualifying for Associateship of th Institute, and hoped that all their name would shortly be enrolled. Proceeding, M Cowdell drew attention to what had bee termed "the new responsibilities of arch tects" in view of recent decisions as to th relative legal liabilities of architects an builders in regard to defects in building and, after briefly dealing with certain the points that had been raised, hoped tha later in the session the members might hav a discussion upon the subject. In conclusion Mr. Cowdell drew attention to two interes ing drawings which were exhibited in th room. These were two of the contract draw ings made by the late Mr. F. W. Ordis when he extended the Corn Exchange an built the flight of steps in front of i They had, he said, been in his possessio over twenty years, and he only discovere them accidentally the other day. The ad dress was followed by a musical evenin arranged by Mr. A. H. Hind, A.R.I.B.A and Mr. W. H. Riley, A.R.I.B.A.

Nottingham Architectural Society : Visit to New Bank Premises.

Messrs. A. N. Bromley, F.R.I.B.A., an H. G. Watkins, A.R.I.B.A., architects, o January 16 invited the members of th Architectural Society to inspect the new premises for the National Provincial Bank Ltd., now nearing completion, at the corne of High-street. Twenty-three members an friends accepted the invitation. M Bromley first of all explained the plans, an pointed out the principal difficulties in con nexion with the scheme and the manner i which they had been overcome.

The peculiar shape of the site necessitate special arrangement of planning, and th ancient lights of the adjoining propertie had also to be considered. The foundation were honeycombed with the rock cellars o the former building, the main walls in place having to be taken down about 20 ft. t reach a solid foundation. The architect decided to carry out the whole of the fron as one continuous design, and when th weather has toned the newness down a littl the columns and carvings will, of course show to better advantage even than a present.

The principal entrance had necessarily t be at the corner of High-street and Smithy row, which, unfortunately, faces north, bu the draught is cut off by means of a porch Swing doors were considered too draughty and, therefore, the doors are arranged so a to throw the incoming air towards th radiators. Another difficulty was that th sewer in High-street was not deep enough t

drain the lavatories, etc., in the basement without these being kept higher than originally intended, and a special arrangement is put in to prevent flooding the basement in time of storms.

The ground floor is occupied by the bank, and the manager's room is placed on this floor, enclosed with glass panels and a glass ceiling to keep out noise. There being very little light obtainable from the side and back owing to the proximity of the adjoining buildings, a glass dome has been erected, and forms a very pleasing feature. To prevent down draughts the dome is double.

The interior of the bank is very striking and is most tastefully designed. The walls are lined with grey and green marbles, and the floor with marble slabs. The beams of the ceiling are covered with fibrous ornamental plasterwork, and the woodwork is polished mahogany. All the fittings are of bronze, specially designed. In the basement are the strong-rooms, clerks' mess-rooms, lavatories, heating apparatus, etc. There are various offices over the bank premises, and a caretaker's suite of rooms above these.

The front has been built in Portland stone. The floors are fireproof concrete, and the window-frames on the ground floor are teak.

The contractors are Messrs. Dennett & Ingle, and the fibrous plaster enrichments to the ceiling and the wood and stone carvings have been done by Mr. G. Seale, of London. The bronze fittings were supplied by Messrs. Spittal & Clarke, of Birmingham, and the electric lighting by Mr. H. T. Hazledine, of Nottingham.

Mr. A. E. Heazell, on behalf of those present, thanked Messrs. Bromley & Watkins for giving them the opportunity to see the plans and the building, and especially thanked Mr. Bromley for personally explaining the various features and conducting them round. Mr. H. Gill seconded.

Mr. Bromley then took the party to Messrs. Griffin & Spalding's on Long-row, where very extensive alterations and additions have been recently carried out from the designs of Messrs. Bromley & Watkins by Messrs. Fish & Son, contractors. The difficulty here was to bring the varying floor levels (due to the steep incline of Market-street) into the general scheme and to obtain light. This has been successfully accomplished, and the long lantern lights form a very pleasing feature.

A very interesting afternoon concluded by Mr. Bromley inviting the visitors to join him at tea in the new tea-room.

Glasgow Technical College Architectural Craftsmen's Society.

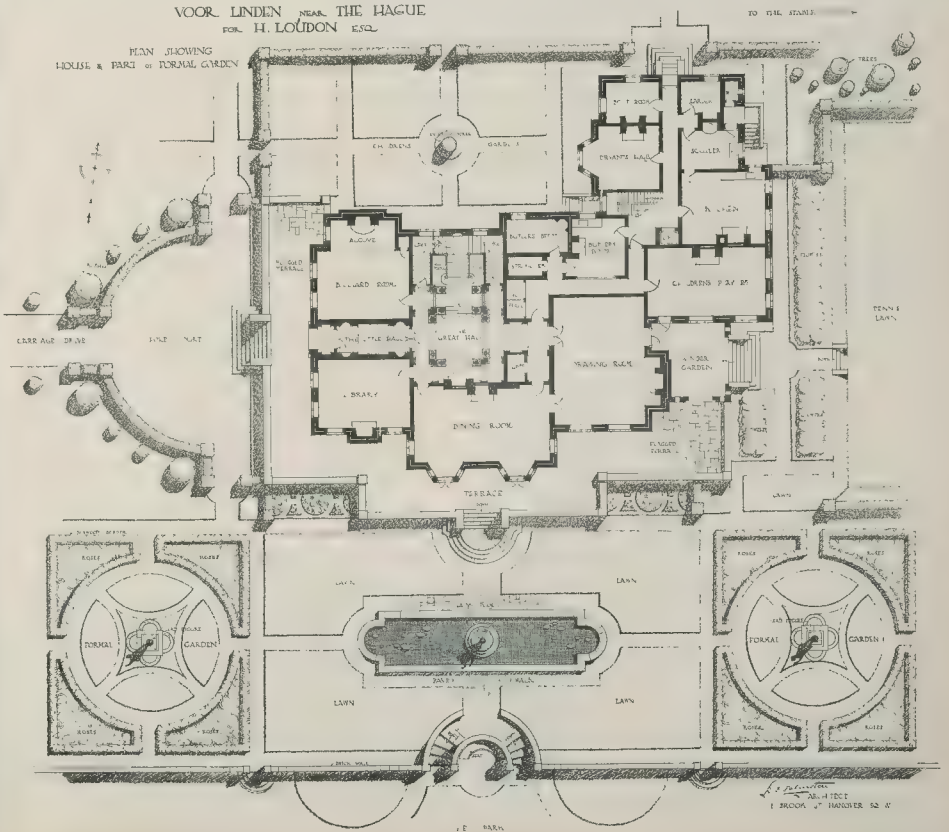
At a meeting of the Technical College Architectural Craftsmen's Society, Glasgow, Mr. James S. Boyd in the chair, a lecture was given by Mr. James McKissack on "Rothenburg on the Tauber and other Bavarian Towns." The lecturer gave a general description of Bavaria, the situation and method of reaching the various towns. A great number of excellent slides were shown, proving its claim to be called a "City of dreams and fairy hills," rich in architectural and historic associations. The lecturer also gave a short description of other interesting towns, including Hamburg, Dinkleshull, etc.

ILLUSTRATIONS.

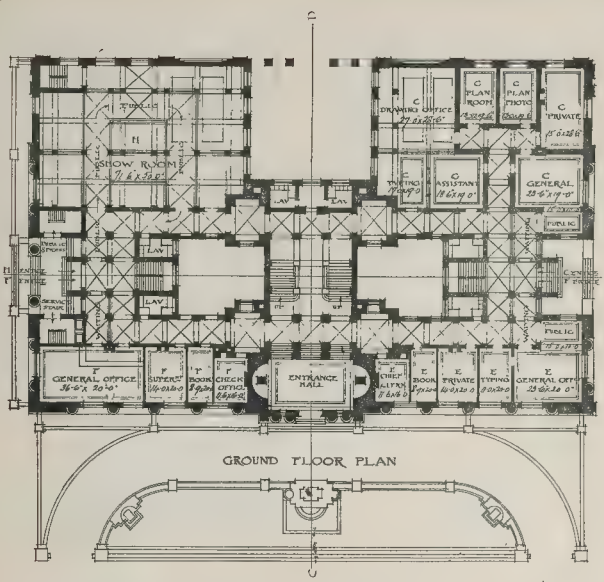
Voor Linden, The Hague.

THIS house is situated about four miles from the Hague in a charming setting of characteristic Dutch landscape. The estate is enclosed on the east and west by a belt of trees. The north is broken by a variety of fine old trees giving an irregular effect. To the south is a large meadow intersected by dykes, and a winding stream of ornamental water. The view is relieved by the distant woods. The house built in the Georgian period; the walls are of thin, hand-made Dutch bricks in two colours, the quoins being light red and the remainder dark red, laid with a light mortar joint. The arches over windows and doors are of hand-made tiles 1 in. thick. The roofs are covered with rough, hand-made tiles supplied by Messrs. Collier, Reading. The main entrance is treated with stone dressings of a fine-grained, mellow cream colour oolitic free stone from France.

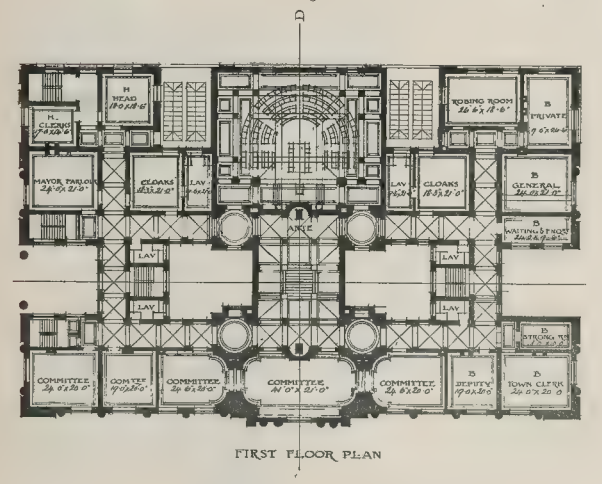
The accompanying plan shows the ground-floor accommodation and part of formal garden. The staircase and all the decorative work of the great hall is of fumed oak, and is lighted by a dome.



There are four suites of bedrooms with their bath and dressing rooms on the first floor, also nurseries, linen pantries, store cupboards, and the usual offices. On the second floor there is good bedroom accommodation, the laundry also being on this floor; an electric lift communicates with all floors. A central heating installation is provided for in the basement.



The stables, cottages, and garage buildings on the estate have been designed so as to be in keeping with the house.



The builder is Mr. H. F. Boersma, The Hague; clerk of works, Mr. John Davies. The bills of quantities have been prepared by Mr. S. L. Gowland, London. The architect is Mr. R. F. Johnston, Brook-street, Hanover-square, W

Designs for the Municipal Buildings, Marylebone.

FULL reference was made in our issue of December 8 to the competition for this building. We illustrate a design submitted by Messrs.

Design for Marylebone Municipal Buildings.

By Mr. S. Woods Hill, A.R.I.B.A.

Thos. S. Tait, James S. Whitelaw, and Cecil A. Sutton. A.R.I.B.A., who write as follows :—

"In designing the elevations of this building the authors endeavoured to make them genuinely expressive of the plan. The equal distribution of the piers throughout the plan is truthfully announced in all the elevations, thereby obtaining unity in the external treatment. The two important floors are emphasised externally by the larger order, whilst the suites of the main rooms are farther accentuated by raising the roof throughout the entire length of the main façade to Marylebone-road. A large pedimented central projection agreeably declares the position of the chief reception-room and the main entrance underneath; this portico is considerably wider than the pedimented ends, thereby forming a dominant note in the whole composition. The ½-in. scale detail is of one of the pedimented ends of the main building, and contains the entrance for the rates department. The relation of this detail drawing to the complete elevation to Gloucester-place is shown by the accompanying small-scale drawing.

It was found to be quite impossible to make the council chamber a feature visible from the main frontage, as the ancient lights prevented the council chamber from appearing above the top of the main roof. It was also felt that a tower was undesirable on so small a building, as such a feature would be entirely dwarfed by the very high adjoining buildings.

Internally the same height of column used in the reception-rooms is used in the council chamber, but here the order stands on a high podium at the level of the spectators' gallery. This increased height gives added dignity, and is in harmony with the greater depth in the curved ceiling of council chamber.

The lavatory accommodation is grouped in the large wells on either side of the main staircase.

The service stairs are placed near the four corners of the building, thereby obtaining rapid and easy communication to the various departments."

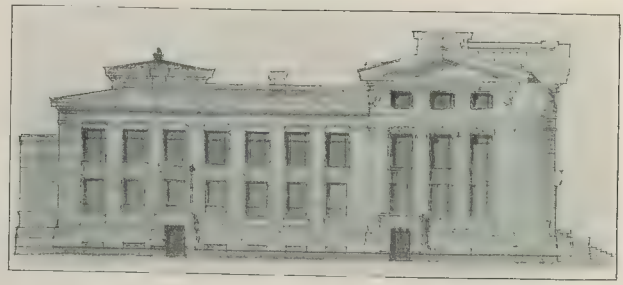
We illustrate also the design sent in by Mr. S. Woods Hill, A.R.I.B.A., who writes :—

"The author felt that adequate access for carts to the back of the buildings should be a predominating factor in the scheme. The plan was, therefore, disposed so that all stores, coal, coke, electrical fittings and apparatus, borough surveyors' samples, contaminated food, etc., could be dealt with at a point as nearly central as possible within the building.

Little more need be said, but that the entrances to the various departments were grouped together round a recessed portion at either end of the building.

The rest of the scheme follows the obvious arrangement of a good central staircase with the committee-rooms and council chamber at front and back of same respectively."

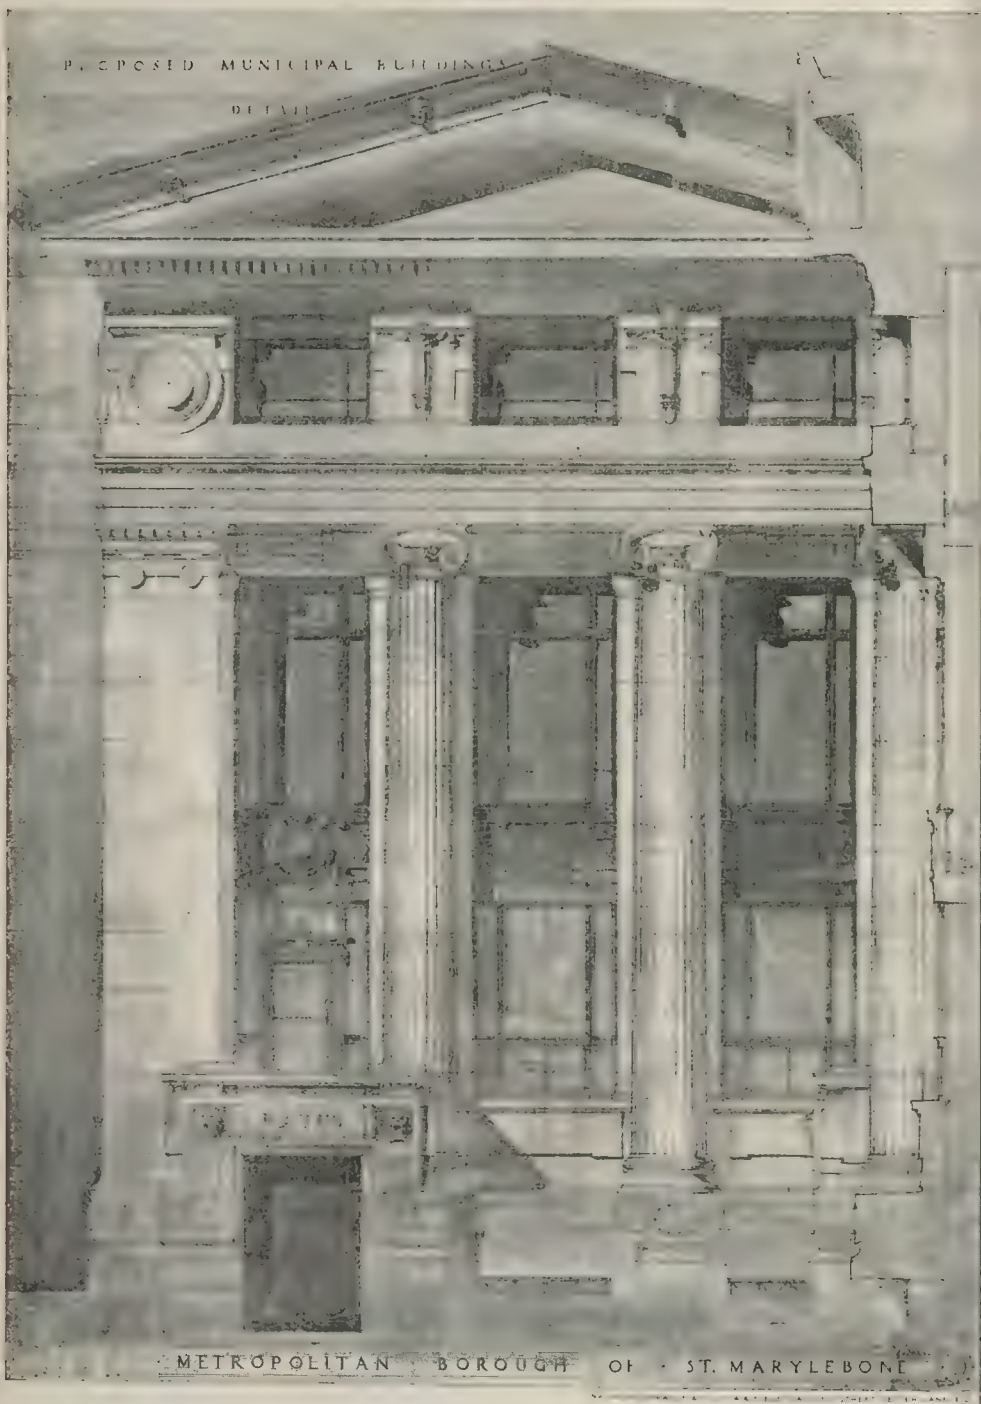
FIFTY YEARS AGO.



From the *Builder* of January 25, 1862.

London on the Thames.

"THAMES, the most loved of all the Ocean's sons," has got into a sad mess; dirty is his bed, and squalid are his banks. We have made a few sketches to show what is the actual aspect, on the river, of—



"The glorious city,
Which holds the fair, the rich, the gay, the witty."

Before long now Parliament will be asked to settle something as to the embankment; and doubtless before the next summer has passed the work will be commenced, we hope, on both sides of the river, and that in the course of a short time we shall have a clearly defined and substantial margin to our great river, and a roadway extending on the north from Westminster to the Tower and on the south throughout such a distance as will afford the required convenience and prevent the damage which is caused by floods. In arranging this matter there should be no half-measures. To stop short on the north side, as is proposed by some, at Blackfriars Bridge, would be a mistake, for independently of other considerations a better roadway along the part of Thames side, which leads from Blackfriars to Tower-hill, is most necessary for the accommodation of the present large and constantly increasing traffic. From morning till night these narrow streets are choked. In the vicinity of the Custom House and Billingsgate the confusion is generally so great that it is not easy for even foot passengers to make their way.

MONTHLY REVIEW · *of* · ENGINEERING.

REINFORCED CONCRETE IN GREAT BRITAIN.—I.

By W. Noble Twelvetrees.

Introduction.

As far back as the early years of the XIXth century the idea of strengthening cast-iron and wrought-iron structures by the addition of concrete, or of strengthening concrete structures by the addition of iron, was suggested and applied in practice by certain British architects and engineers.

The general principle thus originated seems to have been neglected in this country at the period of which we write, although the hint was taken by Continental and American constructors, with the result that buildings and other structures began to be erected in a crude form of reinforced concrete.

About the middle of last century several clearly-defined systems made their appearance abroad, some probably having been developed from the first British suggestions, and others due to the initiative of the inventors concerned.

The history of reinforced concrete as a structural material and reinforced concrete construction as a system of building construction has been so frequently told that readers need not be wearied by its reiteration in the present series of articles. Attention may be directed, however, to some pioneer patents in the United Kingdom which show that reinforced concrete, properly so termed, is by no means a new thing in this country.

In his patent of 1854 Wilkinson, of Newcastle-on-Tyne, describes the use of iron rods or ropes embedded in concrete for withstanding tension. The drawings accompanying the specification show the manner in which the inventor anchored the ends of the reinforcement to obviate the risk of slipping as the result of longitudinal shear when the reinforced concrete was under flexure. Thus it will be seen that Wilkinson clearly grasped the principles underlying genuine reinforced concrete construction. In his 1855 patent François Coignet describes a form of concrete, termed "béton Coignet," and a method of reinforcing floors with iron rods arranged to constitute a network which was carried by iron beams in floors of great span and large area. Matthew Allen, a London builder, obtained a patent in 1862 for flooring reinforced by flat and round bars placed near the lower surface of the concrete so as to form a tension network. This type of floor was used in the Columbia Market, Shoreditch, and elsewhere.

The patent of Brannon, dating from 1871, proposed the employment of reinforcement in the form of a metal skeleton upon which to stretch open wirework. Although the system never came into general use it constituted an anticipation of later patents, based upon the same general idea, which, however, cannot properly be regarded as conveying with the principles embodied in reinforced concrete proper.

Joseph Monier, to whom a British patent was granted in 1883, was a noteworthy pioneer on the Continent, but is known merely by name in this country, where his system never took root.

François Hennebique, whose first British patent dates from 1892, deserves credit for the extensive development of reinforced concrete in numerous countries, his efforts having been ably seconded by the late Mr. L. G. Mouchel, by whom the Hennebique system was introduced into the United Kingdom in 1897.

When the practicability of reinforced concrete had been firmly established several systems, previously employed on the Continent and in America, were introduced here, and subsequently some systems of British origin have evolved, the position at present being that architects and engineers have available for selection numerous methods of applying concrete and steel in the combination now generally termed "reinforced concrete."

Some of the methods involve the acceptance of systems, properly so called, where ordinary commercial forms of steel are utilised and which represent special arrangements of the reinforcement. Others, again, depend upon the use of steel rolled or otherwise manufactured in distinctive forms, for which certain advantages are claimed.

The selection of the most appropriate system for any given class of structure is not an easy task unless the architect is well grounded in the theory and practice of reinforced concrete, and the difficulty of choosing wisely is rendered somewhat more difficult than it would otherwise be by the handbooks which are issued by most of the firms concerned. As a rule, these books are very ably written, and the only conclusion to be drawn from careful study of them is that each system must be better than all the others. So confusing are studies of this kind to the inexperienced that we have known cases where two or more systems have been combined, and in one instance an architect acting on his own initiative designed the main and secondary beams for the floors of a building with reinforcement consisting of rolled steel joists and two patented types of reinforcing bars. The hope that a triple factor of safety would be secured by this multiple use of advantageous reinforcing elements was not realised, for the flooring proved unable to carry its own dead weight.

As a preliminary to the consideration of reinforced concrete systems and patented auxiliaries, it may be convenient to state briefly the more important facts to be borne in mind by the architect concerning the nature of reinforced concrete itself.

Reinforced concrete may be defined as the combination of concrete and steel in such manner that the most valuable properties of each constituent are utilised to the greatest possible advantage.

Well-made concrete offers great resistance to the transmission of heat and sound, is impenetrable by water and moisture, is one of the best fire-resisting materials known, and instead of deteriorating under atmospheric influences actually improves with continued exposure. Therefore it is an ideal building material, well adapted for the protection of steel, which, as our readers are aware, is very deficient in respect of all but one of the above-stated properties.

The use of concrete for the protection of steelwork is quite justifiable, but it must be clearly understood that a concrete-sheathed steel structure does not represent reinforced concrete, and would be more appropriately designated reinforced steel.

Concrete is relatively strong in compression and weak in tension, while steel is of approximately equal strength both in compression and in tension.

Volume for volume, concrete costs about one-fiftieth the cost of steel.

Area for area, steel will withstand about thirty times the compression and about three hundred times the tension that can be resisted by concrete.

The foregoing data are only applied in designing after certain necessary modifications, but will suffice to show that for equal resistance to compression the cost of concrete is only three-fifths that of steel, and that for equal resistance to tension the cost of steel is only one-sixth that of concrete.

Beams.

The great economy of concrete in compression and of steel in tension account for the economy of beams where concrete takes all compressive stress and steel takes all tensile stress, the most advantageous beam form being one of T-shape, where the concrete in the compression area is relatively of large cross section, and the concrete in the tension area is only of such cross section as will provide for enclosing the steel and insuring the requisite lateral rigidity of the rib.

In the selection and arrangement of steel for reinforcement an important matter is to bear in mind the desirability of concentrating the metal as closely as possible along the axis of tension and to arrange the steel so that the axis of tension shall be at the greatest possible distance from the neutral axis of the beam.

These points are illustrated diagrammatically by Figs. 1, 2, and 3, where it will be seen that the axis of tension for a rolled steel joist, used as reinforcement in the manner adopted in certain types of composite flooring, is considerably nearer the neutral axis of the beam than the corresponding axis for small round bars in two rows and a single row, the axis for the last arrangement being the lowest of the three.

If we take the depth of the beam from the top to the axis of tension the length of the lever arm for the internal forces would be approximately as follows—

Fig. 1	R.S.J.	14½ in.
Fig. 2	4 bars	16¾ in.
Fig. 3	2 bars	18 in.

As shortening of the lever arm involves proportionate diminution of resistance moment the practical disadvantage of any reinforcement type or any arrangement of reinforcing bars having the effect mentioned is quite apparent.

Further, it must be remembered that the permissible working stress for steel in tension would be greatly exceeded below the axis of tension if the steel at that axis in Fig. 1 were allowed to be stressed up to the permissible limit, while at the same time the steel above the axis of tension would work at much below the same limit. Therefore, assuming 17,000 lb. per square inch to be the permissible working stress at the bottom flange of the rolled steel joist, the working stress at the axis of tension would be only about 12,000 lb. per square inch.

Similarly, for the two rows of bars in Fig. 2, the actual stress of about 15,500 lb. per square inch at the axis of tension would correspond with 17,000 lb. per square inch for the bottom bars, while in Fig. 3, the whole of the metal may be taken as working at the mean stress of 17,000 lb. per square inch, the excess in the bottom fibres being permitted by the recommendations of the R.I.B.A. Report and generally sanctioned by other authorities.

We need not weary our readers by calculations which they can easily perform for themselves, but will simply point out that the beam in Fig. 2 is 50 per cent. stronger than that in Fig. 1, and the beam in Fig. 3 is 75 per cent. stronger than that in Fig. 1, neglecting in each case the comparatively small element of strength due to the independent moment of resistance of the rolled steel joist.

Another matter of considerable importance is the quality of the steel involved in the different systems of reinforced concrete construction.

As the tenacity of concrete is overcome by the elongation of the embedded reinforcement at comparatively low stress nothing is allowed for the tensile resistance of the

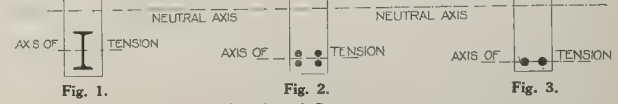

Fig. 1. Fig. 2. Fig. 3.

Reinforced Concrete.

material in reinforced concrete beams. After the point has been passed beyond which the concrete cannot be stretched exceedingly minute hair cracks are developed, but so small as to be invisible until the tensile strain of the steel is very considerable. The dimensions of the hair cracks depend upon the modular ratio of the two materials, and if the steel is to be subjected to stresses greater than 17,000 lb. or 18,000 lb. per square inch it is very desirable that the elastic modulus should be greater than the customarily accepted value of 30,000,000 lb. per square inch, otherwise the hair cracks will be correspondingly extended.

For this reason many engineers insist upon the employment of mild steel in preference to high tension steel. Although the width of the inevitable hair cracks is a matter for serious inquiry in the case of engineering structures, especially those in or near water, these invisible cracks are of less importance in building construction, where it may be permissible to use steel that can be safely stressed up to 20,000 lb. per square inch on the basis of 30,000,000 lb. per square inch as the value of the elastic modulus. If steel could be produced with a higher modulus the range of permissible working stress could be extended proportionately.

As to the form of the bars employed, the architect must decide for himself whether to adopt the plain round section obtainable in the open market or one of the various types of deformed bar.

European experts have used plain bars for many years with perfectly satisfactory results, relying upon the adhesion bond existing between the steel and the concrete, and, in some cases, upon the cranking of the bars as requisite in continuous beams and beams with fixed ends. As an additional precaution the ends of such bars are usually split and fish-tailed, or are bent over to J form.

As Professor Turneaure remarks, "America is the home of the patent bar," the object of which is to furnish a mechanical bond, supplementary to the natural adhesion of the materials.

The architect may adopt the general class of bar he prefers without affecting the question of design in any way. But he should at the same time take into account the character and properties of the steel and the nature of the projections intended to provide the mechanical bond.

If the projections occur at intervals in the length of a bar so as to destroy continuity of the metal in the line of the projections the area of steel must be measured on the core of the bar and the projections treated as waste metal so far as concerns resistance to tension.

A bar with gradual swellings and depressions on opposite sides would be a desirable form but for the tendency of the swellings to cause fracture of the concrete by wedge action.

Twisted round bars are effective, and at the same time obviate wasted sectional area because the fibres are continuous throughout. Twisted square bars are not desirable owing to the sharp corners they present.

The question of web reinforcement in beams raises further points for consideration, and has resulted in a fertile crop of patents, most of them relating to special types of reinforcement.

Web reinforcement is primarily intended for resisting tension on diagonal planes in the concrete, and if the stirrups or equivalent members are of uniform sectional area they ought, in the case of uniformly distributed loading, to be disposed at progressively increasing intervals from the supports to the middle of the beam, as dictated by a diagram of shearing force, which serves as a convenient measure of diagonal tension. If the web members are spaced equally their sectional area ought to be varied in accordance with the shear diagram. These points have a direct bearing on the design or selection of web reinforcement, as the case may be.

In systems where the web members are of round rods or flat strips bent to the form of stirrups or links and looped round or clipped to the tension bars the design of web reinforcement is perfectly simple. There are several types of patented reinforcement where the web members are fixed permanently to the tension bars, and in choosing from these the designer should see that facilities are provided for variation of the spacing as necessary.

Columns and Struts.

Reinforced concrete necessarily shows to less advantage in compression members than in beams, for the reasons already stated, and its economy is further reduced by the customary stipulation that the working stress in the steel shall not exceed m times the working stress in the concrete. As the value m -15 is now generally adopted the result is that for a column with longitudinal reinforcement and moderately efficient lateral reinforcement the working stress in the steel, even for concrete with the safe resistance of 900 lb. per square inch, is only 13,500 lb. per square inch, or 9,000 lb. if the working stress for the concrete is 600 lb. per square inch.

Special forms of bars for the longitudinal reinforcement are unnecessary, and are not always advocated even by makers of patent bars for beams.

The choice of lateral reinforcement offers greater scope for the judgment of the designer. The proprietors of different systems provide several methods for consideration—hoops, ties, links, and spiral coils of various kinds are recommended, and the designer should consider the merits of these with care, bearing in mind particularly the facilities afforded for moulding and tamping the concrete in successive layers from the bottom upwards, a mode of procedure more conducive to sound work than the practice of pouring the concrete in at the top of a closed mould.

As we have mentioned in previous articles the R.I.B.A. Report and the L.C.C. Draft Regulations put a premium on helical reinforcement, and prefer circular hoops to rectilinear ties. Even if these recommendations are followed the designer still has to judge of the efficiency with which they are carried out in the systems of construction submitted for consideration.

(To be continued.)

REGENT-STREET POLYTECHNIC.—III.

[*Continued from page 677, vol. CI.*]

Fire-Escape Stairways.

THE problem of obviating material loss of light where fire-escape stairs are erected outside the windows of buildings was solved in a satisfactory manner at the new premises of the Regent-street Polytechnic.

In that building there are two stairways of the kind both constructed by the St. Pancras Ironwork Company, Ltd., one in the north and the other in the south light area. Both of them are approximately 12 ft. square in plan, with a square or rectangular well varying somewhat in form and dimensions at different floor levels.

As the architect, Mr. George A. Mitchell, considered it very desirable that the obstruction to light should be minimised as much as possible, the patent reinforced concrete treads which had originally been specified for all the stairs were replaced by perforated iron treads and risers, made in compliance with the requirements of the London County Council, except in one place, where obstruction to light was not an important consideration, and in a few situations where a non-slippery tread was particularly desirable.

Further, most of the landings were constructed on the principle of pavement lights, designed so as to throw as much light as possible on the windows below.

The arrangement is one necessarily involving additional cost, which many owners, who are obliged to provide means of escape in case of fire, may think it well to avoid, but the resulting economy of light secured at the Polytechnic is clearly a consideration which justifies the outlay involved by the application of glazed landings in the case of buildings where abundant light is essential for work.

Sanitary Fittings.

The new sanitary tower, the position of which is shown by the drawings reproduced in a previous article, provides ample accommodation for students and others on the various floors. The whole of the fittings were supplie by Messrs. A. Emanuel & Sons, Ltd., and th plumbing was executed by Messrs. Holloway Bros. (London), Ltd., the general buildin contractors. The fittings are of white glaze fireclay, and, although generally similar t those employed so largely in the present da they present some features of which brie mention may be made.

The sink fittings were specially manufacture to suit the space available in the building The lavatory basins are of the twin type and are fitted with special press-dow valves, most suitable for colleges wher considerable waste of water occurs if ordinar screw-down valves are employed. Anothe feature of the basins is to be found in th fitting of the grids into the overflow of th other basins, thus permitting free access fo clearing the waste outlet. The urinals are o the firm's standard pattern, solidly made i fireclay. The closets are in heavy fireclay fitted with teak seats bolted on. The bath room, not intended for the general use o students' is of the independent fireclay pattern and the shower fittings are provided wit Emanuel's "Careless" valve, constructed s that the user must keep his hand on the leve as long as water is required.

Throughout the work no unnecessary wast of water can take place, as all the fittings hav been designed in view of this contingency. S far as we were able to judge in the course o our recent inspection, the whole of the sanitary work has been executed so as to ensure workin efficiency, and the plumbing details b Messrs. Holloway Bros. deserve equal com mendation for their neatness and workmanlik finish.

Heating and Ventilation.

This part of the engineering equipment o the Polytechnic building was carried out under great difficulties owing to the fact that the alterations to the old part and the con struction of the new portion were completed in sections, so as to provide for the unin terrupted continuance of the work conducte by the institution. In consequence of thi programme, the heating engineers, Messrs Strode & Co., were obliged to install the heating and ventilation systems in the various sections as completed, a mode of procedure which is somewhat inconvenient, as wil readily be appreciated by all who have had practical experience of heating and pipe erection work generally.

The medium employed for heating is low pressure hot water, supplied from three large boilers of the sectional type, but two of these are adequate for the requirement of the building, the third being arranged as a stand by. For the swimming-bath any one of the three boilers can be utilised.

To ensure rapid and efficient circulation of the water from and back to the boilers the circuits are fitted with Strode's electrically driven hot-water circulation accelerators, two of these appliances being installed so that one may always be in reserve for use in case of emergency.

Separate circulation mains are run to the different sections of the building, thus permitting any individual section to be shut off independently of the others, this being a very important facility in a building such as that of the Polytechnic, where several sections are only required for use at certain times. The swimming-bath is also served by an independent circuit of flow and return mains.

Heat is distributed in the halls, rooms, and corridors by means of radiators, each fitted with a control valve permitting the regulation of temperature to suit requirements.

The ventilation scheme, also carried out by Messrs. Strode & Co., provides for the supply of fresh air from a central fan of the closed blower type. The air is drawn in through a special filter, and after being purified is blown by way of ducts formed in the brickwork into the various rooms to be ventilated. For the extraction of vitiated air, separate fans of the exhaust type have been provided, the effect of the two systems being to ensure a thoroughly efficient circulation of pure air throughout the entire building. Separate means of regulating the movement of air are included, so that in the event of a large congregation of people in any of the rooms the supply of fresh air can be increased suitably, and, if occasion should arise the volume of air moved by the fans can be reduced.

Hot-water supplies for domestic purposes are furnished by an independent boiler and cylinder from which circulation mains proceed to all sections of the building where hot-water is required.

Electrical Installations.

The whole of the electrical work was carried out by Messrs. H. J. Cash & Co., Ltd., of Westminster, in accordance with the designs and specification of Mr. R. Borlase Matthews, M.I.E.E., of Kingsway. The work comprises five distinct installations, viz. :—

General Lighting, Public Hall Lighting, Power Circuit, Laboratory and Photographic Circuits, Cooking Circuit.

Current for all the circuits is drawn from the mains of the Marylebone Borough Council, whence leads are taken into the building at a point in Cavendish-place, and connected with a general distribution-board on the three-wire system.

For the information of any of our readers who may be familiar only with the two-wire system, we may explain that the three-wire system can be considered as the combination of two two-wire systems placed side by side with the two inner wires merged into one. The lamps are supplied with current alternately from the positive and negative mains and all the return wires are connected with the inner main. Assuming the positive main to carry current at +200 volts and the negative main to carry current at −200 volts, the potential difference is 400 volts. Then assuming the inner wire to be charged with electricity at earth potential, the difference of voltage between each of the outer mains and the inner main is 200 volts, this being the maximum pressure in the lamp wires. Currents passing along the inner main neutralise each other, and if the load were equally balanced there would be no current in this conductor. The great advantage of the system is to be found in the fact that owing to the relatively high potential between the two outer mains and the small amount of current in the inner conductor, the quantity of copper required is very much smaller than for the conductors in a two-wire system, the theoretical saving of copper being fully 70 per cent. From the main distribution board at the Polytechnic cables are run to seven control boards :—Two for the general lighting, at 240 volts; two for the public hall lighting, at 240 volts; one for the power feeders, at 480 volts; one for the laboratory circuits, at 480 volts; and a three-wire board for the laboratory, photographic, and cooking circuits.

The seven control-boards supply the following feeder cables :—

Two 150-ampere feeders for general lighting, carried to a point in the basement, whence rising mains are taken to distribution-boards on each floor.

Three 25-ampere feeders for the public hall lighting terminating on three distribution switch and fuse boards, two of these boards controlling the lighting of the hall, the corridor, and exits, and the third board controlling the lighting of the platform.

Two 20-ampere feeders for the swimming-bath and gymnasium lighting.

Two 100-ampere power circuits at 480 volts for the electricity laboratory, terminating on a distribution-board, whence sub-circuits are carried to supply machinery and apparatus installed in this laboratory.

One 50-ampere power circuit at 480 volts for the electricity laboratory, terminating on the distribution-board mentioned in the preceding paragraph.

One 50-ampere power circuit at 480 volts for the engineering workshops, terminating on a distribution-board, whence sub-circuits are run to supply electric motors operating lathes and other machine tools.

One 15-ampere power circuit at 240 volts also for the engineering laboratory with distribution-board and sub-circuits as above.

Two 100-ampere heat circuits, supplying the kitchen with current for cooking purposes.

Two 50-ampere arc light circuits, supplying current for the lanterns used by lecturers in the chemistry, physics, architecture, engineering, and art departments.

Two 50-ampere circuits, supplying current to the daylight studio.

Two 100-ampere circuits at 200 volts for the photography department.

One 50-ampere circuit at 480 volts for the photography department.

The following electric motors are included in the power installation :—

Two 12-brake-horse-power motors for the lifts.

Two 8-brake-horse-power motors for ventilating fans.

One 5-brake-horse-power motor for ventilating fans.

Two 3-brake-horse-power motors for the Strode accelerators included in the heating installation.

The looped-in system of wiring was adopted throughout the building, a method which obviates the jointing of wires and consequent risk of faults. The greater proportion of the wiring is protected by heavy gauge solid drawn enamelled-steel conduit, erected complete before the floors and walls were finished, the wires having been drawn into the conduits after the floors had been surfaced and the walls plastered.

In lavatories and places where condensation was anticipated the wires were drawn into "Kalkos" tinned-brass tube, with "Kalkos" fittings at all switch and ceiling rose points. The lamps throughout are fitted with Holophone reflectors specially designed to give the best results in the positions where they were placed.

In the Masonic Hall the ceiling enrichment is worked out in masonic designs, outlined with red and blue electric lamps. The conduit work here was very intricate, and had to be executed most accurately to fit the lines of the design.

We are indebted to Mr. Borlase Matthews for permission to publish the foregoing account of this interesting and comprehensive installation.

REINFORCED CONCRETE APPLIED TO BUILDINGS.

At a general meeting of the Leeds and Yorkshire Architectural Society on the 11th inst., held at the Leeds Institute, the President, Mr. S. D. Kitson, F.R.I.B.A., in the chair, an interesting paper was read by Mr. G. C. Workman on "Reinforced Concrete Applied to Buildings." The lecture was illustrated by slides, showing many important buildings already erected and some in course of construction. In the course of the lecture Mr. Workman said :—

"I would explain that as I have been during the past ten years exclusively identified with the 'Coignet System' of reinforced concrete, all the works which I intend to describe to you have been executed in this method, and the reinforcement of the various members has been carried out in accordance with the typical arrangement of the bars, which forms the characteristic of this particular system.

In all the buildings I am about to show you round bars of mild steel have been used in every case for the preparation of the various steel frames or units for the reinforcement of beams and pillars, and the same kind of bars have been used for the reinforcement of the floor slabs, and in certain cases for the walls.

I would mention that the principal reason for using round bars is because they have the advantage of being easily procurable in the open market, and also on account of the fact that this section produces the minimum amount of contact between the various bars forming the steel framework.

It is obvious that flat surfaces of contact between the bars should, as much as possible, be avoided on account of the fact that rust is liable to develop between the surfaces of contact, and this may ultimately become a source of danger to the structure.

Round bars have also the advantage over any other section that they offer a better surface of adhesion for the concrete, which is a matter of great importance in order to ensure the proper working of both the steel and the concrete to resist the external efforts.

In beams the lower or tension bar, which usually varies in diameter between $\frac{1}{2}$ in. and $1\frac{1}{8}$ in., is connected to an upper bar $\frac{1}{2}$ in. in diameter by means of vertical stirrups $\frac{5}{16}$ in. or $\frac{1}{4}$ in. in diameter, passing underneath the lower bar and having their ends hooked over the top longitudinal bar, thus forming a perfect mechanical anchorage between the tensional and compressional areas of the beam. These stirrups are gradually spaced in proportion to the shearing effort, which is greater at the points of support. These stirrups are bound to the main bars by means of strong annealed wire in such a manner that when the unit is suspended into the box-moulding forming the beams the position of these stirrups cannot be altered during the concreting operation, nor is it possible for the lower bars to become pressed downwards in such a manner as to be apparent on the soffit of the beam.

These top longitudinal members have also the advantage that the bars forming the reinforcement of the slabs must pass over them, which makes it necessary to place them in their proper position, namely, in the upper portion of the concrete of the slab above the beams, where they are required to counteract the negative bending moment or contraflexure of the slab.

It is obvious that if the reinforcement of the slab above the beam is not properly kept in position it is liable to be laid flat over the beams so that the upper concrete is not reinforced to resist the bending efforts, and, although this defect may not actually endanger the stability of the slab, longitudinal cracks over the beams are likely to appear in course of time.

The negative bending moment in the beams over the pillars is counteracted by means of joint bars bound by annealed wire to the top members of the unit reinforcement.

The rules of the R.I.B.A. concerning reinforced concrete, which have recently been amended, have added a special recommendation to the effect that precautions should in every case be taken by splitting or bending the rod ends or otherwise to provide additional security against the sliding of the bars in the concrete.

One of the first large buildings with which I had to deal was the second Tobacco Warehouse for the Bristol Docks. This work was carried out under the docks engineer, and the contractors were Messrs. W. Cowlin & Son, of Bristol.

Besides the advantages of fire-resistance and economy which this building offers over the first one, the internal accommodation is larger, on account of the walls being only about 14 in. in thickness throughout the height of the building, instead of the considerable thickness of brick walls required in the first building. These thin brick walls or panels were supported at each floor by lintels, and the building has been divided in two by a partition in reinforced concrete 6 in. thick.

The various floors were arranged in such a manner as to minimise the risk of fire by cutting off any particular floor from the others. The level of the floors is slightly raised at all lift openings and doors, so that it would be possible to flood any particular floor with a couple of inches of water if required. This warehouse has been erected on reinforced concrete piles varying in length between 40 ft. and 50 ft., which were driven into the ground by means of a steam monkey weighing 2 tons.

In the case of several buildings erected at Rainham, Essex, for Messrs. J. C. & J. Field, Ltd. (the architects being Messrs. Scott & Fraser, and the contractors Messrs. William King & Son, of London), the site is situated on the riverside and is extremely marshy, so that the buildings had to be constructed on spread foundations or rafts in reinforced concrete. Although this building contains very heavy machinery and tanks for the manufacture of soap, it has been possible to spread these loads on to the ground evenly, at a rate of only about a quarter of a ton to half a ton per square foot. Reinforced concrete buildings, being monolithic and lighter than brick or masonry work, are very well adapted to cases where unequal settlement is likely to occur, especially when such buildings are erected upon a reinforced concrete raft.

I would mention that there seems to be a considerable difference of opinion between the various methods of stopping the concreting in floor slabs, in beams and in pillars. Personally, I am of opinion that the best method of stopping the concrete of the floor slabs is to stop the work over the beams, because at this particular point the bars of the slab have been brought upwards to take the negative bending moments over the beam, so that the concrete in compression

is underneath, and if a sufficient number of bars have been provided to resist the contraflexure of the slab no cracks should appear, or if such cracks did appear they would not endanger the entire structure, whereas if the break in the concreting operation is in the middle of the slab it is necessary that the face should be left perpendicular, and if by any chance this has not been done there is a risk of the old face and the new sliding over each other, which would have the effect of endangering the strength of the floor. It is also difficult, on account of the meshwork in the lower part of a slab, to carry a perpendicular face right through. The remaining alternative of stopping the concreting in slabs is to do so at about 1 ft. to 2 ft. before reaching the beam at the point where the bending moments change, but here again we are met with the difficulty of making a perpendicular face right through the thickness, on account of the meshwork of the slab.

Concerning the beams, I am of opinion that the best way to stop the concreting operation is at the points of support, for the same reason as I have given in the case of the slabs.

Concerning the pillars, the footings should be made first and the body of the pillar carried up to the level of the soffit of the beams, the remaining portion being concreted at the same time as the beams. The usual practice is to carry out the concreting of the beams up to their point of junction with the slab, and to concrete the slab, which is usually situated above the neutral axis of the beam, after the meshwork has been placed in position on the flat centring.

One of the most interesting buildings with which I have been associated is the new Western District Post Office, which was erected about two years ago under the supervision of the Office of Works, the contractors being Messrs. William King & Son, of London.

This building, which is situated between Cavendish-square and Wimpole-street, comprises a block of 200 ft. frontage and 160 ft. in depth, with basement, ground floor, first and second floors, and flat roof.

Owing to the fact that only four large pillars were allowed in the centre of this floor space, the spans between these pillars and the outer walls varied between 45 ft. and 39 ft., so that the pillars support loads of over 200 tons each.

One of the chief features of the building is that the ends of the principal beams carrying respectively the first floor, second floor, and roof are suspended bodily by means of strong steel stirrups to upper beams 6 ft. high, forming the internal walls surrounding the inner court above the various floor levels. By this means it was possible to obtain a maximum height for the windows, which was a condition stipulated by the Office of Works. This condition, however, brought about a question as to whether this method of suspension could be used without danger, the two beams having a span of 39 ft., and supporting the first floor with a superload of 1 cwt. per square foot, the upper supporting beam having a span of 45 ft. There was no evidence that this particular arrangement had ever been adopted before, at least for spans of such large dimension. I am glad to say that the problem was solved in a satisfactory manner, with the result that the two suspended beams, 39 ft. long each, and the beams across the inner court supporting the skylight appear to have been made in one single span of about 118 ft.

Another noticeable feature is found in the extensive beams, over 12 ft. in height, which carry the other end of the suspended beams. These 12-ft. beams have a span of 45 ft., and it was necessary to provide in them a series of large windows situated below the neutral axis of the beam, which occurs approximately at the level of the first floor.

In this building large areas of flooring were tested, the specification being one and a half times the superload, and the deflection not to be greater than $\frac{1}{720}$ of the span. The deflection recorded in the beams did not, however, exceed $\frac{1}{1500}$ to $\frac{1}{2000}$ of the span, and no permanent deflection was noticed.

I would take this opportunity to state that, in my opinion, it is essential to place underneath the beams which are to be tested a few strong emergency props not touching the soffit of the beam by about $\frac{1}{2}$ in. This has the effect of reassuring the men who are carrying on the loading operation, and it also has the effect of preventing any sudden collapse which might be due to unforeseen circumstances.

A very large amount of reinforced concrete work has been carried out during the last two years in Jamaica, including the new Government buildings erected at Kingston, Jamaica, for the Government. The architects were Messrs. Nicholson & Corlette, of London, and the contractors, Messrs. William Cowlin & Son, of Bristol. This large building, which is entirely in reinforced concrete, contains the General Post Office and the Treasury.

In preparing the design the architects had to consider the question of earthquakes, and consequently the foundations of these buildings have been constructed in such a manner as to offer the least possible obstruction to shocks or movements of the ground. The foundation is practically in the form of an immense raft composed of strong slabs and beams, the latter uniting the various footings of the pillars. The superstructure is of the type usually adopted in hot climates with spacious verandahs and colonnades. All the roofs are flat and covered with several inches of gravel.

The making of the steel frameworks, and in fact all the labour, was carried out by natives working under a few experienced supervisors. I am informed that most of the concreting was done by native women carrying the concrete in baskets. The new King's House at Kingston was carried out simultaneously with the building previously described under the same architects and by the same contractors. It contains a large swimming-bath and several remarkably fine dancing and reception halls.

Another large building is at present in course of erection at Kingston for the new Law Courts, under Messrs. Nicholson & Corlette. In this case the contract was secured by Messrs. Mais & Sant, of Kingston, Jamaica. This last-mentioned building will be very similar in appearance to the other public buildings. Needless to say, they have been constructed not only to resist earthquake shocks, but also to resist fire, and you will no doubt remember that a very severe conflagration followed the earthquake which happened in Jamaica many years ago. It is for this reason that practically all the buildings of any importance in Jamaica are at present being constructed in reinforced concrete.

I would like to mention that it has been my experience that architects, and in many cases engineers also, are inclined to specify superloads which are obviously far more considerable than what is really necessary for the requirements of the particular building which they have designed. This is probably due to the fact that in many cases reinforced concrete is a novelty to them, so that by specifying a comparatively high superload they hope to guard themselves against failure of the work. It is well established, however, that any failures which have occurred have been due either to the premature removal of props and centering, or, in a few isolated cases, to faulty design, so that in reality nothing is gained in security by specifying a higher superload than is required.

In giving a few examples of applications of reinforced concrete to schools I may point out that, although it has been stated frequently that reinforced concrete was too expensive a material to be used for buildings of this nature, as a matter of fact it has been and is frequently used for this purpose.

It is noticeable also that reinforced concrete is gradually superseding all other kinds of flooring for hospitals, on account of its fire resistance, and also of its cleanness and economy. The same system of flooring is at present being used for the Maternity Hospital, Leeds, and the new Royal Infirmary at Bristol; it has been used also for the Livingstone Hospital at Dartford and for the National Hospital for Paralysis in London.

Amongst large buildings where this kind of flooring is used at present I may mention the Headingley Training College.

I would conclude by saying that I trust that these few examples of reinforced work have been of interest to you, particularly in showing you how various difficulties in construction have been solved, and if the works I have described to you have had the effect of further strengthening your confidence in reinforced concrete, the object of my lecture will have been fully attained."

ENGINEERING NOTES.

The Municipal Engineering Profession.

At a Western District meeting of the Institution of Municipal Engineers, held at Birmingham on January 18, Mr Henry Hulse, Borough Surveyor and Engineer, Droitwich, read a paper on "The Institution of Municipal Engineers and its Relation to the Municipal Engineering Profession." The Institution was inaugurated in 1908. In the course of his remarks Mr. Hulse said: "The membership now numbers 712 fully accredited members, eighty associate members, and ninety-five students. Ten districts have already been set up in the British Isles. Examinations have been commenced upon lines which, while being a distinct innovation upon what has been the usual practice, are considered, by those well qualified to express an opinion, to be best suited to present-day requirements, and will undoubtedly be followed by other bodies in the future. These examinations, while making no special call for the crammer, do call for individual initiative, while sound knowledge gained in the ordinary curriculum of the schools, with thorough practical training such as may be gained under an experienced official, will be found to be of more service than the mental gymnastics that have hitherto been necessary in so many examination halls. Let not the slack student think that he will benefit under such a scheme, as it is just the co-relating of theory with practical work in its varied problems in the questions set that will leave him plucked, and discover the student who has made up his mind to understand and grasp the work of the profession in all its many details. . . . Our Institution is at one with other institutions in consolidating the municipal engineering profession, and giving its members reason to think and work along national as well as local lines for the benefit of the entire service."

Blackfriars Bridge.

The City Corporation has just published a historical and statistical report in connexion with the recent widening of Blackfriars Bridge, which is the second bridge at that spot. The first was begun in 1760, opened for foot passengers in 1766, and finally completed in 1769. The present bridge was begun in 1865 and opened by Queen Victoria in 1869. For the widening of the bridge the tender of Sir William Arrol & Co. Ltd.—203,006*l.*—was accepted. This included 3,228*l.*, being the estimated cost of the Embankment subway. The actual cost of the widening and the subway proved to be 197,039*l.*, to which was added 3,560*l.*, being the agreed premium for early completion (178 days, at 20*l.* per day), making a total of 200,599*l.* In addition to the cost of widening there were other expenses to the amount of over 31,000*l.*, including the tramways, or in all, 232,362*l.* Before the widening the total width of the bridge between the parapets was 75 ft.; the present width is 105 ft. The other bridges are of the following widths—London, 65 ft.; Southwark, 42 ft.; Tower, from 48 ft. to 60 ft.; Westminster, 84 ft.; Vauxhall, 80 ft.; Kew, 55 ft.; Chelsea, 45 ft.; Putney, 44 ft.; Waterloo, 42 ft.; Albert, 41 ft.; Battersea, 40 ft.; Lambeth, 31 ft.; Hammersmith, 38 ft.; and Wandsworth, 30 ft.

Strength of Concrete.

In the paper on "Reinforced Concrete Columns," read by Mr. W. C. Popplewell, M.Sc., A.M.Inst.C.E., to the Institution of Civil Engineers, some figures are given which deserve notice by concrete users. The concrete tested by Mr. Popplewell was mixed in the following proportions:—Portland cement, 6½ cwt.; Leighton Buzzard sand, unscreened, 13⅔ cubic ft.; broken granite, ⅜-in. to ¾-in. gauge, 27 cubic ft. This is roughly equivalent to a 1 : 5 mixture by volume, and might reasonably be expected, in view of previously ascertained data, to give the ultimate compressive resistance of from 3,500 lb. to 4,000 lb. per square inch at the age of three months. Nevertheless the average results obtained by Mr. Popplewell were less than 2,200 lb. per square inch, at the same age, thus showing that the strength of concrete cannot be judged merely by the proportions and quality of the materials used, and emphasising the important influence of workmanship and manipulation in the preparation of this material.

THE BUILDING TRADE.

THE NSTITUTE OF BUILDERS:

ANNUAL DINNER.

IE dinner of the Institute of Builders held in the Whitehall Rooms, Hotel opole, Charing Cross, W.C., on Wednes- when Mr. James S. Holliday, President, ied the chair, supported by Mr. W. olson, J.P., Lord Mayor of Leeds; Mr. ld C. Horsley, F.R.I.B.A., President itectural Association; Mr. W. Edgar ie, M.P., F.S.I., President Surveyors' itution; Mr. C. W. Ball, President itity Surveyors' Association; Mr. J. ott-Bartrum, Master Tylers and Brick- s' Company; and Messrs.

ie loyal toasts having been suitably pro- l and honoured,

H. H. Bartlett,

President of the Institute of Builders, osed the toast of "The Architects and evors," coupled with the names of Mr. ld C. Horsley, President of the Architec- Association, and Mr. W. Edgar Horne, President of the Surveyors' Institution.

Bartlett said one had heard a good deal y in regard to the responsibilities of archi-, and more might be heard with advan- on that interesting and important matter. aps a discussion of the subject would le architects to realise the responsibilities h had been placed upon the builders— onsibilities which were not perhaps eciated quite as fully as they might have . The architect who knew what he ed and would say it would find many builders able and willing to interpret his wishes and thoughts, and save him much trouble and labour by doing what was, after all, builder's work—such details as finding out prices, etc. The architect was responsible for the artistic part of a building, and by troubling about so much detail he took upon himself more responsibility than there was any need for. The builder was placed in rather an invidious position, because so many people were invited to do so many different works on the building that almost all the builder had to do was to pay the accounts and take the general responsibility. He knew the temptation put in the way of the architect, but he thought a little more confidence might be shown in the builder. He thought that modern architecture had vastly improved, and much of it would bear comparison with the best work of the past. In London architecture there was great variety, much perfection, and much better materials than used to be specified or used. New materials were constantly being introduced, and ferro-concrete was one of them. It might be a difficult material to treat architecturally, but it had come to stay, and he believed that architects would produce with that material buildings which we should not be ashamed of, but, on the contrary, look on with pride. As to surveyors, they were the friendly medium between the architect and the builder. It was true there were quantities and quantities, and there were some which it was impossible to price, but the best surveyors of the day carried out their work specially well. The quantity surveyor was a man who held the balance strictly fairly between architect and builder. He hoped architects would not take upon themselves the responsibilities of surveyors, and that surveyors would not take upon themselves the responsibilities of architects.

Mr. Gerald C. Horsley,

in responding for the architects, said he was sure in the number of business associations and transactions which are every day entered into by busy men of affairs in this country there were none which were more fully based upon honourable dealing and mutual respect than those between the architect and the builder. There were always reasons for every case of friendship or alliance, and in this case the mutual undertsanding to which he referred as existing between architect and builder was founded upon one common desire, viz., that good work shall be done. In that way only could the obligation to the client, who pays for the work, be fulfilled. The hope that they might be able to do good work themselves, and that they might get good work out of others, and that this work might advance the highest interests and well-being of their art, should be the mainspring and motive force of their daily efforts in their respective occupations. It was this desire which impelled them all to do what they could to improve the standard of knowledge and execution in their own craft. He need not remind them that architects had always been actively engaged in trying to ensure a sound education for the workers in their profession. The Association of which he was President had for the whole of its life of sixty-five years maintained a flourishing school for young architects, designed to supplement the instruction they obtained through the apprenticeship system. To be entirely successful their efforts must be unceasing, and he claimed that they were that. Broadly speaking, the Association had two objects in view:—(1) That an architect shall be an accomplished designer, a first-rate artist; (2) that the arts and crafts connected with architecture shall be so flourishing as to ensure the production of fine and noble building. In the attainment of the second of these objects builders did, and could, materially assist. In the workshops of builders, and in their yards, architects were accustomed to find the best work. When they visited them they invariably found the best technical execution. He was certain that all architects were frequently amazed at the perfection of execution which was to be found in builders' workshops. But although this was the case in so many instances, although the excellence of the British workman was well known (there was none better in his opinion), he believed that every man needed help and encouragement in this world, not only to attain and possess "a living wage," but also to produce the best work he is capable of. Assure him that if he fits himself to do this more than the "living wage" will probably be his. Their Institute was, he had no doubt, engaged upon many affairs of importance which were to the advantage and benefit of the craft and to the art of building in this country. Architects viewed that work with the utmost sympathy and interest.

Mr. W. Edgar Horne, M.P.,

after some humorous remarks in reference to architects, said that surveyors and builders were intimately acquainted and brought into close touch with each other, and their relations were of a most friendly character.

Mr. H. D. Searles-Wood

then proposed the toast of the evening, "The Institute of Builders and Its President." In the course of his remarks he said that builders had a grave responsibility in teaching their workmen. The President had done much in this direction, not only in his own workshops, but also at the Brixton School of Building, of which he was the Chairman of Committee. We talk about the newer responsibilities of architects and builders, and the difficulties they had to face, but he doubted whether those responsibilities were greater now than they were in the distant past. In the Laws of Babylon, some 4,000 years ago, the laws affecting builders were very drastic. Mr. Searles-Wood then read some of the onerous conditions imposed on builders, but the underlying principle was the same, *i.e.*, to build well and truly. He congratulated them on having Mr. Holliday as their President, and the Institute in having as their President a gentleman of such wide experience.

The President,

in the course of his reply, said, as regards the Institute, he could not say it had been a brilliant year, although very useful foundation work had been laid in one important matter, viz., in the suggested form of contract between builders and sub-contractors. Efforts had also been made to resuscitate the apprenticeship system, and those efforts had taken tangible shape in the suggested draft of indentures which had been prepared and submitted by his Council to the Educational Department of the London County Council for their co-operation. The evolution or revolution which has taken place in the building trade during the past thirty years had been very great, and one marked change had been the introduction of specialists into building operations of all kinds. And it had therefore been felt that a fair contract for sub-contractors was necessary, based on the form of main contract agreed upon by the R.I.B.A. and Institute of Builders. He trusted the basis of the sub-contract suggested by his Council, and which had practically been approved by the Master Builders' Association and National Federation, might prove to be considered fair by all interested, especially as the idea had been only to ask the specialist to take the same responsibilities, as far as he was concerned, as the builder had in the main contract. He should like to take the opportunity of thanking the members of the Council, and especially the members of the Contract Committee, for the great assistance they had given him in the consideration of these two important matters. As regards the building trade generally, while admitting that trade generally was better, the clouds of depression were still over us, and the competition so unhealthily keen that it was difficult to obtain prices that were remunerative. Many reasons had been put forward as the cause of this depression. Among others, the disturbing legislation especially affecting the

trade, and he daresay we could all go as far as saying that the legislation of the past three years had certainly not been conducive to the best interests of the building trade. But as the Government had large questions to engage its attention for some time, he hoped the building trade would have a rest from legislation for a time, so that it could rest on a firmer basis that at present, when, he hoped, there would be a natural return to a period of its former prosperity.

Mr. Benjamin I. Greenwood
proposed the last toast, *i.e.*, "The Guests," in happy terms, and in remarking on a previous observation—that perhaps the Pyramids had been built by a prophet—he said that, if so, he was afraid that no builder had had anything to do with it.

Mr. Fitzroy Doll
responded, and said that architects deplored the introduction of so many specialists in the building trade. Having referred to the many qualifications necessary nowadays for the architect to possess, he spoke of the effect of recent legislation on the building industry. The prosperity of the country was the prosperity of the building trade, because unless the country was prosperous building could not go on.

THE LONDON BUILDING TRADE.

THE notice given by the London district of the Amalgamated Society of Carpenters and Joiners of demands for increased wages and shorter summer hours has been considered at a meeting of the masters, but no decision, we understand, has been reached. It is expected that the two sides will meet in a conference, but as the men's notices do not take effect till June 8 the negotiations will probably go on for some time before a definite answer is given.

The demands, as has been already stated, are for an increase of wages from 10½d. to 1s. an hour, double pay for overtime, and a reduction of summer hours from fifty to forty-seven a week. The masters consider that the brighter prospects which the building trade is beginning to enjoy after a period of stagnation lasting for five or six years would be checked by such a considerable increase in working expenses. The prosperity of the trade is dependent to a great extent on the enterprise work on speculative lines in the suburbs, which is largely undertaken on borrowed capital. The proportion of failures in the trade in the last few years has been high, and it is pointed out that any substantial rise of wages as would threaten the stability of speculative builders would tend to discourage the flow of capital to the industry. The employers complain, says the *Times*, of being hardly hit by recent legislation, in particular by the Insurance Act and the Workmen's Compensation Act. In addition to the contributions for invalidity insurance, they anticipate a heavy burden in connexion with the unemployment provisions, the building trade being one of the three groups of trades to which this part of the Act applies. Complaint is also made of the uncertainty as well as the weight of the liabilities imposed on builders by recent Finance Acts.

GOVERNMENT CONTRACTS.

THE following tenders have been accepted during the past month by the Government Departments named:—*Admiralty, Works Department:* Works services, landing steps and footway at Oil Fuel Depôt, Turnchapel—Messrs. Steer & Pearce, 8, Carfrae-terrace, Plymouth; new surgery, North-yard, Devonport — Mr. James Crockerell, Richmond-walk, Devonport, officers' cabins, submarine depôt, Haslar—Mr. John Hunt, South Wharf, Cleveland-road, Gosport; workmen's cottages, Torpedo Range, Loch Long—Mr. William Clarke, 43, Sandgate-street, Ayr. *Commissioners of Woods:* Buildings for wood distillation works at Speech House in the Forest of Dean, Gloucester—Mr. Alfred James Dolman, 95, Ryecroft-street, Gloucester; alterations and improvements, Barossa Farm—Mr. J. Corbett, Bagshot. *War Office:* Work services, alterations and additions to Hilsea Hospital—Messrs. G. Munday & Sons, 9, Botolph-lane, Eastcheap, E.C.; alterations and improvements to married quarters, Cahir—Mr. J. Roche, Gladstone-street, Clonmel; annexes to Netley Hospital—Mr. J. Hunt, Gosport; conversion of headquarters, Cardiff—Messrs. Davies & Griffiths King William-street, Pembroke Dock; erection of civilians' quarters at Tidworth—Messrs. W. E. Chivers & Sons, 29, Sheep-street, Devizes; installation of heating apparatus, Herbert Hospital, Woolwich—Messrs. Ashwell & Nesbit, Ltd., 12, St. James-street, Bedford-row, W.C.; installation of heating apparatus, Military Hospital, York—Messrs. J. F. Phillips & Sons, Ltd., Queen Anne's-chambers, S.W.; internal wiring, Louisberg Barracks, Bordon, and married quarters, Bordon—Messrs. G. E. Taylor & Co., 8, Bush-lane, Cannon-street, E.C.; periodical works services at Tidworth—Mr. F. Holdsworth, Shipley, Yorks; reconstruction of No. 3 store, Gunwharf, Portsmouth—Messrs. E. & A. Sprigings, Winstanley-road, Portsmouth; supply and erection of steel stop butts at Rainham—Messrs. J. Westwood & Co., Ltd., Napier-yard, Millwall, E.; surface drainage, Bulford—Messrs. W. E. Chivers & Sons, 29, Sheep-street, Devizes. *India Office; Store Department:* Lavatories—Messrs. Doulton & Co., Lambeth, S.E.; water supply plant—Messrs. J. Simpson & Co., 155, Queen Victoria-street, E.C. *Crown Agents for the Colonies:* Cement—Messrs. Peters Brothers, 72, Victoria-street, S.W. *Office of Works:* Builders' work, extensions, and alterations, Birmingham parcel office—Mr. J. A. Turton, 1, Wheely's-road, Birmingham; children's conveniences at Kensington-gardens—Messrs. F. Webster & Son, Grove Vale Works, East Dulwich, S.E.; land registry extension—Messrs. F. & T. Thorne, Isle of Dogs, E.; Manchester maintenance work—Messrs. Brown & Backhouse, Chatham Works, Chatham street, Liverpool; erection of new post office, Rochester—Messrs. T. H. Kingerlee & Son, 35, Queen-street, Oxford; erection of administration block, Royal Scottish Museum—Messrs. J. Lownie & Son, 57, Harrison-road, Edinburgh; extension to Waltham Cross Post-office—Messrs. J. Bentley & Sons, Sun-street, Waltham Abbey; water mains, pipelaying, repairs, alterations, etc., Windsor Castle—Messrs. J. Mowlem & Co., Ltd., Grosvenor Wharf, S.W.; alterations, drainage, Windsor Castle—Messrs. Dent & Hellyer, 35, Red Lion-square, W.C.; marble work, British Museum extension—Messrs. Fenning & Co., Ltd., Palace Wharf, Rainville-road, Hammersmith, W.; National Gallery of Scotland Messrs. Galbraith & Winton, 185, St. Vincent-street, Glasgow; reinforced concrete work to tank on Duck Island, St. James's Park—Messrs. Holloway Brothers (London), Ltd., Victoria Wharf, Belvedere road, Westminster-bridge, S.W.; framework and floors, Royal Scottish Museum—Messrs. Loudon & Inglis, Coatbridge. *Commissioners of Public Works, Ireland:* Alterations, Kilkenny Post-office—Mr. T. A. Walsh, Kilmallock.

MAHOGANY AND HARDWOOD.

WE learn from Messrs. Foy, Morgan, & Co.'s London mahogany and hardwood report, 1911, that the total importations of mahogany into London during the last twelve months amounted to about 15 per cent. in excess of the figures for 1910. Although the quantities from several sources of supply show some variation from the shipment of the previous year, the excess is practically owing to the increased importations from the West Coast of Africa. The year closed with a very strong market. The prospect for shippers is encouraging, as there are no indications that the present high prices will fall away in the near future. The importations during the past year of Honduras were almost identical in quantity with those of 1910—to be exact they were one per cent. less. The total importations of African mahogany into London showed an increase of over 60 per cent. as compared with the previous year's total, and the trade during the year reached more important dimensions than for several years past. Unfortunately, however, the increased quantity chiefly came from a district which supplies a very poor quality. In addition to this, the condition of many of the logs generally has been faulty, so that the market has not received sufficient really good logs. Prices have been maintained at an excellent level throughout the year, and all the good logs imported have met with a ready sale at exceptionally good figures. "The teak trade of 1911 presents some peculiar features. The total importations exceed those of 1910 by about 40 per cent. and the increased quantity has consisted largely of logs. While all the sources of supply have contributed to some extent to the increase, by far the most important additional supplies have come from Bangkok. The moderate increase in the plank importations is owing chiefly to the larger import from Rangoon. The deliveries during the year have been disappointing, having declined about 13 per cent. as compared with the total of 1910. . . . So far as logs are concerned, the standard of quality on the whole has not been high. The bulk of the importations has consisted of second-grade parcels, and even some of those which have been brought in as "first class" have left a good deal to be desired in point of condition. . . . The outlook for the near future is difficult to gauge. The present conditions of trade and stocks on this side do not appear to warrant the hope of any advance in values. . . . The bulk of the importations of Kauri pine to the United Kingdom arrived in sailing vessels early in the year, and stocks were more than ample for the slow consumption during the first nine months. A greatly improved demand has existed throughout the last quarter of the year, reducing stocks to a moderate quantity, and enabling holders to advance prices to a slight extent, although not sufficient to bring them to a parity with the increased cost of future supplies. The extraordinary development of the demand in the Colonies during 1910 was more than maintained during the present year, so that very little of the production was available for shipment to the United Kingdom, whilst values have risen considerably at the shipping ports. It appears, therefore, that better prices must be forthcoming in the United Kingdom market in order to attract further supplies of this highly esteemed material. The demand for white pine (Kahikatea) in suitable sizes and conditions is now firmly established, and the consumption has been active during the entire year."

GENERAL BUILDING NEWS.

NEW CHAPEL, NOTTINGHAM.

Messrs. E. R. Sutton and F. W. C. Gregory, of Nottingham, are the architects for the new Baptist chapel and schoolrooms to be erected at the junction of Gregory-boulevard and Sherwood-rise. The chapel will accommodate 500 persons and the schools 400. The estimated cost of the work is about 8,000*l.*

RIDLEY HALL, CAMBRIDGE.

A new block of buildings, to accommodate ten additional students and a tutor, has been built at Ridley Hall, Cambridge. There are now rooms for thirty-nine students. The architect of the new building was Mr. A. W. Wallace (London), and the builder Mr. W. Saint (Cambridge).

NEW SCHOOL, PORT TALBOT.

This new higher elementary school has been erected at a cost of 10,000*l.*, and provides accommodation for 204 children. The building includes a science wing containing a chemical and physical laboratory and lecture-room, and a corresponding wing contains cookery, laundry, and dinner rooms; there is also a large central hall and a manual instruction-room. The architect for the work was Mr. W. James Nash, A.R.I.B.A., the County Architect, and the contract was carried out by Mr. Watkin Williams, builder, of Cardiff.

NEW SCHOOL BUILDINGS, NORWICH.

A large extension of the Norwich High School for Boys has just been carried out from the plans prepared by Mr. E. J. Trench, architect, of Norwich. The new buildings include a large hall, three classrooms, each accommodating one hundred boys, and a chemical and physical laboratory. The heating throughout is by hot water, and the whole school will accommodate about 250 scholars. The contractor for the work was Mr. H. C. Greengrass.

MUNICIPAL TECHNICAL INSTITUTE, CORK.

This new institute was opened last week and has been erected from the designs of Mr. A. Hill, F.R.I.B.A., architect, of Cork, and the contract was carried out by Mr. Samuel Hill, builder, of Cork.

NEW BUILDINGS IN LONDON.

Catholic Church, Eltham; Mr. F. J. Bradford, builder, King Richard-road, Leicester. Rebuilding Nos. 9, 10, and 11, Eagle street, Holborn, S.W.; Messrs. L. W. Ridge & W. Charles Waymouth, architects, 104, High Holborn, W.C. Nurses' quarters at Constance-road Workhouse, Camberwell, S.E. (2,450*l.*); Messrs. W. J. Mitchell & Son, builders, Dulwich Village, S.E.

NEW INFIRMARY, PERTH.

Great progress is being made in the erection of this infirmary, which is to cost about 36,000*l.* About half of the work has already been completed, including the lodges, admission block, operating theatre, half the corridors, and half the surgical block. The architect for the work is Mr. James Miller, A.R.S.A., of Glasgow.

...e contractors are:—Brickwork, Messrs. ... & P. M'Lachlan, Larbert; joiner work, ... Robert Hill, Perth; plumber work, ...s. Munro & Sons, Glasgow; slater work, ...s. James Buchan & Son, Perth; plaster ... Mr. D. M'Nair, Falkirk; iron work. ...V. Hume, Kirkside, Perth; glazier work, ...cook Glazing Company, Glasgow; heat... ...ork, Messrs. G. N. Haden & Sons, Trow... ...s; tyler work, Messrs. Allan & Son, ...urgh.

TRADE NEWS.

...ler the direction of Mr. W. C. Hawke, ...Inst.C.E., Borough Engineer, Dover, the ...le" system of ventilation (natural), em... ...ng Boyle's latest patent "air-pump" ...ators and air inlets, has been applied to ...ier Infants' Council School, Dover.

...able-way, down-draught hospital ward ...s are being supplied by the Royal Doulton ...ries to the Hayley Green Hospital, under ...irection of Mr. H. E. Folkes, architect, ...bridge. Double-way, down-draught ...tal ward stoves are also being supplied ...e Royal Doulton Potteries to the new ...tal extension, Wolverhamtpon, under the ...tion of Mr. Arthur W. Worrall, archi... Wolverhampton.

...e Dutton Isolation Hospital, near War... ...on, is being supplied with Shorland's ...le-fronted patent Manchester stoves and ...hester grates by Messrs. E. H. Shorland ...other, Ltd., of Failsworth, Manchester.

...e Church of England School, Caunton, ...ark, has recently been fitted with D. O. ...'s "Hygiastic" ventilating school grates, ...lied by Messrs. O'Brien, Thomas, & Co., ...er Thames-street, London, E.C., and ...lsior Works, South Bermondsey.

...connexion with extensions and additions ...being carried out to Messrs. Peck, Frean, ...o.'s premises, at Bermondsey, Messrs. ...h, Major, & Stevens, Ltd., of London and ...hampton, have received instructions for ...nstallation of one of their full automatic ...button electric passenger lifts and one ...electrically-operated goods lift. Other ...acts at present in the hands of the firm ...for the Admiralty, for Messrs. Boots' ...ises at Bath and Derby, for the Swansea ...ral Hospital, and for Messrs. PLICATIONS UNDER LONDON UILDING ACTS, 1894 to 1909.

Tuesday's meeting of the London County ...cil the following applications under the ...lon Building Acts were dealt with. (The ...es of the applicants are given in paren... ...s).—

Lines of Frontage and Projections.

...w and Bromley.—Projecting porch and ...ony in front of Tredegar House, Bow-road, ... (Mr. Rowland Plumbe for the Chairman ... Governors of the London Hospital).—...sent.

...apham.—Erection of porches and two-... bay windows in front of three houses ...the southern side of Voltaire-road, Clap... (Messrs. H. F. Buchan & Co.).—Consent.

...ulham.—Erection of twenty-three houses on ...northern side of Clancarty-road, and six ...ses on the eastern side of Peterborough-..., Fulham, with two-story bay windows. ...e boards and porches (Mr. A. Dawkins ...Mr. R. B. Mason).—Consent.

...ampstead.—Iron and glass shelter at No. ...West End-lane, Hampstead (Messrs. H. B. ...ey & Sons).—Consent.

...ampstead.—Greenhouse at the rear of Park ...se, St. John's Wood-park, Hampstead, ... to Avenue-road (Messrs. C. R. Lowe & ... for Mr. E. Gardner).—Consent.

...ensington, South.—Addition in front of ... 23, Pembroke-road, Kensington (Messrs. ...y & Co. for Mr. H. Sharpe).—Consent.

...wisham.—Iron and glass hoods and one-... wooden bay windows to houses on both ...s of Arthurdon-street and the northern ... of Chudleigh-road, Lewisham (Messrs. ...J. Heath & Sons).—Consent.

...arylebone, East.—Erection of a building ...the north-eastern side of Townshend-road, ...he rear of No. 21, Avenue-road, Regent's... (Mr. J. M. Ross for Mr. H. B. Birn...m).—Consent.

...arylebone, West.—Iron and glass hood at ... 47, Boundary-road, St. John's Wood (Mrs. ...S. Lupton).—Consent.

...ddington, South.—Addition in the base... ...t area in front of No. 26, Norfolk-crescent, ...dington (Messrs. Cleveland & Drysdale).—...sent.

Paddington, South.—Iron and glass covered way in front of No. 51, Porchester-terrace, Paddington (Dr. H. Huxley).—Consent.

St. George, Hanover-square.—Illuminated sign in front of No. 13, Wilton-road, Westminster (Messrs. J. G. Pollett & Co.).—Consent.

St. George, Hanover-square.—Two show cases at No. 13, Wilton-road, Westminster (Messrs. J. G. Pollett & Co.).—Consent.

St. Pancras, North.—Addition at the "Gem Picture Palace," Malden-road and Wellesley-place, St Pancras (Mr. J. Codrington for Mr. A. Letté).—Consent.

St. Pancras, South.—Projecting illuminated sign in front of No. 125, Tottenham Court-road (Messrs. F. Sage & Co., Ltd.).—Consent.

St. Pancras, South.—Projecting clock in front of Nos. 297-299, Euston-road, St. Pancras (Greenwich Time, Ltd.).—Consent.

Strand.—Projecting sign in front of No. 183, Oxford-street (Mr. R. H. Kerr for Messrs. Powneeby & Co.).—Consent.

Strand.—Projecting clock in front of Nos. 14-16, Cockspur-street, Pall Mall (Greenwich Time, Ltd., for the Hamburg-Amerika Linie).—Consent.

Walworth.—Addition to the South London Central Mission on the southern side of New Kent-road, Walworth (Mr. H. Macintosh).—Consent.

Wandsworth.—Erection of buildings on the south-eastern side of Mitcham-lane, Streatham (Mr. J. Harding).—Consent.

Wandsworth.†—Erection of buildings on the northern side of Garratt lane, Wandsworth (Mr. E. King).—Consent.

Wandsworth.—Wooden bay windows and porches in front of proposed houses on the northern and southern sides of Woodbourne-avenue, Streatham (Messrs. Holliday & Stanger).—Consent.

Woolwich.—Bay windows in front of four houses on the northern side of Glenlyon-road, Eltham-park (Mr. J. J. Bassett for Lord Rowallan).—Consent.

Woolwich.—Porch at a house on the western side of Eaglesfield-road, Woolwich, immediately northward of Foxcroft-road (Messrs. J. E. Edwards & Co. for Mr. T. Brandon).—Consent.

Woolwich.†—Erection of a building upon a site abutting upon the southern side of Greenlane, and the western side of Henley-road, Woolwich (Mr. Bruce Dawson for the Western Electric Company, Ltd.).—Consent.

Width of Way.

St. Pancras, South.—Addition at the rear of No. 37, Howland-street, St. Pancras, to abut upon Howland mews West (Messrs. H. Holmes & Co. for Messrs. Cleaver Brothers).—Consent.

Width of Way and Lines of Frontage.

Bow and Bromley.—Re-erection of No. 416, Old Ford road, Bow (Mr. H. Brown for Messrs. R. Smith & Co.).—Consent.

Hampstead.—Addition consisting of a water-closet and petrol store at No. 3, Belsize-place, Hampstead (Mr. W. Willett).—Consent.

Kensington, South.—Additions in front of No. 50, Holland Park-mews, Kensington (Mr. H. E. Church for Mr. A. Moor-Radford).—Consent.

St. George, Hanover-square.—Re-erection of a urinal in Hay's-mews, Charles-street, Berkeley square, at the rear of the "Running Footman" public-house (Mr. M. T. Saunders for Messrs. Watney, Combe, Reid, & Co., Ltd.).—Consent.

St. Pancras, North.—Projecting buttresses in front of the church of St. Silas on the southern side of Preston-street, Kentish Town (Mr. E. C. Shearman for the Rev. Gordon Smythe).—Consent.

Strand.† —Erection of an oriel window and hood at No. 8, York buildings, Adelphi (Mr. H. D. Searles Wood for Dr. Wynter Blyth).—Consent.

Lines of Frontage and Construction.

Fulham.—Building of a temporary character at No. 86, Stanley-road, Fulham (Messrs. Wheeler Brothers for Mrs. Roberts).—Consent.

Hampstead.—Motor-car shed at the rear of No. 156, Haverstock-hill, Hampstead (Dr. H. Sanders).—Consent.

Holborn.—Iron and glass shelter over the High Holborn entrance to the Holborn tube railway-station (Mr. W. E. Mandelick for the London Electric Railway Company).—Consent.

Kensington, South.—Temporary wood and iron structure erected on the forecourt of No. 48, Victoria-road, Kensington (Mr. A. de Beaufort).—Consent.

Lambeth, North.—Temporary wooden coffee-stall on the north-western side of York-road, Lambeth (Mr. W. H. Hopton).—Consent.

Lewisham.—Temporary wood, iron, and glass building at No. 132, Arngask-road, Catford, next to Torridon-road (Messrs. Norfolk & Prior for Mr. H. Brown).—Consent.

Marylebone, East.—Temporary wood and iron tool-shed at the entrance to Sussex Lodge, Park-road, St. Marylebone (Mr. W. Chisman).—Consent.

Strand.—Iron and glass shelter at the Tottenham Court-road tube railway-station, Oxford-street (Mr. E. P. Grove for the Central London Railway Company).—Consent.

Wandsworth.—Temporary shed at the rear of No. 87, Mayford-road, Balham, abutting upon the northern side of Fernside-road (Mr. J. R. Coward for Mr. W. E. Bradford).—Consent.

Width of Way and Construction.

Lewisham.—Temporary iron motor and cycle shed at Preston Lodge, on the western side of Trewsbury-road, Lewisham, and re-erection of two sheds at the rear of such house (Messrs. F. & H. F. Higgs).—Consent.

St. Pancras, West.—Three wood and iron buildings of a temporary character on the roof of Nos. 386 and 388, Euston road, St. Pancras (Messrs. Dunk & Bousfield for Messrs. G. Wailes & Sons).—Consent.

Width of Way, Frontage, and Construction.

Hampstead.—Temporary wooden tool-shed in a garden at the rear of houses on the north-eastern side of Belsize-crescent, Hampstead (Mr. W. Willett).—Consent.

Hampstead.—Wooden building of a temporary character at the rear of No. 33, Belsize-park, Hampstead, next to Belsize-lane (Mr. S. C. Lathbridge for Mr. A. Friedberg). Consent.

Space at Rear.

Hampstead.—Buildings on the western side of Finchley-road, Hampstead, abutting also upon the northern side of Weech-road (Mr. H. A. Welch).—Consent.

Strand.—Addition to No. 2, Coventry-street, Piccadilly (Messrs. Emden, Egan, & Co., for Mr. Appenrodt).—Consent.

Width of Way and Space at Rear.

Norwood.—Five buildings with bay windows on the eastern side of Lyham-road, Brixton (Mr. H. Macintosh).—Consent.

Width of Way, Space at Rear, and Alteration of Building.

Southwark, West.—Alterations at No. 2, Sumner-street, Southwark (Messrs. P. & G. Geen for Messrs. Moore & Sons).—Consent.

Space at Rear and Projections.

Norwood.—Three houses on the northern side of Dane-avenue, Denmark-hill, eastward of Finsen-road (Mr. E. B. Ellis for Mr. H. A. Sargeant).—Consent.

Space at Rear and Alteration of Building.

Norwood.—Alterations at Nos. 2 and 2a, Upper Tulse-hill, Brixton (Mr. R. Milnes). Consent.

Working-class Dwellings.

Deptford.—Erection of blocks of dwelling-houses, intended to be inhabited by persons of the working classes, upon a site on the eastern side of Brookmill-road, Deptford (Mr. E. Cannell).—Consent.

Deviation from Certified Plans.

Hammersmith.—Erection of Nos. 7 and 9, The Broadway, Hammersmith (Messrs. Hall-Jones & Cummings).—Consent.

St. George, Hanover-square.—Re-erection of No. 25a, Belgrave square (Mr. F. W. Foster).—Consent.

Separation and Alteration of Buildings.

St. George, Hanover-square.—Alterations at No. 3, Arlington-street, St. James (Messrs. Daniel Smith, Son, & Oakley for Messrs. Crawley, Arnold, & Co.).—Consent.

Formation of Streets.

Norwood.—Roadway of a proposed street for carriage traffic, to lead from Cornwall-road to St. Saviour's-road, Brixton (Messrs. E. Evans & Sons).—Consent.

Buildings for the Supply of Electricity.

Bermondsey.—Steel platform adjacent to the boiler-house at the Neckinger electricity generating-station, Spa-road, Bermondsey (Mr. R. J. Angel for the Bermondsey Metropolitan Borough Council).—Consent.

Finsbury, East.—Steel gantry for a travelling crane at the electricity generating-station, Graham-street, City-road (Messrs. Babcock & Wilcox, Ltd., for the County of London Electric Supply Company).—Consent.

Cubical Extent.

Bow and Bromley.—Additional cubical extent at the premises of Messrs. Bryant & May, Ltd., Fairfield-road, Bow (Messrs. Holman & Goodrham for Messrs. Bryant & May, Ltd.).—Consent.

Chelsea.—Additional cubical extent in respect of additions and alterations to blocks 1, 2, A and B, of Harrod's Stores, Ltd., Basil-street and Hans-crescent (Mr. C. W. Stephens for Harrod's Stores, Ltd.).—Consent.

City of London.—Formation of an opening between Nos. 17 and 19, Carter-lane, City, at the third-floor level (Mr. E. Stones for Mr. G. Buchner).—Consent.

Kensington, South.—Additional cubical extent in respect of additions and alterations at the block of Harrod's Stores, Ltd., at the corner of Basil-street and Hans-road, Kensington (Mr. C. W. Stephens for Harrod's Stores, Ltd.).—Consent.

The recommendations marked † are contrary to the views of the Metropolitan Borough Councils concerned.

PROJECTED NEW BUILDINGS IN THE PROVINCES.*

ABERDARE.—Premises, Gadlys-road, for the Aberdare Co-operative Society.

Aberdeen.—Extensions to Ashley-street School (7,000*l.*); Mr. J. A. O. Allan, architect, 5, Union-terrace, Aberdeen. Church halls, Albion-street Congregational Church (2,200*l.*); Mr. G. Wilson, architect, 181A, Union-street, Aberdeen.

Amesbury.—Police-station; Messrs. Parsons Brothers, builders, Westbury.

Bingley. — Proposed swimming bath and laundry (3,000*l.*); Mr. H. Bottomley, Surveyor, Bingley Urban District Council.

Blyth.—School; Messrs. Robson & Waddle, builders, Blyth.

Bradford.—Tuberculosis dispensary (1,180*l.*): Mr. R. G. Kirkby, Architect, Town Hall, Bradford.

Bristol.—Relief-station, Netham-road; Mr. J. J. Simpson, Clerk, Bristol Board of Guardians, Osborne House, Cotham Park, Bristol.

Brovanmill.—Extensions to Anchor Chemical Works for Messrs. Hope, Ltd. (2,150*l.*); Mr. A. W. McDonald, 219, Hope-street, Glasgow.

Cardiff.—Central fire-station, Newgate street (15,000*l.*); Mr. William Harpur, Surveyor, City Hall, Cardiff. Cold storage warehouse at Docks (40,000*l.*) for the Cardiff Railway Company.

Chelmsford.—Council offices, Waterloo-lane (2,200*l.*); Mr. J. Dewhirst, Surveyor, Chelmsford Rural District Council.

Chertsey.—Twelve houses (150*l.* each); Mr. H. Beeney, Surveyor, Chertsey Rural District Council.

Chorley.—Branch premises, Mayfield-road, for the Co-operative Society

Christchurch.—Additions, infirmary (2,200*l.*); Mr. C. W. Ball, architect, Whittington-chambers, King's-road, Southsea.

Cockburns Path (Berwick).—School (3,000*l.*); Messrs. Gray & Boyd, Scotts-place, Berwick-on-Tweed.

Darwen.—Kiosk and villa, Darwen Park (2,100*l.*); Mr. F. E. Seville, Council Offices, Darwen.

Devizes.—Police-station; Messrs. Parsons Brothers, builders, Westbury.

Doncaster.—Lecture hall, etc.; Mr. C. Stevenson, 6, St. Vincent-avenue, Doncaster.

Dunfermline.—Proposed showroom, workshops, etc., Canmore-street (700*l.*); Mr. A. Waddell, Gas Manager. Town Hall, Dunfermline.

Exmouth.—Church institute (3,000*l.*); Mr. G. H. Fellowes-Prynne, architect, 6, Queen Anne's-gate, S.W.

Fence Houses (Co. Durham).—School (9,000*l.*); Mr. W. Rushworth, Architect, Shire Hall, Durham.

Ferryhill.—School (6,500*l.*); Mr. J. A. O. Allan, architect, 5, Union-terrace, Aberdeen

Garstang.—Isolation hospital (1,457*l.*); Mr. J. Cook, Surveyor, Garstang Rural District Council.

Glasgow.—Extensions to Saracen Tool Works for Messrs. A. Mathieson & Sons (6,000*l.*); Mr. A. T. Millar, 12, Renfield-street, Glasgow. Proposed extensions to City-chambers; Mr. A. B. M'Donald, City Engineer, Town Hall, Glasgow.

Greenock.—Baths and washhouses (5,000*l.*): Mr. J. Low, Master of Works, Burgh Buildings, Greenock.

Grimsby.—Paper mill for Messrs. Dixon & Son, Sheffield.

Halstead. — Proposed public baths; Mr. W. A. Nicholson, Surveyor, Halstead Urban District Council.

Haslingden.—Catholic school (3,000*l.*); Mr. H. Fielding, architect, 2, Beaconsfield-street, Haslingden.

Heywood.—Cooper house, Green-lane, for the Phœnix Brewery Company, Ltd.

Holbeck (Leeds).—St. Francis' Catholic School (3,000*l.*); Messrs. Simpson & Son, 12, Cunliffe-terrace, Manningham, Bradford.

Holsworthy.—Masonic hall; Mr. A. Ross, Heard Bridge, Cornwall.

Honiton.—St. Michael's Church; Mr. C. E. Ponting, architect, Marlborough. Additions, workhouse; Mr. W. Redfern, Honiton, Devon.

Huddersfield.—Yeomanry headquarters, Fitzwilliam-street (7,000*l.*); Mr. W. Cooper, architect, 4, Kirkgate-buildings, Kirkgate, Huddersfield.

Huntwick-with-Foulby.—School (2,600*l.*); Mr. W. V. Dixon, Secretary, Education Committee, West Riding of Yorks County Council, Wakefield.

Inverness.—Science and art school for the Royal Academy (8,000*l.*); Mr. R. I. McBeth, Queen's House, Inverness.

Leagrave. — School; Messrs. Gotch & Saunders, architects, Bank-chambers, High-street, Kettering.

Limerick.—Additions, workhouse infirmary (2,500*l.*); Mr. W. Rosengrave, architect, 33, Catherine-street, Limerick.

Macclesfield.—Structural improvements at Infirmary; Architect, care of the Governors.

Margam.—Twenty-six houses; Mr. J. Cox, Surveyor, Town Hall, Margam.

Montrose. — Flax warehouse (600*l.*), for Messrs. J. & G. Paton, Ltd.

Moorthorpe.—Sunday-school; Vicar, South Elmsall Paris Church.

Mossley.—School (360 places); Mr. R. H. Buckley, Surveyor, Mossley Town Council.

Netherton (Dudley). — School (5,280*l.*); Messrs. Willetts & Sons, builders, Bowling Green, Old Hall, S.O., Staffs. Alterations to school (560*l.*); Mr. W. Deeley, builder, New-road, Cinder Bank, Netherton.

Newcastle.—Additions to Gorforth Church; Messrs. Hicks & Charlewood, architects, 67, Westgate-road, Newcastle.

Newsham (Northumberland).—Picture hall; Mr. J. N. Fatkin, 1, St. Nicholas-buildings, Newcastle.

Nuneaton.—Cooking and handicraft centres, Coton-road (3,390*l.*); Mr. T. Smith, builder, Wheat-street, Nuneaton.

Port Sunlight.—Schools: Mr. H. Beswick. County Architect, Chester.

Radcliffe.—Warehouse and office, Hope Mill, for Messrs. J. C. Hamer, Ltd.

Reading.—Hospital; Messrs. Webb & Sutton, architects, Market-place, Reading.

Renfrew.—Extensions and alterations to Municipal-buildings (3,000*l.*); Mr. John Arthur, architect, 131, West Regent-street, Glasgow.

Saddleworth. — Housing scheme (60,000*l.*); Mr. J. H. Reynolds, Surveyor, Saddleworth Urban District Council.

St. Asaph.—Casual wards; Mr. James Hughes, architect, Denbigh.

Skegness.—Cottage hospital (3,000*l.*); Mr. F. J. Parkinson, architect, 9, Richmond-terrace, Blackburn.

Southsea.—Improvements at St. Jude's Church (2,500*l.*); the Vicar.

Stalybridge.—Additions to Ray Mill for the Victor Mill, Ltd.

Stockport. — Extensions to police-station buildings (10,000*l.*); Mr. C. T. Taylor, 10, Clegg-street, Oldham, and Mr. G. Brady, St. Peter's-gate, Stockport, joint architects.

Swansea.—Extensions to electricity works (4,500*l.*); Mr. C. A. L. Prusmann, Electrical Engineer, Town Hall, Swansea. The following plans have been passed:—Alterations, Dot Café, Rutland-street, for Messrs. R. E. Jones, Ltd.; additions, Printing Works, Fisher-street, for Messrs. E. Davies & Co.; three houses, Gorse-road, for Mr. David Williams; five houses, Pinewood-road, for Messrs. J. B. Jenkins & Sons; alterations, Jersey Arms, Bonymaen, for Messrs. Hancock & Co.; re-building Castle Stores, Castle-street, and twelve houses off Middle-road, for Mr. C. Gustavus; four houses and shops, Penfilla-road, for Mr. D. Ludwig. A plan has been lodged for four houses, Uplands, by Mr. E. Evans.

Trowbridge.—School (5,000*l.*); Mr. G. Powell, County Hall, Trowbridge.

Waltham Cross (Herts).—School (4,940*l.*); Messrs. Willmott & Sons, builders, 80, Walsworth-road, Hitchin.

Warsop.—Seventy-five houses for the New Hucknall Colliery Company.

Wellingborough.—Schools (6,672*l.*); Messrs. Henson & Son, builders, 149, Midland-road, Wellingborough.

Wombwell.—Baths, Hough-lane (6,000*l.*); Mr. W. Quest, Surveyor, Town Hall, Wombwell; architect to be appointed.

Worth.—Additions to Prince's Golf C House, Sandwich Bay; Mr. E. W. May, ar tect, Sandwich.

Wortley (Leeds).—Clothing factory laundry; Mr. J. P. Kay, The Lodge, To street, Bramley, Yorks.

Wrexham.—Church; Messrs. Protheroe Co., architects, 13, The Promenade, Chelt ham; Messrs. Collins & Godfrey, builders, Cross, Tewkesbury.

Yarmouth.—Additions to infirmary; Mr. Burton, Clerk, Board of Guardians, Yarmou

* See also our list of Competitions, Contracts, etc., on another page.

FOREIGN AND COLONIAL.

Labour in the Colonies.

From the Emigrants' Information Office, Broadway, Westminster, S.W., we learn th all emigrants to Canada must fulfil the quirements of the Canadian Government as possession of sufficient travelling mon guarantee of employment, etc. There is present a surplus of unskilled labourers many parts.—In Sydney and suburbs, N South Wales, the building, iron, and furnitu workers have been well employed; and sto masons, bricklayers, brickmakers, carpente sawyers, and able-bodied labourers are in gre demand. It is reported that immigrants ha difficulty in finding housing accommodation Sydney. The strike of ironworkers at Lithg continues. In country districts employment generally plentiful.—In Victoria employme continues to be very good; and assist passages are now being granted to mechan in addition to other persons. There is a lar demand for generally useful men, bricklaye carpenters, plasterers, boilermakers, bla smiths, moulders, engine fitters, plumbe turners, and furniture makers.—In Sou Australia work of nearly all kinds is plen ful, and there is a good demand for bric layers, plasterers, carpenters, first-cla painters, plumbers, tinsmiths, boilermake ironworkers, and coppersmiths.—In Queen land there is a good demand for labo generally, both in towns and country, especial in the building and kindred industries.— New Zealand the demand for mechanics is n so general, but skilled men, such as plumbe bricklayers, painters, plasterers, and buildi trade labourers are wanted in many place skilled labourers in Otago are fully employe but there is much industrial unrest.—In t Union of South Africa employment in t building and other trades in Johannesbu continues fairly active; but the supply of m is quite sufficient, and in the case of ca penters and boilermakers is excessive. In t Cape there is a marked increase in the amou of employment at Cape Town available f artisans and labourers, and there is a dema for a few masons in the stone-dressing i dustry, a few cabinet-makers, a few joine and a few sheet-metal workers. Otherwi there is no general demand for more labour the Union.—The employment by the Isthmi Canal Commission of skilled labourers, clerk and other high-grade employees is no restricted to American citizens, except in cas in which American labour of the charact required is not available. There is a surpl of skilled and unskilled labour on the Isthmu and as the Canal Works are now with measurable time of being completed it wi soon be necessary to reduce the number men employed.

Council Offices, etc., Austria-Hungary.

The following notices are taken from th *Zentral-Anzeiger für das öffentliche Lieferungswesen* (Vienna) of January 11:—The municip authorities of Vienna have approved the pla for the erection of new council offices in th 13th District at a cost of 950,000 kronen (near 40,000*l.*).

The municipal authorities of Pécs (Hungar have (1) ear-marked a sum of 1,500,0 kronen (62,500*l.*) for the carrying out of cit drainage works; (2) authorised a call f tenders for the erection of a central electr generating-station; and (3) arranged for th fitting of water-pipes to 1,500 dwellings.

Works in Servia.

The *Zentral-Anzeiger für das öffentlich Lieferungswesen* (Vienna) of January 11 stat that, in connexion with the construction of new harbour at Prahavo, proposals have bee made for the construction and provision of th following:—Quay walls, thirty-eight concret bridges, water works, streets, fire-station electric-light installations, life-saving ap paratus, dock railways, landing-stage, re taurant, station, workmen's dwellings, hote post and telegraph office, and locomotives.

THE SURVEYORS' INSTITUTION: "AN EVENING IN THE INSTITUTION LIBRARY."

At the ordinary general meeting of the Surveyors' Institution, held on Monday, January 22, Mr. Julian C. Rogers (honorary member and late Secretary) read an interesting paper, entitled "An Evening in the Institution Library." In the course of a long but highly entertaining paper—a witty and amusing paper indeed—he said:—

"There is a class of book undeserving of the smallest mercy in a library like ours. I refer to the obsolete or even obsolescent text book. Theoretically a library like ours should, I suppose, be strictly limited to professional text-books. I am profoundly thankful that this narrow view has not been suffered to prevail. I have known libraries of the kind. They are the most dismal spots on earth.

The staple of our library is British topography, and our collection of these noble works would be hard to match elsewhere. Shall I be thought lacking in appreciation of them when I avow my ability to understand why topography should be regarded as of such surpassing and peculiar interest to surveyors, for, I say it without hesitation after an experience of thirty-six years, there is no class of book in the library less frequently consulted by the members. Whatever might be the appropriateness of topography, there could be no manner of doubt as to the claims of agriculture, historical and technical, ancient and modern, to a place on our shelves, and it figures there to a satisfying extent. Professional text-books also, as a matter of course. There is no lack of them.

As I have said, British topography forms the staple of our collection—in value, not number. The earliest county history is Lambarde's "Kent," of which we possess an excellent reprint, dated 1656—that is two years after its first publication. We have also a copy of Kilburne's "Kent," published in 1657, three years after Lambarde's work, to which it is inferior in every way. Sir William Dugdale's masterpiece, "The History of Warwickshire," was published about two years after Lambarde's "Kent," but there is no comparison between the two authors. Lambarde was an ignorant amateur, Dugdale a professional antiquary and a literary craftsman of the first order of excellence. His work is the model on which all subsequent county histories have been fashioned. We possess a copy of the original edition of this famous book. It is enriched with many plates by the celebrated engraver Hollar, who also contributed many illustrations to the same author's *magnum opus*, the "Monasticon," of which we possess a fine, though not an original, copy.

Let me commend to your notice J. T. Smith's "Antiquities of Westminster," a most delightful book. It abounds especially in admirable illustrations—among them contrasted views of the so-called Painted Chamber of Westminster Palace. The first of them represents the very earliest attempt in the art of lithography, the second the improvements of the art in a later stage of its development. It also shows, on No. 6 of the supplemental plates, an admirable ground plan of Old Whitehall Palace before the fire.

Another book which should by no means be overlooked is Parton's "History of the Parish of St. Giles." Apart from its literary merit, it is of interest from a plan showing, in detail, all the houses and the names of their occupants or owners in the year A.D. 1300. I believe this to be the earliest plan of the kind in existence.

One of the strangest topographical works ever produced is the "Polyolbion" of Michael Drayton, described on the title-page as "A chorographical description of the tracts, rivers, mountains, forests, and other parts of Great Britain." It was published in 1613. Drayton is the "Tusser" of topography, except that his verses are of a higher order of poetical merit, in which the personification of inanimate objects bears a conspicuous part, after the fashion of the period. There is nothing like it in the language. A lyrical Bradshaw or Euclid in hexameters would seem very little more strange to modern eyes. The book is annotated by John Selden.

Those who care for early chronicles should look at our copy of the magnificent volume of Reports of the Record Commission, published under the title "Monumenta Historica Britannica." Here you will find the oft-quoted "Chronicle of Bede" (*circa* 673-735), "venerable," if anyone ever deserved the title, and the "Anglo-Saxon Chronicle," printed in English and Anglo-Saxon in parallel columns—most interesting for those who care to achieve some knowledge of the rudiments of our native tongue, and very useful for students of the much-neglected poet Gower in his last, or English, period. The volume also contains a most instructive map of Roman Britain.

Let me call attention to Fitzherbert's "The Boke of Husbandry," a copy of which, in black letter, dated 1534, is in the library. Thirty years after Fitzherbert came Thomas Tusser's rhymed jingle called "Five Hundred Points of Good Husbandry."

I believe that we own a complete set of Young's writings. They can still be read with profit, though he belonged to that curious class of men competent to advise others in a business in which they are themselves dismal failures.

Of the writings of William Cobbett, Young's successor as an annalist, we possess nothing but his immortal "Rural Rides," which is almost a classic in the language. There is an indefinable charm about the book. It seems to exhale the very air of the breezy downs and sequestered lanes he loved so well.

The principal charm of our library consists in a number of miscellaneous books which cannot be grouped under any general heading.

I am happy to say that we possess a copy of the original edition of Samuel Johnson's dictionary. We are also the possessors of a good copy of Bayle's great historical and critical dictionary—a miracle of learning and research.

We have but two recognisable books from Beckford's celebrated library at Fonthill. One of them, the "History of Framlingham," the other a small guide to the city of Hereford. We are not very rich in books on architecture, perhaps rightly so, but I should like to direct your attention to two of them—Wren's "Parentalia" and Pugin's "Contrasts."

The "Parentalia" is a history of the family of Sir Christopher Wren, written by his son, the second Sir Christopher. Wren was not only a great architect (perhaps the greatest since Bramante), but a great scientist, for he was Savilian Professor of Astronomy in the University of Oxford and a President of the Royal Society. On page 274 is a most interesting account of a survey of St. Paul's Cathedral, made by Wren a few months before the Great Fire in 1666. This should be read in connexion with a report by him after the fire, which will be found on page 247 in Elmes' admirable biography of Wren, also in the library.

A. Welby Pugin's "Contrasts" strikes one at first as an ill-natured pictorial skit on contemporary architecture. It is not really so, being only an appeal to the eye against the degradation of his beloved art. His plan is to place side by side modern and ancient examples of buildings for similar purposes, very much to the disadvantage of the former. I have heard it said by those who knew him that this great artist never used a T-square, and rarely supplied the builder with a working drawing, the poor man having to content himself with rough sketches in charcoal, on the nearest plane surface available.

Let me call your attention to a little "History of Newcastle upon-Tyne" for the sake of its frontispiece, an undeniable product of the burin of Thomas Bewick, recognisable at once, by the instructed eye, by the masses of uncut wood left to form the deeper shadows.

We have a copy of the third edition of the admirable itinerary (1534 1542) of the learned John Leland—that prince of antiquaries. The book was written to form a New Year's gift to King Henry VIII.

It will be observed that Leland's travels covered the exact period of the suppression of the greater monastic houses, and it is a thousand pities that his commission to explore their records did not extend to their acquisition, so preserving them from destruction by accident or design in those nefarious times.

Of road books we have some excellent examples. The Roman roads appear in detail in Reynold's "Iter Britanniarum." It contains an excellent map of the Roman roads in Britain.

We have also another road book (engraved text and illustrations on 100 copper plates, a most costly production), entitled Ogilby's "Britannia," which was the direct predecessor of Patterson's well known book.

Patterson's "Roads of England and Wales," published in 1771, enjoyed an extraordinary popularity and passed through many editions. It was in immense demand in the pre-railway times. We have a copy, dated 1784, of the sixth edition, and another copy greatly enlarged by Mogg, which came out just before the disappearance of the mail coaches. The advent of the automobile has given the book a new lease of life, and it is again in great request.

There is a queer book in the library, published in 1653, entitled "Mattheus de Auctionibus," which, being interpreted, is "Matthew on Auctions."

In order that the fact may be on record I may here state that this very house in which we are assembled has a literary history of its own. Here it was, at No. 13, Great George-street, incorporated in our building, that John Wilkes, patriot, buffoon, and libertine, wrote the famous No. 45 of the "North Briton," and from which he was dragged to imprisonment in the Tower. What is now known as the "Members' " Room on the ground floor was his dining-room, and I have no doubt that its beautiful chimneypiece dates from his time.

We have a complete set of the excellent photo-lithographic reproductions of "Domesday Book" (or "Inquest," as it is more properly called), published by the Ordnance Survey authorities. Its interest is greatly enhanced by a previous perusal of an excellent treatise on it by Mr. Adolphus Ballard, which is also in the library.

Francis Grose's "Antiquities of England and Wales" in eight folio volumes is formidable reading, and more useful for reference than perusal.

No reasonable person can expect our library to be used, say, like the library of the Athenæum Club for very few of our members can be numbered (or, for that matter, would care to be numbered) among the leisured classes. Practically there are but two periods in the life of an ordinary man when methodical reading is possible—the period of youth and the period of late middle life.

Needless to say, what is read in youth is of incalculably greater benefit than what is read in maturer years, if read properly and on a systematic plan; otherwise it is time absolutely wasted, for there is an art in reading as there is in writing or speaking.

The Institution is still young, as institutions go. The composition of the membership has undergone great changes in the last forty years without losing its basal form in relation to the great landed interests. It has attracted to its ranks in large numbers the important class of building and quantity surveyors, valuers, as distinguished from the stewards of country estates, sanitary surveyors interested in ventilation, drainage and sewage disposal, municipal surveyors concerned with paving, sewerage, road making, and water supply. The literary needs of all these classes of practitioners have had to be catered for, with the result that the library is what it is—a storehouse of information in which every reasonable practical want is fairly, if not fully, provided for.

But there is, beyond this, a larger question which, as it is treading on delicate ground, a former Vice-President shall voice for me.

How many are there still living who remember, as I do most vividly, a paper read before this Institution forty-one years ago, by the late Mr. Jeremiah Mathews, entitled "A Plea for Culture in the Profession of a Surveyor"? He pointed out (what is true) that at the beginning of his career (say, about 1820) "the modern surveyor was unknown . . . occupying a simply subordinate position." He adds: "It is well to be reminded of this . . . . in order that we may be impressed with the necessity for

Alterations to "Underhills," Bletchingley, Surrey: The Staircase Hall.
Mr. R. P. Oglesby, Architect.

an expansion of our education and culture." Again he says: "I consider the best preparation for our profession to be a high general education . . . such as is generally thought necessary in the older-established professions . . . and I know of no place comparable to the universities for this purpose."

This is the road which the Institution is now treading, but, as it is open only to a few, might it not be well to place further self-educational facilities within the reach of our students by the inclusion of a considerable number of works of general literature in the lending library, and by encouraging the younger men to attend the classes in History and English Literature, held at King's College, and in many of the provincial universities?

This we can place to our credit—that we were the very first of the modern professions to adopt the examination system, previously confined to the older so-called liberal professions. Our example has since been followed by the architects, the engineers, the accountants, and many other bodies, showing how correctly we interpreted the spirit of the age."

PROTECTION AGAINST FIRE, HAMPTON COURT.

A scheme of fire protection is now being carried out at Hampton Court Palace. The work of laying new water mains which are to furnish a high-pressure supply has been begun by the Metropolitan Water Board, who are carrying a 15-in. main from the Flower Pot Gate in the Hampton Court-road right along the main walk in front of the Palace. From this large main there will radiate several 9-in. mains, while 4-in. distributing pipes will convey the water to all parts of the buildings. A system of electric fire alarms will enable communication to be made with the Palace Fire Brigade.

THE LONDON COUNTY COUNCIL.

THE first weekly meeting of the London County Council after the recess was held on Tuesday in the County Hall, Spring-gardens, S.W., Mr E. White, Chairman, presiding.

LOANS.—The Bermondsey Borough Council is to receive a loan of 2,782*l.* for electricity undertaking. A loan of 2,650*l.* is to be made to the St. Marylebone Borough Council for electricity undertaking, and 2,500*l.* to the Wandsworth Borough Council for the purchase of land for use as a slop shoot.

HOTEL CECIL.—Mr. E. Keynes Purchase has submitted drawings showing a proposal to provide a winter garden in the courtyard at the Hotel Cecil, Strand.

THEATRES, ETC.—The following drawings have been approved by the Theatres and Music Halls Committee:—Broadway Theatre, Deptford—provision of cinematograph chamber; Caledonian-road Baths—provision of cinematograph chamber; Grand Casino (Terry's Theatre), Strand—provision of two water-closets; High-street, Notting Hill (Electric Palace)—provision of a rewinding room; His Majesty's Theatre—adaptation of certain rooms in the basement as property rooms; New Prince's Theatre, Shaftesbury-avenue—arrangement of stage switchboard, arrangement of the seating at the area level, and the provision of balconies at the back of the circle and gallery; Palace Theatre of Varieties, Shaftsbury-avenue—amended arrangement of cinematograph enclosure; Shaftesbury Theatre, Shaftesbury-avenue—construction of a manager's office in a disused painting gallery; Shepherd's Bush Empire—alterations to the gallery.

COUNTERS CREEK SEWER.—The apron at the river outlet of the Counters-Creek sewer is to be repaired, and the estimated cost of the work is 1,500*l.*

ALTERATIONS TO "UNDERHILLS," BLETCHINGLEY.

TO OBTAIN the staircase hall, which is the subject of our illustrations, the central portion of the house was practically gutted. The principal and also secondary stairs had to be so designed as to pick up mezzanine floors.

The whole of the flooring, staircase, and panelling was executed in wainscot oak, the walls above being white with stuc masonry quoins.

The insertion of an old eight-day clock, its brass dial flush with the panelling, is thought to be a novel feature.

The alterations also comprise new library, boudoir, kitchen offices, and maids' rooms. The architect was Mr. Robert P. Oglesby, of George-street, Hanover-square, W.

TRIBUNAL OF APPEAL UNDER THE LONDON BUILDING ACT.

THE Tribunal sat at the Surveyors' Institution on Monday to consider further the appeal by Messrs. William Gilbert Allen & Henry George Norris against the certificate of the Superintending Architect of Metropolitan Buildings defining the general line of buildings on the western side of Fulham Palace-road between Bishop's Park-road and Brandenburgh-road. Mr. H. Courthope Munroe and Mr. Clarke appeared for the appellants, and Mr. Macmorran, K.C., and Mr. Daldy represented the London County Council. A report of the first hearing, which covered the case of the appellants, appeared in last week's *Builder*.

Mr. Macmorran opened the case for the respondents, and contended that the general line of buildings as fixed by the Superintending Architect was the correct line in the circum-

ces of the case. If they were dealing with case outside the metropolis there could be e doubt but that the buildings to the London of Crabtree-lane would govern the line of dings on the other side. In this case, how-, the Tribunal had to decide how far that should extend. They had to deal with t he would call a vacant piece of land ween buildings on the north and buildings he south. In this case the Superintending hitect had taken Brandenburgh-road as one he points, and there were reasons for doing . In the first place, the road was not a ight one, and the general building line had e fixed with regard to the alignment of the et, and at Brandenburgh-road there was a plete break. The first house from the k, where there was a cross road, was set , and the Superintending Architect had n that as one point and the houses set t on the other side of Crabtree-lane as the r point, and this, he submitted, was a right reasonable thing to do. There was no on whatever why the point to start the line uld be taken at Crabtree-lane. The only ting buildings between Crabtree-road and southern point at which the line was fixed e a school and four shops. The shops were ted by consent, and the school building was ted under the statutory authority of the School Board, and therefore these build- could not be taken into account.

he Chairman said the Tribunal had been king the matter over, and thought it an reme pity that the parties did not agree pose they had to find that the line went ugh the appellants' building, it would be a ous matter for them, and, on the other d, if they found there was no general build- line, then the appellants could build up to pavement, which would be a great dis- antage to the whole neighbourhood.

r. Macmorran said the difficulty which had en was with regard to what the appellants uld throw into the road. If they could e to the building line which the County ncil had suggested there would be no culty.

r. Munroe said that at the last sitting he le an offer, which the County Council would accept. There was 5 ft. 6 in. of land ween the front wall of the shops and the ement, and if he was allowed half of this his pavement lights he would give the other to the public. As a matter of fact, if he d be reserved the rights as to the pavement ts and a sale board during business hours the 2 ft. 6 in., he would surrender all other ts to the public, but in regard to that there eared to be a legal difficulty.

he Chairman repeated the feeling of the unal, that it was a matter on which there uld be an agreement, and

r. Macmorran said that if the Tribunal ld hear his evidence he would undertake suggestion as to coming to terms should aid before the Building Act Committee of County Council.

he Chairman said they thought both parties uld be reasonable. There must be a give take on both sides, for otherwise it must be ous to one side or the other.

r. Herbert Alfred Legge, District Surveyor Fulham, said the first he had to do with the ter was when Mr. Allen called on him with is on May 4, 1911, for buildings in the road. ness called attention to the line of frontage, told Mr. Allen that he would have to go to County Council to see what line he could d to. Mr. Allen argued that the line they posed to build to was within their rights, said that the reason why the houses to the h of Crabtree lane had been placed back t. was because this was a residential estate. it was by agreement with the ground land- s. He wrote on May 5 to the London nty Council, stating that the appellants e taking the existing fence as their front- line, but that most of their buildings would ehind that line. Subsequently he saw Mr. n on the building, and asked him if he heard anything from the County Council as he frontage line, and was told he had not. received a copy of the Council's resolution June 21, stating that they disapproved of projecting bays, and Mr. Allen told him on e 23 or 25 that he had received a copy. hat date the building was three-parts up. rwards Mr. Poole, who was acting for the ellants, called on him with reference to bay windows, and Mr. Poole told him in y to a question that he had no instructions tever with regard to the line of frontage.

r. Munroe said he submitted that, looking he resolution passed by the County Council, the bay windows were referred to.

plying to the Chairman, witness said it his duty to call the attention of the County ncil to anything done not in conformity of Building Act. He did not know that the ellants were building beyond the general of buildings because he did not know what general line of buildings was.

Mr. Frank S. Caton, Assistant Architect in the Building Act Section of the Superintending Architect's Department of the London County Council, said that Mr. Poole applied to the Council for consent to the buildings on May 9, 1911. The plans were placed before the Building Act Committee about a fortnight afterwards, and the Council passed a resolution on May 29. Owing to holidays and delays which occurred in presenting, the resolution was not sent out till June 20. The question of the general building line was discussed by the Committee. On June 21 Mr. Poole called on him with regard to the resolution passed, and witness suggested that Mr. Poole should advise Messrs. Allen & Norris to give up certain land and compromise. Of course, he had no authority to make that suggestion. On June 26 he had a visit from Messrs. Allen & Norris, and the question of the building line was discussed.

Mr. A. Millwood, of the Superintending Architect's Department, gave particulars as to the road, and as to the circumstances under which certain houses were erected by consent.

Mr. Walmsley, Solicitor for the Fulham Borough Council, supported the appeal, and said there was no doubt that the absence of forecourts would prejudicially affect the rateable value of the property.

Mr. F. Wood, Borough Surveyor for Fulham, disagreed with the line laid down by the Superintending Architect.

Mr. Walter Atkinson, builder, who had erected a large number of houses in the neighbourhood, said that he had built in Parfrey-road, and had left a plot of 80 ft. on which to build four houses to front Fulham Palace-road. The action of the Superintending Architect would take 15 ft. off this 80 ft.

Mr. Munroe, in replying for the appellants, said that nothing in the evidence had shaken his contention that the Superintending Architect had not defined the general line of buildings, and this was shown by the County Council having offered to agree to a different line, subject to the appellants giving up certain land. He submitted that to raise the question of the building line was only a method of putting on the screw to get land for the public. All the correspondence pointed to the fact that the parties were only dealing with the bay windows, and it was only shortly before August that the have of the general building line was started, and his clients got notice that they had gone beyond the line after their buildings were up.

The case was further adjourned to enable the matter to be laid before the County Council.

LAW REPORTS.

KING'S BENCH DIVISION.

(Before Mr. Justice HAMILTON.)

Building Dispute :

Ramsden & Carr *v.* J. Chessum & Sons.

IN this case the plaintiffs were Messrs. Ramsden & Carr, of St. Dunstan's Studio, Seymour-place, South Kensington, and the defendants Messrs. J. Chessum & Sons, builders, of South-place, Finsbury.

During the year 1910 a cinematograph company employed Messrs. Chessum & Sons to erect "Cinema House," at 225, Oxford-street, and the plaintiffs now claimed in respect of certain goods supplied, including a quantity of artistic door handles and hammered silver and brass door plates. They alleged that the amount due to them was 142*l.* 13*s.*, which they alternatively claimed as money had and received by the defendants for the use of the plaintiffs or as money held in trust for them. Some time after the place had been opened the cinematograph company went into liquidation, and plaintiffs alleged that Messrs. Chessum & Sons had received certain payments which should be allocated to the goods supplied by the plaintiffs. This was disputed by Messrs. Chessum & Sons, who entered a general denial of liability and contended that the orders for the goods were given by the architect, but not confirmed by them.

His Lordship, in the course of a lengthy judgment, expressed the view that Messrs. Ramsden & Carr had failed to show that any money had been received to their use by the defendants. The plaintiffs succeeded on the issue as to goods sold and delivered, and obtained judgment with costs on that issue. Defendants were given the costs on the issues on which the plaintiffs failed.

Alterations to "Underhills," Bletchingley, Surrey : The Staircase Hall.
Mr. R. P. Oglesby, Architect.

OFFICIAL REFEREE'S COURT.
(Before Mr. HENRY WILLIAM VEREY.)

Battle Building Ownership Dispute: Hallett & Langdale *v.* Cowdell.

JUDGMENT was given last week in an action in which Mr. Arthur Carthew Langdale and Mr. John Hallett, trading as Langdale, Hallett, & Co., builders and decorators, of 11, West Halkin-street, Mayfair, sued Mr. Henry Seward Cowdell to recover 75*l.* 19s., balance of an account for work done at North Lodge on the Lewis-road, Battle.

The plaintiffs' case was that in October, 1910, Mr. Cowdell purchased the house in question, for which he required the alterations and additions. He approached the plaintiffs, whom he requested to prepare plans and estimates. The plaintiffs said that Mr. Cowdell had emphasised upon them the necessity for haste, desiring to have the place ready for occupation by March 25, 1911, and repeatedly he had urged that there should be no delay. Mr. Langdale had an interview with the defendant on October 25 at Southsea, taking with him the plans. This interview was regarded as important by both the parties, inasmuch as there was a direct conflict of evidence as to what took place at it. The plans were discussed, and the whole matter investigated. Mr. Langdale claimed that at that interview he was instructed to proceed with the whole of the work—the interior as well as the roof and gutters—and that it had been arranged that he was to render weekly sheets of labour with the usual 5 per cent. establishment charges and 10 per cent. profit.

The defendant, on the other hand, pleaded that plaintiffs at that interview on October 25 were instructed only to do work on the roof and gutters, and that on the day in question a verbal agreement was entered into to do the work for 40*l.* That the plaintiffs denied. —In the course of the hearing Mr. Drucquer (the defendant's counsel) said that it was a question as to whether—aye or nay—Mr. Cowdell gave the order for the whole of the work, and added that his client absolutely denied orders for the interior work. His client, too, disputed the prices for the work in respect to the roof and gutters.

In giving judgment, after hearing exhaustive evidence on both sides,

The Official Referee said he came to the conclusion that the whole conversation between Mr. Langdale and Mr. Cowdell on October 25, 1910, resulted in Mr. Langdale receiving instructions for this work to go on generally, and that consequently the plaintiffs were justified in incurring the expenditure. Mr. Langdale had stated in the witness-box that they would not have engaged a foreman at 3*l.* a week for a 40*l.* job only. This was not a case in which one or either of the parties questioned each other's veracity; there were no mutual accusations of trying to deceive. It was a matter of memory, and he (the Referee) decided that the memory of the plaintiffs was to be relied upon, Mr. Langdale having also made notes of what transpired. His Honour added he could not find anything to discredit the plaintiffs concerning their time sheets. The weather was very bad during the time the work was carried out; they had been told that there were rain, wind, snow, thunder, and lightning, that the place was exposed, and hence it was not plane-sailing work. Nor could he find that there had been any overcharges by the plaintiffs. There would, therefore, be judgment for the plaintiffs for the balance claimed—75*l.* 19s., of which 25*l.* paid into court by defendant formed a part. Plaintiffs would have High Court costs.

LONDON COUNCILS.

Barking.—The Surveyor has been directed to prepare plans and estimates for the carrying through of Bifrons-street into St. Ann's-road. The Surveyor is to prepare plans and estimates for the erection of additional cottages on the remainder of the land adjacent to King Edwards-road. The tender of Mr. S. E. Moss, Southend-on-Sea, has been accepted, at 17,344*l.*, for the erection of the Ripple Schools. A plan has been passed for Messrs. Anton Deppe Söhne for additions to factory, Hart's-lane.

Battersea.—The Borough Surveyor has been instructed to prepare estimates with a view to making-up and paving Bowood-road, Wakehurst-road, part of Alfriston-road, and part of Canford-road. The carriageway of Albert Bridge-road is to be repaired with granite macadam at an estimated cost of 434*l.* No objection is to be raised to the proposals of Messrs. Edwin Evans & Sons and Mr. W. E. Tapley to erect seven houses, Muncaster-road, and additions to Messrs. Spiers & Pond's premises, Warriner-gardens and Alexandra-avenue respectively.

Berkhamsted.—Plans submitted by the Berkhamsted Tenants, Ltd., have been approved for the erection of twelve houses.

Bushey.—Directions have been given the Surveyor to prepare plans, specifications, and provisional apportionments for making-up Nightingale-road and part of Grange-road. The tender of Messrs. Bracey & Clark, at 349*l.*, has been accepted for making-up Springfields.

Chelsea.—No objection is to be raised to a proposal by Mr. C. W. Stephens to erect a warehouse upon an island site abutting upon Pavilion-road, Charlotte-street, and Cross-street; also to the proposal of Mr. C. R. Ashbee for a building scheme at Cheyne-walk.

Croydon (County).—The tender of Messrs. W. Smith & Sons, Croydon, at 2,449*l.*, has been accepted for carrying out the work of erecting a disinfecting station in Factory-lane. The following plans have been passed:—Mr. W. Capon, Streatham, S.W., ten houses, Kilmartin avenue; The Alliance Estates and Development Company, Ltd., 39, New Broad-street, E.C., fifty-nine houses, Beechwood-avenue, and eighteen houses, Nutfield-road; Mr. J. Hicks, Brighton-road, four houses, Mayday-road; Messrs. Thompson & Fyfe, offices, etc., Tamworth-road Model Steam Laundry; Messrs. Chown & Sheffield, Norbury, S.W., four houses, Pollard's Hill North, and two houses, Pollard's Hill West; Messrs. Paish, Tyler, & Co., 5, Station-road, West Croydon, six houses, Lower Addiscombe-road.

Croydon (Rural).—Plans and estimates have been submitted by the Surveyor for making up the following streets at Beddington, at the costs mentioned: -The Avenue, 1,086*l.*; The Grove, 710*l.*; Woodcote-grove, Approach-road, 315*l.*; Osmond-gardens, 1,083*l.*

Hackney.—An old brick sewer in a portion of Forest-road is to be reconstructed for a length of 300 ft. with 9-inch glazed stoneware pipes, at an estimated cost of 98*l.* Plans have been passed for Messrs. Douglass Mathews & Son, on behalf of Messrs. H. E. Davenport, Ltd., for a two-story addition to premises on the western side of Brunswick-place, Farleigh road, West Hackney. Plans have been lodged with the London County Council by Messrs. Rowlandson & Co. for the erection of a factory in Chatham-place.

Hornsey.—The following plans have been passed:—Mr. W. J. Collins, pavilion, Ethelldene avenue, Crouch End; Mr. J. C. Hill, four houses, Hornsey-lane-gardens, Highgate; Messrs. Cutts, Southampton-street, W.C., alterations and additions to All Saints' Church, Durham-road, Muswell Hill.

Islington.—A further portion of the wood paving of the carriageway of Hornsey-road is to be renewed at an estimated cost of 600*l.*, as is also the asphalt carriageway of a portion of Thornhill-road at an estimated cost of 1,200*l.* In connexion with the renewal of the wood paving in Highbury-grove and, as stated above, in Hornsey-road, the tender of Thos. Gabriel & Sons has been accepted at 563*l.* 10s. 4d. to supply 86,000 creosoted yellow deal blocks.

Lambeth.—An apportionment order is to be made for paving the carriageway and footways of Denny-street. The Borough Engineer estimates the cost at 1,024*l.* No objection is to be raised to the proposal of Mr. E. B. Ellis, on behalf of Mr. H. A. Sergeant, to erect three houses at the junction of Dane-avenue with Finsen-road. The L.C.C. is to be advised to refuse the application of Mr. H. Macintosh for consent to the erection of five houses in Lyham-road.

Poplar.—Plans have been passed for Mr. Wm. Stewart, for additions to the Manor Arms beer-house, East India Dock-road; also for the London Asphalte Company, Ltd., for a factory at Leven Wharf, Leven-road.

Stepney.—The sewer in Little Hermitage-street is to be substituted with a nine-inch glazed-ware pipe sewer, at an estimated cost of 90*l.* Electricity mains are to be extended to Grafton-street, Mile End Old Town.

Wandsworth.—Tenders are to be invited for paving Daylesford-avenue, Putney, part of Roehampton-lane, Putney, and part of Southerland-grove, Southfield, as new streets. The tenders of Messrs. E. Parry & Co. have been accepted at 425*l.* (and schedule of prices for extras and omissions), and at 250*l.* (and schedule of prices for extras or omissions), for repairing Beaumont-road and part of Augustus-road, Southfield, respectively. The tender of Messrs. J. Mowlem & Co., Ltd., at 113*l.* (and schedule of prices for extras or omissions), has also been accepted for repairing Southmead-road, Southfield. Plans submitted by Mr. J. C. Radford, on behalf of Lord Westbury, for proposed sewers in two intended new streets out of the western side of Putney-hill, are to be forwarded to the London County Council for approval. Th following plans have been passed:—Messr W. Adkins & Son, alterations and additions t Templeton, Priory-lane, Putney; alterations t Grove House, Roehampton-lane, Putney, an memorial hall, Alton-road, Putney; Messr Swain & Selly, twenty-two houses, Elmwoo House Estate; Mr. F. Eaton, motor garag rear of No. 25, Gwendolen-avenue, Putney Mr. A. Harvey, additions to the Convent o the Holy Family, Nos. 85, 87, and 89, Tootin High-street; Messrs. G. F. Bates & Son alterations and additions to Audley Lodge Putney Park-avenue, Putney; Mr. J. W Coates, additions to Madeira Hall, Madeira road, Streatham; Messrs. L. & W. White head & Co., Ltd., three shops, High-street Clapham; Messrs. Allen, Fairhead, & Son church, Narbonne avenue, South Clapham Messrs. Dent & Hellyer, Ltd., school for Con vent of Sacred Heart, Roehampton-lane Putney; Messrs. Holloway Brothers, twelv houses, Loxley-road, Springfield.

Watford. Sanction has been received by th Urban District Council from the Local Govern ment Board to the borrowing of 5,536*l.* fo footpath paving.

Woolwich.—The following plans have been passed:—Mr. J. J. Bassett, 121, Earlshall-road Eltham, eight houses, Glenlyon-road, and Dun breck-road, Eltham; Mr. W. Pollock, Wes Park, Eltham, additions to east Entrance Lodge, Avery Hill, Eltham.

OBITUARY.

Mr. H. Bloomfield Bare.

We regret to record the death of Mr H. Bloomfield Bare, which has just occurred a Liverpool. The deceased was a Fellow of the Royal Institute of British Architects, having been elected in 1888. He was a Liverpool man, and received his training in the sur veyor's office of the London and North Western Railway at Liverpool. For some time he was a partner with Mr. H. L. Beckwith architect, of Liverpool, and then, leaving England, established a practice in Philadelphia. On his return to this country about eight years ago he resumed his practice a an architect, and did considerable work in connexion with the Art Workers' Guild. Mr Bare was a member of the Liverpool Archi tectural Society.

TO CORRESPONDENTS.

NOTE.—All communications with respect to literary and artistic matters should be addressed to "THE EDITOR" (and not to any person by name); those relating to advertisements and other exclusively business matters should be addressed to "THE PUBLISHER," and *not* to the Editor.

All communications must be authenticated by the name and address of the sender, whether for publication or not. No notice can be taken of anouymous communications.

The responsibility of signed articles, letters, and papers read at meetings rests, of course, with the authors.

We cannot undertake to return rejected communications; and the Editor cannot be responsible for drawings, photographs, manuscripts, or other documents, or for models or samples sent to or left at this office, unless he has specially asked for them.

All drawings sent to or left at this office for consideration should bear the owner's name and address on either the face or back of the drawing. Delay and inconvenience may result from inattention to this.

Any commission to a contributor to write an article, or to execute or lend a drawing for publication, is given subject to the approval of the article or drawing, when received, by the Editor, who retains the right to reject it if unsatisfactory. The receipt by the author of a proof of an article in type does not necessarily imply its acceptance.

N.B.—Illustrations of the First Premiated Design in any important architectural competition will always be accepted for publication by the Editor, whether they have been formally asked for or not.

TENDERS.

Communications for insertion under this heading should be addressed to "The Editor," and must reach us *not later than* 10 *a.m. on Thursday.* [N.B.—We cannot publish Tenders unless authenticated either by the architect or the building owner; and we cannot publish announcements of Tenders accepted unless the amount of the Tender is stated, nor any list in which the lowest Tender is under 100*l.* unless in some exceptional cases and for special reasons.]

* Denotes *accepted.* † Denotes *provisionally accepted.*

THE R.I.B.A. STUDENTSHIPS.

WHILE the open prizes designs are on exhibition in the rooms of the R.I.B.A., whilst the official criticism of the drawings is still to come, while interest in all aspects of the Prizes in Trust, the subjects and their setting, the awards and their reasons, implicit and defined, is still quick, we would venture into publicity a proposal which might, in our opinion, if carried into effect, obviate some of the defects involved in the way in which the competitions are conducted, defects of which the competitors themselves must for some time have been conscious. Our concern at the moment is not with the issue raised by a speaker at the end of the last meeting—the *bona fides* of the competitors. That is a matter which certainly seems to require some investigation. It is full of doubt and of difficulty; it is a question which concerns the Council of the R.I.B.A.; we think the trustees may be depended upon to make the relevant conditions more definite, and everything will then depend upon the personal honour of the competitors themselves. In any case, it is a question of method and of what is fair; and it has little to do with the welfare of the art. It is the welfare of architecture considered as an art which is here and now our primary concern—our topic, the use and misuse of these prizes. That this is of considerable importance no one who realises that a substantial agreement between all those who award studentships might, in a decade, fix the quality of architecture in this country for at least a generation, or perhaps a century, will be disposed to deny. But the subjects are set and the awards are made seemingly at haphazard—and so, at haphazard, too, our towns are built. This conviction of the power of direction latent in the control of the studentships was expressed in our columns on August 18, 1911, in an article in which the following proposal was foreshadowed.

Referring last week to the Soane award—divided honours and clear confession of dubiety—"The whole incident is unsatisfactory and suggests that the programmes for these competitions are perhaps drawn up in too casual a manner":—a gentle expression of our constant contention and almost weekly complaint.

Contention and complaint, we mean, that architectural competition, of all kinds, is carried on amid a clash of merely opportunist considerations as to what is required to be done by hap, and mishap to a bluntly empirical award—through a cloud of incoherence and by chance-besmitten hope. It may be that this state of things cannot be changed until a new generation is in control. But how shall it ever pass, if, with the new generation in their power, young and unhardened, young and hopeful therefore, those who manage the student-ships, those who set the standard, act as ever in the old unprincipled way? It seems as though those at the head of affairs have, in their corporate capacity, no realisation of the potentialities of their function—and indeed one doubts, incidentally, if, even supposing they had an adequate conception, that any concensus could be arrived at, in view of the educational chaos and combat of ideals in which the earlier days of our leading men were spent. A sensibility to the play of cause and effect in these matters prevents us from assigning blame or indulging in individual denunciation—that being futility where no purpose is to be served. On the other hand, the passivity of a mere observer befits no one at a time so doubtful, therefore perhaps so hopeful, as the present. What is required, then, in our view, is a scheme of coherence that shall impose upon assessors and students alike certain *criteria* to which they may refer and by which they may proceed—the *criteria* may be wrong at first, or not so wrong, but the principle that *there are principles* must first be effectively granted, and some principles found and stated; something to counteract what seems to be almost a national tendency to empiricism in judgment, and, as a natural consequence, anarchic opportunism in design. We are speaking now of students' work and of the open prizes in particular; and we put before our readers, R.I.B.A. Councillor and student alike, the following scheme in outline, as something certainly new, something possibly interesting, and something which is, in any case, an attempt to indicate a way which should modify, improve, and eventually render impossible the existing state of affairs. We believe that a scheme by which designer and assessor alike, of a part, should have for constant reference a greater entity to which that part should be related and proportioned would make for this end. Now the Soane and the Tite and the rest are prizes for the design of single buildings or parts of buildings, and may not be perverted from their purpose. What we propose is that there should be supplied for them the greater entity of which each separate design shall be considered as a part—a higher, the highest architectural unit that is to say—a City. Objection meets us that this is but raising the difficulty to a higher sphere—which is true. But the principle would be gained that the city is the unit, and those submitting designs for the present prizes would no longer have to do so on conditions having no relation to anything but themselves or bow to decisions confused by the multiplicity and wildness of their own imaginings. Suppose, then, that an Essay subject be set, definitely to settle, for the time being, the qualities of an ideal city, in our time and in this country. Perhaps one of this year's essays might serve, though not written with precisely this intention. It would be a sufficiently difficult matter; the essentials would have to be disinterred and set forth, not in generalities, but in definite terms. And we would like to see the students themselves, at this stage, having some voice in choosing the essay to be adopted. The next step would be to institute a special competition for a general plan of the City, in which the principles set forth in the essay (which would itself be the chief item in the conditions) were to be embodied. The sites and levels might be given perhaps and the manner of draughtsmanship—to be easily reproducible—ordered. And the plans submitted should be judged strictly in the light of the essay precedent and dominating the problem. On this plan there would be sites for all the chief buildings, in their determined relation and proportionately placed, and the plan itself would form part of the conditions of the R.I.B.A. prizes for some years to come. So that the competing student might know where his building was, and what the function, æsthetically as a part, as well as socially, it had to perform. He could design ideally in the right meaning of the word, but no longer vaguely in the void and be judged—who knows how? And so gradually the city would get built up with prize designs. The Soane one year would supply the Guildhall and the Tite the Royal Exchange. The Grissell an Exhibition building, or it might be a grand stand or a water-tower—in due relation to the rest of the place—or perhaps some interesting piece of construction involved in a design of the preceding year. Part of the Owen Jones might be devoted to a colour scheme for the Guildhall itself. . . . Until all the interesting things to design had been done. And at the end perhaps a special prize for makers of bird's-eye views to fix the whole of it, and so raise the students' work of a decade or so from oblivion to make it part of enduring architectural history. And afterwards? A clearer essay and a finer plan, and better and more justly related buildings. By that time, too, the influence of this schooling would be beginning to be felt in the real towns and real cities of this country.

THE WELLINGTON MONUMENT IN ST. PAUL'S.

The scaffolding has now been taken down from the Wellington Monument and the screens removed, so that the whole work can be seen, finished as closely as possible according to the intentions of its designer and sculptor, Alfred Stevens. The equestrian statue of the Duke has been copied and completed by Mr. John Tweed, after the original model. The work was cast in bronze by Messrs. Singer, of Frome.

UNIVERSITY OF LONDON.

The Goldsmiths' Company have made grants to the Senate of the University of London for the Building Fund of King's College for Women, 10,000*l.*; the Endowment Fund of Bedford College for Women, 5,000*l.*; and the Building and Equipment Fund of the Chemical Department of University College, Gower-street, 1,000*l.* The Senate have appointed Professor Simpson as architect of the new chemical laboratories to be built on the site in Gower-street.

NOTES.

Mr. Pierpont Morgan's Art Treasures.

THE published statements concerning the intention of Mr. J. Pierpont Morgan to remove a large part of his loan collection from the Victoria and Albert Museum, at South Kensington, have naturally occasioned many inquiries as to the cause and many regrets at the apparently accurate statement of Mr. Morgan's intentions. We are glad that the suggestions first made, that Mr. Morgan was removing his valuable collection in consequence of his dissatisfaction at the way in which his exhibits were shown, is emphatically denied by those who ought to know, and the much more reasonable explanation put forth that Mr. Morgan's art collections are to be removed not only from London, but also from Paris and other continental cities because the heavy American duties on objects of art earlier than the XVIIIth century have now been abolished, and the treasures can now enter New York free. This is a much more probable explanation of what, after all, is a very natural desire on the part of an owner to see his collections housed in the museums of his own country; but, nevertheless, we regret the result, and can only hope that a goodly part of the collection will be left to us, and that other private collectors will be willing and able to add to our national exhibits.

The Royal Academy Lectures on Sculpture.

PROFESSOR COLTON'S second Royal Academy lecture on "Ideals and Ethics of Sculpture" was a much more serious effort than the first lecture, in which the subject was treated generally and more or less humorously. In his second lecture Professor Colton made many admirable points, especially in regard to the fashions in modern art and the importance of craftsmanship; and his opinions on Post-Impressionism were emphasised when he remarked that from a strictly business point of view he would advise students to take up Post-Impressionism. It had many advantages. Pictures could be dashed off quite rapidly; in fact, it was essential that they should be dashed off without thought, or they would lose that innocence of expression which was supposed to be their merit. The profit was great. No weary years of preparation or study were necessary or desirable. To be an apostle of this art they had only to throw aside all facts and deny everything. If they were brought to book with the criticism that the nose should be in the middle of the face and not on one cheek they had only to reply that they saw it thus! Subsequent remarks by the Professor were also very much to the point: The ideal before the sculptor must be a fine idea perfectly executed. The question then had to be answered, What is perfect execution, and is such and such an idea fine or commonplace? The Greeks and Romans thought one thing: the craftsmen of mediæval Italy thought the same. In the greatest period of modern French sculpture there was still the same ideal; but of late there had come over us a mist, a straying of aim, a straying after the brazen serpent set up in our midst. Brutal expression and

xecution was called power, and passed
or the highest in sculpture. In the ideal
rt school he would reverse the procedure
sually adopted, and make elementary
udents study living models. He would
ide all antiques until the students
ecame proficient modellers from life.
he aim should be high; and the domestic,
ie frivolous, or the grotesque should not
nd a place in sculpture.

Cold Houses. THE illuminating correspondence in the daily Press on the subject of
ie heating of houses, in which English
ethods have been unfavourably com-
ared to those of U.S.A. and Canada,
ecognises such difference as that of
imate, but seems to lose sight of an
conomic question which is perhaps at
ie root of the whole matter. To instal
heating apparatus requires capital
rtlay. In Canada, and also, we under-
and, in U.S.A., the average middle-
ass householder owns his own house.
n England he does not. The leasehold
ystem explains a good deal. At present
proper system of heating is not con-
dered a necessity of existence. Houses
an be let without it, therefore they
re built without it. Not so long ago
ouses would let without bathrooms,
ut nowadays the speculative builder has
supply them. The same demand
ill probably arise in due course for a
ood heating system, which will be
pplied in the same way. Commenting
n this correspondence a daily contem-
orary thinks that we should drop the
ndividualistic method of heating each
eparate room by a separate fire and adopt
ie co-operative system, and remarks
iat "we are wasting coals and sacrificing
omfort because our architects will not
uild with the simple object of warmth."
s there are other matters to con-
der in designing a house, perhaps
is just as well for their clients that they
o not. If warmth were the only object
brick oven might meet the case. But
a rule it is the client, not the architect,
ho insists upon displaying his truly
ritish individualistic outlook by the
se of open fireplaces, whereby he sacri-
ces not only comfort and economy, but,
we are to believe a recent medical
ronouncement, a considerable amount
f health also.

Warming Houses. DESPITE the various improvements made in the design of firegrates, the
xcellence of the anthracite slow-com-
ustion stoves now on the market, and
ie availability of hot-water radiators,
welling-houses in this country are rarely
armed as they should be, and we are
clined to doubt whether any marked
teration will be effected by reiterated
atement of the fact in newspapers.
is quite easy to warm any house or
ottage by hot-water apparatus and at
ie same time to reduce the coal bill.
ut, as most houses are simply rented,
w tenants care to lay out a sum of from,
y, 30*l.* to 150*l.*, even if they have
ie money to spare, on an installation
hich cannot be moved from place
place like furniture, and property-
vners do not fit hot-water boilers,
pes, and radiators, because so far
there has been no general demand for comforts of the kind. Some tenants would object to use heating apparatus, and the majority would probably decline to pay the enhanced rent necessary to recoup the owner for his original outlay and annual maintenance costs. If our climate were consistently cold for half the year it is probable that house warming would be placed on a more scientific basis. As matters stand, however, we believe that central heating in dwelling-houses will not become general for a long time to come, except in cases where the occupier is also the owner.

The Control of London Statues. THE curious fact to which attention is drawn in *Notes and Queries* that an equestrian statue of the Duke of Cumberland erected in Cavendish-square in 1770 was about a century later removed and melted down by order of the fifth Duke of Portland owing to its insecure condition again draws attention to the need of enlightened public control over the monuments of London. Possibly this particular statue had no great artistic merit, and Cavendish-square may not have suffered any very grievous loss; but even had the statue been of first-rate merit it would probably have been allowed to get into the same state of insecurity, and finally have suffered the same ignominious fate. While statues are left under the control of private landowners there is no guarantee that however great their historic interest or artistic value may be they will not suffer the same neglect. It is well that the attention of the Office of Works and of the London County Council should be called to a matter which, though trivial perhaps in itself, is yet of some importance as illustrating a question of principle.

The Crystal Palace and the National Folk Museum. COUNT PLUNKETT, late Director of the Dublin Museum, has an interesting letter in the *Times* of the 29th ult. in support of the proposal to establish at the Crystal Palace a National Folk Museum illustrating the history, conditions of life, arts, and fashions of the inhabitants of the British Isles. In such a museum, he says, relics of all periods since men first left traces of their existence in the land will be shown in historical sequence, "and, as the ground at Sydenham affords space for the reproduction of dwellings of various periods, decorative arts, furniture, household objects, weapons, and dress will be shown as if actually for use. The Stockholm Museum at the Skansen is an admirable model, and forms one of the most interesting and instructive sights. Among other objects which could be reconstructed with sufficient accuracy are a lake dwelling, British fortified camp, Roman British villa, Saxon thane's house, Norman stockaded castle, mediæval keep, baronial hall, Elizabethan house, and so on, to interiors in the styles of Inigo Jones, Adam, and other architects, and furniture of the great XVIIIth century makers; in their proper places would be shown on lay figures the dress of each period."

Signs of Unrest. THE incident at the close of the last ordinary meeting of the R.I.B.A. after the prize awards had been announced—as reported in our columns "a speaker asked if the *bona fides* of the designs would be inquired into"—is not, we believe, the result of an isolated instance of discontent. Many feel what one may be screwed up to say, and others yet more numerous may have abandoned all interest in the prizes—as being beyond them—office-workers toiling in the evening—as against those with more leisure, or working all their time in schools with a professor's assistance. One prize markedly, the Owen Jones—we do not hesitate to be particular—goes almost always to a student of South Kensington. We are inclined to think that the remedy lies not so much in making the stipulation on this account more precise—though that will have to be done perhaps—as in raising the desiderata entirely out of the realm of draughtsmanship, so that, however well a design may be rendered, it will avail nothing at all if it be not right in itself; to the condition, that is to say, of the Beaux-Arts School in Paris, at which the prize of the year may go to one of the worst-rendered designs. We do not for an instant advocate poor draughtsmanship—on the contrary. But we do deplore the natural tendency—natural in view of the absence of any other common ground of agreement among the assessors—to take draughtsmanship so much into account. Were this not so the office-harassed man might have a chance—if he were a sound designer Also, surely, the mere amount of work demanded is excessive.

COMBINED ORDINARY GENERAL AND CAMERA, SKETCH, AND DEBATE CLUB MEETING.

A COMBINED meeting of the Architectural Association and the Camera, Sketch, and Debate Club was held on Monday at No. 18, Tufton-street, Westminster, Mr. Gerald Horsley, President, in the chair.

Mr. Hall, Hon. Secretary, made the following announcements:—

The third Spring Visit, on February 17, to the British Museum extension (architect, Mr. J. J. Burnet). 2 p.m.

The Camera, Sketch, and Debate Club annual dinner at the Café Monico, Piccadilly-circus, on Friday, February 2.

Meeting of the Camera, Sketch, and Debate Club on February 15 at 7.30, when Mr. John Gaymer will read a paper, entitled "Thoughts

and Impressions of a Tour Round the World."

The following gentlemen were then elected as members :—Messrs. B. R. Hebblethwaite, Beckenham, Kent; H. J. Higgs, Russell-square, W.C.; J. H. Jacob, Salisbury; and H. S. Stephens, Church End, Finchley.

The President proposed a vote of thanks to Mr. G. A. Mitchell for conducting a party of members round the new Polytechnic on the occasion of the second Spring Visit and for providing tea. This was agreed to.

Mr. A. G. R. Mackenzie then read the following paper, entitled :—

THAT MODERN HOUSE PLANNING DOES NOT TEND TO OVER-ELABORATION.

"When I was asked to read a paper on the subject chosen ("That Modern House Planning Tends to Over-Elaboration") I consented to take the negative side in a debate, someone else taking the positive. I hope, therefore, I will be excused if I open the debate on the negative, leaving the positive side to be brought out in the discussion.

There is no doubt whatever that modern house planning yearly becomes more elaborate; but the question which it is proposed to discuss to-night is not the amount of this elaboration, but whether or not it is carried to excess. I think it is essential in considering the question to remember the stages through which house planning has passed, and in doing so to realise that the whole process is part of a natural growth.

I think so all the more because remembering this helps us to take a broader view of the subject and not to hastily reject forms of building which have so naturally come down to us that they appear unimportant, and, on the other hand, not to be afraid to adopt new arrangements and to carry the development further—to carry it on in its logical course.

Of all the characteristics of the modern house, the most striking when compared with the planning of former times is the multitude of purposes which it serves. I have on the walls two sets of plans and photographs of recent large country houses. Keeping pace with our more complicated ways of living, we have not only greatly increased the number of rooms, but have assigned to each a special purpose. Instead of the hall and single chamber of the Middle Ages, with which even kings were content, every ordinary house must have a number of separate bedrooms, at least three public rooms, and a complicated arrangement of servants' offices, as with the development of civilisation we could not now live in those old palaces, in which the only communication for a suite of rooms was by passing through each in succession.

I do not propose to trace the history of the house from prehistoric times, but merely to refer to the advent of prosperity in the times of Elizabeth, when the system of planning was revolutionised, which previously consisted of more or less detached buildings round a central courtyard, and the house was made one by connecting all the parts together by means of corridors or galleries. It was to this period that Mr. Norman Shaw and his contemporaries reverted when, forty years ago, they awakened the architectural world to the realisation that modern houses could be planned with a spirit of the ancient work and with all the comforts which modern conditions demand. It is to them also that to some extent the initiation of the recent movement of the planning of smaller houses may be traced; at any rate, they were the first to realise the possibilities of the good architectural treatment of the smaller suburban house, which, now that garden cities have come into existence, has become so interesting a subject for the man in the street and his wife, as well as the architect.

We are not considering whether over-elaboration is a demerit or simplicity a merit, but whether the present tendency is to over-elaboration, and I contend it is not. I regard elaborate planning as not necessarily leading to elaborate results. That is to say that a house which looks the simplest in the world may, to attain this simplicity of effect, have caused much elaborate planning on the part of the architect. An elaborate house is not the same thing as an elaborately-planned house; the one conveys the idea of complication, the other simplicity in its considered result.

Although an elaborately-planned house does not always bring simplicity, a house that is planned without due elaboration or consideration of detail certainly can only bring simplicity of effect by the sacrifice of comfort. Lord Bacon says somewhere in one of his essays, "Houses are made to live in, not to look upon." The ideal house is, firstly, one which is comfortable to live in, and, secondly, fair to look upon. The one follows the other.

Of the works of man that approach more nearly to Nature in their perfection one may instance sailing-ships. These have not been designed to look beautiful, but have become so by the process of elaboration and elimination, which has continued through centuries till this ideal has been reached. And so it is with house building; the planning is the key to the situation, and it is by elaboration and elimination of everything that has not a *raison d'être* (for elaboration includes elimination) that the perfect house is attained.

That there are numerous examples of over-elaboration is true, but that some have fallen into traps ambushed by the wayside does not affect the general forward movement.

When Professor Reilly at the Architectural Congress made his plea for a more classical treatment of the garden city I confess I was captivated by the idea, and saw in my mind's eye relief from continual picturesque bits and fussy detail. (It is curious how pleased one is with one's own happy thoughts in picturesque features, and how impatient one is with other people's.) I was captivated by the idea of a Georgian garden city designed with due regard to axial lines and symmetry. That great dignity can be obtained by axial planning goes without saying; the architects of the Georgian period knew this, and those who follow them now recognise the value of the vista and balance. How far this can be carried, however, in the smaller house is, to my mind, a very debatable question. Though Mr. Geoffry Lucas and others have succeeded, I very much doubt if they are on the true road to the ultimate solution of the problem.

An elaborately-planned house is, to my mind, one in which everything is considered, so that there is no waste of material and useless space is reduced to a minimum. This is particularly true of smaller houses; indeed, the smaller the house the more elaborate should be its planning.

As an illustration I would take the question of cupboards. In small houses inhabited by people of moderate means it is much more necessary to fit in cupboards to every possible nook or corner than it is in larger houses, where space is not so valuable, because in the former case not only is every inch of space required, but the cost of purchasing furniture such as wardrobes becomes a consideration. In the larger houses the elaboration of planning would probably consist in the fittings suiting the decoration.

Garden cities have led to the study by architects of small houses, and the elaboration of planning which has followed has all been to the good. If one compares the best or even the average houses designed by architects at the recent exhibition at Gidea Park with the builders' erections of ten or fifteen years ago it is ludicrous to maintain that there is any tendency except towards improvement.

Two houses in Gidea Park gave an excellent illustration of my contention that elaboration leads to apparent simplicity, and showing how misleading it is to talk about a simple little house as if the simplicity was attained by obvious methods.

They show how by an elaborate arrangement of chimneys and clever distribution of the rooms a very simple external effect is obtained, while, the fires being in the centre of the house, all the heat is conserved for the benefit of the rooms.

How much more simple to plan a house such as is my third illustration, with all the chimneys in the walls and the scullery projecting behind in the usual way, but how much less pleasing is the result!

Although Mr. Curtis Green, the author of my first illustration, has described it as "planned in the simplest possible manner," I think he will agree with me that it would have been more truthful to have said, "planned with much thought and elaboration, eventually arriving at a simple result."

In the larger houses of to-day the same principles of planning are being applied, though the object of the elaboration may not necessarily be directed towards obtaining the most efficient result with the minimum of space and expense as to obtaining a fine architectural building with the maximum of luxury and convenience for the owners.

I take it we are not here to discuss whether or not people should lead simple lives; we must take our clients as we find them, and the question which architects have to solve is not how a rich country squire can so modify his requirements that a quiet, dignified, and beautiful house can be built for him, as how to build him a house and still give him all the conveniences and luxuriousness he desires. By the facilities for intercommunication now available, among other reasons, life in country houses has become much more complex than it was in the past. Huge house-parties can easily be gathered together, and their successful entertainment greatly depends on the provisions made by the architect, more particularly perhaps in the servants' quarters. Ladies now take a much greater part in life generally, and their not being banished to their withdrawing rooms has led to the development of the hall, where they and the men can meet, and both can come and go without formality. That this apartment has to be a sitting-room, sheltered from draughts, and yet still the hall of the house, has led to much ingenuity in planning.

The necessity for bathrooms and suites of rooms which may or may not be used in connexion with each other also leads to further complications.

The desire for unlimited fresh air is a consideration which is daily becoming more urgent. No one now sleeps with his or her window shut, and the fresh-air habit, like any other, tends to grow. To a person like myself, who habitually sleeps with both windows and door wide open, it is perfect torture to be closed up and to waken in the morning with the feeling of oppression that want of fresh air gives; it is all a matter of habit, and this habit is on the increase. Very soon the desire for open windows will lead, as it already has done in America, to the provision of sleeping balconies attached to the bedrooms, surrounded by a dwarf wall and open on two or more sides, so that by means of shutters the side sheltered from the wind that may be blowing can be left open and the others closed. The American plan shows one example of this, and also a sun parlour, which, I take it, can be used for meals in hot weather. Another set of plans have loggias facing east and west available for this purpose whichever quarter the sun is in, and the balconies over are ready to be converted into sleeping balconies with the addition of roof and shutters. I feel there is a great future for the open-air room, not merely a verandah, but wide enough—at least 10 ft.—to have dinner served in. When these have been provided I anticipate that the next demand will be for places where one can take an air or sun bath. There is nothing which is more delightful and, as many authorities now agree, more health-giving than to expose the whole of one's skin to the sun, or at least to the air. This is impossible in our climate without the erection of shelters or screens, and I foresee that greatly additional elaboration of planning will be required in the future to provide such spaces, either attached to the water bathrooms or forming adjuncts to the sleeping balconies.

But, to conclude, there can be no doubt that the subject of domestic architecture is one which interests us as English architects more nearly than any other; if one looks for fine general planning and magnificent public buildings designed on a scale to impress the mind with the greatness of the nation, one is disappointed. It is in domestic architecture that England excels, and I claim that it is by continual study and elaboration of planning that this reputation has been built up, and it is by that alone that it can be maintained in the future."

Mr. J. H. Jenkins

said he was afraid that it was impossible, unless the resolution be entirely recast by the President, to follow the usual custom of

endeavouring -out of pure sport—to carry an amendment. Although Mr. Mackenzie stated that he had altered the terms of the resolution because he had stipulated that he desired that the subject should be a debatable one, he had been most careful not to alter it so that the amendment could stand the least chance of being carried.

Evidently he had defined "elaboration" as "the process of improving or refining by successive operations. We should, therefore, all agree that modern house planning did not tend to over-elaboration."

Proceeding, Mr. Jenkins said: I hope I shall be pardoned for an apparent digression from the main argument in order to counteract as far as it lies within my power, heresy relating to art which is being consistently preached by certain of the younger school of architects, the heresy that beauty is not a thing to be sought for its own sake, but is only a side issue, a something which cannot be attained by effort, but which, like Fame, as portrayed by Keats in one of his sonnets—

"Will still be coy
To those who woo her with too slavish knees."

Mr. Mackenzie states that "the ideal house is, firstly, one which is comfortable to live in; and, secondly, fair to look upon." It is to be hoped that architects worthy of the name may fairly claim to be regarded as being artists as well as men of business, and it follows that a house cannot be comfortable if it is not fair to look upon, as, if everything is displeasing to the eye, peace of mind will not accompany ease of body. He pretends to instance sailing ships as one of the works of man that approach more nearly to nature in their perfection, and states that these have never been designed to look beautiful, but have become so by mere chance in the process of their development. He might as well maintain that a thirty-five-knot destroyer, her decks inches deep in grime thrown from her funnels in the effort to obtain the last inch in speed, is as beautiful as Lord Brassey's *Sunbeam*, with her fine lines, white and gold paint, and everything designed not only to be absolutely fit for its purpose, but to please the eye. I maintain that the cultivation of an appreciation of the various forms of beauty in art is worthy of being placed in the forefront of those attainments which should form the equipment of every artist, be he architect, painter, sculptor, or craftsman, and it is in proportion to its study that the artist attains or falls short of real greatness. A man may have great knowledge of technique, fitness of material and workmanship to its purpose, and of the work to its use, and yet the result of his labours will be universally condemned if he has not added to it a knowledge of charming composition, beauty of line and mass, appreciation of good colour, and all those attributes which have nothing to do with the fitness of purpose but solely concern themselves with appealing to the eye. People nowadays are fond of collecting, and some people have collected beautiful old household utensils of bronze, copper, brass, or iron, but I cannot conceive anyone adding to it a double-lined saucepan, although this has been proved to be the most perfect for its purpose in cooking.

So my first point is that the modern house is insufficiently elaborated to ensure its being beautiful as well as being convenient. Beauty is only a secondary consideration instead of being of equal importance with convenience in producing the ideal home. If we do not realise this we shall tend to fall behind the times. There is distinct evidence at the present time that a large and increasing section of the community does believe that our streets and buildings should be beautiful as well as fit for their purpose.

Mr. Mackenzie, while recognising the value of vista and balance, hesitates to conceive a garden city in which full play is given to these means in producing a fine effect, though he confesses he is depressed by continual picturesque bits and fussy detail.

This brings me to my second point, viz., that the elaboration of modern house planning tends more to the multiplying of unnecessary conveniences than the elimination of needless features both inside and outside, because it is much more difficult to eliminate than to do the reverse; we see it practised so rarely that a doubt is thrown upon such a course being successful. Mr. Geoffry Lucas has been bold enough to dare to eliminate, and I leave it to the meeting to judge as to whether fine results may not be obtained by this means.

Mr. W. H. Wigglesworth
said he thought the practicability of the plan was the first and essential point in any scheme. If an architect had not nice ideas and some feeling for beauty he doubted whether he would have gone into the profession; and if he had that sense of beauty he would express his ideas with beauty.

Mr. Geoffry Lucas
said he was prepared to support the proposition that modern house planning did not tend to over-elaboration. Everyone was acquainted with the drawings of Phil May, which seemed exclusively simple, but he believed the artist was prepared to redraw and omit again and again until he arrived at the simple results we know. The same thing might be done by the architect; he had his plan full of ideas, and it was his duty and pleasure to rid himself of some of those ideas—to pare them off from the design and get it down to its rudiments. In domestic work it was more or less easy to get a picturesque effect by means of tricks, but to do a simple thing that relied on proportion, and perhaps on colour, was difficult, as was central line design—balanced design, though it might be easier when done on a large scale, the duplication of features driving one to bigness. It was when one came to attempt this in a small thing that the difficulties increased. There was no doubt that in the balanced design, or in the symmetrical treatment, proportion and form were more important than in the picturesque cottage-gable-ingle-nook-chimney type of building. If we were to progress in house design it must be done by culture and by what he would call cruelty to oneself in the way of throwing off the feeling one had for antiquity and the repetition of old features. It is hard not to do them if one liked them, but what did they lead to? House design should keep pace with the culture shown in the design of municipal buildings; there was progress there, and such buildings were put up, perfectly fulfilling complex and new requirements. In his opinion, having got their plan, they should let it make its own elevation, and if it was a good plan it would more or less do this from the roof downwards.

Mr. Dale
supported Mr. Jenkins and referred to the charming effects got in the houses of the Middle Ages. It was the absence of elaboration that was the secret of their charm. In building a house they should remember that it was for the client, who did not want to be worried all the time by the little tricks and eccentricities of the architect in his design.

Mr. H. V. Ashley
said he had listened to the paper with interest, but regretted to be in total disagreement with the reader of the paper. He found the word elaborate had a positive and certain meaning. Murray's Dictionary gave the definition of the word as follows:—"To produce or develop by application and labour; to fashion a product of Art or Industry from the raw material; to work out in detail; to give finish or completeness." He laid stress on this definition because from a certain amount of study of modern houses it became evident to him that house planning was seldom elaborate, and he ventured to say never over-elaborate. He thought that the houses of the XVIIth and XVIIIth century were probably more elaborately planned than is the case now; they were built, the large houses anyhow, with fine lay-outs, dignified suite and reception rooms and noble approaches; but even at this period we find the architects failed again and again to work out in detail or elaborate the upper and lower floors, etc. Again, in the work of the early part of the last century we find the reception suites elaborated, particularly in town houses, but in the bedrooms, kitchen, and servants' accommodation, we have a hopeless muddle of badly-placed rooms which results from failure to work out in detail or elaborated. As to modern house planning, he thought that during the last twenty years it had improved tremendously; it had been elaborated, but to suggest over elaboration seemed to him to invite incompetence, and to suggest to architects that the limit had been reached, and further progress impossible—a truly deplorable proposition. To plan perfectly a modern house, either large or small, demanded a great deal of application and labour and working out in detail, all which meant elaboration. He realised the requirements were greater now than used to be the case, but this simply meant more working out for the architect. How many modern plans of houses could be said to be perfect in, say, only the following points:—their lay-out on the site and treatment of levels; aspect, sunlight in rooms, etc; convenient and dignified entrances, halls, and reception-rooms; convenient services from kitchen to pantry, and so to dining-room; right position of doors, windows, and fireplaces in rooms; proper and economical planning of the sanitary arrangements, baths, lavatories, sinks, etc., and their wastes and supplies? In obtaining a proper note of distinction over the whole house and reflecting on clients' wishes and the architect's liability to grapple with them and elaborate the house, or, as the definition has it, to fashion a product of art from the raw material.

Mr. A. E. Bullock said he thought there was a slight tendency to over-elaboration in house planning.

Mr. C. G. Boucher said that simplification was elaboration. There was over-elaboration in the use of materials, as in some garden city houses.

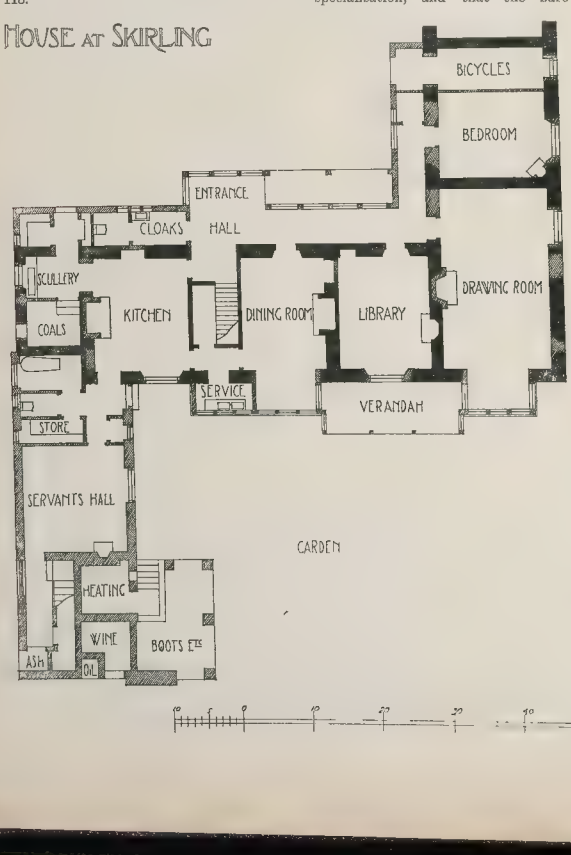
Mr. P. M. Fraser having spoken,

Mr. W. Curtis Green
said that Mr. Mackenzie's paper was eminently sane and reasonable, but having said that he had to confess to a most profound depression in regard to the subject, more particularly in regard to the small house. There were those who, like the Chairman, Mr. Ernest Newton, Mr. May, and others, produced the beautiful small house, and those who did not were inclined to say that that was because the conditions were unfavourable. The majority of small houses in the suburbs were extremely depressing, but if we went back to the time when these small houses were beautiful things and tried to analyse them we found they were very simple, and not only that, but the instinct of good craftsmanship seemed to pervade them. The builders of them did not design them so much, nor did they build them for the admiration of their contemporaries, or to show their own skill. They did them quite naturally and in spite of difficult conditions—difficulties which we did not have to face; and they produced buildings which, as we see now, were admirable. He did not know that the discussion had risen to the height of architecture; the small house was largely the problem of the simple straightforward building, and the development of the small house building had been extremely rapid and very simple. There was not a great deal of difference between the requirements of to-day and those of the XVIIIth century; a few more sanitary arrangements might tend to complicate things, but they did not really alter the conditions which the architect had before him. He remembered hearing an architect say once that he and a friend were very depressed by the houses they saw in the suburbs, and they tried to find one they liked. They succeeded, and they found that the architect was the occupier. We have to discover all the factors and know exactly what is wanted, and then to put them together in the simplest possible way. He thought the question of the small house would have to be solved in a much larger way than was attempted at present. The Garden City movement was all in the right direction, but he believed rather in what Mr. Paul Waterhouse had suggested—*i.e.*, a sort of hospital, to which people who could not afford an architect should go for their designs; they would have the best advice and they would have to carry it out. He thought cupboards and ingle-nooks went together and meant bad design. Cupboards filled spaces which architects did not know what to do with as a rule, and ingle-nooks were the most pernicious things, but people loved them, and architects had to provide them, though they were well enough in an old farmhouse. If one studied

the evolution of house design or cottage design one would find it was a question of roof, and it was the roof which the old men regarded as of the first importance. Architecture had always been governed by the roof.

The Chairman,
in putting the vote of thanks to the meeting, said that all architects must view this question of elaboration in house design as being a question of taking infinite pains. The large house had not been so fully discussed as the small house, and there were certainly difficulties in that connexion after the architect had tried to make his building good in its proportions, etc. The necessity of providing a large number of bathrooms in a house was one of those difficulties. They could be provided, of course, but they had to have their supply and waste pipes, etc., which did not improve the appearance of a house when they were put up, and he would like to ask Mr. Mackenzie if he knew any way in which these modern additions could be best dealt with.

The vote of thanks was heartily agreed to, and



Mr. Mackenzie,
in reply, said as to Mr. Curtis Green's dissatisfaction, he thought that the fact that people who had studied a problem were dissatisfied showed progress was going on, for it was only from dissatisfaction and striving to do better that progess resulted.

It was announced that the next meeting would be held on February 12, when a paper would be read by Mr. Paul Waterhouse, M.A., F.R.I.B.A., entitled "Bridges" (combined meeting with the Junior Institution of Engineers).

The meeting then terminated.

HOUSE AT SKIRLING.

THIS house has been built at Skirling, a small village near Biggar, for his Excellency Sir T. D. Gibson-Carmichael, Bart., Governor of Madras, who was recently raised to the peerage. A view of the house is shown on p. 113.

The site of the house was originally occupied by a small five-roomed farmhouse. This has been retained practically without alteration, and new corridors, bays, and rooms have been added round it. This explains the narrow staircase and thick internal walls.

The house faces the village green, of which it occupies one end. In order to obtain privacy all the rooms look on to the garden on the opposite side.

The external walls are of brick, lined with weatherboarding. The roof is covered with grey slates; heating is assisted by a low-pressure hot-water system. Almost the whole of the work was done by local tradesmen.

Mr. Ramsay Traquair, A.R.I.B.A., was the architect.

ARCHITECTURAL EDUCATION.

AT a meeting of the Manchester Society of Architects on January 24, Mr. H. P. G. Maule, Headmaster of the Architectural Association, London, read a paper entitled, "Architectural Education; a Plea for Breadth and Sanity," in the course of which he said:—

"I desire to take my stand on the broader basis of the general architectural education of the English architect, not with reference to any particular city, university, or school, not to the superperfect equipment of the giant few, but for the solid, sound, sane, and sober training of the many. I assume that, as in all educations, the first step is to establish a basis of general training, for we must ensure that all who in the future profess and call themselves architects should have had at least a definite and comprehensive training in the broader aspects of architectural history, of materials, construction, and design; to say nothing of the business aspects of practice.

Even in a small country such as ours, conditions vary greatly, and, while too much district specialisation is to be regretted, it would be both unwise and impolitic to lay down hard and rigid rules, or a universal system; yet at the same time we must not forget that general training must precede specialisation, and that the bare outline enumerated above is the minimum, and that there remains vastly more than this if we are to rise to the vast conceptions and great ideals that a modern civilisation must require from us.

It is an educational truism that to specialise too soon is the curse of secondary education. Hence follows the need to distinguish clearly between what is general and what is special, and to realise that all who desire to equip themselves fully as modern architects must be prepared to devote a longer initial period to that end.

The Psychology of Education, or Mind Training.

In England, until comparatively speaking a very few years ago, the training of the architect was accomplished almost entirely by apprenticeship or pupilage, and, so long as life is comparatively simple, this system has many advantages. But with the growing complexity of all forms of modern development, the difficulty of acquiring a general training in any one profession has enormously increased, and the educational conscience has at last awakened, and is now actively engaged in standardising and perfecting all forms of professional and æsthetic training.

Unfortunately for various reasons there has not always been sufficient regard paid to what is now termed the Psychology of Education, by which I mean the induction, by training, of certain habits and qualities, apart from the particular objective; in our case, the study of architecture.

If we architects are really going to take the matter of our own education in hand, we must recognise this great question of psychology in teaching; we must not overburden the natural mind of youth with more than it can possibly (in all but exceptional cases) absorb; and we must be content to run the risk rather of doing too little than of confusing, by attempting too much.

Yet there will continue to be mistrust of school and university teaching, among the vast body of practising and practical men, until we can show them that the school training is not devoid of those formative characteristics which promote the habits of observation and self-reliance, so inseparable from achievement in the matter of fact and workaday world of practice.

Is there any recognised training in the arts, sciences, or professions, in which the highest ultimate problems are given generally at an elementary stage? I think there can be only one answer to this; and that we would be wise to make the advanced study of monumental design dependent upon proved individual capacity, or treat it as a specialised form of advanced education, only to be attempted after a very thorough general course has been completed, and thus, only when the student's initial sketch study for the design can be fairly the result of his own imagination and knowledge. It does not follow, as is sometimes assumed, that because monumental problems are relegated to an advanced period the qualities which underlie the production of great architecture would be neglected. On the contrary, in any training worthy the name, those qualities and principles would be insisted upon from the very commencement, and almost all design problems, no matter on how simple or small a scale, would be given with a view to the ultimate and larger conception of monumental architecture. Nor does it follow that what may be termed "advanced design" would be, or is, excluded, but the average English student has certainly a great deal of ground to cover before he is really ready to tackle monumental problems without monumental confusion.

It is the distinction between what is general and what is special, and the amount of time that should generally be allotted to each, that I should like to see more generally understood and more clearly defined.

The main principles are therefore, first the recognition by architects of a science of mind training, the peculiar province of the practical educationalist, to be attained by method and system. Secondly, the recognition of a broad distinction between general and special education; for surely there is no greater fallacy than in specialising too soon and in not recognising that while all may not attain the same ultimate heights, all must b

n the basis from which those heights can ttacked.

rgeness of view, dignity of conception, ymmetry, balance, proportion, all great itectural principles, can be inculcated the commencement; but whatever else do you must not confuse, for as Bacon "Truth comes out of error sooner than of confusion," and if, by attempting too h, you merely confuse, not only do you educate, but you destroy that very vital bute of mind, clearness, and breadth of tal vision, which it is your peculiar llege to build up and develop.

chitecture and the Functions of an Architect.

viously, the whole question of archi- ral education hinges upon our correct rpretation of the true functions of an itect, and the fact that the education ne future will have to be, first for the fit of the average many, and not for exclusive benefit of the privileged few, as been so largely the case in the past. ould it not also be well to realise more rally that national architecture should consist merely in the production of the er buildings of our civilisation, but in and every kind of structure, to which term building can be given, from the ble dwellings of the proletariat to the icipal palace or great Government office. citecture has a far deeper significance the mere gratification of the eye and s, or as an emblem of power and wealth. s largely a nation's sign manual of acter. The refinement and subtlety of Greek, the driving power of the Roman, the mysticism of the mediævalist, are not fitly expressed in their buildings? not the present unrest and dissatisfaction ur peoples equally portrayed by the ess and unrest of much of our building? not our governing and commercial acteristics more faithfully discovered in great engineering works, ships, and en- ? Is not this because we have divorced tecture from reality in all but plan, and p false gods and fashions of styles and ds, whilst engineers and shipbuilders clung faithfully to reality and purpose? we not, one and all, desire to see that h is now debased and ugly shut out, and nation at large, as well as our noble s, rise to a consciousness of the inherent ity and power for good, which a great tecture should bestow upon the material spiritual welfare of the modern State?

we turn to the past for guidance, a of the history of architectural develop- forces us to the conclusion, beyond te, that architecture is primarily a tural art: lavish on it the genius of a ias, or the brush of a Raphael, it remains th a structural entity.

terials and methods may vary, from the e column and lintel unit of the Classic ; through the brick reinforced arch and of the Roman and Byzantine; and the æval conception in stone of these same tural units, down to the latest inven- of ferro-concrete; but all show one me fact: that great buildings have been ages great organisms, as great in con- on and structure as in architectural ssion, that architecture is, in fact, a tural art decorated, and not a decorated onstructed.

scene-painting here, gentlemen, but , pulsating, compelling structure, the g inventions of great minds, tempered adition and building experience, and by lofty ambition to beautify all that ins to the Mistress Art, and her handy satellites, Sculpture and Painting.

ve we then so far changed in our rn conditions, that Architecture has d to be a structural Art, but has become iful matter of scene-painting in stone, the engineer as stage carpenter?

at, then, do we mean by essential quali- n this general training? Briefly they e summarised as follows:

The scientific study of materials and ruction in their more elementary form, special reference to locality and climate. The analytical study of past building ds and architectural expressions, to we give the generic name of "His- The deduction from this study of principles in design; the deduction, that is, of such principles as, for instance, symmetry and balance, the ever-recurrent effort of all great building epochs.

3. The application of the above, that is the producing of architectural design from our scientific knowledge of materials and construction, co-ordinated with the principles deduced from past and present forms.

This comprehensive co-ordination in teaching design and construction (which are really inseparable in all the arts) should be the foundation, from the beginning, of all elementary training.

It is really quite incomprehensible how we have drifted into separating design from construction in our approach to architectural study.

If it be once conceded that architecture is still a structural art, the key to a sound architectural education lies, to my mind, in the skill with which we combine and co-ordinate all the component parts. There is no reason why the study of materials, construction, and design should not be one indivisible operation. Once you achieve this; once you bring the student into harmony with the central fact of architectural development, and augment his faculties for rapid initiative and imagination, you are free to go on and build up advanced design upon that structure, without burdening him overmuch with the more mechanical and engineering problems.

4. The whole course being livened and quickened, by being founded upon a system of mind training, by which the student is stimulated and not sterilised; together with the creation of a standard of taste, that is a knowledge and appreciation of all that is beautiful in art and nature; for this study of the humanities of Art should form part and parcel of the student's training from the very first.

I do not want to be misunderstood. It is more than probable that the world has passed that stage of human activity when any one form of architectural expression can be evolved, adapted to our many and varied activities in building; Domestic, Commercial, Municipal, and Imperial. Some form of deliberate eclecticism is almost certainly inevitable, but if we deliberately decide that Neo-Greek, or Neo-Turk, is the one form most suitable for monumental building, we can in our education specialise in that to our heart's content later on, but it should not form part of the elementary training, which, I am sure, from a varied experience, cannot be thoroughly mastered by the average student in a shorter period than four years."

ARCHITECTURAL SOCIETIES.

Leeds and Yorkshire Architectural Society: East Anglian Rural Churches and Their Decorations.

At a general meeting of this Society, held on January 25, Mr. Wm. Davidson delivered an interesting lecture on "East Anglian Rural Churches and their Decorations." The chair was occupied by Mr. A. E. Kirk, A.R.I.B.A., Vice-President, and there were present a number of Associates and friends.

In opening the lecture Mr. Davidson stated that in no other part of England during the Middle Ages had there been a greater activity in ecclesiastical architecture and decorative and applied art than in East Anglia. Many fine examples of all periods of architecture from the Pre-Conquest work, as at Great Dunham, to the great Perpendicular rural churches of the XVth century, such as Walpole, St. Peter, Cawston, Sall, etc., were shown and described. The influence of material on the design was illustrated by the great prevalence of flintwork (no other building stone being readily available), built either as a concrete wall or used as a mosaic facing in various colours. The frequent use of round towers was also held to be due to the same reason—lack of stone for corners and dressings. Of Norman work the central tower at South Topham, the arcades at Castle Acre, Walsoken, Binham, Wymondham, Hales, and Hadleigh, and the doorways at Thwaite, Aldeby, South Burlingham, and Easton were described as fine examples. The beautiful Parish Church at West Walton, with its magnificent lich-gate, bell campanile, and the west front at Binham, were stated to be as fine Early English detail as any in the country. The stone carving of the nave pier caps at West Walton marked the high-water mark of such work in England. The Pilgrims' Chapel at Houghton-le-Dale was given as an exquisite example of Decorated work. In discussing the transition from Decorated to Perpendicular instances were quoted which, in the lecturer's opinion, proved conclusively that these two styles were very much mixed up, as it was perfectly evident that much of the Decorated work was executed long after the birth of the Perpendicular, showing that even in the best and most traditional of the so-called "good old days" men were not above copying a "good old style." This mixture of the ridged and flowing lines gave the Perpendicular work in Norfolk a freedom and charm which was not to be found in work of the same period in other parts of the country. In speaking of the great churches of the XIVth and XVth century the main dimensions of a few were given and the evolution in plan described. In the East Anglian church the chancel roof was usually lower than the nave (Long Melford and Southwold were quoted as notable exceptions), from which it was generally separated by a chancel arch and a rood-screen, and in some cases a window existed in the east gable of nave over chancel arch. The loftiness of many of these churches with their high clearstory windows was shown by examples at Sall, Cawston, Upton, and Potter Heigham. Views were shown of the great towers at Sall, Cawston, Blofield, Tunstead, Wymondham, Lavenham, etc., which in some cases, Mr. Davidson considered, from their unfinished appearance, must have originally had a wood or lead lantern, such as we find at East Harling, Swaffham, Aylsham, etc. The walls of some of these towers were 7 ft. thick at the ground level. Many north and south porches with decorative flintwork and carving existed among others, Worstead, Lavenham, Kersey being mentioned and shown as good examples. The great wealth of fine fonts and font-covers was illustrated by many notable examples, Walsingham, Upton, Hadleigh, and Palgrave being specially mentioned, also the font-covers of various types, particularly those of Trunch and Sall, which showed traces of the original colour. A very special feature of the lecture was the numerous slides of single and double hammer-beam roofs, which, along with the rood-screens and fonts, were the glory of these Eastern Counties. Of the single type Ludham, Potter Heigham, North Burlingham, Trunch, and Southwold were stated to be among the most beautiful in composition, line, and design. The magnificent double hammer-beam roofs at Knapton and Cawston were illustrated by many detail slides, giving a poetic impression of their beauty under various conditions of lighting. The evolution in design from the stone roof was traced and the various schemes of roof painting given in detail. A short account was then given of the famous painted rood-screens of Norfolk and Suffolk, and many beautiful examples of the figure-painting shown with details of mouldings and floral-painted ornament. A description of the main colour schemes was given. Several schools of figure-painters were shown to have existed, and the lecturer had no doubt whatever as to nearly all the work being that of English artists, though foreign influences were clearly evident, notably Florentine, Flemish, and German. The archaic influence of the Byzantine was said to have survived to a later date in the English Gothic than the Italian, probably about 100 years. In speaking of screen and wall paintings Mr. Davidson expressed the opinion that these do not seem to have been properly studied, otherwise the great beauty of many of these fragments would be pointed out more to students of decorative art. Mr. E. W. Tristram, of London, has, however, taken the study of English mediæval wall-painting up seriously, and it was to be hoped his fine collection of drawings and research would one day be published. On the Continent such work is done at the expense of the State. Many rooms at the National Gallery were devoted to Italian and other foreign schools, but we may hunt in vain for a solitary example of our own great Mediæval School of Decorative Art. No one wished to

see these paintings taken out of their right place in the churches, but there are many fine examples in the hands of private individuals, a few of which could surely be acquired for the nation. In concluding his paper Mr. Davidson showed and described the work of various crafts, such as glass, iron, brass, and leather work, the fine quality of which showed how all the arts arose and developed with that of architecture. The mediæval church in East Anglia at the height of its splendour possessed a great architectural and decorative unity, and must have simply glowed with colour, the floor, frescoed walls, painted screens, painted roof, and stained glass all blending harmoniously together. In such work we have a great heritage and inspiration, but under existing conditions it is difficult for even the best of men to do their best and to emulate such glorious work. The lecture was illustrated by numerous detail drawings, water-colours, and lantern slides.

Mr. A. Willetts proposed a vote of thanks to the lecturer, which was seconded by Mr. J. E. Braithwaite, A.R.I.B.A., and agreed to.

Leicester Society of Architects.

A meeting of this Society was held in the Society's Rooms in St. Martins East recently, there being a good attendance. The President, Mr. W. M. Cowdell, F.R.I.B.A., was in the chair. An interesting lecture on "The Architecture of Stamford" was given by Mr. H. F. Traylen, A.R.I.B.A., who, after giving a brief introductory history of the town, dealt with XIth century architecture, drawing attention to important points of development. He then went on to speak of characteristic XIIIth, XIVth, and XVth century work, and also examples of Tudor, Queen Anne, and Georgian houses, almshouses, and other characteristic local work, including some Sheraton shop fronts. The lecture was illustrated by some very beautiful lantern slides, including a number of views of Burleigh House. A vote of thanks was accorded the lecturer, on the motion of Mr. S. Perkins Pick, seconded by Mr. B. J. Fletcher, headmaster of the School of Art, and supported by Alderman A. E. Sawday, Mr. Herbert, and the President. In responding, Mr. Traylen expressed his willingness to give to the Society a number of the architectural drawings of the late Mr. F. W. Ordish, with whom his father was formerly in partnership. The suggestion was heartily applauded.

ENGINEERING SOCIETIES.

Junior Institution of Engineers.

A party of members of this Institution, in response to the permission of Mr. G. E. Pingree, Managing Director, paid a visit recently to the works of the Western Electric Company, at North Woolwich, and were shown over the various departments. The thanks of the party were voiced by Mr. Walter T. Dunn, Chairman of the Institution, to which Mr. G. H. Nash and Mr. Chas. Rice replied. On February 12, the Institution is holding a combined meeting with the Architectural Association, to hear and discuss a paper by Mr. Paul Waterhouse, M.A., F.R.I.B.A., on "Bridges," and on February 17, the Institution's Annual Dinner is to be held.

GENERAL NEWS.

Professional Announcement.

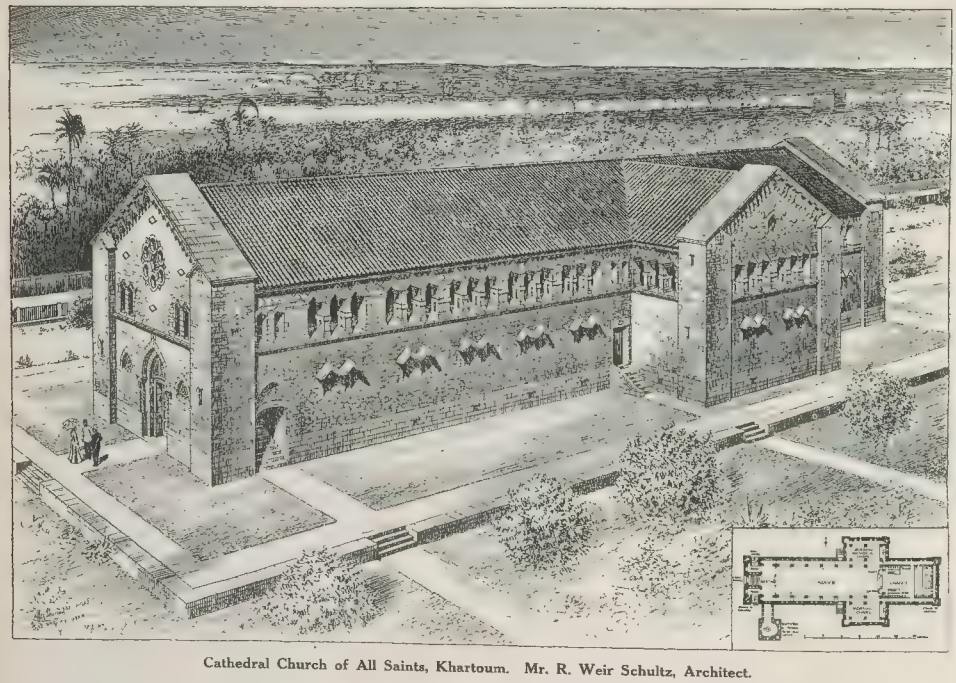
Mr. T. Millwood Wilson has removed his offices from 34, New Bridge-street, E.C., to 4, Staple Inn, Holborn, W.C.

Royal Society of Antiquaries of Ireland.

Count Plunkett, F.S.A., Hon.A.R.I.B.A., has been elected President of the Royal Society of Antiquaries of Ireland.

Royal Academy Appointment.

At a general assembly of the Royal Academy Mr. A. P. Laurie, M.A., D.Sc., sometime Fellow of King's College, Cambridge, Principal of the Heriot Watt College, Edinburgh, was elected to the Professorship of Chemistry in the Royal Academy vacant by the resignation of Sir Arthur Church, K.C.V.O., F.R.S.



The National Insurance Act Advisory Council.

The National Insurance Advisory Council, of No. 3, Northampton-square, London, E.C., is prepared to advise inquirers, whether employers or employed, who are desirous of ascertaining their position under the National Insurance Act. Any person desirous of making an inquiry should forward a letter containing full particulars and a stamped addressed envelope for reply to the Secretary. No charge is made for any information given in response to any inquiry.

The Commerce of Cape Town.

The commercial, agricultural, and manufacturing opportunities of Cape Town are clearly set forth in an official handbook, "The Industrial and Commercial Inducements

KHARTOUM CATHEDRAL.

Cathedral Church of All Saints, Khartoum. Mr. R. Weir Schultz, Architect.

THIS building, erected to the memory of General Gordon, was consecrated on the 26th ult. on the twenty-seventh anniversary of his death. The Building Committee selected Mr. R. Weir Schultz to be architect of the Cathedral, and he has designed a church built in the form of a Latin cross. The nave and chancel are the same width, about 26 ft., with the addition of narrow passage aisles on each side, so that the total width over the walls is about 42 ft. The north transept forms the Gordon Memorial Chapel. The principal entrance is at the west end, the doorway being at the level of the ground outside, with a broad flight of steps inside leading to the narthex, but the usual entrances are from the north and south through covered porches into the narthex. Over the narthex, which extends the full width of the Cathedral, a gallery will be erected at some future date. Two circular staircases at the eastern corners of the building lead to a crypt, containing vestries. The stone used in the building is sandstone of two colours, yellow and pale red. The floor of the sanctuary is laid with Sudanese marble, and it is hoped that eventually funds will allow this marble to be used for the floor throughout. The roof, which is to be covered with green glazed corrugated tiles, is laid to a slope with projecting eaves. The church is lighted by means of small electric lamps. Mr. John Latimer was the clerk of works.

of Cape Town," compiled under the joint auspices of the Corporation of the city of Cape Town and the South African Railway Administration. The book reviews those facts with which the manufacturer who is considering the possibilities of Cape Town as a centre for the establishment of a local factory will desire to be acquainted For the establishment of factories in Cape Town and district the handbook contains much useful statistical information and a number of illustrations. Copies of the handbook may be obtained gratis on application to the Office of the High Commissioner for the Union of South Africa, 32, Victoria-street, London, S.W.

Scholarships in Science and Technology.

The London County Council is prepared to award in 1912:—(i.) Not more than fifteen scholarships in science and technology, consisting of free education in day classes at recognised polytechnics, technical institutes, or institutions of university rank, together with, in cases where the Council thinks fit, maintenance grants to be fixed after consideration of the circumstances of each candidate, but not to exceed 50*l.* a year in any case; the scholarships will be tenable for a period of two years, with a possible extension for a third year, and will be open to persons engaged in industrial pursuits who have attended evening classes at polytechnics, technical institutes, or at colleges of university rank. The Council's intention in establishing these awards is to provide a means whereby intelligent artisans who have already taken up a skilled trade as their life's work, and who are prepared to devote themselves to study for a certain period with a view to their advancement in that trade, may be given facilities for relinquishing their occupation for two years or more in order to follow a course of courses of advanced scientific instruction. (ii.) Not more than 180 evening exhibitions in science and technology, to be open to persons engaged in or intending to engage in industry, each exhibition to consist of payment of tuition fees together with a grant of 3*l.* a year, and to be tenable for two years with a possible extension for a third year.

Barnard Castle Sewerage.

The Barnard Castle Urban District Council have approved plans prepared by Mr. Harry W. Taylor, A.M.Inst.C.E. (Messrs. Taylor & Wallin), of Newcastle-upon-Tyne and Birmingham, for intercepting sewers along the side of the River Tees and a long retaining wall in Galgate. The scheme has been approved.

The "'Sanitary Record' Year-Book."

The "'Sanitary Record' Year-Book and Diary for 1912" (The Sanitary Publishing Company, Ltd., Fetter-lane, E.C.) is the thirtieth year of issue of a useful year-book. It includes articles on "Sanitary Legislation of 1911," "Useful Memoranda for Sanitary Engineers and Surveyors," by Mr. Gerard J. G. Jensen, C.E., and much other information of value to sanitary engineers and surveyors.

The Surrey County Council and Disfiguring Advertisements.

The Surrey County Council have adopted a by-law, in terms of the Advertisements Regulation Act of 1907, and approved by the Home Secretary, to prohibit the exhibition of any advertisement "on any hoarding, stand, or other erection, so as to be visible from any public highway (whether carriageway, bridleway, or footway), or from any public waterway or from any railway, and to disfigure the natural beauty of the landscape." The by-law does not apply to boroughs or places having more than 10,000 inhabitants, and existing hoardings are exempted for a period of five years.

COMPETITION NEWS.

Winnipeg Legislative Buildings Competition.

Copies of the conditions of the competition may be obtained by British architects on application to the High Commissioner for Canada, 17, Victoria-street, London, S.W. A copy may be seen at the Commercial Intelligence Branch, 73, Basinghall-street, E.C.

New School for the Coseley Education Authority.

The assessor in this competition, Mr. Arnold Mitchell, has made his award as follows: The winners are Messrs. Ewen Harper & Bro., of Birmingham. The second place is taken by Messrs. Cleland & Hayward, of Wolverhampton. The Education Committee, after inspecting several of the designs, have appointed Messrs. E. Harper & Bro. as architects for the school.

Competitions for Town Planning, Garden Suburb Scheme, etc.

Acting on the recommendation of the R.I.B.A. Competitions Committee, the Council of the Royal Institute give notice that in the case of competitions for town planning, garden suburb schemes, and kindred enterprises the competition amongst architects should be confined to the design, and architects should not undertake the erection of the buildings they have designed for competition purposes. Further, the Council are of opinion that members of the Royal Institute should not act as assessors to, or otherwise countenance, a competition unless it is limited to the design only.

Erection of Statue, Cuba.

With reference to the notice on p. 417 of the *Board of Trade Journal*, of August 31, 1911, relative to a competition for the erection in Havana of an equestrian statue of the Cuban General Maceo, the *Gaceta Oficial* of January 3 states that the date for the receipt of plans and models has, in consequence of representations from abroad, been extended to July 20. British sculptors proposing to compete should first put themselves into communication with the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall-street, London, E.C., where further particulars (in Spanish) may be seen.

CORRESPONDENCE.

The Policy of the R.I.B.A.

SIR,—The letter of "A Reader" in your issue of the 26th ult. and others which have appeared previously concerning the policy of the R.I.B.A. and the supposed severity of its examinations are such, I think, as to merit some comment. To allow the examinations to be taken in two or more parts is to lower an already low standard.

The examiners are unanimous in thinking that most of the candidates would do much better than they do now if the test were compulsory.

I doubt if it is necessary for any ordinary student to have the services of a coach or even to take up special classes; though the latter course will no doubt facilitate matters with regard to some of the subjects.

And it certainly is not necessary to use up "every minute that can be spared after office hours."

Two hours a night for a couple of months should be quite sufficient for the work, excluding, of course, the drawings and testimonies of study.

If "A Reader" would set about it with energy and in a businesslike manner and divide his time up suitably for recreation and study his difficulties would soon vanish.

Let him look round and note the fury of enthusiasm with which the devotees of any of the sister arts, or the crafts, or even of the engineering trades, pursue their avocations, and he will see that most of the young architects of to-day have much to learn in that direction.

All things that are worth having have to be paid for.

What is needed is, not that the standard of the examinations should be lowered, but rather that it should be raised until the passing of them becomes a guarantee of efficiency, a criterion by which a student may judge of his qualifications for the profession of architecture, and a test which will ensure the successful candidates certainty of employment and reasonable remuneration while he remains in it. H. S. FLEMING, A.R.I.B.A.

The Land Taxes and Building.

SIR, I have read with considerable interest your excellent leading article in the *Builder* of January 19 on the subject of "The Land Taxes and Building," but it is with some concern I note you say that "no organised movement has been instituted to protect property from a policy which is crippling the building industry," etc. May I call your attention to the Land Union, of which Mr. E. G. Pretyman, M.P., is President, and which has since the early part of 1910 carried on a determined and ceaseless agitation against the land taxes, backed by a large and influential Council and with 160 branches formed throughout England and Scotland? This non-party organisation has not only become a powerful fighting machine, with its many thousands of members, but it is ready to give general advice to its members—be they Liberals, Conservatives, or Socialists—on the many difficulties surrounding this grotesque legislation.

The Land Union has held many meetings throughout the country, and it may, I think, take chief credit for the recent decisions in the Court of Appeal, and also for the inquiry now promised by the Chancellor of the Exchequer into the working of the Act.

I enclose you a prospectus, and also some of the literature which has been published, and I hope if any of your readers are in any doubt or difficulty on points connected with Part I. of the Finance Act, 1909-10, that they will communicate with me.

The Land Union is in close and constant touch with the Budget Committee in the House of Commons, and also publishes a monthly journal, which has become the recognised medium for dealing with the anomalies and injustices of the Act which are constantly arising. The Land Union has now become a national organisation, and it is difficult to know how it can have escaped the attention of the writer of your article.

C. H. KENDERDINE, Secretary.
The Land Union, Westminster, S.W.

Portland Cement and Colour

SIR, —In reference to the subject of "Colour as Applied to Architecture," papers on which were read at the R.I.B.A. by Sir Alfred East and Mr. Edgar Wood respectively on Monday last week, and which are reported in the current issue of the *Builder*, I should like to mention the extremely beautiful colours obtainable in Portland cement.

Before giving particulars of same, in my small handbook on Portland Cement recently published, I made a large number of tests, many of which I still have, and which I shall be pleased to forward on request.

These colours are rich and delicate, and their juxtaposition produces the most beautiful harmonies.

As a building material cement possesses this advantage: unlike others the colours of which are fixed before they reach the craftsman's hands, it is capable of modification to any extent, and this, as a rule, increases its hardness. OLIVER WHEATLEY.

21, *Broomhouse-road, Hurlingham, S.W.*

INTERCOMMUNICATION COLUMN.

Rotting of Floors.

SIR,—I should be greatly obliged if any of your readers can inform me of any treatment which will prevent the rotting of floors under linoleum. Several cases have come to my knowledge where this material has been laid on new floors which are apparently adequately ventilated and has caused complete rotting of portions of the flooring within two or three years. Possibly it is the washing of the floors and the soaking of the water under the linoleum which causes the injury.

F. S.

EDITORIAL SUMMARY.

The leading article deals with the R.I.B.A. Studentships and offers some suggestions.

In Notes columns (p. 114) will be found comments on: "The Royal Academy Lectures on Sculpture"; "Mr. Pierpont Morgan's Art Treasures"; "Cold Houses"; "The Control of London Statues"; "Warming Houses"; "Signs of Unrest"; "The Crystal Palace and the National Folk Museum."

A meeting of the Architectural Association, combined with the Camera, Sketch, and Debate Club, was held on Monday, when Mr. A. G. R. Mackenzie read a paper, entitled "That Modern House Planning Does Not Tend to be Over-Elaborated." An interesting discussion followed (p. 115).

An abstract of a paper on "Architectural Education," recently read by Mr. P. G. Maule, Headmaster of the Architectural Association Schools, before the Manchester Society of Architects, appears on p. 118.

Short notices of recent meetings of the following architectural societies appear on p. 119: "Leicester Society of Architects"; "Leeds and Yorkshire Architectural Society."

An abstract of a paper on "East Anglian Rural Churches and their Decorations" appears on page 119.

In Correspondence columns (p. 121) are letters on: "Portland Cement and Colour"; "Land Taxes and Building"; "The Policy of the R.I.B.A."

The Monthly Illustrated Review of Civic Design (p. 125) includes: "The Growth of the Commercial Quarter of a Town"; "Schloss Linderhof"; "Town Planning, Halifax"; "International Road Congress"; "Early Victorian Estate Development"; and Notes.

The Building Trade Section (p. 129) contains: "The London Master Builders' Association"; "The Builders' Foremen's Association Annual Dinner"; "Projected New Buildings in the Provinces"; "The National Chamber of Trade"; "The National Federation of Building Trade Employers"; "Applications under the Building Acts, 1894 to 1909."

The successful designs in the Hendon Central Fire-Station Competition are given on pp. 132-135.

The first of the new series of Carpenters' Hall lectures on "The Arts Connected with Building" was delivered on January 24 by Mr. Thackeray Turner, F.S.A., on "The Unity and Difference in Arts and Crafts." (For report and illustrations see p. 133.)

In Law Reports (p. 136) will be found reports of "Lyons *v.* Runtz"; "Rutter *v.* The Great Western Land Company, Ltd."

MEETINGS.

FRIDAY, FEBRUARY 2.

Royal Sanitary Institute.—Mr. Charles Porter, M.D., B.Sc., on "Sanitary Law (c): Factory and Workshop Acts," etc. 7 p.m.

Glasgow Technical College (Architectural Craftsmen's Society). Mr. J. A. Lanchlan on "A Cistercian Monastery." 8 p.m.

Battersea Polytechnic (Lectures on Illuminating Engineering). Mr. J. S. Dow, B.Sc., on "Daylight and Artificial Lighting Compared." 7.30 p.m.

The Institution of Civil Engineers (Students' Meeting).—Lecture on "Steam-Turbines: Some Practical Applications of Theory," by Capt. H. Riall Sankey, R.E., M.Inst.C.E. 8 p.m.

SATURDAY, FEBRUARY 3.

Aberdeen Architectural Association.—Paper by Mr. A. J. Wood, entitled "Under Italian Skies." Illustrated. 7.30 p.m.

MONDAY, FEBRUARY 5.

Royal Institute of British Architects.—(1) Address by the President, Mr. Leonard Stokes, to students. (2) Presentation of prizes and studentships. Mr. Gerald Horsley to read a criticism on the work submitted for prizes and studentships. (3) Nomination of the Royal Gold Medallist. 8 p.m.

Royal Academy of Arts.—Professor R. T. Blomfield, A.R.A., on "Architectural Drawing and Illustration: Villars de Honecourt." 4 p.m.

Surveyors' Institution.—Mr. Edwin Savill on "The Single Tax Movement." 8 p.m.

Society of Engineers.—Presidential address, by Mr. John Kennedy. 7.30 p.m.

Royal Sanitary Institute.—Dr. Charles Porter on "The Duties of a Sanitary Inspector: (a) Outdoor." 7 p.m.

Liverpool Architectural Society.—Mr. H. L. North, B.A., on "The Old Buildings of Snowdonia." Illustrated by lantern slides. 6 p.m.

TUESDAY, FEBRUARY 6.

Northampton Polytechnic Institute.—Mr. F. M. Denton on "The Production of Electric Light and its Distribution." 7.30 p.m.

The Institution of Civil Engineers.—Papers on "The Water-Supply of the Witwatersrand," by Donald Calder Leitch, M.Inst.C.E.; "Investigations Relating to the Yield of a Catchment-Area in Cape Colony," by Edward Cecil Bartlett, M.Inst.C.E. 8 p.m.

WEDNESDAY, FEBRUARY 7.

Carpenters' Company (Lectures on Arts Connected with Building). Mr. Herbert W. Wills on "Past and Present Conditions of Building." 7.45 p.m.

Royal Archæological Institute.—Mr. J. A. Gotch, F.S.A., on "The Original Drawings for the Palace of Whitehall Attributed to Inigo Jones." With lantern illustrations. 4.30 p.m.

Royal Sanitary Institute.—Dr. Charles Porter on "The Duties of a Sanitary Inspector: (b) Indoor." 7 p.m.

Royal Society of Arts.—Mr. Leonard Hill, M.B., F.R.S., and Mr. Martin Flack, M.A., M.B., B.Ch., on "The Influence of Ozone in Ventilation." 8 p.m.

Northern Architectural Association.—Paper by Mr. P. S. Worthington, M.A., on "Style in Architecture." 7.30 p.m.

Edinburgh Architectural Association (Associate Section).—Mr. Oscar Paterson on "An Elementary Introduction to the Study of Taste in Stained Glass."

THURSDAY, FEBRUARY 8.

Royal Academy of Arts.—Professor R. T. Blomfield, A.R.A., on "Some Draughtsmen of the XVIth Century: Bramante, Da Sangallo, Du Cerceau, Del' Orme." 4 p.m.

Society of Antiquaries.—8.30 p.m.

Society of Architects.—8 p.m.

Concrete Institute.—Discussion on Professor Beresford Pite's paper on "The Æsthetic Treatment of Concrete," read at a recent meeting. 8 p.m.

Sheffield Society of Architects and Surveyors.—Mr. J. H. Cockburn on the "Law of Support to Building."

Institution of Electrical Engineers.—Mr. E. H. Rayner on "High Voltage Tests and Energy Losses in Insulating Materials." 8 p.m.

FRIDAY, FEBRUARY 9.

Royal Sanitary Institute.—Dr. Charles Porter on "The Duties of a Sanitary Inspector: Offensive Trades." 7 p.m.

Royal Institution of Great Britain.—Mr. J. Allen Harker on "Very High Temperatures." 9 p.m.

The Institution of Civil Engineers.—Lecture on "Steam-Turbines: Some Practical Applications of Theory," by Capt. H. Riall Sankey, R.E., M.Inst.C.E. 8 p.m.

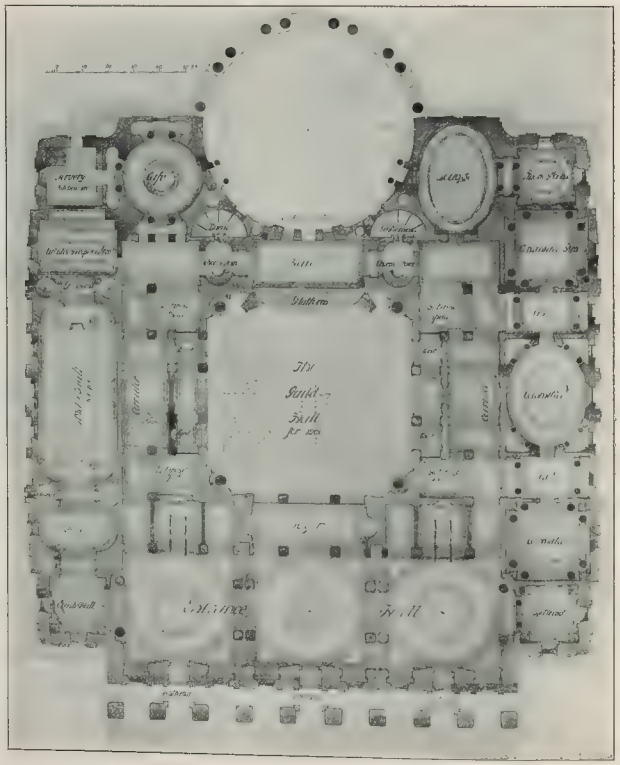
Battersea Polytechnic (Lectures on Illuminating Engineering).—Mr. J. S. Dow, B.Sc., on "Colour of Artificial Illuminants." 7.30 p.m.

Leicester and Leicestershire Society of Architects.—Mr. Beckwith A. Spencer (Royal College of Art) on "Italian Mural Decoration in the XIVth and XVth Centuries." Lantern slides. 8 p.m.

SATURDAY, FEBRUARY 10.

Clerk of Works' Association. Twenty-ninth annual dinner, King's Hall, Holborn Restaurant. 6 p.m.

Royal Sanitary Institute (Meeting in the Board Room, Poor Law Offices, Shakespeare-street, Nottingham).—Discussion on "Local Public Health Administration and the Insurance Act," to be opened by Alderman T. J. Dabell, M.R.C.S., J.P., Chairman, Health Committee, Nottingham. 11 a.m.



ILLUSTRATIONS.

The Soane Medallion Drawings.

WE illustrate this week the designs submitted in the Soane Medallion Competition of the R.I.B.A. by Mr. W. Friskin and Mr. Piet de Jong, which were each awarded a certificate of Honourable Mention and 50*l.*, as the Council were unable to give the prize to any one competitor.

Mr. Friskin has sent the following notes in explanation of his intentions—

"In the working out of this scheme an attempt has been made so to arrange it that the three main apartments—the large hall,

Ground Floor Plan.

R.I.B.A. Soane Medallion: Certificate of Hon. Mention and 50*l.* Design for a Guild Hall.

By Mr. Piet de Jong.

he small hall, and the banqueting hall—shall e the dominating features. A building in a ark demands open planning; hence the round ith the dome over represents the large hall, nd the two wings represent the small hall nd the banqueting hall. The main entrance all gives immediate access to all three, and he exits lead directly to open ground. The ay-out of the surroundings is shown by the lock plan, with the road as the boundary of he park, the avenues and paths in the park eing arranged with the vista terminating in he central feature—the dome."

The author of this design is a former student f the Glasgow School of Architecture.

The name of the author of the other design was incorrectly given in our last issue, though we are not responsible for the error. Mr. Piet de Jong writes—

"This scheme is so laid out that the spectator approaching along the main contour roadways sees the building in easy perspective, gradually changing until detail claims his attention. The building is set upon a raised terrace, above which the Caryatide portico is reached by steps extending the whole length of this centre feature, behind which are three separate entrance doorways, opening into the main entrance hall.

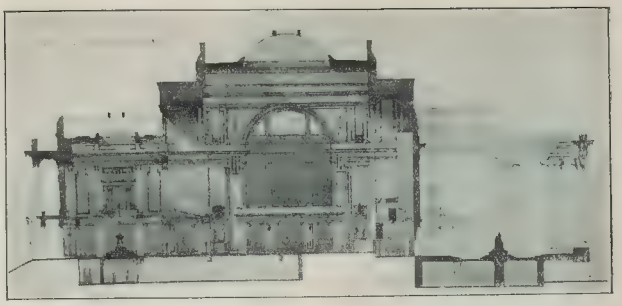
This hall, which is symmetrically treated, contains the staircases and elevators, and gives access through a foyer to the Guild Hall, surrounded by its retiring spaces and corridors leading to the café and lounge in the rear.

A smaller hall for 400 is also entered from the main central hall, and is balanced by a suite of committe-rooms on the other side of the buildings.

On the first floor, ascended by two staircases, is the assembling hall for the reception and banqueting halls. The kitchens and toilet-rooms are placed on a floor above, and are entered from unobtrusive niches in the ante-rooms.

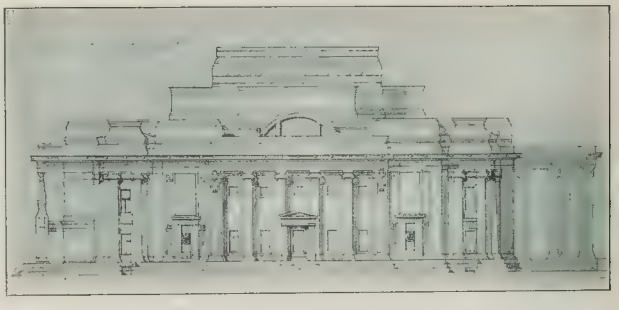
The Guild Hall galleries are also entered from the assembling hall, though at a slightly higher level, and are disconnected by heavy curtains hung between the columns.

The exterior and interior treatment has been as simple and refined as possible with pure unbroken mass and line, detail only being applied when called for. To keep the scale of the building throughout, the main horizontal lines have been used inside and out.



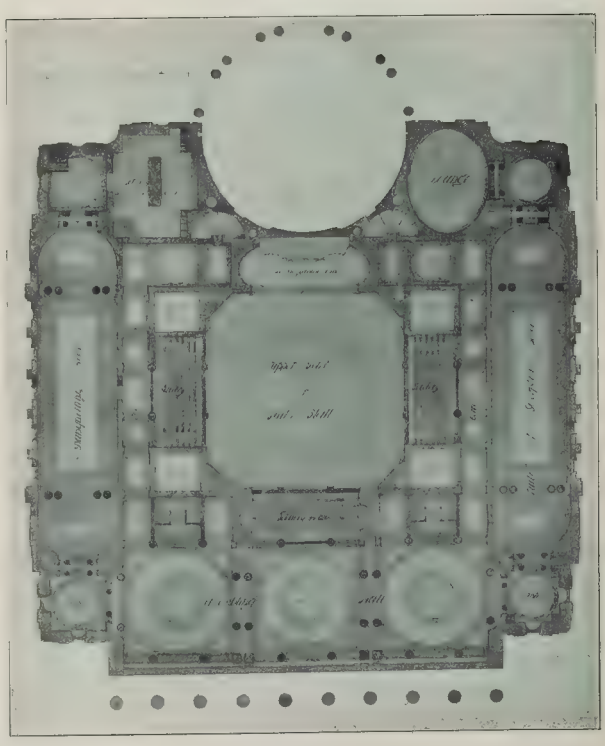
To obtain an easily balanced scheme, suitable for its purpose, without uncalled-for extravagance, has been the desire of the author."

FIFTY YEARS AGO.



From the *Builder* of February 1, 1862.

The Proposed Memorials of the Prince Consort.



THE Sub-Committee met in the Mansion House on Wednesday last and proceeded with the organisation of arrangements for procuring subscriptions. Numerous suggestions as to the form the memorial should take have been addressed to the Committee, but at present they confine themselves solely to raising a fund. When the amount is known they will then be better able to consider what should be done with it. For our own part we desiderate a grand union of the arts in honour of one who knew and loved them all. We see in the mind's eye a magnificent Temple enshrining a noble statue of the Honoured One. Upon and around the pedestal are groups and *relievi* illustrating his character; while other *relievi* and paintings, in the entablature and elsewhere, set forth the incidents of his life. The worker in metal, the glass-painter, the mosaicist have co-operated with the architect and sculptor; marbles of all sorts join with the richest materials of their several kinds and the cunningest art; and we have at once a fitting monument for the Hero of the family-life, and an evidence of the position to which the arts have attained amongst us. A large sum would, of course, be needed to make the vision a reality—but what of that? It would be a good investment for the country; a worthy evidence of the national feeling; that which would give joy and elevation of thought to generations would be cheap at a very large sum. The genius required to produce it might be more difficult to find than the money, but even that, we think, would be forthcoming if properly called out.

MONTHLY REVIEW · *of* · CIVIC DESIGN.

Schloss Linderhof, with Fountain and Cascade.

SCHLOSS LINDERHOF.

THE advantages to be obtained by a proper study of the surroundings and approaches to a building have ays been realised on the Continent; it is only since the XVIIIth century, ing the last few years—and in fact since recent impetus given to the town nning movement — that any general ention has been given to the subject in s country.

The view of Linderhof presents a charm- example of a formal lay-out amidst antic surroundings, and illustrates very cibly how much an otherwise uninterest- building may gain by being placed in a table setting.

HE GROWTH OF THE COM- MERCIAL QUARTER OF A TOWN.

THE gradual expansion of the business tre of a commercial town, absorbing in growth the inner ring of the outlying dential quarters, presents a problem that all probability will always be with us.

Even in a comprehensive city plan which s down definite and stringent limits for commercial and residential areas some cession must be made for future changes l for the possible growth of the business a. This process may be seen going on most suburban districts as the shops dually spread out from the railway- tions along the main roads and overflow the side streets. The condition of most these main roads, many of them now rying tramlines, in which the shops e been built up to the frontage line of original gardens, is such that they are able to fulfil their double functions of n traffic route and of shopping centre or ket without grave inconvenience and ger to life and limb. Indeed, it is ques- hable whether any street, however well arranged, can adequately serve purposes which are so different and provide facilities for uninterrupted through traffic and also for those loitering from shop to shop. The two functions are in a sense contradictory and difficult to reconcile. Failing a definite separation of the two functions and the banishment from the main traffic routes of such types of shop as tend to encourage crowds and general loitering, the state of some of our suburban streets on a Saturday night suggests very forcibly that some measure of relief is necessary. Where houses with front gardens or forecourts are turned into shops the house fronts might still be the building line so that the whole of the garden space could be given up as extra pavement space for the shop

Street in Winnipeg.

(Showing abrupt transition from commercial to residential district.)

discussion of which should make the London Congress a notable event in the history of road engineering.

An Organising Council has been formed by representatives of Local Authorities and of engineering, scientific, automobile, and other kindred societies. General and Executive Committees have been elected to carry out the work of organising the Congress, with Sir George S. Gibb, Chairman of the Road Board, as Chairman; Lord Montagu of Beaulieu, Mr. Joynson Hicks, M.P., and Mr. F. Berryman, as Vice-Chairman; Sir Charles Rose, M.P., as Honorary Treasurer; Mr. Rees Jeffreys, Secretary of the Road Board, as Honorary Secretary; and Mr. Montagu Harris, Secretary of the County Councils Association, as Deputy Honorary Secretary. The membership of the Congress is open to all; the individual membership subscription being 1*l*. The subscription covers full membership, and entitles the subscriber to take part in all the proceedings and excursions connected with the Congress, to receive the daily agenda published during the Congress, and further, a complete set of the various papers on different subjects sent in by members. These papers will comprise reports by leading authorities from all parts of the world, of experiments and recent experiences in road engineering methods of preventing dust and mud, the laying of light railways and tramways on roads, the choice of surfacing materials, the influence of weight and speed of vehicles on roads and bridges, the conditions to be fulfilled by horse-drawn or mechanically-propelled vehicles, in order that they may not damage or suffer damage from the roads, etc.

CIVIC DESIGN NOTES.

Open Spaces and Recreation Grounds.

At their meeting on January 5 the Islington Borough Council unanimously resolved to purchase, for 2,000*l*., the freehold of Barnsbury-square, which they have maintained as a public garden for many years, with a view to its preservation in perpetuity as an open space. Sir Stafford and Lady Howard have just presented to Llanelly a public park of 20 acres, together with Bryncaerau Castle, which will be converted into a local museum. A fund is opened for the acquisition of the Rookery estate as an addition to Streatham Common. The Middlesex County Council will contribute 5,625*l*. towards the purchase by the Southgate Urban District Council of 90 acres at Winchmore Hill for a public park. An old English garden is to be formed in Battersea Park; and the site of the house known as "Inglewood," Norwood Park, is to be cleared and laid out as an extension of the park. A sum of 1,500*l*. is contributed to the amount of 7,500*l*. required for the purchase of 60 acres on Colley Hill, Reigate, being part of the North Downs range, rising to an altitude of more than 700 ft., and traversed by the track of the Pilgrims' Way. The National Trust propose to co-operate with the Selborne Society in adapting portions of the land as a sanctuary for birds, insects, and flowers. At their last monthly meeting the Metropolitan Public Gardens Association agreed to reinstate the garden of Barnsbury-square, if bought by Islington Borough Council, and approved a scheme for acquiring some riverside land at Fulham. The income of the Association for the last year was 2,700*l*., including a special donation of 500*l*.

A New Arterial Road.

The Road Board is reported to be considering the necessity of opening up a main arterial road from London to the west. As things are now it is necessary to pass the narrow and congested bottle-neck at Brentford in order to get on to the main Bath-road. Anyone who has had any experience of this dangerous spot, and has seen the endless procession of brewers' drays, market carts, and heavy traffic of all descriptions through which the double line of tramways endeavours to force its way, will realise that it is necessary to take the matter in hand without further delay. Suggestions have been made both for widening the present route and for the construction of a new one, which will link up with the main western roads without passing through Brentford. This, though more expensive, would probably be cheapest in the end.

Housing at Yeovil.

At a recent meeting of the Yeovil Town Council the Housing Committee reported that seventeen tenders had been received for the erection of the houses the Council proposed to build, and eight for the surveying and constructing of the streets. The houses are divided into three groups of fifty each. Group 1 (to be erected during 1912)—thirty-six five-room houses, proposed to be let at 5s. per week each; six four-room houses at 4s.; and eight to be let as sixteen flats, at 2s. each. Group 2 will consist of forty-eight five-room and two four-room houses; and Group 3 likewise. The five-room cottages will have a frontage of 16 ft. and a depth of 25 ft., and the four-room cottages a frontage of 15 ft. 4 in. and a depth of 20 ft. 9 in. The Committee recommended that, subject to their references being satisfactory, the tender of Messrs. T. H. Moggridge & Son, of Taunton, amounting to 20,748*l*., for the houses, be accepted. The details are—Group 1, 6,848*l*.; Group 2, 6,817*l*.; Group 3, 6,813*l*. The Committee also recommended that the tender of Messrs. Steer & Pearce, of Plymouth, amounting to 2,536*l*. 14s. 10d., for the surveying and constructing of the streets, be accepted; and that the Local Government Board be asked to sanction the borrowing of 24,035*l*., being the sum required for the carrying out of the scheme, in addition to the cost of the land, which has already been applied for. After discussion the report was adopted, on the understanding that only the first group of fifty would at present be proceeded with.

Town Planning, Southport.

Mr. S. A. Kelly, F.S.I. (Liverpool), recently read a paper on "Town Planning" at a meeting of the Southport and District Property Owners' Defence Association. He said Southport was in need of some improvements as regarded road communications, and as Southport could not bring herself to the existing main road it was justifiable to propose that the main road should be brought to Southport. His scheme, if carried out, would reduce the distance between Liverpool and Southport from twenty to seventeen miles, and the distance from Southport to Preston from twenty to fifteen miles. It would also encircle Southport with a boulevard. The reclamation of the sandy tracts on the sea front might provide not only open spaces, but possibly form a development area in years to come, and the possession of which may bring in a fruitful revenue to the municipal coffers. The provision of an extended marine drive and the allocation of a proper space or spaces for the housing of the amusement department must be thought of and contrived to be placed where it was least offensive to the eye of the more æsthetic visitor.

Town Planning.

The Southgate (Middlesex) Urban District Council will seek authority for a scheme to deal with the entire 3,600 acres of the district. They have already purchased 63 acres for a park, and will lay out the surrounding estate (240 acres) upon town-planning lines, according to agreement with the late owners.—The Portsmouth Corporation have directed the Borough Engineer to draw up a preliminary "town plan," showing outlines of roads and plotting sites for public buildings, for submission to a conference of landowners.—The Town-Planning Committee of the Heston and Isleworth Urban District have recommended the local Council to submit, at an estimated cost of 300*l*. for the preparation, a scheme for the whole area, exclusively of lands already developed.—Mr. A. F. Brown has been appointed by the Council to undertake all the work in the first stage of the Richmond (Surrey) Town-Planning Scheme.

Aldwych Site.

The London County Council are selling the eastern portion of the island site between the Strand and Aldwych to the Commonwealth of Australia for the erection of Government buildings which it is proposed to erect in harmony with that already built by the Victorian Government. The price is stated at 379,756*l*. It is anticipated that the erection of such an important building there will lead to the more speedy development of the rest of the unoccupied sites in this neighbourhood which have for so long been a public eyesore.

Town Planning in Yorkshire.

Representatives of Yo[rk]shire local authorities met [at] conference a short time si[nce] at the Leeds Town Hall [to] discuss town planning. Mr. Alderman F. [W.] Lupton, of Leeds, who presided, said that [a] great deal of planning had been carried out [in] Leeds, though the city had not yet applied [to] the Government for a town-planning schem[e]. During the last forty years 25 miles [of] streets where there were few buildings h[ave] been widened, whilst 6½ miles of buildi[ngs] bordered streets had been widened a[nd] 5 miles of new streets had been constructe[d]. The Chairman emphasised the value of maki[ng] roads and streets the right width before th[ey] were lined with buildings. The cost of widenin[g] one of the streets in Leeds had worked out [at] 1,700,000*l*. per mile. Happily only 90 y[ards] were carried out at that rate. In Canad[a] the authorities were aiming at making the ma[in] roads 100 ft. wide. They were not going [to] that extent at present, but were reserving [a] portion of the land needed for the temporar[y] purposes of cultivation.—Mr. H. R. Aldridg[e] gave a lecture on town planning.

The Fate of Orleans House.

Orleans House, Twickenham, at different times th[e] home of the Duc d'Orleans and of the Duc d'Aumale, and [a] Don Carlos, the claimant of the throne [of] Spain, is once more in the market for sale [by] private treaty. This, it is to be feared, will mark the last stage in the downward path of [an] historic estate. Built in the XVIIIth centur[y] by a Mr. Johnstone, Secretary of State f[or] Scotland in the reign of Queen Anne, the hous[e] which is a characteristic building of the perio[d] was added to by the Duc d'Aumale, who erecte[d] a library and picture-galleries. Of late yea[rs] it has been used as a clubhouse. Originall[y] surrounded by some 40 acres of extreme[ly] beautiful gardens, it has shared the comme[on] fate of all such residences as are situated on th[e] outskirts of a growing city, and has gradually been encroached upon by the surrounding population till its gardens have been reduced [to] some 12 acres only, though they still retai[n] much of their original charm. Considering th[e] ever-increasing interest that is being taken [in] the necessity of preserving the beauty of th[e] riverside districts, it is possible that some u[se] may still be found for this interesting propert[y] which will save it from immediate destruction.

The Garden Cities and Town-Planning Association.

Earl Grey will preside at th[e] Holborn Restaurant on Marc[h] 19th at a dinner which [is] being organised by the Garde[n] Cities and Town-Planning Association as a mark [of] personal honour to Mr. Ebenezer Howard, th[e] founder of the garden city movement. Fe[w] men have seen the fruit of their labours in [so] short a time as has Mr. Howard. The dinn[er] promises to be not only a national but an inte[r]national tribute. The Committee promoting the dinner includes prominent housing an[d] social reformers in various European countries and in the United States. Tickets for the dinn[er] may be obtained from Mr. E. G. Culpin, 3, Gray's Inn-place, Gray's Inn, W.C.

Building New Cities.

Unless there is some all sufficient reason for building and equipping a complete city or town, much as a garden suburb is created, in one operation extending over a limited period of time, the enterprise involves considerable risk of failure. An example is furnished by the case of Heungchow, a new seaport constructed in 1909 not far from Macao Harbour. The town was equipped with waterworks, tramways, electric light, telephones and other modern facilities, and it was hoped that the port would compete favourably with Macao and Hong-Kong. The project, however, has by no means realised the hopes of the promoters, for the population is now only 2,000 persons, and comparatively little trade has been attracted. A remarkably successful instance of similar policy is afforded by Port Sudan, on the Red Sea, which furnishes an invaluable channel for commerce, and has done much for the development of the Sudan. Gary City in the United States is a good example of complete town building, the justification for this venture being the establishment of large manufacturing works by the United States Steel Corporation and other companies making certain a large population of employees in a place quite unprovided with dwelling accommodation.

THE BUILDING TRADE.

IONAL FEDERATION OF ILDING TRADES EMPLOY-S OF GREAT BRITAIN ID IRELAND.

IE annual general meeting of the Federation of Building Trades Employers of Great Britain and Ireland eld on Wednesday at the Trocadero rant, London, W. Mr. J. W. White erland), the President, took the chair, nongst those also present were :—Messrs.

gs, London	J. B. Johnson, Liverpool

Annual Report.

Annual Report stated that the ation now comprised the following y federations and local associations : - ern Counties Federation, Lancashire, ire, and North Wales Federation, hire Federation, Midland Federation, n Federation, Southern Counties ation, Eastern Counties Federation, -Western Counties Federation, South Federation, Belfast Association, Dubssociation, colonial members (the South an Federation), and hon. members (the sh Federation). There was no marked e to record in the state of trade. The nal Conciliation Board had held six ngs to consider various appeals. The t dealt with a large number of matters, ling wages and hours of labour, agreed of contracts, Trade Dispute Acts, ng of apprentices, town planning, etc. President, in moving the adoption of Report, said it fairly indicated the ties of the Federation during the year. were two things in the Report which strike them as being outstanding. The was with reference to the Conciliation d, and it showed that good work had done in settling numerous disputes in a dly way. Whether the Conciliation d would be as effective when trade e a little better than it had been in the ix years they would have to wait to ut, whatever might happen with regard e conciliation scheme, he thought both mployers and the operatives would apate what a benefit it had been in the few years. The Federation had had an nse amount of work to do during the in regard to industrial legislation. To ind industrial legislation was going to a very important part in the future, and oved employers to organise themselves. as, he thought, a great pity that there no good combination, not only of the of the employers in the building trade, of the whole of the employers of the ry, so that they might deal with these rs. He hoped the employers would aim orough organisation, because, however their reasons might be, still when they attacked they would find that a strong isation was much more effective than arguments. The most important matter gard to legislation were the Bills relating surance. At the Newcastle meeting the ation passed a resolution asking the cellor of the Exchequer and the Presiof the Board of Trade to receive deputa-

They wrote to the Chancellor of the equer, but unfortunately received no . He considered it a great pity that mportant trade like the building trade should not have had the opportunity of presenting their objections to the Insurance Bill, because it would have a very serious effect in the future upon the trade. With regard to the Bill for the Insurance against Unemployment, he would like to say that their reception by the President of the Board of Trade and the officials had been everything that they desired, and he thought their representations had some effect on the character of the Bill. He believed that as a result of their representations the Bill had been very considerably modified. In the Bill as drafted all apprentices would have come under it, but now only those unindentured would come under it, whilst indentured apprentices would be excluded. Under the Loss of Health and Sickness part of the Bill, however, indentured apprentices would receive full benefits and unindentured apprentices would only receive partial benefits. Another thing which arose was as to what the defination of the building trades should be. They interviewed Mr. Buxton, and subsequently an official of the Board of Trade called on him, and the result had been a considerable modification in the Bill. As he understood it, the Bill now would mean that only those in the building trades who were actually working on the site would come under it, except the joiners. They had also, he thought, gained something on the question of the sympathetic strike.

Mr. Smethurst seconded the motion for the adoption of the Report.

Mr. Whitehouse, on behalf of the Midland Centre, mentioned the circular which had been issued by the National Conciliation Board with regard to the worked-stone rule. He pointed out that in his district they had a dispute over this, but they felt that the matter had been prejudged by the National Conciliation Board. Their feeling was that it was no part of the National Conciliation Board to make such a rule. If it was the business of anyone, it was that of the National Federation. They felt that if such a practice was extended it would result in a set-back to the work of conciliation.

The Report was adopted.

Mr. W. Thomas (Cardiff), the Hon. Treasurer, moved the adoption of the accounts, which showed 1,960*l.* carried to the balance-sheet, and this was seconded by Mr. A. W. Sinclair (Scarborough) and agreed to.

Mr. F. Higgs (London) moved a resolution altering rule 23c with regard to the rate of subscription.

Considerable discussion took place regarding the finances of the Federation, and complaints were made that many builders did not come into the Federation. It was also suggested that in some districts the proper returns could not have been made of the wages paid, or else more funds would come into the Federation.

Mr. Higgs, in reply, said that his observations showed him that builders in London and the South of England made proper returns of wages paid. It had to be remembered that in the South of England federation was practically confined to the towns.

The resolution was adopted.

Mr. G. Macfarlane (Manchester) brought up a report by the Journal Committee. He explained that the arrangements with the Technical Journals, Ltd., had been terminated, and it was proposed to bring out a sixteen-page publication quarterly containing the reports of the Federation. Copies would be posted to every member. The Secretary would act as editor. It was anticipated that eventually the *Journal* would become monthly.

The Report was adopted.

National Form of Contract.

The President said there was a proposal of the Lancashire Federation to further consider matters in connexion with the proposal to amend the national form of contract, and also a proposal of the Institute of Builders for a form of sub-contract for use where specialists were made sub-contractors, with consequential amendments to clauses 20 and 28 of the agreed form of contract. The resolutions had been considered by the Council the previous day, and it was agreed to approve of the alterations which had been carried out by the Institute of Builders.

Mr. Stirling said he hoped the Administrative Council would keep the matter before them. He did not see why they should be continually under the wing of the Builders' Institute. The Federation should certainly look after the matter themselves, for they were quite strong enough, and were more interested in the matter than the Institute of Builders, as they were more numerous.

The Secretary read a number of proposed alterations to the Institute of Builders' form of contract, and several new clauses which it was proposed to add.

There was some discussion over the proposed form, but, as the Council decided that the form should be considered private, any report of the discussion would be of no value in the absence of the form.

A delegate asked what the position of the sub-contractor would be. As they knew, a lump sum was put in the contract for certain work, and it was left to the architect to arrange for the work, so that the sub-contractor turned round and said he was not working for the contractor.

The Chairman said the form before them was specially prepared to deal with that matter. If the form of contract was adopted the architect and all parties would have to abide by it.

The alterations were agreed to, and it was stated that the new form would now go to the Royal Institute of British Architects for consideration.

Employers' Parliamentary Council.

Mr. W. Shepherd submitted a Report of the Employers' Parliamentary Council, which stated that the proceedings in Parliament during the year emphasised in a manner at once serious and significant the need for the closer co-operation of employers and employers' associations. Not only with respect to what Parliament actually did in the direction of legislation, but also with regard to what Parliament would not do to safeguard the interests of the community against an organised conspiracy to paralyse the country, the session of 1911 had provided a lesson and a warning which it might be hoped would not be thrown away.

On the motion of Mr. Smethurst, thanks were accorded Mr. Shepherd.

Fair Wages Clauses in Contracts.

Mr. Townsley (Hull) brought up the question of fair wages clauses in contracts. He said that it was generally agreed that they should have such conditions in national and municipal contracts, but they wished to see the Federation take the matter up and see that tenders of local authorities should only be given to those who did pay fair wages. A further point was that where a contract had been entered into and the wages were increased this should be recognised by the local authority and allowed for.

Mr. S. Easten pointed out that there was a danger in regard to the second suggestion. If a man had a contract and knew that he would be reimbursed for extra wages paid, he would not be in so strong a position on resisting an unfair claim, and hence other builders who had no such contracts would be placed in an invidious position.

Mr. Blackburn said the matter was not quite so easy. In his town they had the municipal employees asking for a 3*s.* a week rise. At present they were paid at the rates ruling in the building trade, and if they got the advance, and that was taken as the ruling rate, it would be hard on the builders.

Mr. Cooke said that at Preston they had an understanding by which the names of men to whom contracts were given were referred both to the Employers' Association and the Trades Union, and they reported whether the conditions were being observed.

Mr. Ambrose said in Bath, where there was a good deal of corporate property, there were a lot of small tenders given out, and in the past the difficulty was that those who paid fair wages stood no chance in a competition. Now they had got a fair wages clause adopted.

After further discussion the matter was referred to the Administrative Committee.

Our report of the proceedings will be concluded in our next issue.

THE NATIONAL CHAMBER OF TRADE.

FROM Circular 177 of the National Chamber of Trade (President, Councillor D. Dickinson, of Blackpool) we take the following comments, which may be of interest to our readers :—

"There are abundant signs of the necessity for strengthening the organisation of trading interests, both productive and distributive. The utter non-recognition of the commercial and trading classes from beginning to end of the National Insurance Act may possibly prove the last straw on the back of the camel, and, bearing in mind the purposes for which this Chamber exists, we are ready to welcome any scheme that will secure at least a reasonable recognition of those, on the results of whose enterprise and acceptance of the responsibility and risk of competitive business, these various schemes of social reform are totally dependent for maintenance. . . .

We are asked to give assistance to the Builders' Merchants' Alliance in getting through a Lien Law, which will prevent the builder in the future from being the tool and plaything of the financial speculator. The objects of the Town Tenants' League have already had sympathetic support. The necessity of an inquiry into the question of Technical Education and the wise replacement of the old apprenticeship system which has given way in so many directions are also matters for careful attention. To this end the Government might be asked to appoint a Departmental Committee to investigate the Trust Deeds of the London Liveried Companies with a view to a XXth-century interpretation being given to them. The Old Age Pension Act does away with the necessity for much of their charity, and each company might move in new and useful directions.

Local taxation, in which there has been no real reform since 1834, is another matter which greatly needs a XXth-century interpretation, and we are looking forward to an early report by the Departmental Committee appointed last year on this subject. A Bankruptcy Bill prepared by the Board of Trade, with a view to amending the Bankruptcy Acts on the lines recommended by the Departmental Committee, was introduced in the House of Lords just on the close of the Session, for the purpose of discussion by traders, and it will have the early consideration of the Parliamentary Committee. . . .

Desirable as attention to the above matters undoubtedly is, the necessity of dealing with current matters must, as in previous years, take the first place. For the moment, the most pressing matters are the attitude to be taken towards the National Insurance and the Shops Act, the latter coming into force on May 1 and the Insurance Act on July 1, unless steps be taken for postponement to a date, which the Act states must not be later than January 1, 1913. . . . We have much pleasure in announcing the formation of the London Chamber of Trade. Under the guidance of Mr. S. J. Ellis, Honorary Solicitor, and one of the pioneers of the National Chamber, it has been formed on businesslike lines and has every prospect of success. Its objects are similar to those of many of the large Chambers of Trade in the provinces, which are affiliated to this Chamber.

Mr. B. B. Evans, L.C.C., has accepted the first Presidency, and among the Vice-Presidents are :—Sir Edwin Cornwall, M.P.; Sir John Rolleston, M.P.; Sir H. Seymour King, K.C.I.E.; Sir Harry Samuel, M.P.; Alderman Sir William H. Dunn, J.P., L.C.C.; and Messrs. H. G. Chancellor, M.P.; Arnold Ward, M.P.; T. Wiles, M.P.; and Mr. E. Cubitt Sayers."

LONDON MASTER BUILDERS' ASSOCIATION.

A COUNCIL meeting of the London Master Builders' Association was held at the offices, Koh-i-Noor House, Kingsway, W.C., on the 18th ult., when the chair was taken by the President, Mr. G. Bird Godson.

The Finance Committee's Report was submitted, and the Council, on the Committee's recommendation, agreed to discharge in full up to date the claims made upon the Association on behalf of the National Federation Reserve Fund.

The Amalgamated Society of Carpenters and Joiners gave official notice to terminate the existing working rule agreement on June 8 next, and with the notice was forwarded a proposed new working rule agreement, which was signed jointly by the Secretaries of the Amalgamated Society of Carpenters and Joiners and of the Furnishing and Cabinet-Making Societies. It was proposed to hold a Conference with the object of discussing the recognition of the latter society, which the Council had declined to acknowledge as a branch of the building trade. The Council maintained its objection and declined to hold a Conference to consider the matter.

The following were elected ordinary members of the Association :—

Mr. B. E. Nightingale, Albert-embankment, S.E.

Messrs. E. A. Roome & Co., 36, Basinghall-street, E.C.

Messrs. W. Blay, Ltd., Dartford, Kent.

Messrs. F. & F. J. Wood, 64, Cleveland-street, Mile End, E.

Messrs. Lole & Co., 12A, Trafalgar square, Chelsea, S.W.

Messrs. Arthur Newman, Ltd., Cranbrook-road, Ilford, E., was nominated as an ordinary member.

It was decided to hold the annual general meeting on Thursday, February 29 next, and the annual dinner, in the Whitehall Rooms, Hotel Metropole, Charing Cross, on Thursday, February 22, and it is hoped that the President will be well supported by the members on both occasions.

Various matters of trade importance and interest were considered.

THE BUILDERS' FOREMEN'S ASSOCIATION:

ANNUAL DINNER.

THE eighteenth annual dinner of the Builders' Foremen's Association was held on Saturday last at the Holborn Restaurant, Mr. Joseph Randall presiding. A large company assembled, and among others present were Messrs. B. E. Nightingale, W. A. Harford, Brees Homan, J. W. Jerram, T. Costigan, and representatives of the Associated Portland Cement Manufacturers, Messrs. Val de Travers, and the Carron Company.

The loyal toast having been honoured,

The Chairman proposed the Builders' Foremen's Association. It was, he said, some years since the Association was first formed, and he was glad to say the institution had done great good and was still improving. His sympathies had been strongly in favour of their own and kindred societies, and he was glad to know that in the year in which he occupied the chair at their dinner the pensions would be increased by two shillings a week, commencing in June next. The increase proposed would, he hoped, help greatly to strengthen the Association, as well as be of undoubted service to their pensioners. This was the result of the careful and energetic management of the Committee. The Association also conferred benefits, both intellectual and social, upon its members, and he asked those present to introduce a friend, and so do that friend a good turn, and at the same time strengthen the position of the officials. He was sure not one of them would contest the statement that in these competitive times it is brains that tell, and he would urge them to use their Association to its utmost, and it would help them to reach the top position.

Mr. G. Holt, the President of the Association, acknowledged the toast. He said the strides that had been made towards placing the Pension Fund upon a sound financial foundation had exceeded the expectations of them all. The generosity of their friends could only be described as magnificent, and he wished to say on behalf of the Association that they deeply appreciated the Chairman's presence that evening, and were glad that he should see them at their pleasures as well as at their labours. Such meetings could only tend to strengthen their confidence in each other, and when mutual trust was firmly established success must follow. He did not wish to make a long statement of their affairs, as [illegible] balance-sheet contained in their *Journal* [illegible] before them, and he could give them [illegible] further facts; but he must say that no assoc[illegible] tion could hope to do better than they h[illegible] done since their inauguration, and, seeing th[illegible] the Pension Fund was only founded [illegible] years ago, the balance now in hand was so[illegible] thing to be proud of, and they were thank[illegible] for their many kind and generous frien[illegible] The Management Committee had recently be[illegible] through their rules and brought them up [illegible] date, and a generous pension allowance h[illegible] been arranged. He cordially invited all th[illegible] present who were not members to come in [illegible] once and assist them in the good work [illegible] preparing for the evening of their lives.

The toast of the building trades was p[illegible] posed by Mr. T. Costigan, who said the to[illegible] was one in which they were all interest[illegible] The conditions of the trade were very [illegible] favourable—prices were very low, competit[illegible] killing, and builders have great difficulties [illegible] fight. He would say this for builders, [illegible] never came across a more honourable [illegible] straightforward class. He frequently co[illegible] pared the tenders published in the papers, [illegible] afterwards, when discussing them with arc[illegible] tects and quantity surveyors, he found th[illegible] were astounded at the prices. Eve[illegible] man was entitled to a legitimate pro[illegible] and in such circumstances as these everythi[illegible] depended upon the foreman, who [illegible] responsible for the discipline of the works. [illegible] good foreman would get plenty of work wi[illegible] out disputes, but an incompetent one wo[illegible] cause constant friction and breaking of [illegible] rules of work.

Mr. B. E. Nightingale, who responded, s[illegible] he hoped trade would come back and th[illegible] would have the good old times of ten ye[illegible] ago. He considered it certain they must co[illegible] back eventually, and he suggested they [illegible] used their best endeavours to remove th[illegible] things which obstruct trade.

The toast of "The Visitors" was propo[illegible] by Mr. T. Evans, and acknowledged by [illegible] W. Townsend in felicitous terms, and [illegible] proceedings closed.

GENERAL BUILDING NEWS.

LIBRARY, DULWICH.

A new library and lecture hall has b[illegible] added to the Horniman Museum, Dulwi[illegible] by Mr. Emslie J. Horniman, and ope[illegible] by Sir Archibald Geikie, President of [illegible] Royal Society. The new building, which [illegible] from the design of Mr. C. Harrison Townse[illegible] consists of two principal floors, and over [illegible] main entrance is a small mezzanine. On [illegible] ground floor is the lecture hall. On the f[illegible] floor are the reference library and readi[illegible] room and a book store. The new building [illegible] been designed to harmonise with the muse[illegible] with which it has direct communication. [illegible] lecture hall will seat 210 persons, and the b[illegible] store can accommodate 10,000 volumes.

TRADE NEWS.

Under the direction of Messrs. Baker [illegible] Penfold, architects, Reigate, Surrey, [illegible] "Boyle" system of ventilation (natural), [illegible] bracing Boyle's latest patent "air-pum[illegible] ventilators and air inlets, has been applied [illegible] Chaldon Schools, Surrey.

The Wash Infectious Hospital is being s[illegible] plied with Shorland's patent Manches[illegible] stoves with descending smoke flues, Manches[illegible] grates and ventilators, by Messrs. E. H. Sh[illegible] land & Brother, Ltd., of Failsworth, M[illegible] chester.

The old St. Pancras Ironwork Company [illegible] now carrying on business under a receiver [illegible] the debenture holders, pending the revision [illegible] financial arrangements. We are inform[illegible] however, that work is being continued on [illegible] large scale, and that the new manage[illegible] entertain hopes of extending the operations [illegible] this company.

APPLICATIONS UNDER LONDO[illegible] BUILDING ACTS, 1894 to 1909

AT Tuesday's meeting of the London Cou[illegible] Council the following applications under [illegible] London Building Acts were dealt with. ([illegible] names of the applicants are given in pa[illegible] theses) :—

Lines of Frontages and Projections.

Kensington, North. — Erection of [illegible] windows, balconies, and a hood at houses [illegible] the western side of Wallingford-avenue, K[illegible] sington (Messrs. W. & E. Morgan).—Cons[illegible]

Kensington, South.—Wooden porch in f[illegible] of No. 15, Holland Park-road, Kensing[illegible] (Messrs. Stanley Krauss & Co.).—Consent.

ensington, South.—Erection of two signs at 51, Brompton-road, Kensington (Mr. B. L. in).—Consent.

ewisham.—Erection of a porch and bay dow at "Ellerslea," on the western side Amblecote-road, Grove Park (Mr. C. E. nscomb for Mr. W. Smith).—Consent.

Marylebone, East.—Erection of projecting conies in front of Nos. 3 and 4, Vere-street, Marylebone (Mr. L. Barrett for Mr. J. rton). Consent.

Mile End.—External wooden staircase at the r of Crown Works, Bancroft road, Mile H (Mr. J. M. Knight).—Consent.

St. Pancras, South.—Projecting sign at No. Percy-street, Tottenham Court-road (Birgham Guild, Ltd.).—Consent.

Woolwich.—House on the north-eastern side Enslin-road, Eltham, to abut also upon the th-eastern side of Ladysmith-road (Mr. M. Jones for Mr. W. D. Bowles).—Consent.

Width of Way.

ewisham.†—Addition to a greenhouse at rear of No. 11, Houston-road, Forest-hill r. W. F. Nicholson).—Consent.

Whitechapel.—Tunnel under the public-way Fulbourne-street, Whitechapel (Messrs. W. & Sons for Messrs. Kearley & Tonge, d.).—Consent.

Woolwich.—Building upon the site of No. 1, cesford-square, and Nos. 1a, 1b, 1, and 2, cesford-street (Mr. R. M. Allen).—Refused.

Width of Way and Lines of Frontage.

Paddington, South.—Addition at No. 3, de Park-square-mews, Paddington (Colonel H. Bethell).—Consent.

Southwark, West.—Projecting crane in front an iron building to be erected upon a site the eastern side of Gravel-lane, Southwark, thward of Dyer's-yard (Messrs Killby & yford, Ltd., for the Amalgamated Press, d.).—Consent.

Wandsworth.—Erection of a one-story building at the rear of No. 78, Charlwood-road, tney (Mr. J. C. Hooper).—Refused.

Lines of Frontage and Construction.

Fulham.—Iron and glass shelter in front of inematograph theatre at No. 583, Fulham-d, Fulham (Messrs. Gardiner, Sons, & Co., l., for Mr. M. A. Pyke).—Refused.

Hampstead.—Retention of a covered way in nt of No. 24, Groville-road, Hampstead r. W. Goscombe John, R.A.).—Consent.

Lewisham.—Wood and iron building of a nporary character at No. 184, Brownhill-d, Lewisham, abutting upon the western e of St. Fillan's-road (Messrs. Norfolk & or for Mr. H. Amey).—Consent.

St. Pancras, South.—Two iron and glass lters in front of the entrances to two cine tograph theatres at Nos. 31, 36, and 36a, ttenham Court-road (Mr. P. Dollar for the hy Syndicate, Ltd.).—Refused.

Strand.†—Iron and glass shelter in front of cinematograph theatre at Nos. 105-107, aring Cross-road, Strand (Messrs. Gardiner, ns, & Co., Ltd.).—Refused.

Width of Way and Construction.

Haggerston.—Temporary wood and iron ce building on the western side of Steanet, Shoreditch (Mr. J. A. Bissell).—nsent.

Islington, West.†—Temporary building at . 11, Hope-street, Islington (Mr. H. Mayd).—Consent.

Width of Way, Lines of Frontage, and Construction.

Holborn.—Wooden advertisement hoarding No. 116, New Oxford-street, abutting upon inbridge street, Holborn (Mr. H. B. Price the Borough Theatre Billposting Company, d.). Refused.

Paddington, South.—Temporary wood and n shed in front of No. 2, St. Petersburgh-ws, Paddington (Messrs. Ellerton & Wilbram) —Consent.

Wandsworth.—Iron and glass shelter in the yground of All Saints' Schools, Putney-dge-road, Wandsworth (Messrs. Read & lkinson for the Managers of the schools).—nsent.

Width of Way, Deviation from Certified Plans, and Cubical Extent.

St. George, Hanover-square.—Re-erection of garage building in Pembroke-mews, Halkinet, Westminster.—Consent.

Space at Rear and Projections.

Hampstead.—Two houses on the northern e of St. Cuthbert's-road, Hampstead (Messrs. & Wilkins).—Consent.

Formation of Streets.

Hampstead.—Erection of three buildings essrs. Farebrother, Ellis, & Co.).—Consent.

Uniting of Buildings.

Bermondsey.—Two buildings by the construction of tunnels under a yard at Greenwalk, Southwark (Mr. A. Lee for Sir W. P. Hartley).—Consent.

Chelsea.—Formation of openings exceeding in size the statutory limits in division walls at garage premises on the southern side of Draycott-avenue and the northern side of Sloane-avenue, Chelsea, and to the use of doors of special construction in lieu of iron doors (Mr. C. W. Stephens for Harrod's Stores, Ltd.).—Consent.

Finsbury, East.—Uniting of Nos. 13 to 17 and No. 19, Ironmonger-row, St. Luke, and use of doors of special construction on one side of the openings (Mr. G. Hubbard for Mr. J. Kent).—Consent.

Hoxton.—Formation of openings in the party wall, between Nos. 9-11 and No. 13, Worship-street, Hoxton, at the basement and ground-floor levels (Mr. T. E. Crossley for Messrs. Berliner & Co.).—Consent.

The recommendations marked † are contrary to the views of the Metropolitan Borough Councils concerned.

PROJECTED NEW BUILDINGS IN THE PROVINCES.*

Abbey Mount.—Halls (3,000*l.*); Mr. E. Calvert, architect, 16, North-street, Andrew-street, Edinburgh.

Ayr.—Engineering workshop, etc., West Sanquhar road (600*l.*); Mr. William Lees, Neptune Works, Ayr. Additions to school (2,000*l.*); Messrs. J. & H. V. Eaglesham, architects, Wellington-square, Ayr.

Barnet. Enlargement of Bying-road School (192 extra places); Mr. U. A. Smith, Surveyor, Herts County Council, Hatfield

Barrow-in-Furness.—Extensions to electricity works (14,000*l.*); Mr. H. R. Burnett, Electrical Engineer, Barrow Town Council.

Bedley (Beds).—School (5,000*l.*); Mr. J. T. Blackwell, architect, Market-place, Kettering.

Billericay.—School (5,000*l.*); Mr. F. Whitmore, architect, 73, Duke-street, Chelmsford.

Cambridge.—School (6,000*l.*); Mr. J. Julian, Guildhall, Cambridge.

Cathays Park (Cardiff).—Technical institute; Messrs. Jones & Thomas, architects, 18, St. Mary street, Cardiff.

Chorley.—Billiard hall (2,000*l.*), for Messrs. W. Holt, Ltd.; Mr. J. J. Edmondson, Burnley-road, Nelson.

Crichton (Edinburghshire).—Additions to Royal Institute (5,000*l.*); Messrs. Mitchell & Wilson, architects, 13, Young street, Edinburgh.

Dewsbury.—Two warehouses, Huddersfield-road (5,000*l.* and 1,000*l.*); Messrs. Barton & Sons, architects, Halifax-road, Dewsbury.

Dublin. School, near Dublin (2,000*l.*); Messrs. Orpen & Dickinson, 13, South Frederick-street, Dublin.

Dundee.—Motor garage, Bellfield street, and shops, Larch-street, for Messrs. Urquhart, Lindsay, & Co.; warehouse, Erskine-street, for Messrs. The Buist Spinning Company, Ltd.: additions to office, Kemback-street, for Messrs. H. Boase & Co.

Dunstable.—Enlargement of school, Chiltern-road (1,230*l.*); Messrs. J. Corby & Son, builders, Bedford.

Exeter.—Business premises and motor garage; Messrs. Westcott, Austin, & White, builders, Summerland-crescent, Exeter.

Featherstone (Yorks).—Block of houses for aged miners; Mr. W. H. Fearnley, architect, 95, Station-road, Featherstone.

Freshwater.—Additions to St. Andrew's Church, North Green (2,000*l.*); Mr. F. W. Newman, Station-road, Freshwater.

Galway.—School (2,000*l.*); Messrs. Orpen & Dickinson, 13, South Frederick-street, Dublin.

Glasgow.—Extensions to Messrs. Stuart & Young's Confectionery Works, Broad-street, Mile End (3,500*l.*); Messrs. Miller & Black, architects, 58, Renfield-street, Glasgow.

Halifax.—Wesleyan chapel, Warley road Mission; Mr. James Hartley, architect, Swadford-chambers Skipton.

Kelvinside (Glasgow).—Motor garage for Messrs. Gilmour, Ltd. (2,000*l.*); Mr. A. Leitch, architect, 30, Buchanan-street, Glasgow.

Kilvonwaig.—School (3,000*l.*); Mr. J. G. Falconer, architect, Cameron-square, Fort William.

Kirmichael.—Additions to school for the Kirmichael School Board (2,500*l.*); Mr. Lake Falconer, architect, 27, Union Bank-buildings, Blairgowrie.

Lees (near Oldham).—Additions to premises for the Glenmill Company.

Milton.—Hostel (20,000*l.*); Mr. C. W. Bevis, architect, Elm Grove-chambers, Southsea.

Monkseaton.—School (10,000*l.*); Mr. F. Forest, Moot Hall, Newcastle-on-Tyne.

Monkton.—Additions to school (2,000*l.*); Messrs. J. & J. Armour, architects, 43, Bridge-gate, Irvine.

Murton Colliery.—One hundred houses; Mr. Joseph Dobson, architect, Station Town, Durham.

Okehampton.—Territorial hall and buildings; Messrs. Ellis, Son, & Bowden, Exeter.

Padiham.—Additions, Padiham Green School (2,100*l.*); Mr. H. Littler, architect, 16, Ribbleslale place, Preston.

Paisley.—Halls for the High Parish Church, Oakshaw-street (2,000*l.*), and workmen's cottages, Fulside-road; Mr. T. G. Abercrombie, architect, 1, County-place, Paisley.

Pentrebach.—Forty-eight houses (8,790*l.*); Messrs. Jones Brothers, builders, Treharris.

Portland.—Council offices; Mr. R. S. Henshaw, Surveyor, Portland Urban District Council; architect to be appointed.

Pulborough.—Eight houses (1,240*l.*); Mr. W. Joyes, builder, Billinghurst.

Purfleet.—School (3,000*l.*); Mr. F. Whitmore, architect, 73, Duke-street, Chelmsford.

Redruth.—Proposed alterations and additions to infirmary (2,000*l.*); Mr. T. C. Peter, Clerk, Board of Guardians, Redruth.

Rock Ferry.—Parish hall (4,500*l.*); Vicar, St. Peter's Church, Rock Ferry.

Royton.—Enlargement of St. Ann's School (350 extra places); the Managers.

Sherwin.—School (5,000*l.*); Mr. W. Rushworth, Architect, Shire Hall, Durham.

Stevenson (Ayrshire).—School (2,000*l.*); Mr. H. Thomson, architect, 60, Hamilton street, Saltcoats.

Stirling.—Additions to police buildings (1,850*l.*); Mr. A. H. Goudie, Burgh Surveyor, Town Buildings, Stirling.

Swansea.—Steel works, The Burrows (about 150,000*l.*), for Messrs. Baldwin & Co., Swansea.

Taunton.—Additions to St Mary's Parish Church; Messrs. Naylor & Sale, architects, Irongate, Derby

Torquay.—Building for mentally defective children, also cookery centre; Messrs. Appleton & Son, architects, 10, Abbey-road, Torquay.

Usworth.—Housing scheme (12,030*l.*); Mr. J. H. Mole, Surveyor, Chester-le-Street Rural District Council.

Windermere.—Steam laundry (2,000*l.*-2,500*l.*); Messrs. Trubshaw & Gibson, architects.

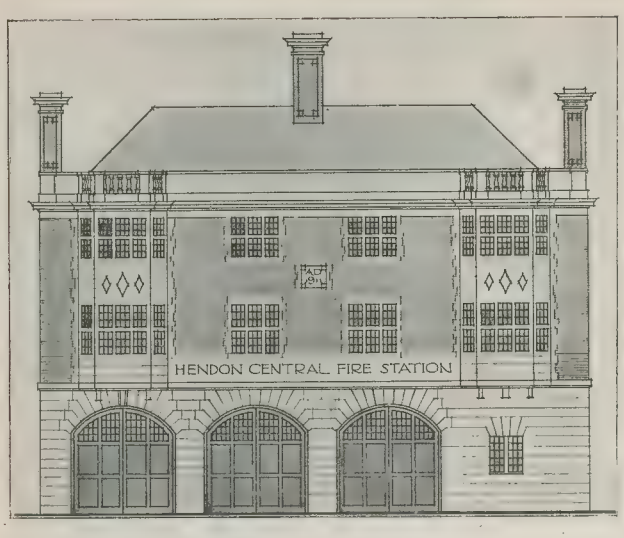
Winsley (Bradford-on-Avon).—Extensions to sanatorium (9,000*l.*); Mr. W. S. Skinner, Edinburgh-chambers, Baldwin street, Bristol.

Winton (Bournemouth). — Congregational church (6,000*l.*); Mr. J. Donkin, Albert road, Bournemouth.

Wotton.—Church (10,290*l.*); Messrs. J. Byard & Son, builders, Stroud-road, Gloucester.

* See also our list of Competitions, Contracts, etc., on another page.

FOREIGN AND COLONIAL.



Building, etc., Works, Canada.

The Imperial Trade Correspondent at Toronto reports that several municipalities in Ontario ratified on January 1 by-laws authorising the execution of electric power and lighting works, street railway extension, extension of water supply system, and building construction. Further particulars may be obtained by British manufacturers on application to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall-street, London, E.C.

Building, etc., Works, Egypt.

A supplement to the *Journal Officiel* of December 25 contains the Egyptian Budget for 1912, from which are extracted the following items of expenditure:—

Ministry of Public Instruction: Construction and extension of schools, £E35,000. Public Health Department: Extension of hospitals, etc., £E30,800. Prisons Department: Construction and extension of prisons, £E15,400. Native Tribunals Department: Construction of court houses, £E35,130. Provinces: Construction of various public buildings, £E36,000. Ports and Lighthouses Administration: Workshop tools, £E800; iron blocks for Gabbary dock, £E1,000; construction of a warehouse on Quay D, £E15,600. Ministry of War: Construction of barracks in Sudan, £E24,000. Ministry of Public Works: Irrigation and drainage works in Lower Egypt, £E164,000: Upper Egypt, £E66,600; Sudan, £E55,000. Railways Administration: Continuation of bridge construction and other works on railways, £E258,000; improvement of stations and of signalling system, £E100,000.

Hendon Fire-Station Competition : Design Placed First.
By Mr. Herbert A. Welch, A.R.I.B.A.

HENDON FIRE-STATION.

THE Urban District Council recently selected six architects to submit designs for a Fire Station at Hendon, and in this limited competition Mr. Herbert A. Welch, A.R.I.B.A., was successful. We illustrate his design and that of Mr. T. Millwood Wilson, which was placed second.

The following notes have been sent by Mr. Welch :—

"The conditions for this competition asked for two complete schemes :—(1) With staff housed within the main building; (2) With staff (except chief officer) housed in cottages in the rear.

No cost was given and the designs were to harmonise with the existing Council offices adjoining.

The site is a corner one, well suited to the purpose of a fire-station.

The main consideration on the ground floor was of necessity the engine-room, which is of sufficient size to accommodate three motor engines. The width of frontage being insufficient for a symmetrical plan, the engine-room is placed on one side in order that the space remaining might be utilised for the watch-room, stores, stairs, entrance, wash-house, and drying-room, etc.

The workshop is placed to open directly off the engine-room, as well as from the washing space at the rear of engine-room. The hose tower is detached and of skeleton steel construction.

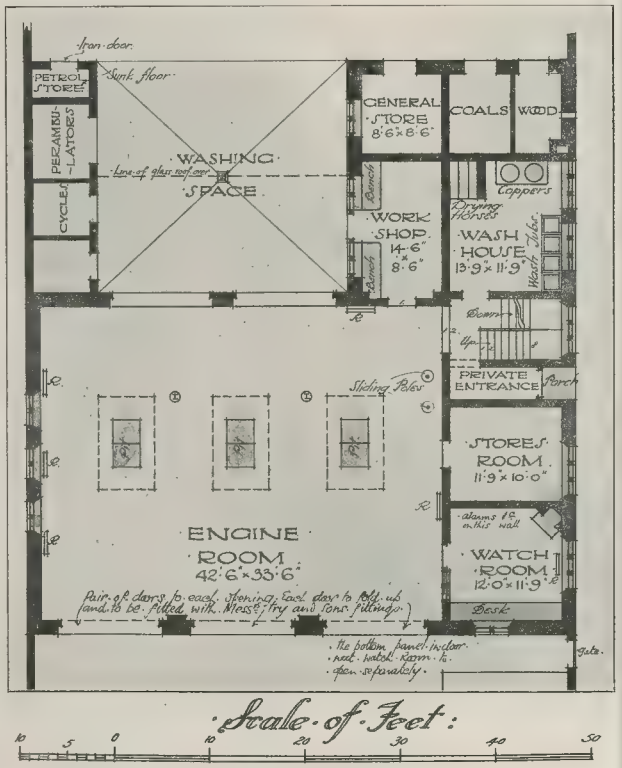
On the first floor and off the main staircase is provided the chief officer's quarters—entered off a separate balcony—dormitory for four beds for single men, mess-room, recreation-room, and bath-room, and water-closet. Sliding poles to engine-room are conveniently placed to suit the various rooms.

On the second floor provision is made for four married men's quarters, each containing living-room (with small "wash-up"), two bedrooms, and offices, with bath-room and two water-closets, for these families. Sliding poles connect this floor with first floor and engine-room. The basement contains the heating chamber only.

The elevations will be treated with brick and stone. The doors to engine-room are shown with circular heads, and bay windows over, in order to harmonise with existing Council offices. The roof will be covered with green Westmorland slates.

The low pressure system of radiator heating will be adopted throughout that part of the building which is not 'domestic.'"

Mr. Millwood Wilson writes as follows :—



It was stated in the Conditions of Competition that the fire-station building was to harmonise with the Council offices adjoining; it was not, however, in my opinion, possible to do this, other than by the materials, as the buildings are so opposite in purpose, and features of the Council offices so entirely unsuitable to a fire-station.

In the plans, it will be noticed that a waiting-room has been provided next the watch-room for callers or the unmarried men. On the first floor are quarters for four unmarried firemen, entirely shut off from the rest of the building, and the chief officer's quarter also recreation and billiard-room, etc. On the top floor, quarters for four married men.

On the ground floor a clear run through to the covered washing place at the back has been provided for two of the engines, and motor pits have been provided in the appliance-room, and a hinged working bench would be fitted to the walls, the workshop being placed in the yard, as it is used for many other purposes, such as repairing hoses, etc.

The elevations would have been of sand-faced bricks with Portland stone dressings, and green slate roof.

The building cubes out at 88,000 ft., and contains some 17,000 ft. less than the first premiated design.

THE LONDON COUNTY COUNCIL.

THE usual weekly meeting of the London County Council was held on Tuesday in the County Hall, Spring-gardens, S.W., Mr. E. White, Chairman, presiding.

LOANS.—A loan of 4,500*l.* is to be made to the Battersea Borough Council for an electricity undertaking, and a loan of 1,300*l.* as a contribution towards street improvements.

KINGSWAY AND ALDWYCH.—It was recommended by the Improvements Committee, and agreed after some discussion, that the eastern horn of the crescent site between the Strand, Aldwych, and Melbourne-place should be sold to the Commonwealth of Australia, and the site will be utilised for the erection of the Commonwealth buildings.

CLERKENWELL FIRE STATION.—No. 42, Rosebery-avenue, has been acquired for the pur-

e of extending the Clerkenwell Fire tion.

ATTERSEA PIER.—This pier is to be re-ved, and the work is to be carried out ler the direction of the Highways Com-tee by the direct employment of labour a cost of about 125*l*.

THE CARPENTERS' HALL LECTURES:

HE UNITY AND DIFFERENCE IN ART AND CRAFT.

HE first of the new series of lectures on s connected with building arranged by e Worshipful Company of Carpenters was en on the 24th ult. at Carpenters' Hall, ndon-wall, by Mr. Thackeray Turner, Mr. R. Cobay, Master, presiding.

The lecturer, whose subject was "The ity and Difference in Art and Craft," d that at the present time much rk passed for art when it is not art at and with equal truth it might be said that ch work which is called craft is not craft all, so that we might with advantage efully consider both art and craft and ir relation to one another.

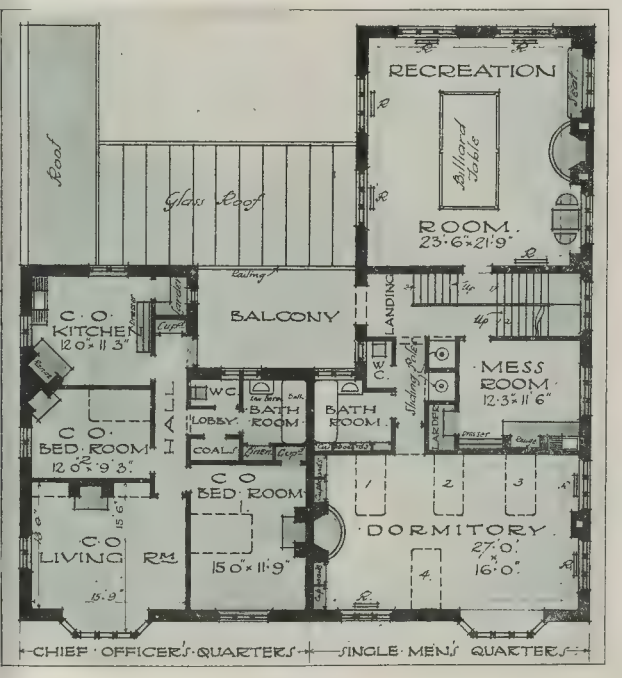
Art and Craft Defined.

Taking the subject of art first, it seems to , said the lecturer, that art must have an ment of creation in it. If it has not, n it falls short of being art. It must ve life, and there cannot be life without ation. I am fully aware of difficulties ich may be put forward, as, for example, question as to whether a really good copy a work of art, where the copyist has led nothing, is a work of art. Still, it d be found true that no work of art is void of life, and there is creation in it. If n persuaded two or three good artists to y the same work of art accurately you uld find that all the copies differed, and that u could recognise the work of each man in his copy. Thus each man would, as a matter of fact, have added something.

When we come to consider craft we have a still more difficult subject to deal with. One thing is certain, art cannot exist without craft. Where would the architect be without craftsmen? The painter and sculptor can, of course, each be his own craftsman. It seems as though craft in a low form could exist without art. For example, no one who has seen the pretty reed thatch work done by the Norfolk thatchers, and which, owing to foolish building by-laws has almost died out, can help admiring it or deny that it is a craft, and a very delightful craft too, but it can hardly be called an art. Or again, no one can help admitting that there is craft in the adze and drawshave work done by the village wheelwright who builds waggons and carts, and who used to make ploughs before the iron ones came in, but there can hardly be said to be art in these things which have been done just the same thousands of times before and on just the same lines.

The perfect example of craftsmanship is reached when the artist is also the craftsman, as, for example, when the sculptor cuts in wood or stone his own ideas, instead of doing as most sculptors do now, getting another man to do the carving for him. The real work of art in this case is the sculptor's clay model which the carver copies, and which is destroyed as soon as the carver has finished.

The painter is perhaps a better example still, as he always paints his own picture, so that he is the artist and craftsman combined. We must not forget that many of the greatest painters of old had pupils, and they used to allow them to paint parts of their pictures. It is a custom I would gladly see revived, for in this way they taught their craft better than it could be taught in any other possible way. We have to remember that the number of men and women who are artists—that is, who have the power of design and composition—is few when compared with those who are skilful in the use of tools and who can carry out work in an intelligent way. It seems to me that it is this capacity for working with thought which gives the workman the right to be called a craftsman.



The Quality of Life.

Such a building as Durham Cathedral must be the conception of one or two men—at any rate, to a very large extent—but obviously no one man's lifetime would enable him personally to carry it out; so you see here is a clear case of the combination of the artist and the craftsman, and a perfectly reasonable arrangement too. Supposing the architect, or master mason, as he was then called, had craftsmen such as we have now—masons with their moulds and templates scratching the stone into shape with drags, not knowing what the design of the moulding is to be nor for what purpose the stone which they are scratching into shape is required, and caring less—would the building have possessed that wonderful charm and life, that quality of being a part of nature? A building the author of which is inspired with poetic and noble ideas will not have the effect upon us which our mediæval architecture has if the

craftsmen are not of a higher order than our machine craftsmen.

I think the ideal craftsman will always have sufficient interest in his work to make him think out the details and treatment of what he is at work upon, so that he will be certain to make varieties, even if not noticeable by the ordinary observer, and this human quality will just give that something which will keep it alive and turn the object into a work of art.

That is the keynote, "Keep it alive." If the human mind can be seen in man's work there need be no fear that the work will lack interest and life, or, to put it in one word, there need be no fear that it will lack art.

I think most people will agree with me when I say that it is easier for us to work with our hands than our heads, but art demands the higher work. It is so soothing to have some nice straightforward piece of work to do, but it should be the reward of mental work.

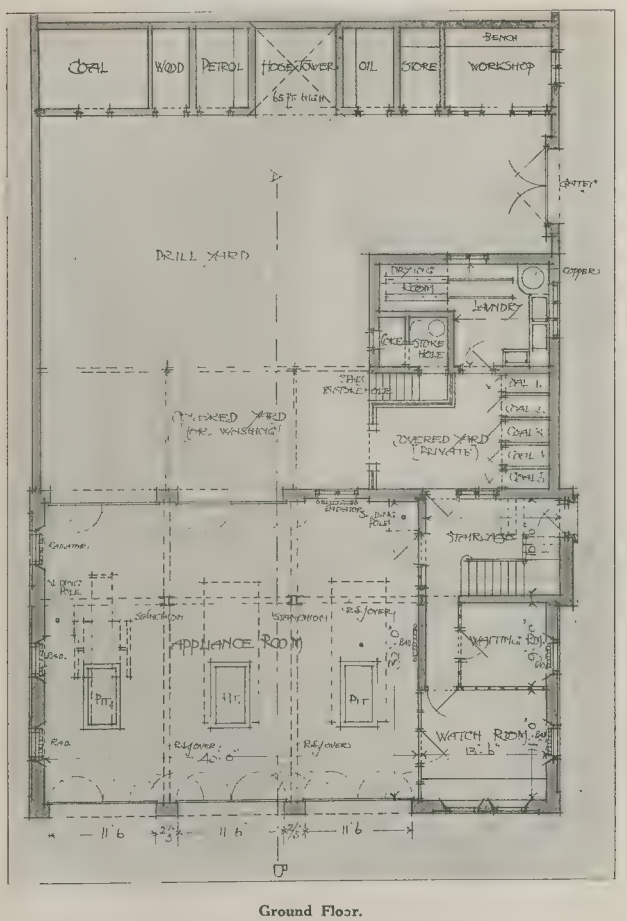
To my mind it is quite wrong that one man should do all the thinking—that is, all the designing—whilst another or others should do all the making and have no thinking to do. No satisfactory result can be obtained by such a system. In architecture it is quite possible for one mind to create a grand scheme, but to carry it out ought to be the work of many minds. Each craftsman ought to think as he works, and then noble buildings, such as were created in mediæval times, will result. It is astonishing how much interest—that is, humanity or life—each workman can put into his work if only he will take interest in it. If he will only think, he will certainly be rewarded by great pleasure and also by his work becoming art—that is, having life and giving pleasure to others. I find it is most useful when a workman asks me a question about the work we are doing to say, "Well, what do you think?" I recommend it as an excellent formula. It finds out the quality of your man. The good ones respond, the bad ones do not, and show that they think you are asking for what they are not paid for.

Harmony in Art.

Unity between art and craft demands that there shall be no discord. One pretty thing surrounded by ugly things does not make harmony in art, and without harmony there will not be art as a whole.

I made a pilgrimage the other day to Kensal Rise to see Batten's wonderful altar-piece which was exhibited in the last Arts and Crafts Exhibition held in the New Gallery in Regent-street. The only satisfactory way of seeing it, I think, is to get sufficiently near to exclude from view all the surroundings, and to my eyes its great beauty only intensifies the offensiveness of the church itself. Had the triptych not been there I could have gone into the church and walked out again with the usual feeling that it w just a commercial production, but as matte now are one cannot help being exasperate with the complete absence, save the presenc of the picture, both of art and of craft in th whole building. I will give one smal example. The pulpit is most elaborate worked in richly coloured alabaster. Th mason who fixed it used red putty, doubtles according to instructions or custom, to for the joints. In parts the alabaster is cream coloured, but still he used the red putty Could that man have had any spark of intere in what he was doing? Of course, it needless to point out that the whole pulpit as wrong as it could be. It is obvious tha if you have a natural material which richly figured in itself, and you pick out th most varied pieces as being most beautifu you should not carve it in order to ad beauty, because by doing so the carvin destroys the beauty of the marble, and it beauty destroys the effect of the carving.

Good Craftsmanship Redeems Weak Design.



The unity of art and craft may be fill illustrated by taking two imaginary cases We will suppose that rare individual, a patro of art, decides to build a really fine buildin twice in his life. The first time he chooses really able architect, but the neighbourhoo only provides what I have previously calle machine craftsmen. He tries to inspire then and fails. He makes complete drawings every detail and makes them carry the wor out accurately from the drawings, but he ca give them no freedom, as they are no interested and do not wish for it.

The second time this very rare man, th art-patron, chooses a weak architect wit no great power of design, but the buildin is erected in a neighbourhood where th craftsmen are true craftsmen. They under stand their trade and love their work. The result is that the architect does not giv instructions in all details, and the building although having no great force of characte given it by the one man, viz., the architect is, nevertheless, full of the feeling and characteristics of the many. Which of the tw buildings shall we say cause the least pain Or, shall we say, give the most pleasure I believe myself that the absence of good design would be felt far less than the absence of good craftsmanship.

Needless to say, there is no reason wh the conceiver of the whole building should not be in complete harmony with the crafts man and have the power, which is, un doubtedly, best obtained by praise, of draw ing out the qualities of each craft, and yet o keeping all the crafts in their places and subservient to one another. A craftsman who only sees the beauty in his own craft and does not make an effort to understand other crafts and see their beauty will, prob ably, hardly be as perfect as he might be i his own craft, for he will not fully under stand how to make his own work harmonise with the surroundings.

Machine Craftsmen.

The craftsman, at times, seems to be want ing in proper respect for his craft. Fo example, if he has something which he wishes to repeat he may be found transferring i over and over again—a process which needs no craftsmanship—instead of drawing it If he has the skill in draughtsmanship which he ought to have it should be a pleasure t draw his repeat, whereas no one can say it is a pleasure to transfer. Moreover, if his repeat is drawn the human quality so neces sary to art will shine out, but if he trans fers his repeat he is doing his best t imitate the work of the machine, and is fitting himself to be called a machine crafts man. Again, if a craftsman spaces his work out by eye, provided he is skilful, inaccura cies will not be obvious, and the whole work will gain in richness; but if he spaces it ou by the aid of rule and compasses a mechan ical effort must be produced. The Japanese artist draws objects over and over again and he will not be satisfied until he can draw whatever it is he wishes to introduce int his picture with ease and certainty, and there can be no doubt that this is one of the reasons why their work has such a charm

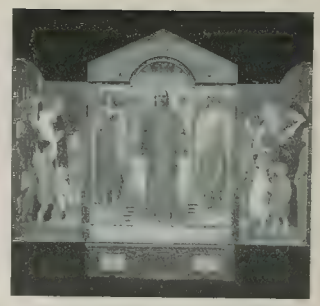
By Mr. T. Millwood Wilson.

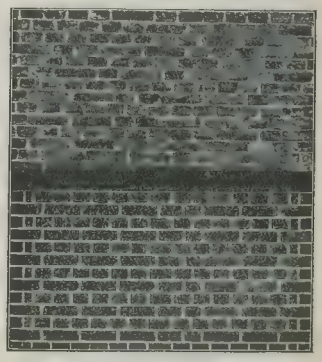


always appears to be so finished, even
n it is little more than a sketch.

Ancient and Modern Brickwork.

fter showing a slide of the XVth cen-
brickwork of the big chimney at
tead Manor House, near Godalming, and
w it some exceptionally good modern
e brickwork, the lecturer continued :—
The modern bricklayer is always think-
about his bond. This is what is called
English bond in both cases. That is, the
k is built with first a row of stretchers
bricks, laid with their length showing,
then a row of headers. A bricklayer
made a mistake would probably be
ed off the job, and yet, if you look at
old work, the pattern is constantly varied
most pleasing results. I feel almost
you will agree with me that the upper
e of brickwork is far the more pleasing.
ourse, it has gained by age, but time will
r make the brickwork shown on the
r half of the slide as beautiful, or nearly
eautiful, as the old work. In producing
heartless work the architect's specifi-
on has a great deal to answer for. The
der is given a hard-and-fast description
ow the brickwork is to be built. Archi-
, as a rule, do not write their own
ifications, but let the quantity surveyor
t for them, but even when they do write
r own specification it is usual to take
ld one and alter it to suit the new build-
Some of the clauses are of great age,
and the pupil learns them by heart. I have copies of some of Sir Gilbert Scott's specifications, and the clauses about brickwork run on the usual lines :—'The bricks are to be of a uniform colour.' To be pretty they should vary in colour as much as possible. 'The perpends are to be kept true.' That means that the perpendicular joints are to be exactly over one another. The very thing that is so ugly. The jointing is described to be done in various ways, but always in some ugly way. The matter is now receiving attention by architects, but the harm has been done, for the traditions of the bricklayer are now all wrong, and I doubt if you could find a properly qualified bricklayer who had an idea in his head about beautiful brickwork, and yet it can be most wonderfully beautiful.

Influence of Machinery.

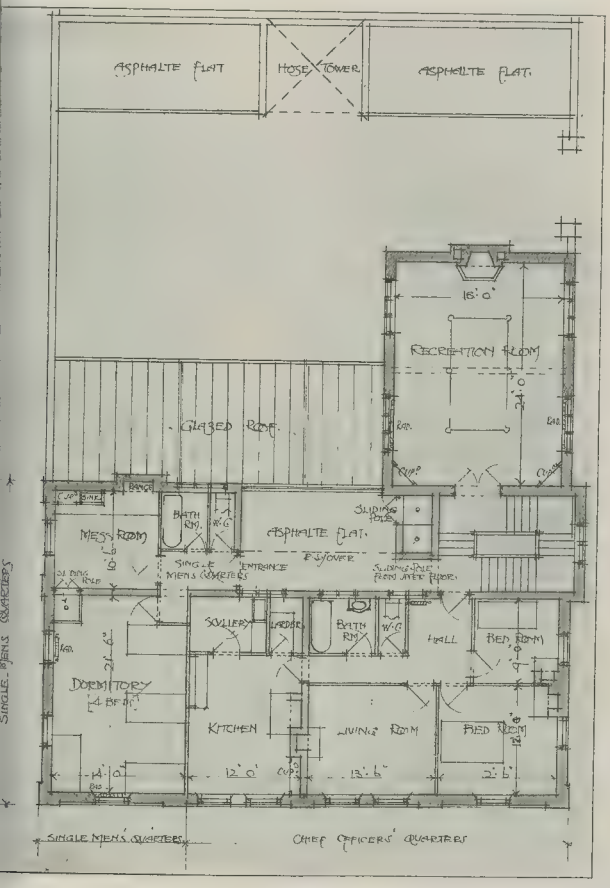


I fear it is true that what people do not understand they do not like. The present age does understand machinery, and if there is one quality more than another in machinery it is accuracy. It is, therefore, quite easy to understand how it comes about that our craftsmen sacrifice everything to accuracy. However, I think the blame lies at the door of the man who should be the artist rather than, with his subordinate or assistant, the craftsman. People will not believe that science is not art and that science cannot produce art, and, indeed, it is in some ways actually opposed to art. I doubt if the artist as such has not been thrown back by the advance of science, although indirectly through the craftsman he has gained somewhat, because they have gained. You see, people have said from time to time, 'If there is such a thing as beauty clearly there must be some law or laws of beauty.' When classic architecture was the rage in England they reduced it, or tried to reduce it, to a science. They measured the ancient examples of each period and then struck the average for each period and called it perfection.

Triptych, St. Martin's Church, Kensal Rise. By Mr. J. D. Batten.

Advantage of Full-Size Work.

I suppose there can be no doubt that doing things in small, or, if you prefer it, drawing things to scale, is justifiable; it is so in the case of architecture, and yet I am convinced that the architect more often comes to grief through its use than in any other way. We all know that if you bring a common outdoor object indoors how very big it looks. Personally, whenever I am designing a building I draw some portion the real size at quite an early stage, and I feel sure that one of the best training for beginners is to measure and draw existing work full size Of course, this can be done in South Kensington Museum, but not with as good results as upon a building, because you want to learn the size of the detail in relation to the actual buildings. However, of this I feel sure, that the sooner the architect, sculptor, and painter can get to work upon the actual piece of work he has to do the better the chance will he have of success.



Brickwork: Unstead Manor House, near Godalming.

Craft Without Art.

Now let us turn from art and consider craft.

I maintain that a craftsman to be worthy of the name must have some creative power; otherwise, he is no more worthy of the name than the man who breaks stones on the road. Mind, I do not despise the stone-breaker, for I know full well how difficult his work is; but, still, the stone-breaker is not a craftsman in our sense. As we have seen in the case

First Floor.

Hendon Fire-Station Competition: Design Placed Second. (*See page* 132.)
By Mr. T. Millwood Wilson.

of the artist, the perfect craftsman is the man who is craftsman and artist combined: but to be a craftsman, if he has not the creative faculty, he must at least be able to carry out a good idea when it is given him, and this means that he must take the idea and make it his own, so that he may add to it and give it life.

Almost all who love the beautiful, if they begin young, can design if they will take the trouble, but remember that the power of designing, like everything else, will only come with practice; indeed, it seems to me that it needs almost daily practice. And do not be discouraged because your efforts are not successful. Remember that our very greatest artists have all produced some poor work, and they only know how much bad work they have destroyed.

If you can get no original idea to work upon, take an old one and see if you cannot

Unstead Manor House, near Godalming.

treat it in your own way. Take the idea from memory, but do not copy. If you have sketched some beautiful object do not use it at once, and do not look at your sketch before using it, but rely upon memory, and then you will be the more likely to put something of your own into it. To carry out your own design, to live with it in your mind, to see it grow to perfect its details, is more exciting than a first-rate novel or some splendid acting. How different from carrying out a design which is not your own, where you are timidly wondering what its author would wish, and fearing to do wrong!

Above all do not be ambitious. Do not try to do what you think others will consider beautiful, but try to please your own sense of beauty. Scribble ideas in spare moments. If you cannot think of anything else try to make varieties of diaper patterns. They are the easiest form of designing and endless in their variety, and help the mind to be active."

OBITUARY.

Mr. W. Glover.

We regret to announce the death in London, on January 18, of Mr. William Glover, of "St. Helen's," Southbourne, near Christchurch, Hants, aged eighty-two years. Mr. Glover was the son of the late William Glover, Tapissier-in Ordinary to Queen Victoria, and he was distinguished for his generous donations on behalf of the architectural profession and in other directions. He was elected a Fellow of the Royal Institute of British Architects in 1899, and served as a member of Council; he was President of the Northern Architectural Association for the sessions 1899 1901. He was chosen as the first Vice-President of the Architects' Benevolent Society in March, 1905, and was re-elected in that capacity for the sessions 1906-12 Until his removal to Windsor in 1901, Mr. Glover had practised in Newcastle-on-Tyne; he was the architect of the buildings there of the Royal Jubilee Exhibition, 1887, and of an extensive range of premises, with offices, work and pattern shops, and stores, and an approach road from St. Peter's Station, at St. Peter's Works, for Messrs. R. & W. Hawthorn Leslie & Co. Of his many gifts and benefactions to the Northern Architectural Association we may mention the Presidential chair and badge, a travelling studentship, and a sum of 1,000*l.* consols in promotion of the Association's educational work and in aid of the acquisition of their new premises, 1903; he supplemented that sum, in the following year, with 1,000*l.* towards three objects—the completion of the purchase of the house for the Association, the Architects' Benevolent Fund, and the scheme of Sir Aston Webb, R.A., for the higher education of architects. In his letter, dated November 22, 1904, to the Association, he writes:—"This will enable me to carry out three leading principles which have influenced me through life:—First—To spend my money where I made it. Second—To assist those poorer than myself. Third—To endeavour to leave the world better than I found it." He also gave 800*l.* to the Newcastle Corporation as a fund for the purchase, for the Laing Art Gallery, of works of art by local artists, in 1905, and (besides giving the money already mentioned) was a most liberal subscriber to the funds of the Architects' Benevolent Society. He gave 2,000*l.* to endow two beds in the King Edward VII. Hospital, Windsor, and, we understand, that institution will further benefit under his will. Mr. Glover was left a widower in July, 1905.

LAW REPORTS.

OFFICIAL REFEREE'S COURT.
(Before Mr. EDWARD POLLOCK.)

Theatrical Architectural Dispute: Lyons *v.* Runtz.

JUDGMENT was given, after a hearing of several days, in an action in which Mr. Isaac Nathaniel Lyons was the plaintiff and Mr. Ernest Runtz, F.R.I.B.A., practising at 64, Victoria-street, Westminster, was the defendant, against whom Mr. Lyons presented a claim in respect to a series of business transactions of a complicated nature. A counter-claim was advanced by Mr. Runtz in regard to architectural services, including the preparation of plans for the Elysée Theatre that was to have been built by Mr. Lyons on a site in the Haymarket.

Besides evidence of account, professional testimony was also forthcoming, Mr. Lyons calling Mr. Robert Briggs, of Messrs. Frank Matcham & Co., and Mr. Bertie Crewe; and Mr. Runtz calling Mr. Herbert Phillips Fletcher, F.R.I.B.A., of Messrs. Banister Fletcher & Sons, Mr. J. Priestley Briggs, F.R.I.B.A., and Mr. F. R. Farrow, F.R.I.B.A., the Vice-Chairman of the R.I.B.A. Science Committee.

Mr. Pollock, in the course of his judgment said that this was an unfortunate piece of litigation, being an action by Mr. Lyons against Mr. Runtz, concerning several intricate matters. The question of the Haymarket site was a conflicting one, and it was the most substantial item of the whole affair.

In 1907 the plaintiff's attention was drawn to a site in the Haymarket, on which he intended to build, with the assistance of the defendant, who was to make the plans, a theatre to be called the Elysée; but the project was eventually abandoned. Mr. Pollock remarked that at one time it had seemed to him that Mr. Runtz had entered with Mr. Lyons into this Haymarket scheme as a speculation, and that he would be content to abide by what he could get if the matter went through, but subsequent evidence had led him to the conclusion that such was not the case, but that Mr. Runtz was entitled to have whatever might be the proper remuneration for what he had done on this Haymarket site. Mr. Runtz's evidence was that he was entitled to an agreed sum of 1,000*l.* in respect of the work. He (the Referee) was quite prepared to accept that Mr. Runtz conscientiously believed that such an agreement was made; but he must entirely decline to accept the suggestion that there was such an agreement. It was a matter, the proof of which rested with Mr. Runtz, who, in accordance with the usual practice of gentlemen carrying on his profession, kept a diary. In that diary there was not one single item which suggested that any agreement of any sort or kind was made, and Mr. Lyons utterly denied that any such agreement was made, and there were, too, the documents, and in the light of all this he was forced to decide against Mr. Runtz. The next principle arising was — How was the remuneration Mr. Runtz was entitled to arrived at? Mr. Jones, the Counsel for Mr. Runtz, had suggested that it must be measured by the scale laid down by the Royal Institute of British Architects, and argued that under Clause 5 Mr. Runtz was clearly entitled to 2½ per cent. on the estimated value of the building. Mr. Jones had also urged that the parties must be taken to have agreed that the scale was to regulate Mr. Runtz's remuneration. But the parties had not agreed to abide by the scale. He doubted whether the scale was applicable, because it was perfectly clear that Mr. Runtz did not do all that which Clause 5 of the scale said had to be done by the architect to entitle him to the 2½ per cent. Mr. Jones had said—"I make a deduction of ½ per cent. in respect of that which is omitted." But, as he had said, the scale was not applicable; but it was not very material because the parties had not agreed to abide by the scale. Raising the question of the value of these plans, undoubtedly prepared by Mr. Runtz, the Official Referee remarked that they showed a very handsome building from an exterior point of view, but he had not the slightest information as to what the inside would be. He did not understand, too, how Mr. Fletcher arrived at the view that the general cost of the building would be 45,000*l.* as shown by the plans. The plaintiff's professional witnesses seemed to him to be able gentlemen of very large experience. Looking at the evidence to form a fair estimate of what was a proper figure to arrive at, he came to the conclusion that 500*l.* would be a fair sum to allow Mr. Runtz in respect of the Haymarket site. The Official Referee then dealt with the parties' figures, and, setting each against the other, and making a calculation, said that Mr. Lyons was entitled to a sum of 599*l.* 15s. 10d. in all, and there would be judgment in his favour for that amount with costs, and also in his favour on the counterclaim with costs.

Mr. Jones protested in effect that the Official Referee had determined the figure on a wrong basis; but his Honour adhered to his decision, remarking that if Mr. Jones had anything further to say he must go elsewhere.

Mr. Jones said it was very hard on Mr. Runtz.

Mr. Pollock said it was also hard on him to allow him to deal with the case as he had done and then to make this suggestion.

Counsel in the case were Mr. C. Wertheim (instructed by Messrs. Bartlett & Gluckstein) for the plaintiff; Mr. G. W. H. Jones (instructed by Mr. G. W. A. Edwards) for Mr. Runtz.

OFFICIAL REFEREE'S COURT.
(Before Mr. M. MUIR MACKENZIE.)

A Claim Settled: Rutter *v.* The Great Western Land Company Ltd.

THIS case, which had been in his Honour's warned list, was mentioned last week by Mr. Herbert Louis Tebbs, who stated that it was a claim for fees by Messrs. Rutter, land agents, surveyors, auctioneers, etc., of Norfolk street. The parties, said Counsel, had come to terms, and his application was that the learned Official Referee should direct judgment to be entered for plaintiffs for 515*l.*, and the costs to be taxed. His Honour agreed. It was understood that the claim had reference partly to work done in connexion with the development of Elthorne Heights, in West Middlesex.

PATENTS.

APPLICATIONS PUBLISHED *

334 of 1911.—Harry Shrubsole and Doctor Croft: Hearth ventilators for domestic fire places.

2,074 of 1911.—John Whalley Powell: Means for fixing gas and like brackets or other devices to walls.

TO CORRESPONDENTS.

TTE.—All communications with respect to literary artistic matters should be addressed to "THE 'OR" (and not to any person by name); those ng to advertisements and other exclusively ess matters should be addressed to "THE LISHER," and *not* to the Editor.

communications must be authenticated by the and address of the sender, whether for publica- or not. No notice can be taken of anonymous unications.

responsibility of signed articles, letters, and s read at meetings rests, of course, with the rs.

cannot undertake to return rejected communi- ns; and the Editor cannot be responsible for ngs, photographs, manuscripts, or other docu- s, or for models or samples sent to or left at this unless he has specially asked for them.

drawings sent to or left at this office for con- ion should bear the owner's name and address ther the face or back of the drawing. Delay and venience may result from inattention to this.

commission to a contributor to write an article, executs or lend a drawing for publication, is given t to the approval of the article or drawing, when ed, by the Editor, who retains the right to reject unsatisfactory. The receipt by the author of a of an article in type does not necessarily imply its ance.

.—Illustrations of the First Premiated Design in portant architectural competition will always be ted for publication by the Editor, whether they been formally asked for or not.

CES CURRENT OF MATERIALS.

ur aim in this list is to give, as far as possible, the e prices of materials, not necessarily the lowest. y and quantity obviously affect prices—a fact should be remembered by those who make use of formation.

TERMS OF SUBSCRIPTION.

"THE BUILDER" (Published Weekly) is supplied DIRECT from the Office to residents in any part of the United Kingdom at the prepaid rate of £1 8s. per annum, with delivery *by Friday Morning's Post* in London and its suburbs

To Canada, post free, 21s. 8d. per annum; and to all part of Europe, America, Australia, New Zealand, India, China, Ceylon, etc., 26s. per annum.

Remittances (payable to J. MORGAN) should be addressed to The Publisher of "THE BUILDER," 4, Catherine-street, W.C.

TENDERS.

Communications for insertion under this heading should be addressed to "The Editor," and must reach us *not later than* 10 *a.m. on Thursday.* [N.B.—We cannot publish Tenders unless authenticated either by the architect or the building owner; and we cannot publish announcements of Tenders accepted unless the amount of the Tender is stated, nor any list in which the lowest Tender is under 100*l.* unless in some exceptional cases and for special reasons.]

*Denotes *accepted.* †Denotes *provisionally accepted.*

BALLYLESSON.—For erection of a dispensary and residence, for the Lisburn Board of Guardians. Mr. G. Sands, C.E., architect, Lisburn:—

Ifferson & Fullerton	£1,280
A. McDowell & Co.	1,248
W. I. & C. Law	£1,196
Beeds, Ballylesson‡	1,187

‡ Subject to approval of Local Government Board.

CANTERBURY. For new drill hall, Canterbury. Messrs. Worsfold & Hayward, architects, Market-square, Dover:—

W. Couzens	£5,777 0 0	F. E. Wallis & Sons	£4,883 0 0
J. W. Edwards	5,445 16 3	S. W. Stiff	4,875 0 0

H. & C. Spackman	4,665 16 8		

CLIFTONVILLE (Margate). For alterations and additions to Fort Paragon Hotel, Cliftonville, Margate, for the Fort Paragon Hotel, Ltd. Mr. F. Leonard Poole, architect and surveyor, 246, Balham High-road, S.W.:—

A. G. Lockwood & Co.	£1,298
Anderson Bros.	1,245
F. Eaton, Wandsworth, S.W.*	1,235

LLANBRADACH (Glamorgan).—For the erection of a new boys' Council school at Llanbradach, for the Glamorgan County Council. Mr. D. Pugh-Jones, F.S.I., M.S.A., County Architect, Cardiff:—

Hamilton & Millard, Caerphilly*	£5,850

LONDON. For erection of lifts at Woolwich Tunnel, for the London County Council:—

	Carrying Capacity of Lifts.	Time Required for Execution of Work.
	Persons.	Weeks.
Easton Lift Co., Ltd.	£3,390	45	30
Otis Elevator Co., Ltd.	3,280	40	26
R. Waygood & Co., Ltd.	3,150	40	22

LONDON.—For the remodelling of the hot-water supply system and the improvement of the drying-closet at the Cherry Garden-street Fire-Station, for the London County Council:—

Comyn, Ching, & Co., Ltd.	£409 0	E. Deane & Beal, Ltd	£331 8
Hayward Bros. & Eckstein, Ltd.	350 0	Cannon & Hefford	310 0
		W. G. Cannon & Sons, Ltd.	277 0

[The Architect's estimate, comparable with the tenders, is £250.]

LONDON.—For the laying of 3,580 yds. of 16 in. main from the 16-in. main in Clissold Park through Mildmay Park and Sourbgate-road, Stoke Newington, N., for the Metropolitan Water Board:—

	Per yard. s. d.
Reid Bros.	8 8
W. & C. French	6 9
J. Mowlem & Co.	5 9
Aird's, Ltd.	5 8
T. Docwra & Son	5 5

PENYBANK (near Bargoed, Glamorgan). For levelling playground of Penybank Council school, near Bargoed, for the Glamorgan County Council. Mr. D. Pugh-Jones, F.S.I., M.S.A., County Architect, Cardiff:—

D. Williams, Deri, near Bargoed*	£205 1 6

PERTH. For erection of stone walls and iron railings, for Perth Town Council. Mr. Robert McKillop, Burgh Surveyor:—

Ramage & Cooper, Perth*	£205

PONTLOTTYN (Glamorgan).—For additions to the infants' school at Pontlottyn, for the Glamorgan County Council. Mr. D. Pugh-Jones, F.S.I., M.S.A., County Architect, Cardiff:—

D. Francis, Shirley-road, Cardiff*	£986

PONTARDAWE. For construction of sewage disposal works. Mr. John Morgan, engineer, Pontardawe:—

R. Rankin	£40,089 8 7	T. J. Davies	£20,110 12
E. Powell	24,291 4 0	W. & J. R. Watson	19,937 4
Johnson Bros	23,647 6 11	Bennie & Thompson	19,627 10 11
J. Riley	23,057 4 8	R. Clarke	19,473 17

R.I.B.A. TITE COMPETITION:—

PRIZE DESIGN, BY MR. LOUIS DE SOISSONS.

CERTIFICATE OF HON. MENTION. DESIGN BY MR. THOMAS H. CHALKLEY.

House at Hampstead. Mr. W. Curtis Green, F.R.I.B.A., Architect.

The house illustrated above was built by Messrs. Moss & Sons. The walls are faced with hand-made sand faced bricks, and the roof is covered with hand-made sand-faced tiles. All the window-frames are oak, having iron casements and lead glazing by Messrs. Wainwright & Waring. The internal doors and staircase are in oak.

SKELETON-FRAME BUILDINGS.

AFTER waiting with unexampled resignation for a long series of years, London architects and ders were finally rewarded in 1909 n enactment releasing them from the ds established long ago and tied by the London Building Act of . We refer to the restrictions h virtually prohibited the employt of steel to full advantage in its imate capacity of a trustworthy ding material. By the regulations erning the construction of skeletonne buildings made by the London nty Council under Part IV. of their eral Powers Act, 1909, the useful erties of steel have at last been ially recognised.

In this article we do not propose to discuss the wide subject of skeleton construction, but rather to consider the conditions attending the application of steel to the branch of architectural practice indicated.

Sect. 22 of the Act provides that where any work in the nature of a skeleton frame is to be executed, for a new or an existing building, the customary notice to the District Surveyor under sect. 145 of the London Building Act, 1894, shall be accompanied (*a*), in the case of a new building, by detail drawings showing the proposed construction by calculations setting forth the loads and stresses contemplated, and by particulars of the materials to be used, and (*b*), in the case of an alteration or addition or other work, by such drawings, calculations, and particulars as the District Surveyor may reasonably require.

The section mentioned does not specify precisely what drawings, calculations, and particulars should be submitted, and relegates to the District Surveyor the duty of deciding this important matter, as will be seen by the words: – "And should such plans, sections, calculations, or particulars be, in the opinion of the District Surveyor, not in sufficient detail, the person depositing the same shall furnish the District Surveyor with such further plans, sections, calculations, or particulars as he may reasonably require." Therefore, according to the

terms of the section, the architect is left entirely at the mercy of the particular District Surveyor with whom he may have to deal in connexion with a new skeleton-frame building or any work in the nature of a skeleton frame executed in an existing building.

District Surveyors, in common with other human beings, are not produced like steel ingots in moulds of standard dimensions and from material of uniform composition and properties, and each of them regards things from his own standpoint, his judgment being affected largely by individuality and by the effects of professional training. Consequently sect. 22 does not give architects any assurance of uniformity in the reasonable requirements that may be made by the District Surveyors of London.

We cast no reflection on the competency or fairness of District Surveyors—a body of men who have in the past discharged, and will doubtless continue to discharge, onerous and by no means easy duties with general satisfaction to all concerned; but we cannot disguise the fact that the section to which reference is made distinctly favours the establishment of requirements varying from district to district and perchance from day to day.

That our views of the question are strictly reasonable is proved by the fact that the District Surveyors' Association (Incorporated) have recently issued a pamphlet formulating a uniform basis for the preparation of drawings, calculations, and particulars to be submitted relative to skeleton-frame buildings or work. This scheme has been prepared with the co-operation of the Royal Institute of British Architects and the Surveyors' Institution, and its advantages are set forth in the following terms:—"It will manifestly be convenient to the architect, engineer, and District Surveyor that the calculations shall be submitted upon a uniform basis, thus greatly reducing the labour of making and checking the calculations."

We are fully in accord with this expression of opinion, and can give two recent cases which confirm its justice. One is that of the drawings and calculations for the steel frame of the Regent-street Polytechnic, the first building of its kind constructed under the provisions of the new Act. When the notice was served on the District Surveyor neither that official nor the architect, nor the structural engineers, had any clearly-defined notion as to the scope or exact nature of the information required to comply with the true meaning of sect. 22, and the result was an elaborate series of drawings and calculations involving considerably more trouble and expense than were really necessary, the object having been to make absolutely sure that the proposal should be approved without the risk of delays. The other case is one quite unconnected with the new Act, but nevertheless illustrating just as well the need for uniformity of particulars. The writer was retained by a municipal council outside the London County boundaries to consider the drawings and calculations for a skeleton building. The drawings submitted were inconvenient and inadequate, not permitting the ready identification of the structural members denoted in the calculations, and not showing essential details. The calculations had been performed in a needlessly complicated and roundabout manner by the aid of laborious methods. Consequently various supplementary drawings had to be furnished, and the work entailed on both sides was fully four times that which would have been involved if the drawings and calculations had been got out more suitably. It will readily be understood that similar trouble caused to a District Surveyor, whose fees are limited by statute, would result in serious loss of valuable time.

The schedule of recommendations published by the District Surveyors' Association is intended to obviate difficulties to all concerned, and we are sure will be widely appreciated.

Part I. suggests methods of denoting piers, columns, girders, beams, floors, other structural elements, and parts of a building by letters and numbers, so that each of them can be readily identified; Part. II. is a schedule of notation for employment in all formulæ and calculations; and Part III. specifies the scope of the drawings required. These three parts are judiciously drawn, in our opinion, and are of perfectly satisfactory character.

Part IV. aims at the standardisation of calculations and the manner in which the data and calculated results are to be submitted. For the convenience of architects the Association have prepared standard tabulated forms for pillars, beams, and foundations respectively, making clear the exact nature of the particulars required. The necessary wording to introduce or accompany the required data and calculated results is printed in or at the top of the various columns in each form, and will undoubtedly save the user a good deal of time and make work delightfully easy in the office of the District Surveyor. We may add that the three kinds of sheets can be purchased in bulk from the printers to the Association or obtained through any stationer.

No sheet is provided for roofs, the design of which is to be shown by drawings, stress diagrams, and other specified particulars. Additional sheets are required for all special members to which the standard forms are not applicable, as, for instance, eccentrically-loaded beams, gusset plates, brackets, bracing, and connexions generally.

Part V. states formulæ suggested for calculations, and, although the equations do not cover all cases arising in practice, they will suffice for a large proportion of the work to be done.

The pamphlet concludes with a series of tables on the weight of materials, working stresses on steel pillars, safe loads on beams and pillars, permissible shear on rivets and bolts, and the bearing value of steel plates.

The pamphlet is commendably brief, while at the same time quite explicate in every respect. Having already stated our opinion as to the value of the recommendations, we need only say in conclusion that the hearty thanks of the profession are due to the District Surveyors' Association for their effort to make easy the application of the new regulations covering the design and construction of skeleton-frame buildings. The reasonable manner in which the question has been dealt with suggests the confident hope that the path of designers in reinforced concrete will be made equally smooth after the draft regulations of the London County Council have been finally amended and approved.

NOTES.

The Over-Elaboration of Plans.

THE need for a precise definition of terms before a discussion can be fruitful is suggested by the debate at the Architectural Association on the motion "That Modern House Planning Tends to Over-Elaboration." By the aid of Murray's Dictionary the meeting appears to have arrived at the conclusion that to elaborate means "to produce or develop by application and labour; to work out in detail; to give finish or completeness." From this we may perhaps conclude that the precise charge brought against modern house planning was that this process is carried too far, with the result that modern house plans are laboured or over-elaborated in the same way that a picture may be said to be over-painted. Over-elaboration in this sense is a fault to which all artists are prone—it is always difficult to know just when and where to stop; but it would not have occurred to us that the designers of houses were worse sinners than others. We should be inclined to regard it more as a matter of individual temperament or method of design. As Mr. Mackenzie says in the interesting paper with which he opened the discussion, there is no doubt whatever that modern house planning yearly becomes more elaborate. Here he seems to use the word as it is generally understood, implying that it becomes more complex, more full of detail. But when he goes on to say that "an elaborate house is not the same thing as an elaborately-planned house; the one conveys the idea of complication, the other simplicity in its considered result," he appears to attach a somewhat arbitrary and even paradoxical meaning to the adverbial use of the word which, though justifiable for the purposes of his argument, seems rather unfortunate, as possibly leading to confusion of thought. We doubt whether the term "elaborately planned" would convey the idea of simplicity to the ordinary mind; whether elaboration would generally be considered to include elimination; or whether the process whereby a well-studied plan attains this "simplicity in its considered result" would usually be regarded as a process of elaboration. The Chairman took a broad view of the matter by suggesting that "all architects must view this question of elaboration in house design as being a question of taking infinite pains"; but he does not appear to have ventured an opinion as to whether house designers take too much or too little. Neither will we.

The R.I.B.A. Meeting-Room.

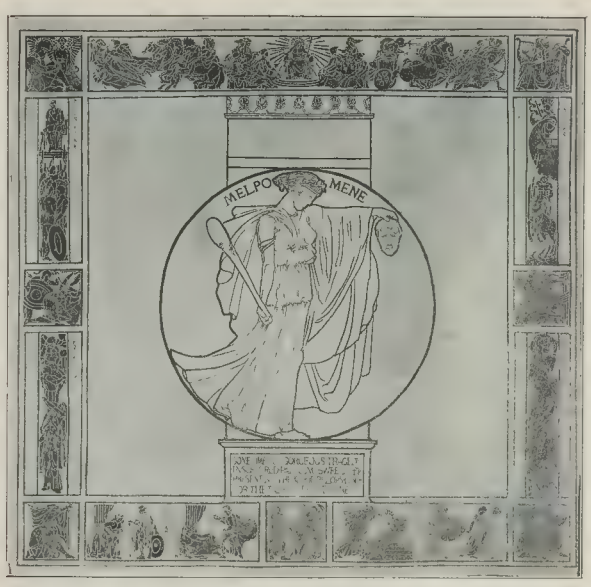
APART from the practical reasons advanced by Mr. Alan Munby, in the *Journal* of the Institute, in favour of a rearrangement of the seats in the meeting-

om, there is another point of view ıich might be considered to support s proposal. It is much to be desired at every member of the Institute should el at home at the meetings and be couraged to take part in the discussion. t present the occupants of the back ws—or, indeed, of any but the few ont ones—are in a position which rather nds to discourage them. Under the est of conditions it probably requires me little courage for any but the most lf-confident of the younger members intervene in debate. To be obliged do so from a position which makes him el more or less of an "outsider" is help to him. He may feel that his tervention is almost an intrusion. he meetings being held in a gallery not iginally designed for meetings, its iape is naturally not an ideal one r this purpose; but there seems reason why its inherent defects ıould be aggravated by the arrangement the seats. In so long and narrow a om, seated as at present, the inevitable ndency is to confine the discussion to ıe occupants of the few front rows of ats, and for all the rest of the members feel somewhat "out of it." We elieve that Mr. Munby has only put ıto definite shape the feeling of a large ımber of the members, and we hope ıe Council will see their way to give his ıggestion a trial.

Dry Rot in Church Buildings. At the annual meeting of the Chester Diocesan Church Building Society the Bishop of Chester is eported to have called attention to the reat waste of money caused by the levelopment of dry rot in newly-built hurches and vicarages, some of which ıad been erected under the direction of vell-known architects. Such waste, of ourse, is to be regretted, but we should ike to have a little more evidence, specially as to the extent to which he dry rot prevails, before we are willing o let the implied criticism of architects ass; and as to the statement attributed o Archdeacon Barber, *i.e.*, that he was fraid that the church building of to-day vas not done with the same solidity as n former times, that is only a matter f opinion which the Archdeacon would ind it very difficult to substantiate, especially bearing in mind some recent ad cases of failure in some of our old athedral churches. Canon Gore thought hat defective church buildings were hiefly due to inefficient clerks of works—a statement to which clerks of works may have something to say. All we need remark is that as a body the clerks of works of this country are a most capable class, and that efficient clerks can generally be obtained when an adequate salary is offered.

The R.A. Lectures on Sculpture. Professor W. R. Colton, A.R.A., in his third Royal Academy lecture on "Ideals and Ethics of Sculpture," made some interesting remarks in regard to the works of sculpture which, in his opinion, had influenced modern sculpture more than any other works, and he showed some examples of foreign work which had had considerable influence upon sculpture, and referred particularly to the influence of Michelangelo and Donatello upon sculpture work even to the present day. He also considered what was necessary in this country to produce a great school of sculpture, contending that the soil and the cultivators were ready, but that what was lacking was the influence of faith, and he justified this belief by saying that with Michelangelo and Donatello there was the same great faith in life.

Hints to Students. In the last lecture of the course Professor Colton gave some excellent hints to students, dealing with the limitations which all sculptors had to recognise in their work, such as the impossibility or undesirability of treating some subjects in sculpture, and the importance of studying beautiful objects rather than ugly ones for the purpose of cultivating the artistic taste. He gave some admirable advice as to the necessity of letting sketches be sketches of intention, free from the idea of particular models and prepared under the influence of a sculptor's own ideas and the spiritual side of his nature. He recommended them to put the original sketch aside, but to refer to it now and then as they proceeded with the commission to see how far the first intention was being adhered to. Every great sculptor had two faculties, *i.e.*, the skilful manipulation faculty and the poetical faculty, and if an artist did not possess these two he would fail as an artist in one direction or another. It is interesting to note that in the opinion of the lecturer much sculpture is ruined in this country because the original idea of the sculptor is not carried out, with the result that many conceptions are weakened and spoilt. Professor Colton showed some beautiful lantern slides, and gave a review of some modern work, concluding with an interesting account of the work of St. Gaudens.



The Institute Gold Medallist. It was announced at the meeting of the Royal Institute of British Architects on Monday that the Council have decided to present the Royal Gold Medal this year to an English architect, Mr. Basil Champneys, and we are quite sure that this will be regarded as a very good selection, and that there will be no difference of opinion on the suitability of the choice. Mr. Champneys is an architect of distinction, whose work is pleasing and refined, and his claims to recognition could not very well have been overlooked.

THE NATIONAL COMPETITION, 1911.

From the designs sent in for the National Competition we have chosen for illustration examples of those awarded the Gold, Silver, and Bronze Medals. The number of works submitted was 13,153, and from these the judges selected ten for Gold Medals,

Modelled and Carved Design for Fireplace. By Mr. William H. Wright (Nottingham).
(National Competition: Gold Medal.)

Design for a Fireproof Curtain for a Theatre. By Miss Helen D. Copsey.
(National Competition: Silver Medal.)

103 for Silver Medals. 261 for Bronze Medals. 561 for Book Prizes, and 989 for Commendation. Four of the Gold Medals were won in London schools (Hammersmith, Islington (2), and Clapham), and the others went to Birmingham, Macclesfield, Nottingham, Warrington, and Dublin (2).

PRESIDENTIAL ADDRESS TO STUDENTS.

THE seventh ordinary general meeting of the session of the Royal Institute of British Architects was held on Monday at No. 9, Conduit-street, Regent-street, W., Mr. Leonard Stokes, President, in the chair.

Deceased Members.

Mr. H. T. Hare, Hon. Secretary, said he regretted to announce the decease of Mr. William Glover, Fellow, elected 1899. Mr. Glover was a Past-President of the Northern Architectural Association, and represented that body for a time on the Council of the Institute. He was well known for his generous gifts and benefactions to the Northern Association, to the Architects' Benevolent Society, to the King Edward VII. Hospital at Windsor, to the Laing Art Gallery, Newcastle, where he founded a fund for the purchase of works of local artists, and to various other institutions, educational and charitable. Mr. Glover, who retired from practice about twelve years ago, was eighty-two years of age.

On the motion of Mr. Hare, it was agreed that the regrets of the Institute at the loss it had sustained be entered on the minutes, and that a message of sympathy and condolence be conveyed on behalf of the Institute to Mr. Glover's nearest relatives.

Mr. Hare also announced the decease of Francis W. Humphreys, elected Associate 1880, Fellow 1892; and of John Codd, Associate, elected 1880.

The Royal Gold Medallist.

The President said the Council proposed to submit to his Majesty the King the name of Mr. Basil Champneys as a fit recipient of the Royal Gold Medal for his executed works as an architect.

The announcement was received with applause.

Some Licentiates attending for the first time since their election having been received,

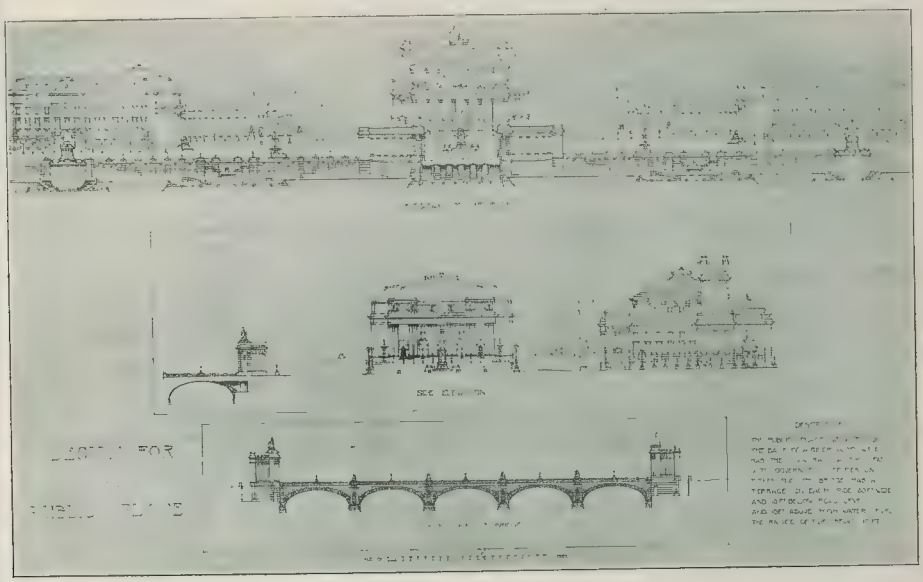
The President delivered the following address to students:

"A year ago I made a promise which I am breaking to-night. I remember it, if you do not, so I am not going to plead forgetfulness, but only that I have been advised that my promise was an unwise one, which had better not have been made, and so had better not be kept. As I have failed, therefore, to produce for you an address to students from a student I will try to take myself back rather more than a quarter of a century to my own student days, and tell you, if I may, few of may own experiences and mistakes; for though at the time I was not of an age when mistakes are generally made, or, at any rate, admitted, yet now I can see very well that I was not quite so infallible as I thought myself to be at the time. Take warning, therefore, and remember that it has been very truly said that even the youngest of us may make a mistake. Well, my first one was that I began my architectural life much too young, and without proper preparation; but as my health broke down time after time at school, and as I had a taste for building rabbit-hutches and drawing tracery windows with a pair of compasses, a kind friend suggested that an architect's office was a nice easy place to be in—he was by way of being an architect himself and should have known better—and that as no examinations were necessary I could easily become an architect. So without more ado I was articled for three years. There may have been some excuse in my case, but from personal experience I can say that no young architect should begin his career without a thoroughly good all-round education. Whether, from an architectural point of view, he should go to one of the Universities or not I am not prepared to say; but from a worldly aspect I feel sure he would be wise to do so.

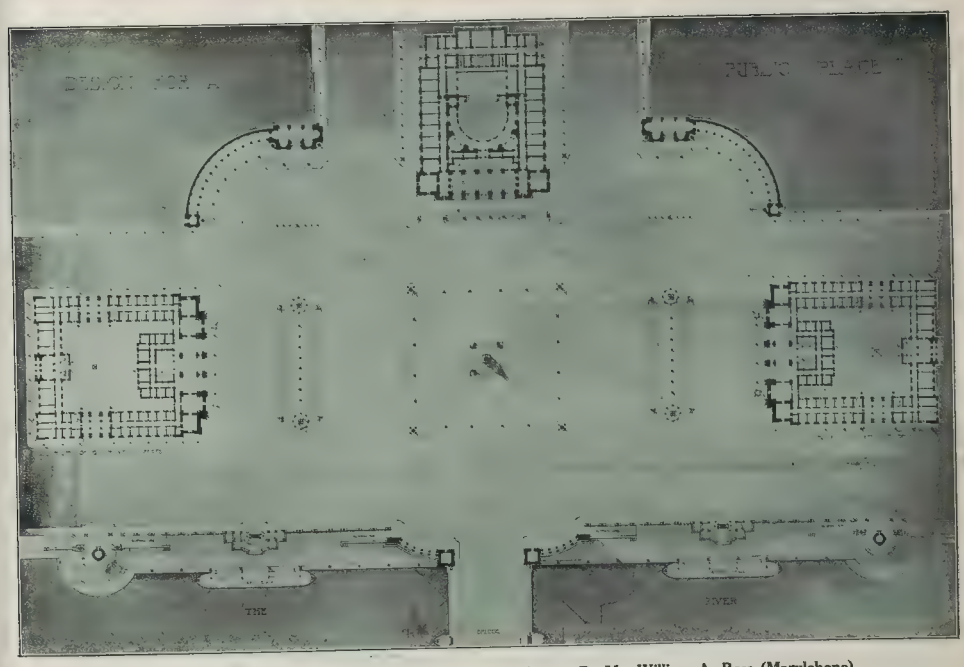
But to return to my mistakes. The first thing my master, who was quite a good architect in his way, asked me was whether I preferred Gothic or Classic architecture. Well, I thought of my rabbit-hutches and my tracery windows and answered, "Gothic!" The result was not what I expected, for I was set to cut my teeth on "the Orders," and as I could not use my instruments at all properly you may imagine what I made of them. Of course, I should have been taught to draw, and a good many other things besides, before I ever tackled "the Orders" at all, as is now so well done in architectural schools; but as a matter of fact, after the first few months, I never looked at them again—at least, not for many a long year.

My master was an old Architectural Association man, and a great believer in that body, so I was told I must join and look forward to holding some office in it, as he had done. That was my first ambition. Well; the "Brown Book" was studied, and, as the subjects in the advanced class of design seemed easier than those in the elementary class, I plunged into the advanced class without more ado, which, of course, was a great mistake, for whereas my first design was for a cricket pavilion—which taught me next to nothing—I might have been put through my facings on "an atrium to a Roman house" in the elementary class, for which I should have had to look up some authorities and go into the subject properly and refer to my old friends "the Orders." But, not having had any proper schooling, I must needs try a short cut to architectural fame.

This, of course, was the greatest of all mistakes, for the older I get the more certain I am that a good grounding in things architectural is absolutely necessary; so, if you will be advised by me, you won't try any shorts cuts whatever, but go steadily on up the ladder, round by round, from the bottom to the top, and if on looking back you remember having on occasions taken two or three rounds at one time, go back at once, however near the top you may be, and go over them again, one at a time, before it is too late, for we cannot be too thorough in our studies if we want to be authorities in after life.



And if we want to be thorough we must cultivate our observation on all occasions. In my nursery days I well remember a little story we were very fond of, called "Eyes and No Eyes." There was a good little boy "Eyes"—who noticed everything, and his walks were full of interest, for he saw the cows milked, heard the birds sing, and smelt the flowers; whereas "No Eyes" came home having been impressed only by the hardness of the road and the length of his walk. Now, life is full of "Eyes" and "No Eyes"—principally "No Eyes"—and the "Eyes" get on and "No Eyes" do the reverse, particularly amongst architects, for what are we without observation? Is not our one way of learning how to produce desired effects to find out how others have done what we want to do, and to make quite sure how they did it? Do we not measure every inch of the admired object so that we may have it on paper, and by comparing the drawing with the original make ourselves able to judge work the other way round, *i.e.*, by beginning with our paper work, knowing in our mind's eye what it will look like when produced in bricks and mortar? "Eyes" can do this; "No Eyes" can't.



Of course, a sense of proportion is a very valuable gift—whether it can be taught or not I should not like to say; but observation will help us a great deal, and not only observation of the object itself, but also of its position, material, and surroundings, for it is obvious that a slender column which might look right in a screen would look quite wrong carrying a large building, so that we must use judgment with such rules as we have, and to get judgment I contend we must train our own eyes and not depend on other people's.

My three years of pupilage being over, I went by advice into a quantity surveyor's office for a year; and perhaps the only thing I ever learnt thoroughly in my life was how to "square dimensions," for I spent "six months' hard" at it. I also learnt how to

k abstracts and a few other accomplish-
nts which have been of no use to me since,
cept that I now have a general idea of what
ere should be in a bill of quantities—only
o often to find that it is not there. While
the surveyor's office I had a month's
liday, which I used largely in measuring
a fine old church, the drawings of which
t me into the Architectural School at the
oyal Academy as a probationer; but, of
urse, when I got into the schools I found
at I knew much more than my masters—a fatal thing; but I was still very young. The teaching in those days, however, was a very perfunctory performance. Each student got—if he was lucky—a few minutes' criticism once a week from the visitor, while, in my case, what I wanted was solid hours of instruction. But I suppose it was my own fault for going to the wrong shop.

While in the schools I made several vain attempts to win a big prize. The first time I think I might have had a chance but for a much better and more elaborate design. This elaborate design not only lost me that prize, but perhaps the next one also; for the second time I thought that elaboration evidently fetched the R.A.'s, so I would be elaborate, and I was. But Leighton, in giving out the prizes, said there was a want of "expressional fitness" about some of the designs—and there no doubt was. Elaboration had failed, so next time "expressional fitness" was my one idea. But this did not come off either. The mistake I made after my first attempt was not going quietly on

Design for a Public Place Situate upon the Bank of a River. By Mr. William A. Ross (Marylebone).
(National Competition: Bronze Medal.)

C

doing the best I could without any regard to my judges, or, at any rate, to my idea of them.

Take warning, therefore, and never, whatever you do, either play up or down to your judges, even if they are the Council of the R.I.B.A. Do justice to yourself and yourself only, and never bother about anyone else—until you get a client; and then, unless you have luck, you may perhaps even wish you hadn't got him.

After I had finished my year's quantity surveying—*i.e.*, about the time I got into the Academy schools—I went for nearly a year as clerk of the works on a big building, and saw a certain amount of life and its wicked ways in the building line; and then about another year or so at office work, during which time I won my only prize—the Pugin—more by good luck than anything else, for there were two other men better than I was, but they were so equal that the judges could not make up their minds which was the best, so they gave it to me, much to my surprise, for, although I had sent in some good honest work, I knew that either of the two other men was more likely to get it than I was, but I wanted to get my hand in for perhaps the following year.

Another mistake I made was to avoid the examinations established by this Institute by joining as an Associate amongst the last batch who were elected without examination, instead of even then taking to my books and fitting myself in the only right way—for a youngster—to become a member of this Institute.

I have now described to you my student days proper, and will let you off the old platitude about being a student all my life. The only thing that I have omitted to mention is that for about three months in each of four years I travelled—twice in England and twice on the Continent—my only regret being that the bulk of my work was not more serious and not quite so sketchy; but, in common with other students, my eye was caught by bits of pretty detail, and, instead of worrying out the general scheme and construction of a fine piece of work, some dodgy little corner which made a pretty sketch was too often selected.

Now, the lesson I want you to learn from all this is that I was too young and not half equipped for anything at the time I attempted it, and that I drifted into practice long before I should have done, and here I am in the chair holding forth to you some ten or fifteen years too soon—not that ten or fifteen years can make any difference to me now, but properly spent at the beginning of my career they would have enabled me to address you this evening with much greater advantage and profit to yourselves as students."

Works Submitted for Prizes and Studentships.

Mr. Gerald Horsley, Owen Jones Student 1887-88 and President of the Architectural Association, then made some criticism of drawings submitted for the Institute prizes and studentships 1911-12, in the course of which he said: -

"Time has not permitted me to read the essays which were submitted, but I am indebted to Mr. Reginald Blomfield, who took part this year in judging them, for some valuable remarks concerning them. He says:—

"The essays sent in for the Institute Silver Medal were unequal. Some of them were irrelevant to the subject, but that sent in by "Redundancy," to which the prize is awarded, is an exhaustive and thoughtful essay on a difficult subject, and has well earned the prize.

Certain serious literary faults appear in the majority of these essays, such as a tendency to rhetoric, which fails of its purpose; a habit of powdering the essay with quotations from every possible writer, poets, essayists, and others, many of them having little or no bearing on the points under consideration; flippancy and familiarity in style, occasional lapses of grammar, and, lastly, a mistaken conception of what either an essay or a book should be.

Many of these essays are mere strings of classification; the subject is divided and subdivided till it runs out like a river, lost among the sands. No central idea emerges as a result of all the industry, and the writer appears to forget that an essay or a book should be an organic composition with a beginning, middle, and end, and a backbone of some definite idea running through the whole.

The object of these essays is not a display of literary fireworks, but the clear and logical presentation of the ideas and conclusions that result from the careful study of facts. The art of the writer should not obtrude itself; it is shown in the orderly marshalling of his forces, in the lucidity and precision of his statement, and in a certain suppressed emotion that gives the deeper harmonies of his music. A method of writing which shocks and jars is wrong. It is with writers as with artists—the best are those who make least parade of their technique."

I would recommend this excellent criticism to the consideration of all architectural students. I am persuaded that much of the ignorance of the laws of composition shown in some of these essays may be traced to the inadequate literary training which obtains in our secondary schools. I believe that the time must come when the many-sided character of an architect's education will necessitate a better understanding and co-operation between our architectural schools and the secondary schools of this country. In the meantime I would like this admirable criticism of the essays to be in the hands not only of our students, but also of every schoolmaster in the land. Some of the mottoes displayed on the drawings bear out my contention. A motto should be in good taste, and at least grammatical. "Φερω κυκρετε" in Greek characters is senseless, and what can possibly be said of "Ego fecit" and "Fer dans blancmange"? In turning to the exhibition of drawings, we find it consists, as usual, of two parts—(1) that which comprises exercises in design, and (2) studies in ancient architecture.

In forming some judgment of these two divisions a careful observer will discover, I think, a certain weakness in the design section and a certain strength in the other. The fact that this year the Soane Medallion has not been awarded supports this view. The strength in the design section lies in the excellent work submitted by the winner of the Tite Prize. The way in which he has solved the problem presented for solution and the quality of his drawings should be particularly noticed. He has best fulfilled the purpose of this competition, which is to produce a fine design finely drawn. The Soane Medallion is not awarded this year for the reason that no one of the designs shows a real grasp of the conditions governing the competition or an entirely satisfactory solution of the problem. The Council have decided, in consequence, to bracket together the two designs under the mottoes "Circle City" and "Antæ" in honourable mention, and to divide the prize of 100*l.* between the authors of them. With the decision of the Council I agree, for when an exhaustive study of the drawings has been made it must be admitted that justice has been done in circumstances where the choice and decision were of considerable difficulty. The two successful designs represent two different views of the problem, and neither has wholly succeeded. "Circle City" has apparently been over-influenced by the fact that the building is intended to stand in a park. The simple lines of his plan, with all the principal rooms on the ground floor, suggest too much an enlarged garden pavilion. This suggestion is fatal to the expression of dignity a civic building should possess. Moreover, it is questionable whether in actual building the conjunction of a rectangular and circular structure would look well. It is possible it would rob the completed building of balance and grace. Personally, I should also fear, in a circular building of this size, the creation of tiresome echoes. The arrangement also of the plan has prevented the provision of a suite of reception-rooms in direct connexion with the principal apartments. Although a large and handsome reception-room is shown on the first floor, it is too remote, and is only directly connected with a small gallery of the Guildhall. "Circle City's" chief strength lies, first of all, in the restraint which is shown in the design of his elevations, a restraint which is very welcome in these days of what is called "free classic"; and, secondly, in the way in which he has displayed his design. The drawings in pencil, with light washes of colour, are the best in the room.

The author of the set marked "Antæ" has treated the problem very differently. His plan is of the type of an *hôtel de ville*, which would be quite suitable to the centre of a large town; but, on the other hand, the elevations, notably the façade adorned with caryatides, which give an unusual touch of gaiety to the design, are very appropriate to the open position proposed. The weak spot in the scheme is that the central Guildhall is too small. It would not be possible to seat 1,200 people upon the floor, the seats which are shown on the plan being far too near together from back to front. The small size of the hall has led to the entrance-hall being unnecessarily large, and it is doubtful whether the assembly-hall and reception-rooms on the first floors are of sufficient dignity or importance. By being only directly connected with the banqueting-hall and galleries of the Guildhall they would be likely to be circumscribed in use. Generally speaking, the author is to be congratulated upon a design which is restrained and dignified in character. The Greek *motif* adopted in the elevations has been carried out with discrimination. With the exception of the site plan and some accessories in the perspective drawing, which would be better away, the draughtsmanship is decidedly good, especially in the case of the detail drawing."

Having dealt with other designs submitted for the Soane Medallion, Mr. Horsley made the following observations in regard to the Tite Prize drawings: -

"Turning to the drawings submitted for the Tite Prize, mention has been already made of the excellent work provided by the winner, Mr. Louis de Soissons. The plan is admirable for the purpose—namely, the central courtyard of a Royal Exchange. It is thoroughly well thought out, stately, with ample and dignified entrances. The courtyard itself is as large as possible, a first consideration in a Royal Exchange. The proportions of the building are exceedingly good, especially in the well-designed "Order" of the interior. The drawings are beautifully executed, and gain technically by the careful showing of the jointing. Their good effect is rather marred by some signs of hurry in the detail drawings."

Other designs submitted in the competition having been referred to, Mr. Horsley said:—

"On leaving the consideration of these drawings for the Soane Medallion and the Tite Prize, permit me to congratulate the Royal Institute upon its recent decision to make a competition in design one of the compulsory features in its final examination. This competition will oblige the student in the future to study design systematically. Every architect who has seen the good work done by young students in French ateliers in the *petits concours*, or sketch design competitions so frequently held there, will surely hope such trials of strength may be more frequent among our own students. Even in the case of the youngest it is no bad thing to encourage him sometimes to "hitch his wagon to a star," or "dip his pencil in the hues of the rainbow."

In the competition for the Grissell Gold Medal four competitors have entered. To "MCMXII." the prize has been awarded. Undoubtedly this design best fulfils the requirements of this competition. The construction is extremely well adapted to a temporary building, and the plan is quite good, though, personally, I should prefer a more dignified architectural treatment for the housing of an art exhibition. . . .

Turning to the second part of the exhibition, I shall speak first of the Measured Drawings Prize and Silver Medal. This is a very good competition. Five sets of drawings are submitted. After a careful study of them and a scrutiny of the measured work and sketches done on the spot one feels that Mr. Maxwell has well earned the prize. His portfolio of measured studies is an admirable example of what such a collection should be. Taken together with his finished drawings, it shows that his study of this beautiful old house, Compton Winyates, has been

ough and exhaustive. In making his ey sympathetic and complete he has ised more than any of the other com- tors the special purpose of this prize— . to encourage a comprehensive and ily intelligent study of an ancient build- of importance. The result is that he produced a set of drawings in a manner thy of the interesting example of English itecture he chose to study. I should, ever, draw attention to the fact that the hed drawings consist of mounted tracings ı drawings made on the spot. I think ı a practice is to be strongly deprecated, the reason that tracing-paper, however mounted, is a fragile material of little ıral permanence. Measured drawings of importance may pass into our national ections, such as that at South Kensing- and should be on sound English drawing er."*

r. Horsley also referred to the drawings nitted for the Pugin Studentship, the en Studentship, and the Arthur Cates te.

Henry Miers,

ncipal of the London University, in ing a hearty vote of thanks to the sident for his address, and to Mr. rsley for his criticism, said the President shown himself an artist in words as as in stone, and what he said would no bt sink into the minds of those who heard and have as lasting an effect on them anything they could see in the admirable igns hung on the walls that evening. was glad the President had referred to the ortance of a good all-round education for itects, because, at the University, they that very much at heart, and they hoped r were laying the foundation of a really ng school of architecture in London pired by university traditions and carried on university lines, and they hoped they uld have, in carrying out that school, the ice and assistance of the Institute. They red forward to the co-operation of the titute in building up a strong school of itecture. They were looking forward to e before long a really dignified home for University of London which would bear parison with those other university build- s which grace other cities, and it might that one of the Institute students whose igns were on view might design a really and lasting building for the University London.

Alfred Keogh,

tor of the Imperial College of Science Technology in London, said the ching of architecture had been rather lected in the past, and one rejoiced hear the President say that attempts uld be made in the future for the provement in the education of the ng generation of architectural students. e necessity of improved education was gnised in all professions, and he knew s a good many members of the Institute recently considered the desirability of ing to architects a sounder scientific cation than they received at present. ey knew that efforts had been made by Institute to bring home to architects necessity for an acquaintance with entific work. It was desirable that archi- tural students should have a more close uaintance with the materials which they than they possess now, and attempts been made at the Imperial College to vide something in that direction—inade- ate, no doubt, but it was hoped that in e their efforts would meet with approval. that way, no doubt, the Imperial College uld do something to provide for the ciency of members of the architectural fession. He heartily seconded the vote of nks.

Mr. Hare, Hon. Secretary, put the motion, ich was heartily agreed to, and the Presi- nt replied on his own behalf and for Mr. rsley.

---

*In reference to these remarks, we have heard m Mr. Horsley as follows :—
I am glad to say that Mr. Maxwell informs that the paper is not tracing paper, but a nsparent, tough paper of a permanent racter, called 'English Bank.' I am inclined, wever, to favour the old-fashioned English d-made drawing paper as being the best for portant drawings of this character."

The prizes and studentships were then presented to the successful students. The list of successful competitors appeared in our issue for January 26.

The President announced that the next meeting will be held on February 19, when Mr. E. Warren, F.S.A., will read a paper on "Collegiate Architecture."

The meeting then terminated.

THE ARCHITECTURAL ASSOCIATION:

SECOND SPRING VISIT.

THE second visit of the session was made on Saturday, January 27, to the new building of the Regent-street Polytechnic. Members were met by Mr. G. A. Mitchell, A.R.I.B.A., by whom they were conducted over the building, which is conveniently arranged and fitted for the educational work of the Institution. The new front portion contains two basements, ground floor, and six stories above. The major part of the ground floor consists of an entrance hall 60 ft. square, approached by a well-planned lobby with revolving doors on either hand forming the sides, and ordinary swing doors across the width—not for general use, but for occasions of exceptional pressure. The hall is lined with marble sheeting and has columns of Skyros. At the rear are the stairs and two electric lifts. The basements are occupied by the workshops of the Engineering School, the Physical Laboratory, and the appliances for heating the building, which is accomplished by forced hot water, three sectional boilers (one as a standby) and two circulating pumps accomplishing this with a drop of only 10° on the return mains. The old gymnasium has been dropped one story—what was originally the floor being now the gallery, and the old gallery, floored completely over, now forming a suite of club-rooms easily approached from the hall by the straight lower flight of the main stair. The first floor is mainly administrative, the two succeeding floors contain the classrooms of the Polytechnic Day School, on the fourth floor are the School of Architecture and the School of Photography, while the two top floors are devoted to the art-rooms, the topmost series lighted by a sawtooth roof masked by the lofty slated curb of the front elevation. The building is of steel-frame construction, all riveted, and with ferro-concrete floor slabs averaging 21 ft. by 7 ft. 6 in. It is stated to be the first steel-frame building passed by the London County Council under their General Powers Act, making this system economically available. All this work was carried out by Mr. Mitchell. Descriptive articles have appeared in the *Builder* of November 17, 1911; December 8, 1911; and January 26, 1912.

The external façade is part of a general scheme for the treatment of the whole block, and is due to Mr. F. T. Verity, F.R.I.B.A. A perspective drawing showing the completed scheme was exhibited for inspection, and shows how much the effect will gain when the relatively solid end blocks are added and the columned screen extended. At present it shares the defect of other Regent-street rebuildings—that it is violently out of scale with its surroundings, for which the architects cannot be blamed; it may be hoped, however, that the completion of the scheme may not be delayed until the expiry of adjoining leases—perhaps neo-Greek will not then be fashionable. A detailed consideration of the design at once suggests comparisons with Selfridge's, where a somewhat similar problem arose. The solution, in this instance, though on somewhat similar lines, is in some respects hardly so successful. Half columns always have an air of unreality, and columns which are patently seen to carry nothing still more so. The device by which the main cornice surmounts the attic instead of the Order is a clever piece of design, and the detailing is harmonious, with the possible exception of the metal-screen front. The construction of the lowest stage of this screen in stonework is also a doubtful improvement. Comparisons apart, however, the front is a scholarly design, cohesive as a whole, and never descending to triviality.

THE ROYAL ACADEMY LECTURES ON ARCHITECTURE:

ARCHITECTURAL DRAWING.

PROFESSOR R. T. BLOMFIELD, A.R.A., delivered the first of his Royal Academy lectures on Monday, taking as his subject "Architectural Drawing and Illustration, and dealing in the subsequent part of his lecture with Villard de Honnecourt.

In the course of his remarks Professor Blomfield said he proposed to talk about architectural drawing, to endeavour to disentangle the ideals to be aimed at in such drawing and the point of view from which it should be approached. He intended to enlarge the scope of our conception of architectural drawing by tracing its development in the past and by reviewing the work of certain great masters of the art. Though we could not help noting the work of contemporaries, it was not here that we should search for our touchstone of criticism, but in the achievements of men long since dead. Fashion had so much to do with current reputations that the only safe standard to judge by was that set by the men who had long been recognised by competent judges as past-masters of their art. The verdict of time was seldom wrong, and students—at any rate, in their training—would be wise to take as their masters only those artists whose reputation had stood the test of time, and to regard with an open mind and even suspend judgment on methods and models that were still in the melting-pot. They must in selecting their models fortify their judgment by history and by the study and analysis of old work. A good deal of caution was wise in appreciating the progress of contemporary draughtsmanship. Was it better than the work of fifty years ago? Were our line-and-wash drawings up to the standard of Girtin? Was there any living draughtsman who could use his pen and his blot as Piranesi did in his lightning improvisations? One could safely say there were no such draughtsmen now. But if one shifted the standard, if one compared modern drawing or modern architecture with what was accepted as such in England fifty years ago, he did not doubt that there was a marked improvement. The architecture, and with it the draughtsmanship, of the middle of the XIXth century was founded on no solid basis of inheritance; it sprang out of nothing in history, and it had ended in nothing, except that, as a reaction against this unprofitable emptiness, artists had gone back to earlier traditions. In recent years they had attached themselves more particularly to the French tradition of draughtsmanship, which in the last twenty years had overrun this country and America. Fine as that tradition was, it was by no means the complete and only standard of architectural draughtsmanship. Far from it; it was itself only a very dexterous convention which attained its perfection by eliminating half the problem. We must go much further afield than this if we were to understand the whole gamut of notes on which a really great architectural draughtsman can play. Generally the object of architectural drawing was the representation of architecture. It did not include for the purpose of this study the architectural background of pictures, but in this connexion he called the attention of students in painting to the necessity of the serious study of architecture as an essential part of their training for decorative painting.

A difference presented itself in architectural drawings according to the intention with which they were made. This intention might be either objective or subjective; that was, the intention of the draughtsman might be either to make drawings which could be carried out in building by other hands exactly as drawn, or he might wish to produce in somebody else's mind the impression of the building as a whole as he conceives it, or he might employ architectural forms as the symbols and embodiments of some abstract idea, the imagery of a world which never has existed in fact and never can. In the first case he would proceed by geometrical drawings; in the second and third by perspective representation with such accessories as skiography, etc., as might be necessary to drive home his ideas. There

were two essential conditions of geometrical drawings: they should be perfectly accurate and they should be perfectly clear. The ultimate intention of these geometrical drawings is their translation into stone, bricks, and mortar by a builder who, except for the drawings and the specification, was ignorant of what was in the designer's mind. One could not help wondering what must be the inner thoughts of experienced builders when they came face to face with some of the drawings with which they had to deal.

As to drawings being perfectly clear, he regretted to say that certain vicious tendencies in architectural drawings had appeared in recent years, notably the use of a very thick line and the use of a very thick line in connexion with a much thinner line. The use of the thick line was due, he believed, to the mediæval proclivities of William Burges, a fine draughtsman spoilt by his fondness for mummery and posing. Burges deliberately copied the methods of mediæval draughtsmen, with the result that what should have been studies of fact became mere exercises in style.

The second, and possibly even more injurious, use of the thick line and the thin line had originated in competitions. In a room full of drawings by different designers competitors had feared that their drawings would be overlooked unless some strong insistent line shouted its existence at the spectator. With variations of line not only were all the refinements and subtleties of architecture lost, but the breadth of effect goes too. Nor did he believe that it made any but an unfavourable impression on an assessor who knew his business, and who, of course, read the elevation by the plan and section. As to the builder, the effect of such methods of drawing must be simply paralysing. Line should be finely drawn, uniform in thickness, sufficient to express neither more nor less than the architectural features intended. They should have thought out exactly what they wanted before they put their final line to paper, for line so drawn became a part of business of serious importance, as careless architects had found to their cost when the damning evidence of an ill-considered line stared them in the face in their contract drawings.

He warned them against a common abuse of skiography, which he noticed in the work of many students, and that was the habit of projecting violent shadows over every part of the plan. The result was that the drawings were illegible. Besides making the plan unreadable, it also made it very ugly. In their geometrical drawings they would do well to eschew all such tricks and devices and be content to do a plain thing in a plain way.

The situation was almost reversed when we came to the second function of architectural drawing, that of producing in the mind of another the impression of an architectural idea. We were not concerned here with a bare and literal statement of facts. The impression aimed at was a complex one; that was, the draughtsman aimed at producing the impression not only of certain abstract forms of architecture, but of those forms as a whole, and as a whole considered in relation to its placing on the site, its environment of sky and landscape, even the intention of the building, all subjective matters, incapable of literal translation into fact, but scarcely less important than data given by the working drawings in the building up of the total impression to be conveyed to another mind. The line that in the geometrical drawing had to be hard and precise, now became sensitive, even tentative, feeling its way and clinging on to the idea, as it were, in order to suggest it in all its multifarious complexity. Absolute accuracy of detail was less important here than accuracy in the statement as a whole.

As to the third class of subjects, *i.e.*, the use of architectural forms for the expression of abstract ideas, the draughtsman was to all intents the free artist, with no limits to hamper him but those of his knowledge and imagination.

Having referred to the subject of isometrical projection, the lecturer proceeded to trace the development of architectural drawing and illustration. He referred to the scarcity of working drawings in the Middle Ages, and gave reasons for thinking that no system of preparing such drawings existed, at any rate, in the earlier part of that period. After referring to one or two rare examples, the lecturer went on to describe the work of Villard de Honnecourt, pointing out their value on the one hand and their limitations on the other, and calling attention to the wide difference of conditions under which buildings were carried out in the Middle Ages and the Renaissance as the real reason why architectural draughtsmanship, which had little or no place in mediæval times, became and remains an absolute necessity in neo-Classic architecture.

SOME DRAUGHTSMEN OF THE XVITH CENTURY.

In his second lecture Professor Blomfield said that architectural drawing as we understand it really dates from the earlier days of the Italian Renaissance. He did not know if there were any drawings of Alberti in existence, but there were drawings by Bramante and a considerable number of drawings by Giuliano da San Gallo, his brother Antonio, his son Antonio, Peruzzi, and others. There were also the painters Mantegna, Carlo Crivelli, Pintoricchio, Ghirlandajo, and others, who used architecture very freely in their compositions, and with obvious enjoyment in its design. The architecture in the background of their pictures was beautifully conceived, for these artists of the Renaissance were enthusiasts for the new architecture that scholars were discovering for them from the remains of ancient Rome, and their ingenuous minds were fascinated by experiments with the newly-formulated rules of perspective. These painters realised in a way that had been forgotten in modern times that the arts, though separate, were also related, and that the artist should be alive to beauty in every art and in other arts than his own. They simply would not have understood the point of view of the modern painter, who in his own heart did not believe that architecture was an art at all.

Villard de Honnecourt was an accomplished artist in his way, yet hardly, except in a summary and rudimentary manner, an architectural draughtsman. From internal evidence he (the lecturer) took it that Villard de Honnecourt was wandering about France with his sketch-book early in the XIVth century. After him we draw the Middle Ages blank, with unimportant German exceptions at the end of the XVth century. Indeed, one might say with the most complete probability that architectural draughtsmanship did not exist, the necessity for it not having as yet arisen in the practice of architecture. But meanwhile in Italy there had come about that astonishing outburst of intellectual activity which we call quite vaguely the Renaissance. The mere indications adequate in mediæval architecture were useless when designers wished to build in a manner unknown to the ordinary workman. More than that, the designer had to master that manner himself by unremitting study of the innumerable fragments of ancient architecture still left in Italy. It was owing to the emancipation of the individual and to the radical change in the aims and methods of architecture that architectural draughtsmanship came into existence. It was essentially a modern art, the complement of methods of architecture and archæology which were undreamt of in the Middle Ages.

The lecturer then referred to the album of drawings by San Gallo in the Barberini Library at Rome, the drawings, seventy-six in number, being made in pen and ink on sheepskin sheets. Some of the earlier drawings were crude, and San Gallo never drew the figure well, but in many of the drawings the profiles were firm and unfaltering and the details were drawn with clearness and precision. Here one got for the first time the method of drawing architectural details which became general in printed books of architecture of the following century, and in its directness of statement and scholarly selection of essential features this was in some respects a model for technical book illustration. But San Gallo was destitute of that imaginative insight which made some architects' sketches so delightfully suggestive and personal.

Bramante had nine characteristic drawings at the Uffizi, but the work that showed most clearly his power as an architectural draughtsman was the magnificent engraving in the British Museum representing the interior of a Temple Hall. It was a strange drawing, but it showed a rare faculty of chastened architectural design and a technique based on that of his master, Andrea Mantegna, and scarcely inferior to the work of that incomparable artist. San Gallo father and son, and Bramante and his pupil might be taken as the founders of architectural drawing, and their drawings as compared with the work of later draughtsmen had an almost archaic purity of line. Bramante's powers, both as designer and draughtsman, were beyond question, but Peruzzi, his pupil and assistant, and the greatest of the Renaissance architects, went more to the root of the matter in the drawings which he made for Bramante. Peruzzi and Antonio da San Gallo the younger possessed extraordinary freedom of drawing in pen and ink.

At the beginning of the XVIth century a fresh factor of vast possibilities appeared in the printed and illustrated books of architecture. The draughtsmanship here exhibited was at first and for many years a very humble affair, and it seemed surprising, after Bramante's magnificent engraving, that the early editions of Vitruvius should have been illustrated as crudely as they were. The first genuine advance in architectural illustration seemed to have been made by Serlio in his "Architettura." He was not a fine draughtsman in any sense, but he followed Giuliano da San Gallo in the critical spirit, and the anxiety to get at the facts with which he applied himself to the study and presentation of architecture.

Palladio was an accomplished draughtsman, and his design for the completion of St. Petronio at Bologna was beautifully drawn. Good man as he was, he was content, however, with rather cheap and easy attainments—stones instead of masonry in his architecture, conventions instead of searching study in his drawings.

As to De l'Orme, he was an artist of much ability and energy, but uncertain in taste and a somewhat unscrupulous poacher, and he referred to him more on account of the historical interest of his illustrations than for their value as drawings.

The next advance in architectural drawing was due to Du Cerceau, that indefatigable draughtsman who spent his life in turning out worthless architectural fancies and fragments that did more harm than good, and also in making views of the great houses of France, which were of inestimable value. He had little genuine sense of architecture, but the work he did in his "Plus Excellents Monuments" was quite admirable in its way and of the highest value to the historical student. He had at his command a line of unfaltering precision. He could, if he wished, draw almost anything. On the other hand, there was little trace of any imagination reaching beyond the subject such as we found in the thumb-nail sketches of Peruzzi and the younger San Gallo. His drawings were very clear and of scientific accuracy, but they left one cold. Du Cerceau seemed to be intensely honest in his drawings of buildings and the exact opposite in his fancy designs, and it was on the former that his enduring reputation rests. The other half of his work raised the whole question of the draughtsman-designer—that was of the man who sat at his drawing-board and turned out design after design without the least regard to materials and to the conditions of their realisation in fact. There was an unwholesome growth of such men at the end of the XVIth century.

These men were the forerunners of the much more considerable draughtsmen of the XVIIth century. They were all members of the same family, industrious builders of "Châteaux d'Espagne," indefatigable and unprofitable designers in the air. It was possible they might suggest ideas; personally, when looking through these books of design, from Du Cerceau to Oppenord, I had never found the thing he wanted. Others appeared not to have found it so, judging from the abundance of these books of design in the XVIIth and XVIIIth centuries. Yet it seemed almost impossible that

a design thought out from end to end, a sign that aimed at unity of effect, these bbets from another mind could be rightly similated; they could only result, not in hitecture, but in a compilation of archi- tural detail without meaning or cohesion. he draughtsman's line showed the expres- on of first-hand knowledge, its means of nveyance to other minds and other hands; d unless there is this knowledge behind awing, inspiring and controlling it, the sult would be disastrous. Because con- ruction is of essential importance in archi- ctural design, men had been tempted to say at draughtsmanship did not matter, and at, he believed, was a mistake, for the chitect's business was not merely to state e facts of construction in his building, but had to state them in a form that was autiful.

BOOKS.

he Story of Ford Abbey. By SIDNEY HEATH. (Francis Griffiths. 10s. 6d.)

ORD ABBEY, Dorset, has a history dating om the XIIth century, and the story is not ithout architectural interest. The details f ecclesiastical routine, with the duties of the arious officers connected with this and other onastic establishments, are outside our here, but there is much in this book other- ise which attracts attention. After the issolution the building passed through arious hands, and in 1649 belonged to Sir dmund Prideaux, who employed Inigo Jones improve it. This he did to some extent, nd would have done more but for his death 1652. Mr. Heath is satisfied that the death f the restorer was of benefit to the building.

It was Jones's intention to convert the whole f this fine Gothic house into a classical one, ut his death interfered with this project, and is probable that had not this event taken lace, there would be little to see to-day of he wonderful structure erected by its last bbot (Thomas Chard). It is only fair to dd that internally the house was much improved and highly embellished, making it one of the most magnificently appointed houses in the country."

The building seems to be in good hands at present, and with its tapestries and other works of art it is worthy of a pilgrimage. Mr. Heath's serviceable monograph includes a plan, with reproductions of photographs and pen drawings.

The Life of James McNeill Whistler. By E. R. and J. PENNELL. New and Revised Edition (the fifth). (London: William Heinemann. 1911. 12s. 6d. net.)

IN the new edition of this work Mrs. and Mr. Pennell have taken the opportunity of adding numerous little touches to their life portrait of Whistler, touches that have all been carefully studied with the single aim of adding vividness to the realisation of the artist as he lived. Few biographers have been so fortunately placed in regard to their relationship to their subject. An intimate knowledge of the circle in which Whistler's later years were spent and a keenly sympathetic attitude towards his art are but two of their many qualifications.

Some day we may hope to see this picture of the artist's personality supplemented by another work on the development of his art. Probably the time for this is not yet, and our authors in this case feel, in their admiration of the consummate quality in Whistler's work, that it would be an impertinence to attempt any such philosophic appreciation as that we have hinted at. What the painter himself would have thought of such an attempt one may guess fairly easily, but sooner or later it will be made, and when it is we trust it will be at the hand of one who can devote to it the same sympathetic and faithful study that the book before us gives to the events of Whistler's life and the development of his strikingly individual and brilliant personal characteristics. No book on Whistler could be dull; but this, which has reached its fifth edition within three years, is packed with bright things and entertaining anecdote. Perhaps it would have been difficult to mingle the story of his artistic development with these, and those works of his which are reproduced are therefore left to tell their own tale with merely an added date.

Costumes, Traditions, and Songs of Savoy. By ESTELLA CANZIANI. (London: Chatto & Windus. 1911. 4to. 1*l.* 1s. net.)

THIS work is a striking example of colour printing, and is, in other respects, remarkably well produced, reflecting in these respects great credit on all concerned. It is difficult to see how it can be issued at the low price of 1*l.* 1s.

It is the outcome of an intimate study of the life and scenery of the little-known mountain districts of Savoy, which must have occupied Miss Canziani's energies over an extended period. The drawings of national costume and characteristic personal ornaments are of quite exceptional interest to the artist, while the racy descriptions of peasant life and customs will hold the attention of the general reader. In landscape the method of handling does not lend itself quite so well to reproduction as in the figure studies. The best of these latter are the larger-scale drawings, showing head-dress and bodice, in some of which the heads are remarkably finely characterised.

No one who has not been over the ground covered by Miss Canziani could realise the extraordinary variety of very decorative costume to be found in this out-of-the-world province. At the present day, when all European dress is so rapidly conforming to uniformity, it is refreshing to find one district at least where the traditional garb is still in vogue. It is to be hoped that Savoy may continue to keep up its distinctive national traits, but, in any case, we must feel our indebtedness to this work for putting on record so much that is interesting in this somewhat neglected corner of Europe. It is obvious that few could have done such a service in the intimate fashion that Miss Canziani's gifts in draughtsmanship and linguistic attainments have enabled her to do, and congratulation is due to her in that she has employed her talents to such good purpose.

The Local Government Annual and Official Directory for 1912. (27A, Farringdon-street, London, E.C. Price 1s. 6d.)

THE twenty-first annual issue of this compact and useful compilation is just published. The main portion of the book is devoted to the directory, which gives the names and addresses of the chief officials of all corporations, London borough councils, county councils, boards of guardians, urban and rural district councils, county and borough asylums, etc., throughout the kingdom, as well as a list of the City companies of London. In addition will be found the names of the members and officials of the Port of London Authority.

Besides the directory, there is much information relating to baths and washhouses, and electric light undertakings in the boroughs of London, and an abstract of the local government legislation of 1908 will be found. The work contains a list of all the parks and open spaces of the metropolis, with the local authorities controlling them.

Ceiling, Ford Abbey.
(By permission of Mr. Francis Griffiths.)

THE INSTITUTE OF SANITARY ENGINEERS.

On Monday, February 12, at the Royal United Service Institution at eight o'clock, Mr. Edward White, Chairman of the London County Council, will take the chair at a meeting of the Institute of Sanitary Engineers, when the question of "Hospitals and Sanitoria and Their Relation to Tuberculosis" will be under discussion. Dr. F. C. Davies, Medical Officer of Battersea Tuberculosis Dispensary, will read a paper dealing with the history of the infectivity idea in relation to tuberculosis and its results in the modern attitude of public health authorities towards its treatment, and Mr. A. Alban H. Scott will deal with the question of the planning and designing of modern hospitals and sanitoria on the lines to meet the requirements of the medical profession at a cost suitable for both private and national sanitoria.

THE CARPENTERS' HALL LECTURES:

LONDON AS AN ARCHITECTURAL SYLLABUS.

THE second of the present series of Carpenters' Hall Lectures on the "Arts Connected with Building," was delivered in Carpenters' Hall, London-wall, on Wednesday last week, by Professor Beresford Pite, Mr. Percy Preston presiding.

Professor Pite, the subject of whose lecture was "London as an Architectural Syllabus," said he thought it would be useful if we attempted to classify our ideas of the buildings of London with which we have to live. Nearly everybody had opinions on the subject, but public opinion on London architecture was, to say the least, confused, and in order to offer an opinion on architecture one had to rely upon some sort of principles. In artistic matters principles were things which were very easy to invent to meet the particular needs of the moment, though there were a great many sane principles in common use which were only imperfectly understood and improperly applied, and there was the danger. As a general rule, architectural text-books which took the architecture of the whole human family from its earliest day down to the present, and codified the buildings of mankind, with styles and dates of buildings, were of little value in dealing with current criticism of London buildings. He did not pretend to attempt to deal with the whole problem, but his lecture had underlying it the idea that London had in itself the material for providing a useful architectural syllabus of opinion, of doctrine, and of criticism, so that it was not necessary to travel in Italy or Greece, or to absorb an encyclopædia, or to pass an examination conducted by the Royal Institute of British Architects in order to know the character and value of the buildings by which we are surrounded.

Architectural design could be described as a matter of detail. It was detail which mattered in architecture, and there was small scope in the practice of architecture and building for the novel application of old principles or the discovery of new. He ventured to suggest that the moment was somewhat opportune for seeking to elicit public interest in the architecture of London. In recent years there had been a considerable growth of public interest in architectural matters, and quite recently—in fact, the most recent event which had happened in the architectural world, and an event of the very greatest importance—was the publication by the Government of a new plan for the improvement of access by the great arterial roads to and around London. That very important plan, recently published by the Traffic Department of the Board of Trade, carried the development of London very much further than any similar event in the lifetime of anyone there. As we looked at this very important scheme and considered the effect of these great roads we got face to face at once with the important relation of roads to buildings—what should be the direction of approach, what should be the effect aimed at in an important public thoroughfare from the point of view of beauty? The link between the traffic plan, the road plan, to the architectural approach was very close.

He would suggest at once that we have a real architectural syllabus as architects and builders provided by law, and that there is a limit set which entirely governs our proceedings and designs, and which, in a sort of subconscious way, gave architectural results—*i.e.*, the London Building Act of 1895, which deals, amongst other things, with the formation of streets, open spaces about and height of buildings, an architectural implication underlying each of these matters. Then we came to the structure and the thickness of walls, to rules for recesses and openings, as to height, of roofs and angles, dormer windows and chimneys, staircases and projections; in fact, we could not create an architectural design without dealing with every one of these items, and in every case the law gave distinctive rules. With regard to projections, for instance, the law specified that:—

"Every coping, cornice, string-course, facia, window-dressing, portico, porch, balcony, verandah, balustrade, outside landing, outside stairs and outside steps, and architectural projection or decoration whatsoever, and also the eaves, barge-boards, and cornices to any overhanging roof except the cornices and dressings to the window fronts of shops and except the eaves, barge-boards, and cornices to detached and semi-detached houses, and to other dwelling-houses in which the party-walls are corbelled out so as to project 4 in. beyond such eaves, barge-boards, or cornices, shall be of brick, stone, tile, artificial stone, slate, cement, or other fireproof material.

Every balcony, cornice, or other projection shall be tailed into the wall of the building, and weighted or tied down to the satisfaction of the District Surveyor, and no cornice shall exceed in projection 2 ft. 6 in. over the public way."

It was this Act that every architect and every building designer came up against whenever he attempted to design buildings in London, and there was an effective syllabus in regard to all those particulars. In consequence of this Act it would be quite impossible to build in the London streets structures like the Strozzi or Farnese palaces because of their projections; we have our wings clipped and we were confined to somewhat narrow limits. The Act would prohibit any such delightful group as that which still stands in Holborn, in Staple Inn, and every architect inspired with brilliant ideas had, after surmounting the difficulties of cost and the client's instructions, to bring everything before that benevolent tyrant, the District Surveyor, who applies the law, and the unbenevolent adjoining owner's surveyor. Visions of beautiful windows, the freshness in city life gained by shadowed eaves, as at Ipswich, of quaint half-timber work like that at Middle-row, or of soaring majesty—such as the New York skyscrapers—were quite impossible, and that half-timber work, so fascinating to the artist, was entirely prohibited. The District Surveyor, whom we love for his conscientious faithfulness, "cut all the patter" and applied the law. But the fact was that this beneficent enemy of jerry-building became a very ogre when one dealt with beauty, and could only refer one to the dreadful syllabus and to the necessity of applying to the County Council for any exceptions to certain of its provisions. There was incessant friction and conflict. He was not drawing any imaginary picture, for modern architecture in London had been a process of incessant conflict and friction between the ambitions of the designers and the stipulations of the law, and it would be an interesting investigation in the future to discern and illustrate the underlying legal obligations and the incessant resistance to them of artistic sentiment—of an artistic sentiment extraordinarily manifest—in all XIXth-century work—which this Act had created. In fact, among the arts and crafts work of modern times had to be inserted, this new art and craft of evading the building law.

There was the conflict of other doctrines from which we might derive a syllabus—the syllabus of taste which reflects current culture, or the social conditions reflected in our buildings; but the constructional syllabus ruled. The social syllabus, portraying growth of luxury and wealth with amenity, began with the day when the merchant lived over his counting-house in the City, and progressed to the time when he migrated to the aristocratic districts of Bloomsbury-square and Lincoln's Inn. Another generation passed and the social centre shifted to the stucco mansions of Belgravia, the artistic brotherhood flits to the hilltops of Hampstead and flatland, and finally, in our own time, the advent of the motor-car is turning London into a garage and a restaurant. London is itself a museum of any number of different influences from which we could construct a social as well as a constructional syllabus.

There was a certain topsy-turveydom in applying an architectural syllabus to London in the ordinary way, because neither Byzantium, Greece, or Rome apply to us. Such a syllabus was only apparently historical; it was not really so; it was superficial in the sense of its being concerned with the æsthetic idea, not with the real architectural fact. He could find a Greek building in London in the British Museum, and he could find Roman and Italian buildings, but they were imitations, and they did not hold a proper architectural place in the syllabus; while he would suggest an architectural syllabus which was constructional as well as historical.

In order to give a rough idea of what he meant by the constructional syllabus he would rapidly run through, on the one hand, the constructional development of London, and if they put on the other hand the historical development of London, between the two he hoped they would find the guidance needed. Constructionally, the first London—the first element in the syllabus, was the London of wattle and mud. The first stage was soon passed, and we came to the second period—*i.e.* to rubble London, when walls were of rubble stone with a large amount of crude mortar. This rubble London was Gothic London. Mediæval London, the London of the Tower and cathedrals. Rubble London—rubbish-built London—was followed by wooden-framed London, which lasted all through the Middle Ages well into Queen Elizabeth's time. Henry VIII. had a great wooden palace, Nonsuch, on the south side of the river near Twickenham, and Queen Elizabeth had left behind, at Staple Inn, those well-known wooden fronts. Wooden-framed London was wiped out by the Great Fire of 1666, and we were brought to the fourth item in the syllabus—*i.e.*, brick London, post-1666, covering the Carolean period and Queen Anne. This London had to be associated with stone dressings, stone ornament, and the treatment of the stonework in connexion with the brickwork was different from the treatment of the stonework when it was in connexion with rubble masonry; it became finer and more interesting—it became, in fact, masonry of a fine order, so that we were shortly face to face with the next phase—*i.e.*, Portland-stone London, when it was felt that all architectural dignity lay in a finely-finished, smooth-faced stone wall. To this period belonged St. Paul's Cathedral, and at a later date Somerset House, and around and between them we could group all the fine buildings of the period, finding them universally faced with Portland stone. Stucco London followed—very large and in many ways interesting, but stucco for all that. It was the architecture of the Regency and the material of Carlton House-terrace. We were getting near our own time, and one felt a lingering sympathy with the stucco movement still. And finally we came to the last item of the syllabus—*i.e.*, Building Act London, or modern London. He must not omit as an important element in Building Act London what he ought to call *post*-cholera London—sanitary London, and he did not think he was far wrong in saying that the greatest interest of modern London to future ages would be the drainage system and the remarkably beautiful plumbing and drain-laying in lasting materials.

The lecturer then showed a large number of lantern slides of London buildings in illustration of his remarks, and of the different periods referred to, and, in conclusion, he said the constructional syllabus still held, but it was changing and altering with the advent of ferro-concrete, and we might be on the eve of new changes. He ventured to hope that our accidental inspirations might not come to an end, that our love for the study of antique architecture would still flourish, but that there would still remain among us those characteristics of the English school which had made the XIXth century so important in its freedom and originality in dealing with building. London had nothing at the present time to fear from a comparison with Continental capitals, although Berlin is making very rapid strides after us. The law of construction was all that could be defined, and let artistic liberty have as much freedom and as much money as could possibly be allowed it.

On the motion of the Chairman, a hearty vote of thanks was accorded to the lecturer

ALEXANDER THOMSON TRAVELLING STUDENTSHIP.

THIS Studentship, which is awarded triennially and is of the value of 60*l.*, has this year been awarded to Mr. Jas. Bennet. The subject on this occasion was a design for a bridge, and in addition studies of the Orders and from the antique were asked for in terms of the conditions governing the competition, of which the Glasgow Institute of Architects are the trustees. Only three competitors sent in drawings for the prize; but it is gratifying to know that the work of the winner is good enough to have won against a larger number. Mr. Bennet's design is the only one that at all conforms to the general conditions governing the competition, which requires work based on the principles so ably exploited by the late Alexander Thomson, and is a very well conceived design shown by admirable drawings. He has adopted a steel construction with

posed lattice girders, these latter, perhaps, ther lacking in depth for their span, sup- rted by quasi-Doric columns flanking piers, whole in five spans with quarter circle onnades and pylons at either end. The rspective view, though a river drawing, rely does justice to the design as it phasises the comparative lowness of the ns.

The other two competitors, while showing ne good studies, are lacking in a grasp the essentials of the problem. One of m has devoted much more time and ought to designing the buildings to which e bridge might form an approach than to e bridge itself, and the other has been led ay in an attempt to emphasise the piers the bridge, and has divided his bridge the ends by twin arches which might be ry convenient for controlling traffic, but is scarcely a monumental treatment of a adway. Both have adopted a free Renais- nce treatment, which, as mentioned, does t conform to the general conditions.

GENERAL NEWS.

Professional Announcement.

The partnership which has existed for ny years between Mr. Keith D. Young, R.I.B.A., and Mr. Henry Hall, F.R.I.B.A., s been dissolved as from December 31, 11, owing to the retirement from practice account of serious ill-health of Mr. Hall. s from January 1, 1912, Mr. Young has ken into partnership Mr. Alner Wilson all, A.R.I.B.A., the son of Mr. Henry all, who was articled to Mr. Young, and me time ago qualified himself by examina- on as an Associate of the Royal Institute British Architects. The name of the m, therefore, will not be changed.

New Australian Offices.

It is stated that Mr. A. Marshall Mac- enzie, A.R.S.A., architect of the new arischal College at Aberdeen, has been lected by the Australian Government to esign the new offices of the Commonwealth Kingsway.

nternational Archæological Congress, Rome.

The third meeting of the International ongress will be held in Rome, on October 9- 5. Amongst the sections are those for pre- storical, Oriental, Early Hellenic, and truscan, and Italian archæology; Greek and oman antiquities; the history of classical t; ancient topography; Christian archæ- ogy; and the organisation of archæological ork. Letters and inquiries will be received y the General Secretary of the Ordinary ommittee, Professor Lucio Mazini, Direzi- ne-Generale di Antichita e Belle Arti, iazza Venezia, 11, Rome.

Mr. Pierpont Morgan's Art Collection.

The Board of Education announce that the radual withdrawal by Mr. Pierpont Morgan f the collection exhibited by his kind per- ission on loan at the Victoria and Albert Iuseum began with the removal of ne enamels on Monday, February 5. No efinite arrangements for the withdrawal of ny other part of the collection have as yet een made, but it is anticipated that the ext portion to be removed will be the ollection of silversmiths' work.

The London Society.

A proposal has been made to establish a ociety under this title with the object of dvancing the practical improvement and rtistic development of London, and a pre- minary meeting will be held at the alleries of the Royal Society of British rtists, Suffolk-street, W., at 8 p.m., on the th inst., with a view to its inception. Sir aston Webb, C.B., C.V.O., R.A., has romised to preside.

Designs for Mural Painting.

The Committee, of which Mr. D. S. facColl is Chairman and Mr. Charles Aitken nd Mr. Wilfrid Walter as joint Hon. ecretaries, formed to promote the practice f mural painting in schools, churches, hos- itals, and other public institutions, more specially by young artists and students, will hold a competitive exhibition of designs at Crosby Hall, Chelsea, in the latter part of May.

R.'s Method of Perspectives.

Mr. Roberts, author of R.'s Method of Perspectives, is again showing and demonstrating his method to London architects. He has developed his original idea of perspective-squared paper, new points, etc., making the diagrams useful not only for making finished perspectives, but for rapidly roughing-out any details to scale in perspective. Mr. Roberts is willing to demonstrate his method during his year's stay in London, and appointments can be made through his home address, 51, London-road, Ipswich.

The Rougemont Estate, Exeter.

This estate has just been sold, and passes into private ownership again. Portions of the city and castle walls of Exeter are within the boundaries of the estate.

The Florentine Academy of Arts.

The Florentine Academy of Arts has conferred the distinction of Honorary Academician on Count Plunkett, Hon.A.R.I.B.A.

COMPETITION NEWS.

Stafford Public Library.

We are advised that the assessor, Mr. H. T. Hare, F.R.I.B.A., made his award yesterday (Thursday). We hope to announce the result in our issue of next week.

East Sussex Hospital, Hastings.

The premiums in this competition were 125*l*., 75*l*., and 50*l*. Mr. Edwin T. Hall, F.R.I.B.A., has now given his award, which is as follows:—First premiated design, Messrs. John Saxon Snell & Stanley M. Spoor, 37, Maida-vale, London, W.; second premiated design, Messrs. C. K. & T. C. Mayor, 41, John Dalton-street, Manchester; third premiated design, Messrs. Adams & Holden, 28, Woburn-place, Russell-square, W.C. The designs are to be exhibited at the Drill Hall, Middle-street, Hastings, from February 13 to 15.

The public exhibition of designs is, by request, to be extended to Saturday, the 17th (five days in all). The hours will be from ten to five, and on the last day (Saturday) from ten to seven. The change is made for those who may only be free at the end of the week.

Scottish National Memorial to His Late Majesty King Edward VII.

It has been decided that this memorial is to be placed in Edinburgh, and, subject to the approval of his Majesty King George V., it is to be associated with the Palace of Holyrood in the form of a suitable memorial erected in or near the Palace grounds, with appropriate public accesses. The Committee, some weeks ago, resolved that a number of architects in Scotland should be invited to send designs for the proposed memorial, and the following gentlemen have accepted the invitation, viz.:—Sir Robert S. Lorimer, A.R.S.A., F.R.I.B.A., Edinburgh; Mr. G. Washington Browne, R.S.A., Edinburgh; Mr. Hippolyte J. Blanc, R.S.A., F.R.I.B.A., Edinburgh; Mr. John J. Burnet, LL.D., F.R.I.B.A., Glasgow; Mr. Henry E. Clifford, F.R.I.B.A., Glasgow; and Mr. Robert J. Macbeth, F.R.I.B.A., Inverness. It is left to competitors to suggest a site in the neighbourhood of Holyrood, and also the form that the memorial may take, but it is desirable that it should include a statue or other personal representation of his late Majesty. The designs submitted are to be illustrated by a model and drawings, and these are to be lodged with the Town Clerk by March 30 next.

CORRESPONDENCE.

The Bonâ-Fides of the Competitors for the R.I.B.A. Studentship.

SIR,—Many will have read with interest and pleasure your remarks last week concerning the bona-fides of the competitors for the R.I.B.A. Studentships.

As regards the question raised at the meeting to which you refer I know nothing, but you are right in your conjecture that this is not a case of isolated discontent.

Some of the students at South Kensington are members of the architectural profession, taking a course of study at the Royal College of Art, and no exception can be taken to their entering as competitors so long as the designs, etc., sent in, are entirely their own. But it is common knowledge that the Owen Jones prize has, in the past, been awarded to men who were not in and had no intention of entering the profession.

Under such circumstances one is justified in saying that the matter is one that does concern the welfare of our art.

No one will grudge an artist any prize he may wrest from this philistinic world, but the Owen Jones was founded for the study of architecture, "more particularly in relation to ornament and colour decoration," and was to be open to members of the architectural profession.

Would it not be better for the welfare of architecture as an art, and even for the art students and artists whom I propose to exclude, if the competition were restricted entirely to architects or students intending to become such?

For not until architects in general have a much finer appreciation of colour and its possibilities in relation to architecture than they have at present will much progress be made, and not till then will mural painters, artists, and craftsmen receive at the hands of our profession the recognition they deserve.

An important prize such as is the Owen Jones, reserved strictly for competition among architectural students only, would do much to further the study of colour and ornament among many who now, perhaps, feel that it is hopeless to compete against craftsmen who have trained and specialised in their subject for years. Wider interest would be aroused and many more entries result. Also, whether the splendid scheme with regard to the greater coherence of the competitors outlined in your leading article, is adopted or not, should not, in the particular case of the Owen Jones prize, far more attention be directed to complete schemes of colour, decoration, and ornament, in relation to architecture, instead of the fragmentary contributions—copies of isolated pieces of wall-paintings, mosaics, and stained glass, that usually receive the award?

H. S. FLEMING, A.R.I.B.A.

The Crystal Palace and the National Folk Museum.

SIR,—Will you kindly correct a "slip" which has occurred among your "Notes" this week.

I am one of the promoters of the scheme for a Folk Museum at the Crystal Palace, and I am the present Director of the National Museum of Ireland. Colonel Plunkett, formerly Director of the Dublin Museum, wrote lately in the *Times* in support of the Folk Museum project, and the writer of your "Notes" has—perhaps with some excuse—substituted my name for Colonel Plunkett's.

G. N. COUNT PLUNKETT.

[We have received a letter *re* the "Policy of the R.I.B.A." from "A Reader," but with no name or address. We shall be pleased to print the letter if "A Reader" will communicate with us.]

INTERCOMMUNICATION COLUMN.

Damp Plaster Wall.

SIR,—Could any of your readers inform me of the best way of treating the inside face of a very bad, damp (plastered) wall so that it will stand paint well? Q. S.

"Rotting of Floors."

SIR,—To prevent floors rotting under lino, sprinkle a layer of fine sand on the floor before laying the linoleum. This forms a minute air space and also absorbs any moisture that penetrates through the lino. Your correspondent is quite correct—it is the washing of the floor and the soaking of the water through the linoleum which causes the injury.

KERNER-GREENWOOD & CO.

EDITORIAL SUMMARY.

The leading article is entitled "Skeleton-Frame Buildings," and in the course of our comments on the regulations made by the London County Council we refer to some proposals of the District Surveyors' Association.

Notes (p. 142) include comments on: "The R.A. Lectures on Sculpture"; "Hints to Students"; "Dry Rot in Church Buildings"; "The R.I.B.A. Meeting-Room"; "The Institute Gold Medallist"; "Over-Elaboration of Plans."

A meeting of the R.I.B.A. was held on Monday, when the President delivered an address to students and Mr. Gerald Horsley made some criticisms on the designs submitted for the prizes and studentships. See p. 144.

The second Spring Visit of the Architectural Association this session took place on January 27, to the Regent-street Polytechnic. Some particulars of the visit appear on p. 147.

Professor R. T. Blomfield, A.R.A., delivered the first of his Royal Academy lectures on "Architecture" on Monday, taking as his subject "Architectural Drawing and Illustration," and dealing in the subsequent part of his lecture with Villard de Honnecourt. The second lecture was delivered on Thursday on "Some Draughtsmen of the XVIth Century." See p. 147.

Book Reviews (p. 149) include: "The Story of Ford Abbey"; "The Life of James McNeill Whistler"; "Costumes, Traditions, and Songs of Savoy"; "The Local Government Annual and Official Directory."

The second of the series of Carpenters' Hall Lectures on the "Arts Connected with Building" was delivered by Professor Beresford Pite on the 31st ult., the subject being "London: an Architectural Syllabus." Our report appears on p. 150.

The Alexander Thomson Travelling Studentship has been awarded to Mr. James Bennet. Some notes on his designs and the designs of the two other competitors are given on p. 150.

In Correspondence column (p. 151) will be found letters on: "The Crystal Palace and the National Folk Museum"; "The *Bona Fides* of the Competitions for the R.I.B.A. Studentships."

The Monthly Illustrated Review of Construction (p. 153) contains: "New Buildings in Central Paris"; "Automatic Temperature Regulation"; "Heating, etc., McGill University"; "Testing of Materials of Construction"; and Notes.

The Building Trade Section (p. 157) contains: "National Federation of Building Trades Employers of Great Britain and Ireland"; "Bristol Master Builders' Association"; "Clay Excavating Plant, Warnham"; "Leicester Building Trades Employers' Association," etc.

An abstract of a paper on "Smoke Abatement," read by Mr. Lawrence W. Chubb, Secretary of the Coal Smoke Abatement Society, before a recent meeting of the Institute of Sanitary Engineers, is given on p. 161.

In our Law Reports (p. 165) will be found a report of the case of "Cable *v.* Lewis"—Muswell Hill Houses.

MEETINGS.

FRIDAY, FEBRUARY 9.

Royal Sanitary Institute.—Dr. Charles Porter on "The Duties of a Sanitary Inspector: Offensive Trades." 7 p.m.

Royal Institution of Great Britain.—Mr. J. Allen Harker on "Very High Temperatures." 9 p.m.

The Institution of Civil Engineers.—Lecture on "Steam-Turbines: Some Practical Applications of Theory," by Capt. H. Riall Sankey, R.E., M.Inst.C.E. 8 p.m.

Battersea Polytechnic (Lectures on Illuminating Engineering).—Mr. J. S. Dow, B.Sc., on "Colour of Artificial Illuminants." 7.30 p.m.

Leicester and Leicestershire Society of Architects.—Mr. Beckwith A. Spencer (Royal College of Art) on "Italian Mural Decoration in the XIVth and XVth Centuries." Lantern slides. 8 p.m.

SATURDAY, FEBRUARY 10.

Clerks of Works' Association.—Twenty-ninth annual dinner, King's Hall, Holborn Restaurant. 6 p.m.

Royal Sanitary Institute (Meeting in the Board Room, Poor Law Offices, Shakespeare-street, Nottingham).—Discussion on "Local Public Health Administration and the Insurance Act," to be opened by Alderman T. J. Dabell, M.R.S.S., J.P., Chairman, Health Committee, Nottingham. 11 a.m.

MONDAY, FEBRUARY 12.

Architectural Association.—Mr. Paul Waterhouse on "Bridges." 7.30 p.m.

Royal Academy of Arts.—Professor R. T. Blomfield, A.R.A., on "French Draughtsmen of the XVIIth Century." 4 p.m.

Royal Sanitary Institute.—7 p.m.

The Institute of Sanitary Engineers (at the Royal United Service Institution, Whitehall).—Discussion on "Hospitals and Sanatoria and their Relation to Tuberculosis," to be opened by Mr. A. Alban H. Scott and Dr. F. C. Davies. 8 p.m.

Junior Institution of Engineers (Combined Meeting with the Architectural Association, at 18, Tufton-street, Westminster).—Paper on "Bridges," by Mr. Paul Waterhouse, M.A., F.R.I.B.A. 7.30 p.m.

The Incorporated Clerks of Works' Association (Carpenters' Hall, London-wall). Paper by Mr. Arthur Robinson (Paripan Company) on "The Sanitary Decorative Finish of Buildings." 8 p.m.

TUESDAY, FEBRUARY 13.

Northampton Polytechnic Institute (Lectures on Illuminating Engineering).—Mr. S. Field on "The Chemistry of Gas Manufacture and Lighting." 7.30 p.m.

Institution of Civil Engineers.—Papers on "The Water Supply of the Witwatersrand," by Mr. D. Calder Leitch, M.Inst.C.E; and "Investigations Relatiting to the Yield of a Catchment-Area in Cape Colony," by Mr. E. C. Bartlett, M.Inst.C.E. 8 p.m.

WEDNESDAY, FEBRUARY 14.

Carpenters' Hall, London-wal (Lectures on Arts Connected with Building).—Mr. T. Stirling Lee on "The Sculptor's Craft" (demonstrated and illustrated). 7.45 p.m.

Royal Society of Arts.—Mr. Cecil Thomas on "Gem Engraving." 8 p.m.

Royal Sanitary Institute.—Dr. G. F. McCleary on "Methods of Disinfection." 7 p.m.

THURSDAY, FEBRUARY 15.

Carpenters' Hall, London-wall.—Sir R. Hanbury Brown, K.C.M.G., on "The Nile in English Harness." 8 p.m.

Royal Academy of Arts.—Professor R. T. Blomfield, A.R.A., on "Italian Draughtsmen of the XVIIIth Century, and Piranesi." 4 p.m.

Society of Antiquaries.—8.30 p.m.

FRIDAY, FEBRUARY 16.

Royal Sanitary Institute.—Dr. G. F. McCleary on "Elementary Statistics." 7 p.m.

The Royal Institution.—The Rt. Hon. Sir J. H. A. Macdonald, K.C.B., LL.D., on "The Road: Past, Present, and Future." 9 p.m.

Battersea Polytechnic (Illuminating Engineering).—Mr. J. S. Dow, B.Sc., on "Practical Lighting Problems." 7.30 p.m.

Edinburgh Architectural Association.—Associates' annual dinner. 7.30 p.m.

Glasgow Technical College Architectural Craftsmen's Society.—Mr. J. Muir on "The Management of Building Contracts." 7.15 p.m.

Institution of Mechanical Engineers.—Annual general meeting. 8 p.m.

Institution of Civil Engineers (Students' Meeting).—The Vernon-Harcourt Lectures on "Works for the Prevention of Coast-Erosion," by Mr. W. T. Douglass, M.Inst.C.E. 8. p.m.

SATURDAY, FEBRUARY 17.

Architectural Association.—Third spring visit, to the British Museum Extension. 2 p.m. at the building.

Aberdeen Architectural Association.—Mr. J. A. Ogg Allan on "The Educational Buildings of America." Illustrated. 7.30 p.m.

Junior Institution of Engineers.—Annual dinner, at the Hotel Cecil, London. Commendatore G. Marconi, D.Sc., President, in the chair. 7.30 p.m.

ENGINEERING SOCIETIES.

The Society of Engineers (Incorporated).

The first ordinary meeting of the present session was held on Monday at the Institution of Electrical Engineers, Victoria-embankment, W.C. The chair was first occupied by the retiring President, Mr. F. G. Bloyd, who presented the following premiums awarded for papers published in the *Journal* during 1911:—The President's Gold Medal to Mr. W. R. Baldwin-Wiseman for his paper on "The Administrative Aspect of Water Conservancy"; the Clarke Premium to Mr. T. J. Guerittе for his paper on "The Mechanical Installation and Upkeep of Permanent Way on Railways"; the Bessemer Premium to Mr. R. W. A. Brewer for his paper on "Two-Stroke Cycle Engines"; a Society's premium to Mr. E. Kilburn Scott for his paper on "Nitrogen Products made with the Aid of Electric Power"; a Society's premium to Mr. F. G. Woollard for his paper, entitled "Some Notes on Drawing Office Organisation." Mr. Bloyd then vacated the chair in favour of Mr. John Kennedy, the President for 1912, who was received with acclamation. A vote of thanks to the retiring President was proposed and heartily accorded.

The President then delivered his inaugural address, which dealt with shipbuilding and marine engineering.

A cordial vote of thanks was given to the President for his address, and the meeting terminated.

The Institution of Civil Engineers.

At the ordinary meeting on Tuesday the elections of new members, Associate members, and Associate, and admissions of students were reported. Mr. H. G. Williams, West Dulwich, S.E., was elected a member, and twenty-one Associate members were elected.

ILLUSTRATIONS.

The R.I.B.A. Tite Prize Drawings.

WE illustrate in this issue the Tite Prize design of Mr. Louis de Soissons and also the design by Mr. T. H. Chalkley, which received a certificate of Hon. Mention. We referred to these designs in our issue for January 26, and this week (p. 144) we give Mr. Gerald Horsley's criticisms made at the meeting of the Institute on Monday. Mr. De Soissons writes: –

"The dominant factors which have influenced my design for the Tite Prize are simplicity and dignity. Simplicity, because a Royal Exchange, a place where affairs of international importance are transacted, is in no way associated with a place of amusement. It must have repose and dignity. To obtain this effect it is essential the design should assume a monumental scale. From the monumental is but too easy a step to the error of the gigantic. The medium exists in the "grand manner" of tradition, and it is in this spirit I have endeavoured to render the design in so far as it is possible with the necessities of modern building. This medium is too often forgotten in contemporary work. Men, realising the incongruity of adapting the gigantic to modern conditions, are too apt to fall to the insignificant, and apparently forget the happy medium created by such forbears as Inigo Jones, Wren, and Vanbrugh in England, De L'Orme, Perrault, and Mansart in France. It is this tradition in design which has given its direction to my study of the problem."

Mr. Chalkley writes:—

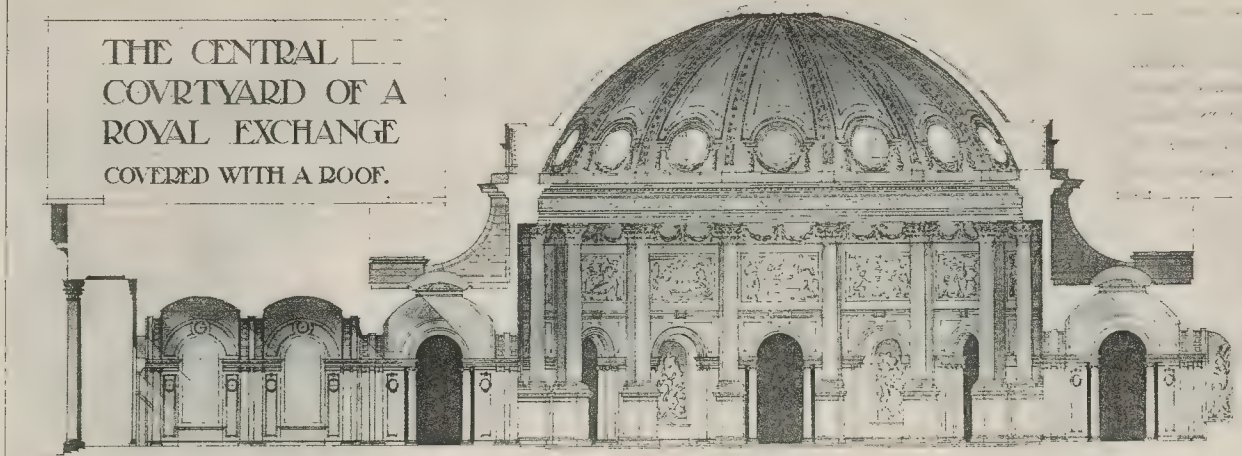
"The dominant ideas which, it was considered, should govern a design for a Royal Exchange were that it should have dignity—representative of the city's political and civic importance—simplicity, because of its special use and purpose, yet so treated as to be a monument to the city's wealth and of the excellence of its craftsmen, artists, and sculptors.

The courtyard was planned circular in form, simple and appropriate, and producing, undoubtedly, the finest and grandest internal effect.

Dignity was given primarily by the plan—by the dome as a roof covering—the treatment of the vertical height in one Order; the unbroken entablature and by the studied gradation in the application of ornament that gives to the dome a rich appearance and treats the lower parts very simply.

A Royal Exchange is built for all ages and all classes of business men; it is an essential feature of a city which plays its part in the national and political life of the country, and it must contain within itself allusions to these things.

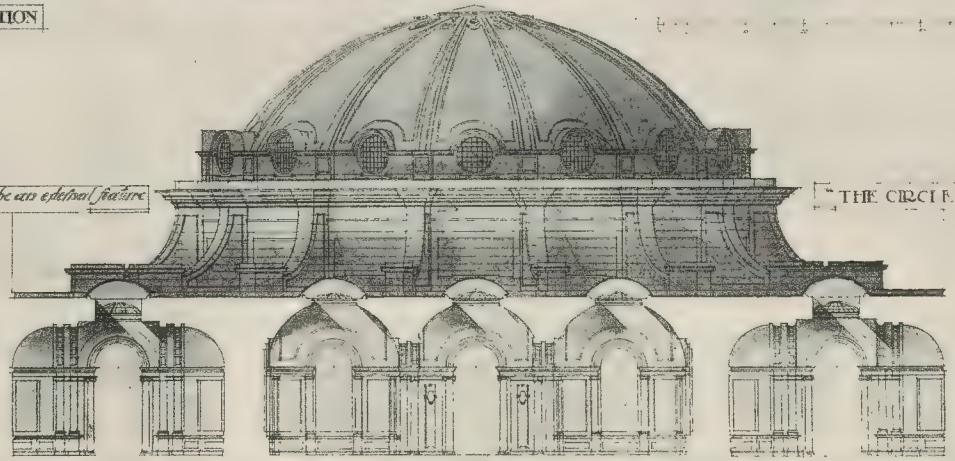
These thoughts were expressed by the various sculptured groups and panels in the courtyard, and the provision made for wall paintings in the arcade."



FIFTY YEARS AGO.

From the *Builder* of February 8, 1862.

Brussels "Palais de Justice" Competition.



THE Belgian Government selected designs from those sent in competition, by a Brussels architect, an Antwerp architect, and an English firm, Messrs. Green & De Ville; but in lieu of presenting the premiums offered have awarded greatly reduced sums. Endeavours are being made, we believe, through the Royal Institute of British Architects, to induce the Belgian Government to reconsider this very shabby and unjust proceeding.

Fig. 1. Front Elevation of New Buildings.

NEW BUILDINGS IN CENTRAL PARIS.

SINCE the days of the Restoration the Boulevard des Italiens—then named the Boulevard de Gand has remained he boulevard" of Paris, having lost hing of its former animation, notwithnding the disappearance of some famed ablishments which were popular resorts in time of Balzac. Nevertheless it may be nitted that the architecture of the buildings ves much to be desired, a point brought relief by the large office buildings conicted of late by sundry insurance corporas, prominent among them being those of New York Life and the Equitable comies. Further improvement of the boulevd from the artistic standpoint will result n the rebuilding operations now in gress between the Rue Taitbout and the e de Helder on the north side of the street. are indebted to our contemporary, *le ie Civil*, for the illustrations and particus given of these interesting works in the sent article.

General Features of the Project.

For some years past l'Urbaine-Vie Assure Company have been acquiring one by the buildings occupying the angle ned by the Boulevard des Italiens and the e Taitbout, with the intention of rebuilding property and opening a new street from boulevard to the *carrefour* at the end of Boulevard Haussmann.

But the land requisite for the complete lisation of this project could not be purssed, and the scheme has been modified as wn in Fig. 2. Part of the land has been d to *Le Temps* newspaper proprietors for erection of new offices, and the remainder the site, with frontages of 86·40 metres on Boulevard des Italiens and 78·80 metres on Rue Taitbout, will be occupied by new ldings and a private road, the Rue des liens, forming a thoroughfare for foot sengers and a cul-de-sac for vehicles. The nd site at the right hand has a frontage 47·50 metres on the boulevard, the new eet is 13·05 metres wide, and the site at the hand has a frontage of 29·00 metres on the levard, the other dimensions and general angement being shown by the plan. Fig. 1 strates the façades on the Boulevards des iens.

Although in the form of two blocks above eet level, the buildings are connected by a tinuous basement, with the average height 5·50 metres. and in this respect resemble new General Post Office buildings in ndon. In a situation where every square re of land represents a value of several nsands of francs it is very important to ise all available space. Consequently the Rue des Italiens is carried by two series reinforced concrete beams and a conous slab of the same material, forming a spacious addition to the basement which will be divided up and rented to the occupants of shops on each side of the street.

The right-hand block of buildings occupies a site of 2,275 square metres, and the left-hand block one of 1,635 square metres, while the connecting basement and roadway take up the area of 1,200 square metres.

As will be noticed by the elevations in Fig. 1, the architectural features of the two blocks are practically uniform, the only material variations being those entailed by the regulations of the city authorities with regard to the height of roofs. The ground floor in each case is entirely devoted to shops, with the exception of the space necessary for entrances and lodges for the concierges. The right-hand block has three entrances, two on the Rue Taitbout and one on the Rue des Italiens, each with a passenger and goods lift. The left-hand block has only two entrances, both on the Rue des Italiens.

Fig. 3 is a drawing which shows the architectural treatment of the upper part of the façades and roofs.

Main Structural Features.

Each block will be erected first in the form of a complete steel skeleton of seven or eight stories according to position, extending from the foundations to the roof. The skeleton will afterwards be clothed by masonry walls, floors, and roof covering, as well as by enclosures for entrances and stairways. Fig. 4 is a half-section of the right-hand block illustrating the general construction.

The façades proper only start at first-floor level, for practically the whole of the ground-floor frontages will be left free for the large windows demanded in the present day for the display of goods, the only breaks in the wide expanse of glass being the entrance doorways and the covered stanchions of the steel frame. Having in view this inexorable demand on the part of business people, the architect has deliberately regarded the façades as non-existent up to first-floor level, and has strengthened the main stanchions below that level so as to carry the loads transmitted from the upper part of the structure.

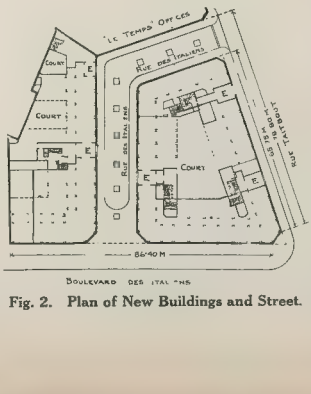

Fig. 2. Plan of New Buildings and Street.

Above the first floor the stanchions rise to the roof, their dimensions being decreased from point to point. Some of the stanchions are of H and others of J form, and between the flanges descend the rain-water pipes, and provision has been made for the accommodation of other pipes and conduits, also between the flanges. In addition to the main stanchions, there are others for the support of stairway and lift enclosures as well as for interior partitions to be built later in accordance with the requirements of occupiers. The roof frame and covering consist of steel principals with timber rafters, an insulating lining of pulverised cork, and lathing covered with slates. The crest of the roof is formed of timber framing covered with zinc.

It should be noted that neither of the buildings will be finally completed until tenants have been secured for the various floors. The first stage of the building programme simply involves the construction of a steel-framed masonry shell leaving each story in the form of one large apartment with no interior partitions but the walls of light wells and stairway and lift enclosures. The second stage will include the establishment of interior partition walls and fittings in accordance with the needs of private residents or business firms, and the floors have been designed so that they will be able to sustain the weight of partition walls wherever placed. Provision has been made for carrying away waste water from baths and sinks in any part of the building, and numerous ducts have been included to serve the purpose of chimneys or ventilation shafts as may hereafter be found requisite.

Bearing in mind the two successive phases of construction, the architect came to the conclusion that a steel skeleton would be more convenient than one of reinforced concrete, and consequently limited the employment of the latter material to the construction of retaining walls and the supports and decking for the roadway and footpaths of the Rue des Italiens.

The principal court of the right-hand block will be covered, as shown in Fig. 4, and windows above the covering will admit light and air to the ground floor of the surrounding building. The courts of the other block are similarly treated, and the light wells descending to the sub basement are protected with glazed roofs and louvres for ventilation purposes.

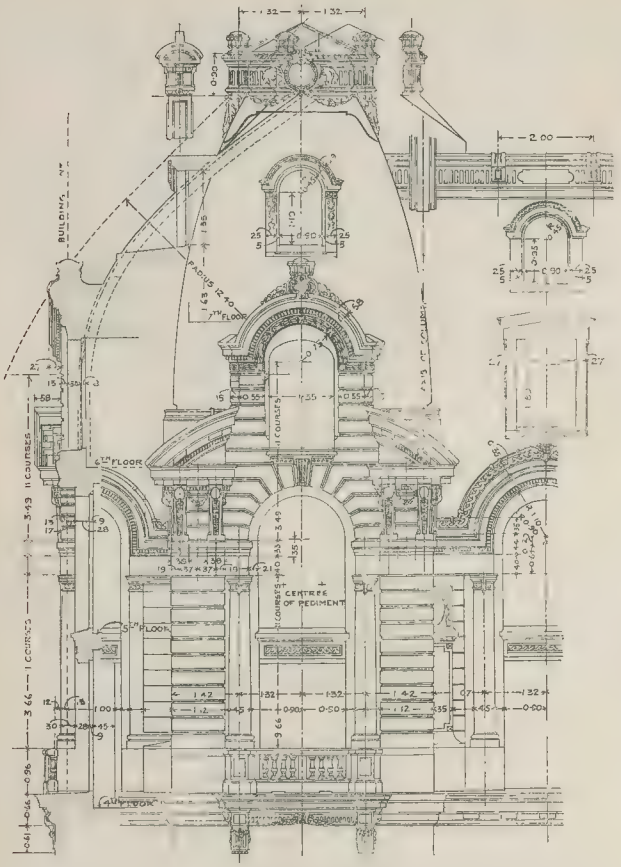

Fig. 3. Typical Details of Façade.

Construction of the Rue des Italiens.

This new street to which access can be gained by vehicles from the Rue Taitbout end only and by pedestrians from either end is formed by a decking of reinforced concrete carried by longitudinal and transverse beams supported on columns of the same material. The transverse beams are stiffened by brackets projecting from the columns, and providing support for an arched ceiling to the space beneath the roadway. Fig. 5 is a half-section showing the details of construction. The roadway proper consists of a foundation bed of concrete, a layer of asphalt, a bed of rough concrete, and asphalt paving. Along the centre line of the street a row of standards serve for the support of electric lamps, and at the same time provide outlets for the escape of air from the sub-basement. Between the reinforced concrete and steel columns on each side of the street there is a gallery for the reception of pipes and conduits. The galleries are to be used only by the employees of the proprietors, and in consequence the space beneath the roadway is only accessible from the sub-basement. The reinforced concrete framework and decking was calculated for the superimposed load of 4,000 kilogrammes per square metre on the roadway, and 800 kilogrammes per square metre on the foot pavement.

Progress of the Works.

Early last year the Rue des Italiens was opened up at the Rue Taitbout end, and the offices of *Le Temps* were built. During July the contractors were placed in possession of the entire site, but, owing to a strike, were unable to commence the work of demolishing the old buildings until the middle of September. Three months later 45,000 cubic metres of earth had been excavated, and the trench was cleared to sub-basement level. The foundation blocks for the columns were next executed in reinforced concrete, and before the end of the year the building contractors commenced the erection of a large

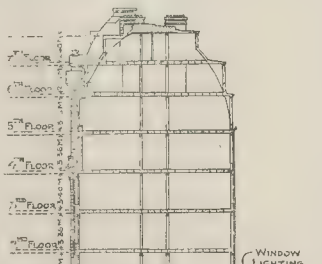

Fig. 4. Half Vertical Section of Right-hand Block.

double derrick commanding one-half of t site, the other half being equipped wi timber staging carrying a platform on whi was mounted a travelling crane. To the t derrick towers, 43 and 47 metres high, spectively, two pivoting masts were connecte at the top by horizontal rods, each m carrying a horizontal arm pivoting with and commanding a radius of 20 metres at a height up to 30 to 35 metres, as require above street level. Materials are brought the site and unloaded directly by the fi derrick, which delivers them to the site work in hand, or deposits them at a poi whence the second derrick can transfer the to staging built over the foot pavement of t boulevard. Ultimately the second derri will deliver materials direct to the workm in the Rue des Italiens, as soon as the n street is accessible by waggons.

Good progress has been made with reinforced concrete work generally, and at t present time concrete is being deposited the moulds erected along the entire course the new street.

It is hoped that the first stage in the co struction of the two blocks of buildings w be completed before the end of this year, a that the interior walls, partitions, and fittin will be added soon after, so that tenan

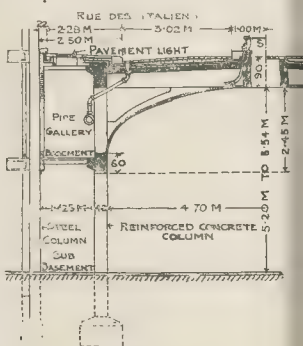

Fig. 5. Half Cross-Section of New Stree and Basement.

may take possession of premises arranged their individual liking during the early pa of 1913.

Architect and Contractors.

The whole of the works were designe for the Compagnie l'Urbaine-Vie, their execution is being superintended M. Edouard Arnaud, Architecte Diplôm M.Soc.Ing.Civ.(France) and Professor Architecture at l'Ecole Centrale, Paris. M Fossard & Lesieur were contractors for demolition of the buildings swept away, the work of excavation was entrusted MM. Laubeuf & Lécluse.

The steelwork for the right-hand block is the hands of MM. Moisant, Laurent, Savey, and the masonry contractor for same block is M. Gilardi.

MM. Baudet & Donon are the contracto for the steelwork in the left-hand block, masonry contractor being M. Devillette.

The construction of the roadway and oth reinforced concrete work was allotted to Pradeau, licensed contractor under the Henn bique system.

The magnitude of the works described m be gauged to some extent by the fact that purchase and demolition of the old building and the construction of the new blocks a street will involve an outlay of about twent eight million francs.

AUTOMATIC TEMPERATURE REGULATION.

At the annual general meeting of t Institution of Heating and Ventilati Engineers (Incorporated) on Tuesday a pap on "Automatic Temperature Regulation was read by Mr. Herbert A. Jones. In t course of his remarks he said :—

"In this country the question of automa temperature regulation has up till qu

ently failed to arouse interest on the part owners of buildings, their architects, or isulting engineers, although such systems in extensive use in the United States, nada, and other countries, and are there arded just as much a necessity in the ipment of a building as the heating system lf. This lack of interest is probably due the fact that as compared to America we not experience anything like the extremes variation in temperature which Americans and this has generally been the reply one received when seeking to interest people e in a means of automatically controlling peratures. With such a reply the expert consulting engineer considers that he has lly settled the matter. If, however, he ked carefully into the subject he would d that automatic control was just as much ecessity and as desirable here, in spite of fact that we do not get great variations outside temperature. Those of you who e been in the United States and Canada e probably been struck with the com- rative comfort with which you could with- nd the extreme cold of their winters; this due to the dryness of the air. On the er hand, you have all met the American o complains that he cannot keep warm e in winter. These experiences are proof t small extremes of temperature in a nate that has large extremes of humidity, variations in the amount of moisture in air, are possibly more uncomfortable to perience than great extremes of tempera- e where the humidity is more constant.

The subject of temperature regulation is quently confounded with ventilation. The ter deals with the supply of fresh air, ile the former controls the temperature d prevents the rooms of a building from oming too hot or too cold. The advan- es derived from temperature regulation twofold :—

First.—By keeping the temperature of a lding (say, a school) at, say, 60 deg., all ste of fuel is prevented, and consequently onsiderable saving of money is effected. ndreds of pounds have been wasted in a gle school by overheating it and securing ooler temperature by opening the windows. ery particle of excess heat which goes of the windows is an actual waste of blic money. If the outdoor temperature 30 deg., it will require 30 deg. of heat bring the schoolroom temperature up to deg. If, however, the outdoor tempera- e is 50 deg., only 10 deg. of heat are uired to ensure the comfort of the oolroom. A reliable system of tempera e control will furnish the exact amount heat required and avoid all excess con- mption of fuel, and consequently save ney.

Secondly.—By keeping the classrooms at even temperature the health and comfort teachers and pupils are promoted. A ssroom that is too cold causes physical comforts which may result in ill-health. classroom that is too hot is even worse. e average teacher will resort to an open dow for relief. The draughts from these dows are certain to bring on coughs and ds, which only too frequently end in oat and pulmonary troubles. The cause education is as much promoted by hygienic roundings and physical comfort of pupils by teachers and text-books. Hence auto- tic temperature regulation for schools is oming regarded by the highest experts in country as a necessity.

Temperature regulation of buildings was empted as far back as sixty years ago, , of course, means the controlling of the rce of heat by means of a thermostat ced on the wall of the room heated. The d "thermostat" literally means a heat ulator, and whatever it is and on what- principle it works it is a thermostat. e records show that thermostats have been le since the middle of the XVIIIth cen- y, and many of the most renowned ntific minds have attempted to solve the blem. The want of success in most tems has been due to their feeble power because they were not adaptable to all ditions.

n efficient system of automatic tempera- e regulation should be able to control ween close limits (1 deg. Fahr. is usually enough) the temperature of any room, hall, or corridor; it should open or close the valves of the heating system, whether that be by steam, hot water, or gas. The action of opening or closing should be definite and prompt, as particularly in the case of steam valves; sluggish movement of partial closing causes "wire drawing" and early destruction of the valve seats. In addition to this, it should be capable of operating ventilators and starting fans, and so perfecting the ventilating system. Beyond this, the system should by its cumulative effect exercise a direct control and economy in fuel at the source from which the heat is generated.

The apparatus, and more particularly the thermostat itself, should be of good design, thoroughly sound construction, and capable of continuously acting accurately and definitely under all conditions of temperature with practically no attention. A proper system should be capable of being applied to existing systems of heating without material alteration, and then to give the full advantage as regards control of temperature, although, to get the additional advantage of economy in fuel, modifications at the source of heat may require to be made.

Very little thought is necessary to arrive at the definite conclusion that it is not possible to devise a thermostat for the purposes above described which has sufficient inherent power to perform the operation of opening and closing valves, dampers, etc., and it will therefore be found that all systems consist of thermostats which are really combined instruments, which one can term relays, in that the thermostatic strip or control element, or the thermometer in an electric system, is made to control the operation of a compressed-air, vacuum, or electric system, by which means the valves are actually controlled.

In giving a brief description of various systems with which I am acquainted, or have particulars of, I shall only refer to those which can properly be described as attempting to give temperature regulation, and this I define as an apparatus which, fixed in the position where it gets an average temperature, is affected by the same, and controls some distantly-placed valve or other mechanism through which the source of heat passes. In passing, however, I would say that there are several ingenious stoves and water-heaters which combine a thermostat with the heating apparatus. It is obvious, however, that these are heat regulators, and cannot hope to regulate the consequent or surrounding temperatures.

The following are some of the systems of temperature regulation at present on the market :—

The "Johnson" system.
The "Powers" system.
The "Nuvacuumette" system of Messrs. Ashwell & Nesbit, Ltd.

The above use either compressed air or a vacuum for the main operation of valves, etc.

The "Fournier" system, working by the pressure of saturated vapours.
The "Grundy" system, this being an electric system."

The author then described the systems referred to. In dealing with economy he said :

"That a system of automatic temperature regulation in which, besides the room temperature being regulated, the boiler-furnace draft is regulated also in accordance with requirements, is economical can readily be seen from a simple calculation :—

The average outside winter temperature is about 40 deg. Fahr.; if 70 deg. Fahr. is the desired room temperature, then the apparatus for heating raises the temperature 30 deg. Now, it is well known that the expense of fuel is in direct ratio with the increase of the inside temperature. In other words, if the outside temperature be at 40 deg. Fahr. and a room is raised to 55 deg. Fahr., it will take a certain amount of heat. If the temperature be raised to 70 deg. Fahr., or another 15 deg., it will take twice as much heat, or fuel, to keep the room at 70 deg. Fahr. as it did at 55 deg. Fahr.

If 70 deg. is a comfortable temperature, let us suppose that the temperature be raised to 73 deg. unnecessarily. Seventy degrees is 30 deg. above 40 deg., and 3 deg. would be one-tenth added; consequently to keep a room at 73 deg. instead of 70 deg. requires an expenditure of 10 per cent. more fuel.

Let us suppose that a room be kept, unnecessarily, at 75 deg.; there is then a waste of 16·6 per cent. of fuel, which is a great extravagance, and yet many rooms in buildings here are kept at this figure or above. At 75 deg. Fahr. a person becomes uncomfortable, and the tendency is then to open windows, conducing to further waste.

Experience has shown that these calculations are verified in practice, and that in many cases the waste is greater than shown above."

HEATING, ETC., McGILL UNIVERSITY, MONTREAL.

THE following is an abstract of a paper read at the ordinary meeting of the Institution of Civil Engineers on January 30 by Mr. R. J. Durley, B.Sc., M.Inst.C.E., on "The Central Heating and Power Plant of McGill University, Montreal."

The paper describes the arrangement and equipment of a central heating plant, combined with an electric light and power station, designed to serve the various buildings of McGill University. Although only of moderate size, the installation is of interest on account of the somewhat severe climatic conditions and the unusual nature of the service. Attention is called to the fact that the economic possibilities of such a station depend very largely on the relation between the demand for heat and that for electric current. The University buildings were, up to 1908, heated individually by their own steam or hot-water equipment, and took current from the local electric supply company. The coal used for the heating service was necessarily of an expensive kind, and the cost of current was rather high. Economy and improvement in service, therefore, were sought by utilising cheaper coal in a central boiler plant and heating the various buildings from one source, employing for this purpose as far as possible the exhaust steam from electric generating sets. The buildings which will ultimately be served have a total volume of about 7,570,000 cubic ft.; they contain 81,000 sq. ft. of direct-radiation heating surface, need 185,000 cubic ft. of warmed air per minute for ventilation, and require as a maximum about 475 kilowatts for light and power. The greatest demand for steam for heating and ventilation for all the buildings in cold weather would be about 30,000 lb. per hour. The station as at present working supplies current to eleven buildings and heat to five, and the heating service will be extended to all the buildings as opportunity serves. A brief discussion of the systems of heating and ventilation in general use in Canada for large buildings, and a description of the nature of the demand for steam and current for the University purposes, is followed by notes as to some of the problems arising in the design and construction of underground piping systems for steam and hot water.

The McGill power-house itself is not of an unusual type, its equipment including four water-tube boilers, three steam-electric generating sets, the necessary heaters and auxiliary machinery, and the ordinary apparatus for the switchboard and electric accessories. The heat distribution to the buildings being largely by means of forced-circulation hot water, as well as by steam, the heaters and circulating pumps are installed in the engine-room, and are at present capable of supplying hot water to 60,000 sq. ft. of direct-radiation heating surface. Means are provided for obtaining a record of the heat delivered to the heating systems of the various buildings. The electric distribution is by underground cables throughout, the cables, as well as the heat-distributing pipes, being carried partly in tunnel and partly in conduit. Secondary heaters have been installed in two of the buildings in order to avoid the expense of renewing their existing heating pipes and radiators. The paper includes a description of the methods of operation adopted and the systems of temperature regulation employed, together with some notes as to working costs.

TESTING OF MATERIALS OF CONSTRUCTION.

THE Watt anniversary lecture of Greenock Philosophical Society was delivered recently in the Watt Museum Hall by Mr. James T. Milton, M.Inst.C.E., etc. The subject of Mr. Milton's lecture was "The Testing of Materials of Construction," with special reference to mechanical engineering. The importance of systematic testing of materials, he said, is now more than ever realised. An international association has been established in the hope of attaining international agreement in regard to methods of testing, and an engineering standards committee in this country has successfully standardised specifications and tests of many structural materials. Systematic testing resolves itself directly into two branches; the first may be called scientific, and consists in the determination of the various properties of different kinds of material; the other is devoted to what may be called commercial or acceptance tests. It is this latter system to which the labours of the Engineering Standards Committee have been directed with such excellent results, their specifications for the acceptance tests of nearly all structural material being universally accepted in this country. All the straining actions which come upon constructive material can be resolved into two kinds, acting either singly or in combinaton. These are direct stress, whether of tension or compression and stress of shear or distortion. When either of these stresses is applied to any material deformation takes place. If the stress is very low this deformation, called strain, is small, and it is found by experiment to be directly proportionate to the stress. With increasing stress, however, in ductile materials a point is reached at which the strain increases at a greater ratio than the stress, and in very ductile materials a further increase of stress produces an altogether disproportionate increase of deformation. The points at which the strain commences to increase at a greater ratio than the stress is called the limit of proportionality. Below the limit of proportionality the application of a stress produces the proportionate strain. If the stress is altogether relieved the strain disappears, the material returns to its original form and dimensions. If the stress is reduced, but not entirely taken off, the strain reduces itself also to the amount which would have been produced by the same stress being initially applied. In other words, the material is perfectly elastic. When a stress higher than the limit of elasticity is applied part of the deformation produced is permanent. It is certain that the limit of proportionality and the limit of elasticity, as above defined, do actually fall near together; many consider these points to be coincident. It is argued by many engineers that as the material stressed below the limit of elasticity returns to its original dimensions all its qualities must also be unaltered, and therefore, as one application of a stress within the limit does not affect any of its properties, it must be able to withstand an unlimited number of applications of such stress without injury. It is this view which leads to the importance which is attached by some engineers to the inclusion of the determination of the elastic limit in the acceptance tests of materials.

Mr. Milton proceeded to say that each kind of material possesses its own peculiar properties of strength, ductility, hardness, etc. All of these can be measured quantitively, and when the material is of good quality the various measurements will be found to fall within comparatively narrow maximum and minimum limits. It must be noted that the properties actually determined in acceptance tests of ductile materials not only may be different from those required in the structure, but may be qualities which serve no useful purpose. Notable examples may be taken in the case of mild steel. This, when of good quality, subjected to a gradually increasing stress, will yield very considerably before finally giving way. A tensile test will give an extension of from 20 per cent. to 30 per cent., and a bend test will deform enormously without breaking. These properties of excessive deformation are of no use whatever in actual structures, yet if mild steel does not possess them it is rejected. That structural material can be reliable without excessive ductility is evident when we consider the satisfactory use of cast-iron for cylinders and other parts of steam engines. The reason why such excessive ductility is required in the acceptance tests of mild steel is not because it is useful *per se*, but because we know that good mild steel, while possessing properties which make it a useful constructive material, also possesses this ductility, and that if from any cause its ductility falls below its usual amount then doubts will immediately be raised as to its possessing, in due proportion, all the properties which made it useful and which are actually required. In conclusion, Mr. Milton confidently stated that not only has the systematic testing of the properties of constructional materials largely assisted in the developments of their manufacture, but without it such structures as the Forth Bridge on the land and the *Olympic* and *Titanic* on the sea would not have been possible.

CONSTRUCTION NOTES.

Cleaning Moulds for Concrete. A SIMPLE method of cleaning out moulds employed in reinforced concrete work is to blow steam on them from a hose-pipe. It is stated by an American engineer that steam is more efficient and more economical than any other medium for the purpose.

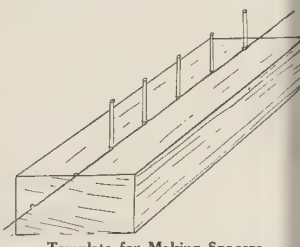
Standardisation of Vitrified Ware Pipes. THE draft specification prepared by the Standardisation Committee of the Institution of Municipal and County Engineers is now being considered by a Sectional Committee of the British Engineering Standards Committee, and objections have been raised in reference to certain of the proposals embodied in the draft specification. One of the proposals to which the Standardisation Committee attach considerable importance, and to which objection has been taken, is that dealing with the proposed form of socket.

After prolonged consideration and discussion the Standardisation Committee decided to suggest, for inclusion in the Standard Specification, a modified form of socket having, in their view, many advantages over the old form, including the following:—

(1) It is only necessary to push home the spigot to obtain a true invert and to ensure the pipes being concentric, whereas with the old form this result can only be attained by the exercise of the greatest care; in fact, it is comparatively rare to find drains and sewers, except those laid under the most constant and careful supervision, free from obstructive "lips" in the invert.

(2) The pushing home of the spigot also leaves a clear regular space all round for jointing material, whereas with the old fo the space is frequently very irregular, render it difficult to properly fill the joint.

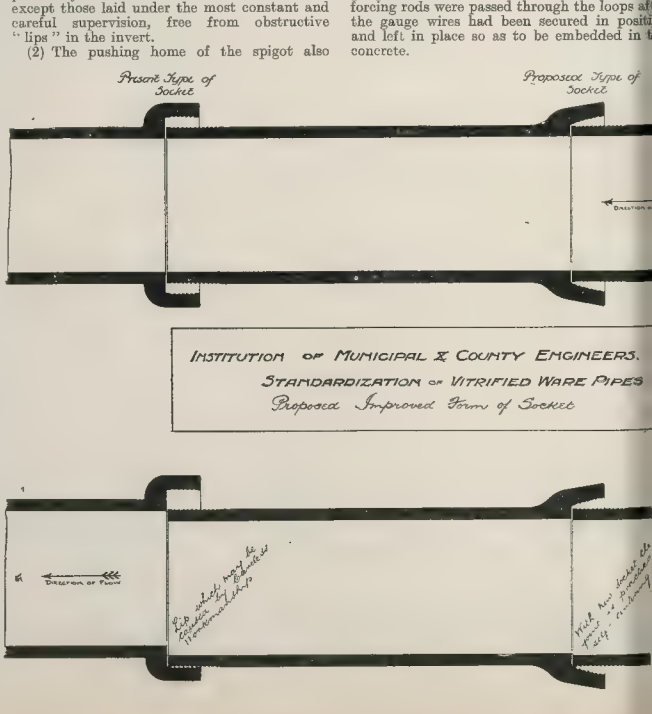
(3) The new socket is stronger, and designed that the greatest strength is at point of greatest stress.



(4) There is less risk of jointing mater entering the pipe and forming an obstructio

(5) Less jointing material is required.

(6) There is less risk of the joint be disturbed after the pipes are laid and bef the cement has set.



The Committee have asked the members the Institution for their opinions as to wh form of socket it is desirable should be includ in the Standard Specification.

Spacing Gauges for Floor-Slab Reinforcement. IN a building erected at M waukee the contractor e ployed an ingenious meth of forming gauges for spac the steel rods constituting reinforcement of the concrete floor slabs. gauges were made by means of a templa consisting of a wood block in which were pieces of steel rod of the same diameter those to be used for the reinforcement, the r

Template for Making Spacers.

projecting 2 in. and spaced the same distan apart as that specified for the rods of the fl slab. The accompanying illustration is from article by Mr. E. B. Murray in *Concrete*, long piece of stout wire was then looped ro each of the projecting rods in turn, starting one end of the wire, and the succession of loo was continued, as far as requisite, by lifting the wire and making other series of loops arou the same pegs. In this way numerous spac gauges were made for all the floors. The re forcing rods were passed through the loops af the gauge wires had been secured in positi and left in place so as to be embedded in concrete.

THE BUILDING TRADE.

E NATIONAL FEDERATION OF BUILDING TRADES EMPLOYERS OF GREAT BRITAIN AND IRELAND.

AST week we published a report of the annual general meeting of this Federation, held at the Trocadero taurant, W., on January 31, under Chairmanship of Mr. J. W. White nderland). The following is a continuaof the report.

Provisional Sums in Quantities.

was moved: "That it be an instructto the Council to inquire into the ctice of inserting provisional sums of large unts for quantities in school buildings, to take such steps as may be deemed ssary." The speaker said he considered would be a suitable time to inquire into matter, because education authorities ed anxious to ascertain if it was possible educe the cost of school buildings, and in district they thought that it would be uced if the practice of inserting large visional sums were given up. One archiin their district regularly inserted in quantities provisional sums which would n a third of the amount of the accepted der, and the sums so included were generexpended without any competition, and, considered, to the detriment of the der who was carrying out the work. The der had to wait an indefinite time before could get instructions about ordering ls, and when he did so order the firm who plied would take their own time as to n they delivered, and many cases of hard often arose in consequence. If this ter were ventilated, and the education norities could be shown that there was te in this way of doing the work, the ctice would soon be given up. The ter was connected with the question so en discussed amongst builders—that of cialists. If anything could be done by means to prevent the unnecessary emyment of specialists it would be a distinct antage.

he seconder of the motion said they eved the practice complained of was rimental to the building trade and opposed public policy. These provisional sums ht to be kept as low as possible. Special came in who had no interest in the ticular neighbourhood except to do the k, and they got as much out of it as sible. When the ordinary contractor ed to be allowed to compete he was told work was to be done by a particular cted firm. If selection rather than open petition was going to be the guiding nciple, then why should not a firm of lders who had given satisfaction in one be given another without having to pete?

The resolution was agreed to.

Standard Wages and Cost of Living.

Mr. Townsley, on behalf of the Yorkshire deration, brought up the question of ndard wages and the increased cost of ng with a view to asking whether the ncil could get any reliable figures which ld be utilised when the employers had to t the arguments of the men regarding increased cost of living. At present res were published, but they varied gely. He moved that the matter be rred to the Council.

Mr. Rushforth (Grimsby) seconded the ion, and it was carried.

Goods to the Public at Trade Prices.

Mr. E. J. Brown (London) read a resolun which had been passed by a sub-comtee of the London Federation pointing out t they considered the question of merants and manufacturers supplying the blic with goods on the same terms as the de ought to be dealt with by the National deration. The sub-committee had also roached the Federation of Master Decorrs on the subject.

Mr. S. Smethurst (Oldham) said there was a movement on foot in all parts of England for obtaining preferential terms for those in the building trade as against the general public, and he believed that the building trade was the only trade in connexion with which outsiders could get equal terms. He moved that the matter be referred to the Administrative Committee.

Mr. A. S. Smith (Birmingham) considered the question one of growing importance. Many factory owners and others were employing men to do their own repairs, and they could buy their bricks and timber and firebricks and everything they wanted at the same price as the builder. If any means could be suggested by which this could be stopped it would greatly benefit builders.

Mr. J. B. Johnson (Liverpool) said the slate merchants were considering if they could give such a preference.

The matter was referred to the Committee to report on.

Alliances with Kindred Trades.

The Secretary read a letter which had been received from the Yorkshire Federation suggesting the expediency of a closer alliance with kindred trades with a view to joint action being taken for the protection of trade interests.

Mr. Townsley (Hull) remarked that at present there was a Confederation composed of three, if not four, national organisations of those engaged in the building trades, which comprised about 2,500 firms and included the plasterers and plumbers and slaters, and he believed the painters were in full sympathy, if not really allied to that body. It seemed to him if that organisation could in some way be attached to their own Federation it would very greatly strengthen their hands in the case of certain eventualities.

Mr. Hopkins (York) said that there was a danger of sub-contractors breaking away from the national body of master builders, and that he considered would be a disaster. The fact was that a large number of sub-contractors felt very insecure with reference to the money which should be paid to them. They had done work for the contractor and had not received payment. If the sub-contractors could get an assurance that the client for whom the work was really being done would be responsible it would be all right.

Mr. Matthews remarked that in Manchester they were adopting a form which would put the sub-contractor in a better position than before.

Mr. Cooke suggested that the best way to bring about organisation in the building trades would be to form an association in each centre and have separate committees to deal with each separate trade, and then those committees could bring forward their recommendations to the general body to be confirmed.

Mr. Rhodes observed that there was a feeling amongst the smaller trades that they would be swamped in any general movement because of the smallness of their numbers, but he thought they might get over the difficulty.

The matter was referred to the Administrative Committee to go into.

National Insurance Act.

Mr. F. Woods (Bolton), in moving that the Committee should continue to consider what future action should be taken with regard to the National Insurance Act, said he knew there was a disposition on the part of some employers to cease their opposition now the Act was passed. They in Lancashire did not agree with this, but they believed that by a steady and active opposition they would be able to place their considered judgment before the Commissioners, so that in the framing of their regulations the Commissioners might ameliorate those conditions which would harass the trade. They wanted each Association to send up its suggestions to the Administrative Committee.

Mr. Matthews (Manchester) seconded the motion, which was carried.

It was also agreed, on the motion of Mr. Davidson, to place on record the appreciation of the action of the President and the Secretary in relation to the unemployment part of the Bill.

National Board of Conciliation.

Mr. J. Storrs (Stalybridge) proposed that the questions of admitting builders' labourers to the Board of Conciliation scheme and that of expediting procedure in relation to appeals be left to be dealt with by the National Conciliation Board.

This was carried.

Mr. Storrs next reported that at a meeting of the Council the previous day it was agreed that it was desirable that there should be an affirmation of policy with regard to the question of the employment of unionists and non-unionists. Difficulty had been experienced in regard to the matter, and it was considered that the principle of freedom of employment should be affirmed.

Mr. A. W. Sinclair (Scarborough) said that the workmen were insisting that Rule I. of the Building Trades Conciliation Board was the beginning and end of the Conciliation Board's duties. That rule read as follows:—"The object of the Conciliation Board shall be to adjust all questions or disputes relating to hours of labour, rates of wages, working rules, and demarcation of work that may from time to time arise and be referred to them either by employers or operatives with a view to an amicable settlement of the same without resorting to strikes or lock-outs." In certain towns in Yorkshire trouble had arisen on the non-union question. In Leeds there was the case of a man with a rather heavy contract which had to be completed in a given time, and the men took advantage of that to say they would have certain men in their union or they would stop the job. In Leeds they had a local rule agreed to by the men and employers that there should be no stoppage of work until the dispute had been considered by a trade committee. But the men would not have the matter of union and non-union men referred to any committee, as they said it was their own business, and if they did not want to work with non-union men they would simply leave the job. The operative masons had now given notice of their intention to move at the Conciliation Board that questions of union and non-union workmen shall be excluded from the purview of the Board, and on that the employers and the men must come into direct conflict. In certain districts of the Midlands the men were now enforcing it, but in others they were not strong enough. Personally, he had always contended that high organisation by both the men and the employers was the best condition for carrying on business, but that where either one side or the other predominated they had the elements for oppression. If the resolution was carried by the men it would mean that they would make a stronger organised body for labour than the employers had attained to. If the matter had to come to a fight, now was not an unfavourable time, but if they waited until trade was better and the unions were more organised, then they would be in a worse position to deal with such an important question.

Mr. Smethurst (Oldham) said they were up against this question all over the country. If the resolution of the operative masons was rejected by the Board it meant a fight sooner or later, and he considered the Federation ought to be fortified with the considered opinion of the whole of the branches in England. It would be fatal to enter into a battle without knowing the forces behind them. Birmingham and Manchester and London would have to shut down, as did the cotton employers recently, and he would like it to be found out whether in the event of the matter being fought out the trade would stand together. The other side of the question was whether they would accept the resolution and say they would in

the future only employ trade unionists, and that was a very far-reaching issue. They had to look further than the mere temporary advantages it might bring them. He moved :-

"That the Administrative Committee be requested to circularise each branch Association through the Federation asking them to consider the question of the action of the trades union workmen in claiming the right to refuse to work with non-unionists, and to say if the settled opinion of their Association is that the right of the employer and the workman to employ whom they will or to work for whom they will shall, as far as possible, be maintained, and, if necessary, they will support the Federation if they desire to fight this issue. And it be an instruction to the Administrative Committee to issue a memorandum reviewing the position."

Mr. Moss remarked that one particular trade, which he would not name, had entered into an arrangement with the workmen by which the employers in the Association would only employ union men and the union men would only work for the associated employers.

Mr. Cooke said they tried that at Preston, and after a time they had a shoal of disputes. They had no assurance that the leaders of the men could enforce their decisions on the men whom they were supposed to control. He could give instances in Lancashire where plasterers had been ordered by their Executive to return to work and had absolutely refused to do so.

Mr. Sinclair asked if the unions could not stop the funds.

Mr. Cooke said he supposed they could, but the men seemed to find funds somewhere.

Mr. Matthews (Manchester) proposed :—"That this meeting is of opinion that the Board of Conciliation scheme comprises the consideration of all disputes involving the stoppage of work."

Mr. Shepherd (London), in seconding Mr. Matthews's motion, said that to be consistent they must uphold the principles of conciliation; but there was no doubt the position was becoming serious. What was the result of the intervention of Sir George Askwith in the cotton dispute? They could not avoid the conclusion that disputes of this kind were not to be settled by such methods. So far as his judgment guided him, intervention by the Board of Trade was not the best means of getting at settlements.

Mr. Storrs said the matter ought to have come before the meeting of the National Board called in December, but, feeling that they were out against a very serious difficulty, and one on which the whole country might eventually decide to take action, he thought he was taking a right course in getting a postponement, so that the matter might be brought before them. He accordingly arranged with Mr. Chandler and with the Secretary of the Operative Stonemasons' Society to postpone the matter until January. The operatives had decided that unless the masters agreed to discharge non-union labour they would enter into a strike, and they might take it that if this was entered into it would be a very bitter fight.

Mr. Moffat said he took it that the only reason the operatives had not already delivered the blow was in consequence of Rule 17 of the Conciliation Board, because if they entered on a struggle, Rule 1 combined with Rule 17 would rule them out of court. He thought that the alteration of which the masons had given notice ought not to be allowed to creep into the rules. Personally, he felt they were in for serious difficulty, and hoped the National Conciliation Board would take a strong line and resist anything like the suggested alteration.

Mr. Davidson (Leeds) said that this was a serious matter, and they in Yorkshire wanted the assurance that if drastic action was taken against individual members the National Federation would take action.

Mr. Long (Bath) remarked that the point arose in Bristol in September, where a builder's foreman objected to two men trying to coerce a non-unionist to join the union. The men left work, and the local Association wrote to the trades union, who replied that the matter was not a trade dispute within the rules. The unionists contended not only that it was not a conciliation matter, but also that it was not even a local Association matter, but simply a matter for the workmen amongst themselves. They would have to understand that this matter meant a fight.

Both the resolutions of Mr. Matthews and of Mr. Smethurst were carried.

Election of President.

The Chairman proposed that Mr. James Wright, of Nottingham, be elected President for the ensuing year, and this was unanimously agreed to.

The President-Elect, in reply, expressed the hope that the influence of the Federation would be extended in such a way as to enable employers to conduct their businesses in the way their intelligence and experience directed them, and he hoped they would never be afraid to maintain personal and individual liberty. Above all, he hoped their influence would be exerted to the preservation of initiative. The trend of modern legislation seemed of such a character that there was a danger of these great principles being subverted, but it was by such qualities that this country had been made great, and it was only by their exercise that progress and prosperity could be maintained.

A hearty vote of thanks was accorded the retiring President, and he was elected a Vice-President.

On the motion of Mr. Browne, seconded by Mr. Wright, a hearty vote of thanks was passed to the Secretary for his valuable services.

It was decided to hold the next meeting at Nottingham.

BUILDING PLANS *v.* BUILDING PROSPECTS.

THE latest returns for the last quarter of 1911, made by the local authorities as to building plans lodged for their approval, show some little improvement on the same quarter of the previous year. There was an increase of 339,241*l.*, or 11·1 per cent. (exclusive of the County of London, as to which figures are not given). This increase was confined to factories, workshops, shops, and other business premises or public buildings. Dwelling houses showed a large decrease of 227,966*l.*, or 14·8 per cent. The increase seems to be confined to Lancashire, Cheshire, the Midlands, and other districts in England exclusive of Outer London, the Northern Counties, and Yorkshire. Wales showed a decrease, but Scotland and Ireland increases.

CLAY EXCAVATING PLANT, WARNHAM.

THE Sussex Brick and Estates Company, Ltd., of Horsham, have installed a clay excavating plant at their Warnham Works. The plant consists of a steam navvy, automatic hopper and a clay conveyor. The 8-ton steam crane navvy has been built for them by Messrs. Ruston, Proctor, & Co., Ltd., of Lincoln. The machine carries a bucket of 1½ cubic yds. capacity, practically equivalent to a weight of 1½ tons of clay. The method of working is as follows :—

The bucket is first lowered to the bottom of the working face and to the level upon which the machine stands. It is then drawn up the face of the clay, taking a cut some 3 in. to 6 in. thick and 36 in. wide. By the time the top of the cut is reached the bucket is full. The machine is then slewed or swung round, so that the bucket is immediately over the hopper, which is in position alongside the machine. The driver then releases a catch upon the bucket by means of a rope, the bucket door swings open and the contents are discharged into the hopper, which in turn transfers it into wagons beneath. The machine swings back again opposite the next cut to be taken, and the bucket is lowered, which action automatically closes the door.

The above series of operations take longer to describe than to carry out, as the full cycle can be completed in thirty seconds, or in other words the machine can dig and discharge into wagons about 1½ tons of hard clay in half a minute, the speed and facility of working being a revelation.

The hopper has been built from special designs by Messrs. Fawcett, engineers, Leeds. It consists of a hopper 1½ cubic yds. capacity, under which is a revolving cylinder having two recesses, each of which will hold ½ cubic yd. of clay. Beneath the cylinder are the rails along which the clay wagons are conveyed continuously to the grinding mills by means of an endless chain. The cylinder driven by a separate engine and is speed to revolve so that the recesses filled with c empty into the trucks underneath three tir per minute.

As to the construction of the 8-ton cr navvy, there is a cutting pressure upon bucket teeth of 8 tons, hence the t "8-ton" crane navvy. The carriage is b of steel castings and girders, and carries eig travelling wheels for standing and travelli upon the temporary rails which are necessa The bedplate above the carriage is support upon the latter by six rollers, which revo upon a gear ring on the carriage, and ena the machine to revolve through a compl circle. The engines and gearing for hoistin slewing, and travelling are all arranged up this bedplate, the two first motions bei driven through friction clutches. The racki gear to the bucket consists of a large ste cylinder from which motion is transmitted racks upon the bucket arm for regulating depth of cut taken by the bucket, the cont being in the hands of the driver, who sta right at the front of the machine. The boi is of large size, and supplies steam to engines of the hopper as well as to the navv The water tanks are arranged under the boi in the rear of the machine, and have a capac of 300 gallons.

The total weight of the machine in worki order is about 34 tons.

A driver and a fireman upon the machi and two or three men around it, are all t is necessary for the output of 400 tons of c required by the brick company to make th output of 100,000 bricks per day.

BRISTOL MASTER BUILDER ASSOCIATION.

THE annual general meeting of this Assoc tion was held under the Presidency of M Frank Chown (President).

The annual report, from which the follo ing is an extract, was approved and adopt upon the motion of the President, seconded Mr. A. Perkins. The year 1911 has been period of continued depression, so far as building trade is concerned, notwithstandi the improvement which has taken place in general trade of the country. The labo unrest which has been apparent throughout country during the past year made princip very loath to put in hand any work other th that which was imperative; consequently co petition has been exceptionally keen and pri have ruled low, in spite of an upward te dency in the cost of materials. Few buildin of an important character have been put hand. The Association has spent considera time negotiating with the employés in t matter of notices received for advances wages and various alterations in the worki rules, and, in view of the large number meetings thus entailed, it is fortunate th matters of general business were less pressi than has perhaps been the case in previo years.

Notices were received from all trades January 1, 1911—carpenters and joiners, bric lays, plumbers, painters, plasterers, a labourers—asking for an increase of 1d. hour; whilst the masons desired a reducti in the hours of labour during the summ from fifty-three to forty-seven, to brought about by commencing work 7 instead of 6 a.m., their idea being secure employment for a greater number their men by spreading the work over a larg area. Local meetings were first held, follow by reference to the South-Western Cen Conciliation Board in the case of the c penters and joiners, bricklayers, and mase who were affiliated to the National Concil tion Board, but without any satisfactory setti ment being arrived at.

Eventually it was decided to refer the matt to the Board of Trade for arbitration, Mr. A. A. Hudson, K.C., attended at t offices on July 31 and August 1, when t case for the employers was conducted by M Frank N. Cowlin. Mr. Hudson's award w to the effect that there should be no advan of wages.

As to the demand on the part of the ope tives for a reduction of the working hours summer his award was as follows :—

"I award and determine that there sh be no reduction in the working hours unle the masons' labourers affected are willing th a reduction should be made, in which case t reduction shall be three hours per week summer for masons working on the bench in the shop, and a corresponding reduction the hours of labourers attending on su masons, such reduction in such case to effected by altering the starting time fro 6 a.m. to 6.30 a.m. in the summer months."

s was accepted by all trades with the tion of the plasterers, who took the r to their Central Conciliation Board, nom it was referred back for local settle-

After further discussion it was agreed for the expiration of their notice until nber 31, and the question is accordingly discussion at the present moment. In d to the question of hours of labour for s, the society decided to adhere to the hours as worked by other trades.

wing promised to give special considera- to the request of the labourers for an ase, their case was brought before special ngs of the Association, with the result t was decided, in view of the low average ngs of these men and the increased cost ring, to give them an advance of a half- per hour as and from January 1, 1912; only to refer to genuine builders' rers. Further notices have now been ved from all trades for alterations in many o working rules, as well as for advances ages, and it is hoped that an amicable ment will be arrived at.

the motion of Mr. F. Chown, seconded Mr. Cowlin, Mr. Audley Perkins was d President of the Association for the ng year.

ery hearty vote of thanks was accorded etiring President, Mr. F. Chown.

F. A. R. Woodward was unanimously d Vice-President.

E. I. Neale was re-elected Hon. urer.

on a ballot being taken, the following declared to constitute the Committee for coming year:—Messrs. A. Dowling, F. n, F. N. Cowlin, W. Foster, G. W. phreys, J. Lovell, F. H. Ridd, and E. W. ers.

CESTER BUILDING TRADES IPLOYERS' ASSOCIATION.

e annual dinner of the Leicester and ict Building Trades Employers' Associa- was held at the Grand Hotel on the st. Mr. F. Beck (President) was in the supported by Alderman A. Tollington or of Leicester), Mr. J. Wright (President e National Federation), Mr. J. B. White- (President of the Midland Centre), Mr. . Amphlet (Secretary Midland Centre), E. G. Mawbey, M.Inst.C.E. (Borough eyor), Mr. W. M. Cowdell, F.R.I.B.A., Mr. C. Stretton (Society of Architects), A. Chambers (Hon. Treasurer), Mr. S. A. (Secretary), and others.

W. Yates, in submitting the toast of e National Federation," observed that the ration admirably fulfilled the purposes for it existed in watching and promoting nterests of the trade. In proof of that it be mentioned that the Federation was lly recognised by the Government, and ently had communication with the Board rade and other official bodies. The In- ce Bill, for instance, gave them a great nt of trouble and anxiety. All the es of the Federation throughout the ry were circularised for the purpose of ning their views of the measure. The r was carefully considered, and the rations sent deputations to both the cellor of the Exchequer and the Board of e. Out of nineteen or twenty amendments asked for, they obtained no fewer than en. In coupling the toast with the name e President of the Federation, Mr. Yates ssed the pleasure they all felt at Mr. s Wright, of Nottingham, having been d to that office for the present year.

James Wright, in the course of his pointed out that the success of the nal Federation depended upon their g successful local associations. It was sary, too, to have strong local associa- if only for the purpose of dealing with own workmen. They all knew what a g, active, and aggressive force trade ism had become. Trade unionists were y looking after their own business. What ers had to do was to look after theirs, if they were going to meet the united of trade unionism and to regulate the ons between both parties they must be united. It was absolutely impossible to with them in units. Mr. Wright dealt the fixing up of national Conciliation ls in connexion with the trade. The e was based on such sound principles if both sides were faithful to those ples and loyal to the decisions arrived thing but good could come as the result e scheme. The Federation's only object o improve the conditions and raise the of the building industry. They knew he trend of modern industrial legislation ery much towards encouraging encroach- upon what he considered to be the absolute and unalienable rights of employers, and they were, he thought, fully justified in exerting the influence of the Federation in order to try and preserve personal freedom and individual liberty in every direction, and to preserve so far as they could the fullest opportunity for the full exercise and development of individual enterprise and personal initiative in business

Mr. Edwin Fox proposed "The Midland Centre," emphasising the important work of that body and the thoroughness with which the representatives from the various associations carried out that work.

Mr. J. B. Whitehouse (Birmingham) replied to the toast, and said he should like to offer a little criticism of builders who, while gripping each other's hands on an occasion of that sort, would be figuratively cutting each other's throats on the morrow in trying to get a bit of work. It was their own fault, he thought, that they did not get a fair remuneration for the work they took. He predicted there were stormy times ahead in regard to the Conciliation Boards, as he was inclined to think that now trade was reviving there would be a disposition on the part of the men to force, rather than to conciliate. In regard to the question of unionists working with non-unionists, and whether the matter came within the province of the Boards, he said their claim was that anything that tended to disturb the trade was a subject for the Conciliation Board. Sooner or later there would have to be a fight on that question, and it would be necessary for the whole of the associations to be prepared to meet it. It might be delayed somewhat, but he was certain they had got to fight unless the leaders of trade unionism exercised more common sense than they were showing at the present time.

Mr. F. W. Amphlet submitted "The Leicester and District Association." In urging the need for the masters to be united, he suggested that the effort on the part of trade unions to make it impossible to employ non-union men was not confined to the cotton industry. They were trying to make it a general thing, and they were already feeling the effects of it in the building trade.

The Chairman, with whose name the toast was coupled, referred to the significance of the success of that gathering, and referred with satisfaction to the inclusion of the sub-trades and other steps that had been taken in the interests of the trade during the past three years.

The toast of "The Mayor and Corporation of Leicester" was proposed by Mr. E. J. Underwood.

The Mayor, having replied,

Mr. E. G. Mawbey (Borough Surveyor), who also replied, referred to the growth of the town during his experience of it, mentioning that during twenty-two years over 20,000 houses had been built in the borough, apart from factories and warehouses. In that time the greatest number of new houses in any one year was 1,809 in 1898. The numbers dropped to 700 in 1905, 320 in 1910, and 367 in 1911. The number of "empties" reached a maximum in 1907, when they numbered 3,205. It was satisfactory to know they dropped last year to 1,403.

Mr. G. A. Hewitt proposed "The Leicester and Leicestershire Society of Architects," which was coupled with the names of Mr. W. M. Cowdell and Mr. C. Stretton

The toast of "The Visitors and Honorary Members" was submitted by Mr. A. Chambers, and acknowledged by Mr. J. H. Hawthorn and Mr. S. S. Redwood.

GENERAL BUILDING NEWS.

NEW SCHOOLS, POOLE.

The designs for these new schools were by Mr. S. J. Newman, the Borough Surveyor, and the contract was carried out by Mr. H. W. King, of Springbourne, at a cost of 6,780*l*. The exterior is of South-Western Pottery white-faced bricks with terra-cotta dressings by Messrs. Carter & Co., and the first floor is of fireproof construction by Messrs. Homan & Rodgers. The electric light was installed by Mr. A. G. Studwicke, of Branksome, and the heating apparatus by Mr. Haydon, of Trowbridge. The schools provide accommodation for 580 children.

NEW SCHOOL, LEISTON.

Mr. J. Webb is the architect for this school, which has been erected at a cost of about 3,000*l*., and which provides accommodation for 360 children. The new building includes seven classrooms, an assembly-hall 40 ft. by 20 ft., and storerooms, etc. The contractor for the building was Mr. A. J. Gibbons, Crowfield; the heating installation by Mr. E. Scott, Ipswich; and the gas-fitting by Messrs. Martin & Newby, Ipswich.

TRADE NEWS.

Under the direction of Mr. Wishart Galloway, architect, Brechin, the "Boyle" system of ventilation (natural), embracing Boyle's latest patent "air-pump" ventilators and air inlets, has been applied to the new Public Hall, St. Cyrus-by-Montrose.

An example has recently been afforded of the efficiency of the Grinnell sprinkler as a means of preventing serious fires. An outbreak occurred on November 10 at the flour and provender mills of Messrs. W. Primrose & Sons, Ltd., Glasgow. The mill was equipped with an installation of Grinnell sprinklers. In the Strut House eleven of the sprinklers operated in such a manner that the fire was soon extinguished. Messrs. W. Primrose & Sons, Ltd., have written to Messrs. Mather & Platt, Ltd., stating that owing to the timely action of the sprinklers the only damage done to the Strut House was that caused by water and a few pounds damage to wood.

Messrs. Mather & Platt, Ltd., have just been instructed to proceed with a large contract for the Accrington and Church Outfall Sewerage Board, which comprised twenty-four of their pipe arm type of revolving distributors, each 62 ft. diameter, complete with all appurtenances, as well as a sewage pump, screening mechanism, motors to drive the machines, and also the lighting work. Messrs. Mather & Platt, Ltd., are makers not only of spreaders, but also of pumps and electrical machinery, etc.

The Excellence Wood Block Flooring Company, of 11, Queen Victoria-street, London, E.C. (agent, Mr. F. S. Mayo), have recently laid wood-block flooring in their patent system at the Law Union Society Building, Chancery-lane, Austin Friars House, E.C., and Swiss Bank, Regent-street, all for Messrs. Colls & Sons. They have also laid the flooring in several London City and Midland Banks in various parts of the country under Mr. T. B. Whinney, architect; the Grammar School, St. Albans, and business premises, St. Albans, under Mr. Percival Blow; the drill hall, Taplow, under Mr. E. Wimperis, architect; the new School House, Folkestone, under Messrs. Jarvis & Richards; and doctor's house, Wimpole-street, under Messrs. Banister Fletcher & Sons, architects.

The Spot Cinema Theatre, Derby, is being ventilated by means of Shorland's patent exhaust roof ventilators and special inlet ventilators, supplied by Messrs. E. H. Shorland & Brother, Ltd., of Failsworth, Manchester.

Messrs. Morris & Sons, Ltd., Kennington-road, S.E., have erected at St. Peter's Church, Wellesbourne, Warwick, a three-light figure window, "Christ Blessing Little Children," with angel, traceries, and base, to the memory of Bevil and Alice Granville, of Wellesbourne Hall.

APPLICATIONS UNDER LONDON BUILDING ACTS, 1894 to 1909.

AT Tuesday's meeting of the London County Council the following applications under the London Building Acts were dealt with. (The names of the applicants are given in parentheses):—

Lines of Frontage and Projections.

Kensington.†—Iron and glass porch in front of No. 21, South Lambeth road, Kensington (Messrs. J. A. J. Woodward & Sons for Messrs. E. & S. Hebert).—Refused.

Kensington, South.—Erection of a projecting clock in front of Nos. 78 and 80, Brompton-road, Kensington (Messrs. Bare, Leaning, & Bare for the Brompton Motor Company, Ltd.).—Consent.

Marylebone, East.†—Erection of Nos. 9 and 10, Market-place, St. Marylebone, with a projecting lower portion (Mr. F. M. Elgood for Mr. J. Michell).—Consent.

Marylebone, East.—Additions at No. 2, Wellington-road, St. John's Wood (Mr. S. J. Wright).—Consent.

Paddington, South.—Erection of pilasters in front of a projecting shop at No. 28, Queen's-road, Bayswater (Messrs. Still, Wheat, & Luker).—Consent.

Strand.—Alterations to a projecting sign in front of No. 40, Pall Mall (Messrs. Hill & Harrington, Ltd.).—Consent.

Strand.†—Erection of an additional projecting iron and glass sign in front of No. 27, Gerrard-street, Soho (Mr. G. K. Bird for Mr. J. Ucelli).—Refused.

Wandsworth.—Bay-windows, porches, and oriel windows to five houses on the southern side of Old Devonshire-road, Balham (Mr. A. G. Hastilow for Mr. F. E. Cain).—Consent.

Wandsworth.—Three buildings upon the site of Nos. 2 and 4, Christchurch-road, Streatham (Messrs. Barlow & Roberts).—Consent.

Wandsworth.—Gas meter-house at Earlsfield Station, Garratt-lane, Wandsworth (Mr. J. W. Jacomb Hood).—Consent.

Wandsworth.—Erection of porches and bay-windows to ten houses on the southern side of Heybridge-avenue, Streatham (Messrs. E. & A. Wates).—Consent.

Wandsworth.—Erection of wooden bay-windows and porches to eight houses on the north-western side of Heybridge-avenue, Streatham (Mr. F. Gadsdon for Mr. A. Soden).—Consent.

Wandsworth.—Erection of an external staircase at Immanuel Church, Streatham Common, next to the southern side of Braxton-road (Messrs. Murray, Delves, & Murray).—Consent.

Westminster.—Addition upon a bay-window in front of No. 124, Victoria-street, Westminster (The Westminster Trust, Ltd.).—Consent.

Width of Way and Projections.

Strand.—Re erection of Nos. 1 and 2, Clare-market, Strand (Messrs. Metcalf & Greig). Refused.

Lines of Frontage and Construction.

Brixton.†—Iron and glass shelter in front of a cinematograph hall at Nos. 101 and 103, Brixton-hill, Brixton (Messrs. Gardiner, Sons, & Co., Ltd.).—Refused.

Hackney, Central.†—Iron and glass shelter in front of a cinematograph theatre at Nos. 538 and 540, Kingsland-road, Hackney (Mr. F. N. Falkner).—Refused.

Hampstead.—Iron and glass shelter in front of the stable at No. 26, Ferncroft-avenue, Hampstead (Mr. C. J. Moss).—Consent.

Paddington, South.—Erection of an iron and glass shelter at Nos. 18 and 19, Leinster-gardens, Paddington (Mr. W. J. Purdy).—Refused.

Width of Way, Frontage, and Space at Rear.

Islington, North.—Erection of a building upon the site of No. 116A, Brecknock-road, Islington (Mr. A. D. Watson for Mr. H. C. Scott).—Consent.

Width of Way and Construction.

Deptford.—Raising of a boiler-house wall at premises, Gosterwood-street, Deptford, without providing a damp course to such wall (Messrs. W. A. Wayland & Co., Ltd.).—Consent.

Haggerston.—Wood and iron office building upon a site on the northern side of Mill-row, Kingsland-road (Messrs. H. Jeffries & Co., Ltd.).—Consent.

Islington, North.—Wood and iron motor-house at the rear of No. 150, Junction-road, next to Wyndham-crescent, Islington (Mr. H. Goodchild for Dr. Barragry).—Consent.

Width of Way, Lines of Frontage, and Construction.

Limehouse.—Wood and iron shed at the premises of Messrs. T. Goldschmidt, Ltd. (Messrs. Cooper & Goulding for Messrs. T. Goldschmidt, Ltd.).—Consent.

Whitechapel.—External iron and concrete gangway over the public way of Fulbourne-street, Whitechapel, to connect the premises of Messrs. Kearley & Tonge, Ltd. (Messrs. W. Eve & Sons for Messrs. Kearley & Tonge, Ltd.).—Consent.

Space at Rear.

St. George, Hanover-square.—Building upon the site of No. 19, Berkeley-street, Piccadilly, so far as relates to the erection of a summer-house and open wooden trelliswork on the roof (Mr. H. Tanner, jun.).—Consent.

Deviation from Certified Plans.

Marylebone, East.—Erection of a building upon the site of Nos. 1, 1A, and 2, Duchess-street, and Nos. 17 and 19, Hallam-street, St. Marylebone (Mr. F. T. Verity for Mr. C. E. Peczenik).—Consent.

Alteration of Buildings.

Hackney, North.—Construction of the floor of an entrance way leading from High-street, Stoke Newington, to the Four-per-cent. Industrial Dwellings (Messrs. Joseph & Smithem).—Consent.

Marylebone, West.—Erection of lifts and lift motor-rooms in Block L of the premises of Messrs. Selfridge & Co., Ltd., Oxford-street, Duke-street, and Somerset-street, St. Marylebone (Building Construction Company, Ltd.).—Consent.

Paddington, South.—Erection of a one-story shop in front of No. 28, Queen's-road, Bayswater (Messrs. Still, Wheat, & Luker).—Consent.

Wandsworth.—Formation of an additional story at the house known as "The Whim," Victoria-road, Wimbledon Park (Mr. W. G. James for Mr. W. H. Collbran).—Consent.

Formation of Streets.

Wandsworth.—Roadways of streets, sanctioned on April 11, 1911, on the Elmwood House Estate on the south eastern side of Upper Tooting-road, Upper Tooting (Messrs. Swain & Selley).—Consent.

Wandsworth.†—Adaptation as a street of a way or part of a way leading from Mitcham-lane to Eardley-road, Wandsworth (Mr. J. Harding).—Refused.

Woolwich.—Roadways of proposed streets on the north-eastern portion of the Eltham Park Estate, Eltham (Mr. R. Stewart).—Consent.

Uniting of Buildings.

City of London.—Uniting of No. 6, Edmund-place and No. 11, Hamsell-street, City (Mr. J. Farrer for Messrs. W. Wood & Son).—Consent.

City of London.—Uniting of Nos. 13 and 14, Blomfield-street, with No. 46, New Broad-street, City (Mr. A. R. Conder for Mr. W. T. Henley's Telegraph Works Company, Ltd.).—Consent.

Finsbury, East.—Uniting of No. 101, Finsbury pavement and Nos. 103-117, Finsbury-pavement, Finsbury (Messrs. Joseph & Smithem for Mr. W. Shepherd).—Consent.

Marylebone, West.—Formation of an opening of greater width and height than specified on the ground floor at No. 370, Edgware-road and No. 123, Church-street, St. Marylebone, and for permission to use armoured doors to such opening and to an opening on the first floor of the said premises (Mr. J. Hudson for Messrs. P. Keevil & Sons).—Consent.

Uniting of Buildings and Construction.

Strand.—Opening of larger size than specified in a division wall at Nos. 114-120, Regent-street; (ii.) the use of steel revolving shutters in lieu of iron doors to an opening in a division wall at the said premises; and (iii.) the omission to carry up a division wall above the roof level of the said premises, and the Council, in the exercise of its powers under sect. 82 of the London Building Act, 1894, do also approve the construction of gangways (Mr. H. Tanner, jun.).—Consent.

The recommendations marked † are contrary to the views of the Metropolitan Borough Councils concerned.

LONDON COUNCILS.

Acton.—The Health Committee have given instructions to the Surveyor to prepare working drawings and estimates for the erection of an administrative block at the Isolation Hospital. The estimated cost is put at 3,400*l.*

Barnet.—The Surveyor has been instructed to prepare specifications, estimates, etc., for making-up a portion of Normandy-avenue. Sanction has been received from the Local Government Board to the borrowing of 4,700*l.* for the erection of additional working-class dwellings.

Bethnal Green.—It has been decided to offer no objection to a proposal by Messrs. Allen & Hanbury, Ltd., to erect a factory on the west side of Coventry-street.

East Ham.—Plans and estimates prepared by the Borough Engineer for the erection of a fire-station with quarters for the officers and firemen's dwellings adjoining have been approved. The estimated cost is put at 8,628*l.* The Engineer has been instructed to submit estimates for the construction of an underground convenience at the corner of Barking-road and Green-street. The kerb on the eastern side of High-street North between Nos. 52 and 74 is to be set back, and application is to be made to the Board of Trade for consent to the duplication of the tramway track at this point. Instructions have been given the Town Clerk to take the necessary steps to obtain the approval of the Local Government Board to the following by-law:—"The by-laws with respect to the structure of walls shall not apply to any wall of a new public building, or of a new building of the warehouse class, which shall be constructed with steel or iron framework and in accordance with the following requirements:—(1) The framework shall be of sufficient strength to secure due stability and shall be properly put together (2) The framework shall be filled in with bricks, stone, or other hard and incombustible material, properly and solidly put together, and of such thickness as shall be necessary to secure due stability to such filling." Plans have been passed for Mr. J. Clark for eight houses in Bedford-road. Mr. J. Hartshorne has lodged plans for three houses in Park-avenue.

Finchley.—The tender of Mr. William Iles has been accepted, at 1,210*l.*, for carrying out private street works in Holly Park. Application is to be made to the Local Government Board for sanction to borrow 17,000*l.*, the estimated cost of building a school in G... North-road. The Surveyor has been direc... to prepare plans and estimates, with a v... to application being made to the Local Gov... ment Board to sanction a loan for the erect... of a public convenience at Tally Ho-corn... North Finchley. Plans have been passed ... Mr. F. G. Huggins for five houses in Squi... lane, also for Messrs. Hedges & Son for se... houses in Grove-road

Hammersmith.—Plans and specifications ... to be prepared by the Borough Surveyor ... relaying the wood-paving of Hammersm... road, from Addison-road Bridge to Row... road, at an estimated cost of 5,302*l.*, ... tenders are to be invited for carrying out ... work. The tender of Messrs. Burt, Boulton ... Haywood, Ltd., has been accepted for ... supply of 35,000 creosoted deal blocks, requi... in connexion with the paving of the north ... of the Broadway, at 6*d.* per 1,000. No ob... tion is to be offered to the proposal of ... J. T. Weatherburn to erect a building ... Galena-road, King-street, also to the prop... of Messrs. J. S. Quilter & Son to erec... building in King-street and Dimes-place.

Ilford.—Plans have been passed as follows ... Messrs. B. Bailey & Co., for Mr. F. B. Ha... son, sixteen houses, Perth-road; Mr. A. ... Hutchins, four houses, Tillotson-road; Mes... Rawlins, Culver, & Co., four houses, Burl... ton-terrace, Green-lane; Mr. A. T. Hai... four houses, Leeds-road.

Middlesex.—At a recent meeting of ... County Council it was decided to render ... proof the accommodation for records at ... new Guildhall at a cost not exceeding ... Mosaic steps are to be substituted for gr... lithic steps in the secondary staircases, a... estimated cost of 159*l.* Both the contra... mentioned are to extras on Mr. J. Carmicha... contract for the erection of the Guildhall. ... Education Committee has been authorised ... arrange for tenders to be obtained for ... posed alterations to the buildings of ... Uxbridge, Cowley-road, Boys' School.

West Ham.—The Education Committee h... accepted the tender of Mr. F. J. Coxhead ... Leytonstone, at 3,240*l.*, for alterations to ... Colegrave-road School; also the tender ... Mr. H. C. Horswill, Forest Gate, at 2,76... for alterations to the Water-lane School. ... following plans have been passed:—Mr. M... Hudson, offices, Northern-road, Plaisto... Messrs. Holbrook & Sons, additions to facto... Cullum-street, Stratford; Mr. A. Sing... offices, warehouses, and alterations at Aera... Candy Company's premises, Tramways-ave... Stratford.

Willesden.—The following plans have b... passed:—Messrs. Freeman & Barber, bu... ing line, Temple-road, Cricklewood; Mes... Nowell Parr & A. E. Kates, for Mes... Sich & Co., Ltd., alterations and additi... to White Hart public-house, Willesden; ... W. J. S. Lawton for the Crypto Electr... Company, factory, Acton lane. Plans h... been lodged as follows:—Mr. H. R. Hunt ... six shops, etc., All Souls'-avenue, Harlesd... Mr. Ernest Bates for Mr. H. R. Hun... eleven houses, All Souls'-avenue, Harlesd... Mr. Edward Cave, six houses, Barrs-ro... Stonebridge Park.

FOREIGN AND COLONIAL.

Hotel Construction, Spain.

Information has been received by the C... mercial Intelligence Branch of the Board ... Trade regarding a proposal to build a l... hotel in a city of Southern Spain. Furt... particulars may be obtained by British ... tractors and manufacturers on application ... the Commercial Intelligence Branch of ... Board of Trade, 73, Basinghall-street, Lon... E.C.

Building, etc., Works, Chile.

H.M. Legation at Santiago report the ... Government Bill has been submitted to ... Chilian Congress providing for the expendit... necessary for the execution, during the ... years 1912-21, of a scheme for the construct... of railways, hydraulic, and irrigation wo... and public buildings, at a total cost ... 211,790,455 pesos. The expenditure is divi... as follows:—Railways, 110,100,000 pesos, ... which 15,600,000 pesos are to be expended ... 1912, and 10,500,000 pesos in each of the ye... 1913-21; hydraulic works, 28,690,455 pesos, ... 1912, and between 2,500,000 and 3,000,000 pe... in each of the remaining years; public bu... ings, 63,000,000 pesos spread evenly over ... ten years; irrigation works in the provin... of Tacna, Atacama, Coquimbo, Santia... Curicó, Linares, Bio-Bio, and Cautin, 10,000, ... pesos spread evenly over the years 1912-16.

THE RVEYORS' INSTITUTION.

an ordinary meeting of this Institution onday Mr. Edwin Savill read a paper The Single Tax Movement," in the of which he said :—

ie result of putting all taxation upon te value of land must necessarily be nly those persons who own or use land pay taxes. Of course, the advocates e tax say that as everybody must, y or indirectly, use land, so everyone have to pay their share; but there are instances in which enormous profits de with very little use of land, and of with huge incomes owning no land ving in comparatively small houses. the case of the big trader who has a office in the City, who would pay very n rates compared with the benefits he s from the protection of his interests e Army, Navy, and Police, and from national services. For example, a ith, say, 30,000*l.* a year, derived from s interests, foreign and home direc-, etc., occupying a small office in the nd living in the country in a house 0 acres of land rated at 400*l.* a year; ld now pay in direct taxes and rates , while under the single tax system uld only have to pay about 250*l.* a On the other hand, a man who derives ncome of 30,000*l.* from an agricultural and who would now pay, say, 2,700*l.* in taxes and rates, would under the tax system be called upon to pay no an 50,000*l.* a year; but against this it e presumed that the rates now paid by nant, say, 6,000*l.* a year, could be on to them in additional rent.

question of how other industries would ected by the suggested change in the d of raising revenue is a difficult one. k the idea is that if all buildings and ements were exempt from rating ies would move out into the country, land is cheap, and where consequently x payable would be small in amount. g upon this point, however, we must rget that many industries own their premises, and would be heavily ed in having to pay crushing taxes valuable sites which they would be still to occupy, in that they would ly not be able to sell it. Undoubtedly ndustries which were in a position to would be inclined to do so. but, before , they would have to consider not only n, but means of transit, market, and other matters.

e would in all probability be great s in our industrial towns. A good deal epend upon how much land an industry s, and the value of that land, but, all, upon a point on which the land themselves do not at present seem ear, namely, whether a revaluation of d would be made at certain periods, or r the present valuation would remain sis of taxation for ever. If the land to be revalued, the valuations which w being made (of which the site value e used for assessing the new taxation) quickly become entirely false, all the ons under which they had been made hanged the moment the new Act was

In spite of this fact, the owner be compelled to go on as long as he ble paying taxes upon the original on, arrived at before the great changes ken place, and notwithstanding the at his land had depreciated in value, nts departed, and new ones unable to nd. When ruined and unable any to pay the taxes his land would ably pass to the State. Doubtless wners in districts which are now of alue would presumably score, because d purchasers from them would only o pay taxes on a low site value, h, owing to capital expended on roads, s, houses, etc., their land would be far higher sum.

he other hand, if the land is to be d at certain periods, there would be, , a large increase in the amount of the pound, owing to the depreciation ent valuable localities being more han the appreciation in the localities land is now of little value. As a ence the industries which had moved into the country would find that, on account of this increase in the amount of the tax on the increased site value of the land they occupied (and they are all supposed to be going to spread themselves out and use much more land than they do at present), they would not have benefited much by the change.

I think the position can be summarised in this way. If land is not to be revalued, some factories, small houses, and cottages will occupy larger areas of land, and, owing to the low original value of their sites, will pay comparatively low taxes, while in other cases the converse will obtain, certain sites being burdened with taxes so crushing as to make them almost incapable of economic use. If, on the other hand, land is to be revalued, industries will build their workshops and cottages on the smallest possible area of land, because they will fear the increase in the amount of taxes they will have to pay as values increase. This surely will be no improvement on the present state of affairs."

PRELIMINARY EXAMINATION, 1912.

The following candidates have satisfied the examiners :-

J. P. Addison, Colliery, near Durham
R. Addison, Appleby
F. H. H. Barber, West Ayton
A. G. Bates, Paddington
P. R. Bawden, Redruth
G. Berriman, Bournemouth
G. C. Biggs, Congleton
G. D. G. Bottomley, High Harrogate
C. L. Bulstrode, Bishop's Waltham
A. V. Cain, Milnthorpe
O. A. Chapman, Tramore
F. E. Clarke, Twickenham
G. J. Clarke, Slough
R. K. Crouch, Kenilworth
D. L. Davies, Carnarvon
S. Davies, Lye
J. H. Day, Maidstone
G. McT. Desprey, Kensington
W. R. H. Downes, London
W. E. Ellis, Newport, Mon.
E. R. Elwell, Leytonstone
E. H. Esbester, Bristol
A. Eversfield, Burton-on-Trent
C. W. S. Fifield, Chingford
H. G. S. Flower, Bath
F. O. Forrester, Purley
F. C. Gibaud, Bristol
A. Gilbert, Enfield Highway
A. Glasse, Loughton
E. E. W. Granger, Burnley
H. S. Graves, Ashford
S. L. T. Green, London
H. H. Haddelsey, Birmingham
W. Harwood, Keyworth
G. S. Hebden, Rawcliffe Bridge
M. T. Hedley, Cumberland
T. A. Heywood, Darwen
G. S. Jennings, Birmingham
R. G. Jukes, Tipton
M. D. Kilford, Ilkeston
H. C. Killender, Liverpool
Wm. S Knowles, Gloucester
D. Langlands, Dartford
R. C. Lewonski, Hove
H. C. Mason, Croydon
A. W. E. Medhurst, Wandsworth
*H. P. Mole, Redhill
C. Ody, Manchester
T. B. Owen, Stroud
F. L. Peacoe, Stroud Green
A. D. Paull, Wembley
R. R. B. Payne, Hitchin
G. B. Piggott, Merioneth
E. Purry, London
E. G. Richardson, Wood Green
H. H. Roberts, Carnarvon
R. G. Roberts, Abergele
J. T. Robinson, Atherstone
R. A. Samuel, Swansea
E. Seabrooke, Manda Vale
W. A Shimmin, Douglas
P. E. Simmons, Basingstoke
P. W. Soundy, Cherlwood
H. N. Surgey, Sesford
C. J. Thurgood, Ware
D. W. Turner, Mansfield
R. M. Vickery, Chard
S. Watts, Kensington
T. G. White, Pontardulais
C. I. Widcombe, Datchet
H. V. Willis, Southampton
C. H. F. Wollaston, St. Albans
H. C. Wolton, Suffolk
C. J. Woolley, Stoke-on-Trent
E. H. Wootten, Ealing
C. S. Wootton, Ealing

Scottish Candidates.

T. MacMillan, Glasgow
J. C. Platt, jun., Barnes

* Head of list.

SMOKE ABATEMENT.

At a meeting of the Institute of Sanitary Engineers held on January 22 (Surgeon-General Sir Lionel Spencer, K.C.B., in the chair) Mr. Lawrence W. Chubb, F.C.I.S., Secretary Coal Smoke Abatement Society, read a paper on "Smoke Abatement." In the course of his remarks he said :—

"The smoke abatement movement has suffered not so much from any general failure of engineers, chemists, and social reformers to recognise the disadvantage of a befouled atmosphere, or to the non-existence of a desire amongst manufacturers to avoid waste, as from the absence of unanimity as to the best remedial measures, and from the lack of systematic co-operation and united effort on the part of those who, broadly speaking, are in sympathy with the movement either as coal consumers or sanitary reformers. What is required is a definite programme, to which all interested in the subject may subscribe, calculated to appeal to the common sense of the community, as well as to manufacturers, as reasonable and practicable.

It is almost unnecessary, save for the purpose of explaining the urgent need of Government action, to remind you of the decay from which our buildings suffer as the result of the acids deposited by smoke. The case of Westminster Abbey at once occurs to the mind, and we have it on the authority of the Rev. Dr. Robinson, until lately Dean of Westminster, that as long ago as 1683 the stately edifice was described by Keepe as being "So shrivelled and parcht by the continual blasts of the northern winds to which she stands exposed, as also the continual smoaks of sea cole, which are of a corroding and fretting quality, which have added more furrows to her declining years so that little of her former beauty now remains." What took place two centuries ago is now going on at an ever-increasing rate, and it is stated that it is now sometimes necessary to renew portions of the fabric which have only been exposed to the London air for twenty years.

And what is true of the Abbey is equally true of every building in the metropolis. The rate of decay may be checked by the use of Portland stone or other building material, which suffers less from the deleterious action of sulphur acids than the susceptible fabric of the Abbey, but decay is slowly but surely taking place. The corrosive effect of smoke and its constituents is everywhere apparent. We see it in the case of modern buildings, such as the St. Pancras Railway-station, and already the new palatial piles of Government buildings in Whitehall are becoming discoloured.

Buildings are not the only sufferers. Works of art, according to Sir Arthur Church and other noted experts, equally suffer; so do our clothes, furniture, and, indeed, everything exposed to the decimating effect of the sulphur compounds given off into the air wherever coal is burned. The experiments of Dr. Rideal have proved that even plated and metal articles rapidly deteriorate upon exposure to our sulphurous atmosphere.

The waste of fuel is equally appalling. In the case of domestic fires the late Sir W. Roberts-Austen undertook the collection of data. His inquiries led him to estimate that the percentage loss of coal as soot was somewhat over 6 per cent. This estimate has recently been confirmed by Professor Cohen and Mr. Ruston, of the University of Leeds. If, as is computed, in this country we annually burn from thirty-two to thirty-five millions of tons of coal for domestic purposes, the direct waste of fuel is nearly 1,950,000 tons. In factories it is estimated that the waste of coal as soot is 0·5 per cent., or approximately 500,000 tons per annum. This is apart altogether from the loss in connexion with locomotives and gas-works.

The legal position is fairly simple. There is no power to interfere with the emission of smoke from the chimneys of private dwelling-houses, but factories, workshops, and commercial establishments generally are amenable to the London Public Health Act, 1891, if in the metropolis, or to the Public Health Act, 1875, if outside.

The provisions of the Public Health (London) Act relating to smoke nuisances are substantially the same as those in the earlier statute. But in 1910 the London County Council secured the insertion of a clause in its General Powers Act enabling it to take proceedings in regard to smoke nuisances, at the request of and in lieu of Borough Councils, the sanitary authorities for administering the Act of 1891. The County Council can also take proceedings in the case of nuisances emanating from the works of Borough Councils, and may spend 500*l.* per annum "in investigating and advancing measures with respect to smoke consumption and the abatement of nuisance arising from the smoke." Dwellers in London owe much to the County Council for its whole-hearted support of the smoke abatement crusade.

It might be thought that the general statute law was sufficiently drastic to ensure the cessation of smoke nuisances. Unfor-

tunately, this is by no means the case. In the first place, it is often found that among members of the local authorities, upon whom is imposed the duty of securing the observance of the law, are some of the worst offenders. They are not likely to desire to prosecute themselves. Sanitary officers, obviously, are unfairly handicapped in such cases, for it requires an unusual degree of courage for an officer to press that the law should be enforced against his employer.

In the second place, proceedings are, as a rule, heard by a bench of magistrates, and not by a stipendiary. Medical officers of health and sanitary inspectors generally complain that in such circumstances it is either impossible to secure a conviction, or that the fine imposed is so trivial as to fail to act as a deterrent.

In the third place, the notorious case in regard to the Lots-road generating-station has shown the uselessness of relying upon any colour standard. In that case the magistrate declined to admit that the smoke emitted was "black," preferring the evidence of scientific experts to that of trained sanitary inspectors.

In the fourth place, there still exists amongst the uninformed an impression that the smoke abatement movement is designed to harass trade.

The Coal Smoke Abatement Society was formed in 1899 mainly as the outcome of the efforts of Sir William Richmond, its President, in consequence of the great prevalence of factory smoke in London, owing to the failure of the local authorities to enforce the observance of the law. It is, of course, a voluntary body, and by the employment of an inspector to report upon smoke nuisances, by stirring up local authorities to a sense of their obligations to the community, and by showing the public that smoke abatement is no idle dream, but a practical scheme of social reform, the Society has done much to improve the conditions of affairs in the metropolis.

The result is seen in the gradual but remarkable diminution of smoke fogs, as well as in the increase of winter sunshine which the metropolis now enjoys. The average number of cases of metropolitan smoke nuisance reported upon by the Society is 1,350, but there can be no doubt that the emission of smoke from factories has undergone a remarkable decrease since the Society came into existence. By way of illustration it may be of interest to point out that the Society's observations have shown that during the last twelve months no nuisances have been detected in respect of 913 factories which in past years were persistent offenders. This fact shows that smoke can be abated where the desire to do so exists.

Industrial smoke which pollutes the London air at the present time is mainly due to factories outside the area administered by the County Council.

In cases where a wilful disregard is shown of statutory obligations to administer the Smoke Clauses of the Public Health Act, it is competent for the Local Government Board to intervene. Unfortunately, the Department has hitherto manifested a disinclination to take the initiative in this direction. The result is that every fog from which London suffers is charged with soot from outlying towns.

In organising the movement the Society has not overlooked the importance of dealing with the domestic smoke nuisance. It cannot be gainsaid that a large proportion of London's smoke is now contributed by our kitchen fires and household grates. In this connexion, several elaborate series of tests of grates, gas fires and fuels have been conducted under the Society's direction, and with the concurrence and support of H.M. Office of Works. These tests have established that while it is almost impossible to hope that an open grate will ever be devised in which bituminous coal may be burnt smokelessly, yet many types of grates are now being manufactured which at least diminish the waste of fuel and give much more satisfactory results from the point of view of heating than their old-fashioned predecessors.

It is believed, too, that the tests of gas fires have tended to remove the prejudice which previously existed against this method of heating, for they have shown that if inserted and used under hygienic conditions, properly constructed gas fires are satisfactory and economical. To the gas and electricity supply companies we owe a great deal, for the employment of their heating and cooking appliances must have effected an immense reduction in domestic smoke, and the cheap and smokeless power they supply has greatly simplified the facts of dealing with factories where deficient boiler room has been the main cause of smoke nuisances. The extent to which gas is alone assisting to clear the air may be gauged from the fact that in the metropolis no fewer than 1,300,000 cooking and heating appliances are now served by the gas companies.

The greatest difficulty has been the latent suspicion, or open hostility, with which the Society has been met by manufacturers. But signs are not wanting that this, perhaps natural feeling, is slowly but surely giving place to a desire for co-operation. It is now becoming widely recognised that the emission of quantities of smoke, especially in the case of large installations, is a sign of waste of fuel, a proof of inadequate supervision, and an ocular demonstration of boiler inefficiency.

The present position of the movement is by no means satisfactory. It is true that striking advances have been made towards the goal we are reaching for, a pure and unpolluted air. But we now seem to be marking time owing to the indisposition of Parliament to give the further powers sought by the great Local Authorities without conclusive proof that these would not unduly harass trade.

Prosecutions for the infringement of the law are decreasing, not because of the non-existence of nuisances, but because of the difficulties of meeting the numerous technical pitfalls created by modern decisions. I therefore suggest that the time has arrived when all interested in the movement should sink their individual desires that some particular form of remedy should be universally adopted, or that efforts should be made to secure the passage of some Private Member's Bill to amend the law in some particular direction.

My proposal is that the Government should be urged to appoint a Royal Commission. The last Parliamentary Committee to consider Smoke Abatement met sixty-seven years ago. Power production, heating and lighting have made marvellous strides since then, and there are numerous points upon which official inquiry could well be made. May I be permitted to summarise a few of the most important of them?

The Royal Commission might be directed to inquire :—

1. What standard, if any, is desirable as to the colour or density of the smoke which should be deemed a nuisance?
2. How the colour or density of smoke can best be identified. (At present a variety of methods are employed, none of which is altogether satisfactory, and some uniform rule is urgently required.)
3. Are the fines at present inflicted upon offenders sufficiently adequate to act as deterrents?
4. Who should be punished, the owner of the works, the engineer-in-charge, or the stoker, when smoke nuisances result from careless manipulation of well equipped installations?
5. Should any industries receive special treatment
6. Should Government Inspectors be appointed to act in regard to the emission of smoke as is done in the case of the Alkali Acts?
7. Should Government premises be placed under the obligation to prevent smoke nuisances? (At present they are immune from prosecution.)
8. Ought any hourly or other time limit to be fixed during which the emission of black or other smoke may fairly be permitted to issue from factory shafts? (At present the time limits fixed by various municipalities vary between three minutes and fifteen minutes in the hour.)
9. Should all cases be heard by Stipendiaries?
10. Can the issue of an unreasonable quantity of smoke be prevented except in the case of breakdown or accident?
11. Can it be shown that the installat of proper appliances generally resu in economy, as is contended "Smoke Abaters."
12. The incidence, intensity, and durat of fogs and their effect on health.
13. The influence of smoke on health.
14. The damage of smoke to buildi works of art, and property genera
15. Foreign efforts to cope with the sm nuisance.
16. How far it is possible by Smoke Ab ment to conserve our coal supplies.
17. How far it is practicable to deal w smoke from private dwelling-house

I entertain no doubt whatever that if inquiry is granted, the result of its inve gations will be to create an overwhelm body of public opinion sufficient to force Government to initiate legislation to prese from unnecessary pollution the air breathe."

TROPHY FOR "THE BUFFS

THIS regimental trophy has been desig and modelled by Miss Florence Steele Mr. H. H. Plante, silversmith. At side of the base are two groups represent Kent training her children in knowle and arms, surrounded by swags of l Above are the badge, a dragon (at each si and a label with the motto of the Bu "Veteri Frondescit Honore," then come f figures in relief, Courage, Endurance, Loya and Mercy, leading up to a figure of Vict Around the base are the battle honours, under each group a label with this insc tion :—"Presented to the 2nd Battalion, Buffs, by those officers who served during South African War." 1899 to 1902.

THE LONDON COUNTY COUNCIL.

THE usual weekly meeting of the Lon County Council was held on Tuesday in County Hall, Spring-gardens, S.W., Mr White, Chairman, presiding.

LOANS.—A loan of 10,000*l.* is to be m to the Greenwich Borough Council for st improvements, and a loan of 2,500*l.* to Stepney Borough Council for electri meters.

CROSSNESS PUMPING STATION. It is p posed to erect penstocks, hydaulic pipe etc., required in connexion with the enla ment of this pumping station, and tend are to be invited for that purpose.

SOUTHWARK PARK.—Various repairs alterations are to be carried out at the su intendent's lodge and cricket pavilion at park, at an estimated cost of 250*l.* for lodge and 55*l.* for the pavilion.

KENNINGTON PARK.—Public convenien are to be erected on the triangular detac portion of Kennington Park, at the junct of Kennington Park-road with Brixton-ro

THEATRES, ETC.—It is proposed to ere cinematograph theatre on a site in De place, King-street, Hammersmith, various alterations are to be carried ou the Little Theatre, John-street, Adelp including the provision of a balcony. following drawings have also been proved : Adelphi Theatre—scheme of he ing and ventilation and provision of doors from the exit staircase from the up balcony; Lyric Theatre, Shaftesbury-ave alterations to electrical installation; Prince's Theatre, Shaftesbury-avenu provision of electrical resistances; George's Hall, Langham-place—alterati to cinematograph enclosure, provision platform for seating in balcony, and alte tions to ventilating arrangements; 2 Tottenham Court-road—provision of draug screen, raising of orchestra floor, and alte tion to orchestra rail.

HOMELAND CHURCHES.

A new edition of Mr. Sidney Heat "Our Homeland Churches and How to St Them," will be published by The Homel Association during next month. The t has been remodelled and lengthened; illustrations have been revised and now clude a series of architectural drawings Mr. J. R. Leathart. The new edition will issued at 2s. 6d. net.

Regimental Trophy. By Miss Florence Steele.

List of Competitions, Contracts, etc.

For some Contracts still open, but not included in this List, see previous issues. Those with an asterisk (*) are advertised in this number: Competitions, iv.; Contracts, iv. vi. viii. x.; Public Appointment, —. Auction Sales, xxii.

Certain conditions beyond those given in the following information are imposed in some cases, such as: the advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in.

*** It must be understood that the following paragraphs are printed as news, and not as advertisements; and that while every endeavour is made to ensure accuracy, we cannot be responsible for errors that *may* occur.

Competitions.

FEBRUARY 14.—**Shanklin.**—Liberal Club, to cost about 1,000*l*. Particulars from Mr. E. G. Medley, 1, Victoria-villas, Clarendon-road, Shanklin.

FEBRUARY 17.—**London, E.C.**—NEW OFFICES.—The Port of London Authority invite preliminary sketch designs for new head offices in Trinity-square, and for laying out remainder of land as a building site. See advertisement in issue of November 24 for further particulars.

FEBRUARY 17. — **York.** — SCHOOL. — The York Education Committee invite competitive designs for a public elementary school. See advertisement in issue of January 12 for further particulars.

MARCH 15. — **Drammen, Norway.**—RAILWAY-STATION.—Particulars from the Norges Statsbaner, Christiania.

MARCH 15. — **Prestatyn, North Wales.** — LAYING-OUT ESTATE.—Lord Aberconway and the Trustees of the Prestatyn Estate invite designs for laying-out of the estate. Three premiums are offered. Particulars from 33, Henrietta-street, W.C. See advertisement in issue of January 5 for further particulars.

MARCH 16. — **Harrow.** — PUBLIC OFFICES.—The Harrow-on-the-Hill U.D.C. invite tenders for the enlargement of and alterations to their Public Offices. See advertisement in issue of January 5 for further particulars.

MARCH 30.—**Edinburgh.**—MEMORIAL TO KING EDWARD.—Limited. See Competition News, p. 151.

* MARCH 31.—**Manitoba, Canada.**—PARLIAMENT BUILDINGS.—The Government of Manitoba invite designs for the new Parliament buildings to be erected in the City of Winnipeg. See advertisement in this issue for further particulars.

APRIL 20.—**Birmingham.**—BLUE COAT SCHOOL.—Limited to local architects. Assessor, Mr. G. H. Hunt, F.R.I.B.A. Particulars from the Secretary, the Blue Coat School, Birmingham.

MAY 1.—Society of Architects' Travelling Studentship. Design for a Town Hall. 25*l*. and medal.

JUNE 28. — **Hale, Cheshire.**—TOWN PLANNING SCHEME.—Premiums 50*l*. and 25*l*. Particulars from the Council Offices, Hale.

JULY 1. — **Dusseldorf.** — A plan for the extension of the City of Dusseldorf. Premiums of 1,000*l*. to 375*l*. Conditions on application to the Chief Burgomaster, Dusseldorf. A translation appeared on page 366, September 29.

AUGUST 30. — SAXON SNELL PRIZE. — Fifty guineas; with medal, is offered for essay on a hospital subject. Particulars from the Sanitary Institute, 90, Buckingham Palace-road, S.W

NO DATE.—**Jordanhill, Glasgow.**—PROPOSED TRAINING COLLEGE.—Limited to six firms, named in Competition News, December 1, 1911, page 635.

* NO DATE. — **Warrington.** — SCHOOL. — The Warrington Education Committee invite competitive plans for the erection of a public elementary school. See advertisement in this issue for further particulars.

Contracts.

BUILDING.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in.

FEBRUARY 9. — **Dewsbury.**—ALTERATIONS.—For alteration of houses, Wakefield-road. Plans and specifications with Mr. E. Vincent King, A.R.I.B.A., architect, 24, Westgate, Dewsbury.

FEBRUARY 9. — **Harwich.** — ALTERATIONS.—For alterations to the Esplanade Infants' School. Specification from Mr. G. D. Hugh-Jones, Secretary, Harwich.

FEBRUARY 10. — **Edinburgh.** — BANK.—Formation of proposed manure loading bank at the railway sidings, Cattle Market, Gorgie. Plans and specification by Mr. James A. Williamson, A.R.I.B.A., Public Works Office, City Chambers.

FEBRUARY 10. — **Edinburgh.**—BUILDING.—For erection of a building for store cattle at the new Cattle Market, Gorgie. Plans and specification by Mr. James A. Williamson, A.R.I.B.A., Public Works Office, City Chambers.

FEBRUARY 10.—**Machynlleth.**—IMPROVEMENTS. Erection of new organ chamber and other improvements to Maengwyn C.M. Chapel. Plans, etc., at Glasgow House. Mr. Rowland Lloyd Jones, M.S.A., architect, 14, Market-street, Carnarvon, and 36, High-street, Pwllheli.

FEBRUARY 10. — **Penryn.** — CENTRE. For forming a handicraft centre at the Penryn Council School. Plan and specification with Mr. Sampson Hill, Architect to the Committee, Greenlane, Redruth.

FEBRUARY 10. — **Portrush.** — SHOP, ETC.—For erection of a café and shop on the site known as the "Rock Shop," and construction of a concrete breakwater. Plans and specifications from Mr. Albert J. Clarke, C.E., architect and surveyor, 2, Craigvara, Portrush.

FEBRUARY 12 **Colebrook.** VICARAGE.—Erection of a new vicarage. Plans and specification seen, and quantities, on deposit of 3*l*., from Messrs. E. H. Harbottle & Son, architects, County chambers, Exeter.

* FEBRUARY 12. — **Great Burstead.** — SEVEN COTTAGES. The Billericay R.D.C. invite tenders for the erection of seven cottages in Church-lane, Great Burstead. See advertisement in this issue for further particulars.

FEBRUARY 12.—**London.**—REPAIRS.—For repairing works to floors and roofs, etc., at Workhouse, Northumberland-street, Marylebone, W. A specification and form of tender from the architect, Mr. A. Saxon Snell, F.R.I.B.A., of 22, Southampton-buildings, Chancery-lane, W.C. Deposit of 5*l*.

FEBRUARY 12. — **Pontymister.**—HOUSES.—For erection of fifteen houses in Clyde-street. Plans seen, and specifications from the Surveyor, Mr. A. J. Dardis, Council Offices, Risca. Deposit of 2*l*. 2s.

FEBRUARY 12 **Port Talbot.** — CHAPEL.—For erection of Independent Congregational Chapel at Aberavon, Cymmer, Port Talbot Plans and specifications with Messrs. T. E. Richards & Kave, architects, Pontypridd.

FEBRUARY 12 **Rosehearty.** HALL. Erection of new Masonic Hall. Plans and specifications with Mr. W. S. F. Wilson, architect, Fraserburgh.

FEBRUARY 13. — **Maidstone.**—ENGINE-HOUSE Erection of a small engine-house at the Corporation Sewage Works at Aylesford. Specification, plans, and form of tender from the Borough Surveyor, Fair Meadow.

FEBRUARY 14 **Cockermouth.**—HOUSES. For converting No. 1, Derwent-place into two dwelling-houses. Plans and specifications with Messrs J. S. Moffat & Bentley, Lic.R.I.B.A., architects, 33, Church-street, Whitehaven.

FEBRUARY 14.—**Woodford.**—SCHOOL.—For erection of a school for special instruction at Madeira-grove. Plans and specification seen, and information from the architects, Messrs. Tooley & Foster, Council Offices, Queen's-road, Buckhurst Hill, Essex. Quantities on deposit of 2*l*.

FEBRUARY 15. — **Morley.**—VILLA.—For erection of villa residence, St. Andrew's-avenue. Plans and specifications seen, and quantities from Mr. T. A. Buttery, Lic.R.I.B.A., architect, Queen-street, Morley.

FEBRUARY 15. **Porthtowan.** RESIDENCE.—For erection of a residence. Plans and specifications with Mr. S. Hill, architect, Green-lane, Redruth.

FEBRUARY 15.—**Reading.**—HEADQUARTERS.—For the erection of new headquarters for Scattered Homes, Russell-street. Architect, Mr. W. Roland Howell, F.R.I.B.A., 17, Blagrave-street, Reading. Deposit of 1*l*.

FEBRUARY 15.—**Redcar.**—TOWER. For erection of the memorial clock tower in Central-square. Plans and specifications with Mr. J. Howcroft, Surveyor, U.D.C Offices, Redcar.

FEBRUARY 15. — **Welshpool.** — GALLERY.—For construction of a gallery at the Wesleyan Church. Plans and specification with Mr. John Potter, No. 4, Pentreifelin-terrace, Welshpool.

FEBRUARY 16. **Barrow.**—LAUNDRY.—For erection of a new laundry at the North Lonsdale Hospital. Quantities from Mr. H. T. Fowler, A.R.I.B.A., architect and surveyor, 6, Cornwallis-street, Barrow-in-Furness.

FEBRUARY 17.—**Skipton.**—CHIMNEY, ETC.—Erection of a brick chimney and an engine-house at Moor View Baths. Mr. A. E W. Aldridge, Surveyor, Town Hall, Skipton.

FEBRUARY 17. — **Thornley.**—ALTERATIONS.—For alterations to the Workmen's Club at Wheatley-hill, Thornley, S.O. Plans and specification at 22, Market-place, Durham. Mr. H. T. Gradon, architect.

FEBRUARY 19. — **Belfast.** — SHED.—For taking down existing buildings and clearing site for new goods shed for the Great Northern Railway Company (Ireland). Drawings and specification at the Engineer's Offices at Dublin and Belfast, and quantities from Mr. T. Morrison, Secretary, Amiens-street Terminus, Dublin. Deposit of 1*l*. 1s.

FEBRUARY 19. — **Cardiff.** — EXTENSION. — For extensions of works and sidings at Lower Penarth. Plans seen, and specification, quantities, and form of tender on deposit of 5*l*. from Mr. John W. Rodger, architect and surveyor, High-street, Cardiff.

FEBRUARY 19. **Coventry.** FOUNDATIONS.—For construction of concrete foundations for purifiers, etc., at Foleshill Gasworks. Drawings seen, specification, with form of tender and quantities from Mr. F. W. Stevenson, Engineer and General Manager, Gasworks, Coventry. Deposit of 1*l*.

* FEBRUARY 19. — **Hunstanton.** — ADDITIONS, ETC., TO HOME.—The Committee of the Hunstanton Convalescent Home invite tenders for alterations and additions. See advertisement in this issue for further particulars.

FEBRUARY 19. **Lydiate.**—CHANCEL.—For rechancel to the church. Plans and specification with Messrs. Austin & Paley, architects, Lancaster; quantities from Messrs. Wright & Son, surveyors, Lancaster

FEBRUARY 19. — **Sheffield.**—SCHOOL.—For erection of new department for infants and open centre, at Whitby-road Council School, Darnall. Drawings and conditions of contract seen, quantities and forms of tender from the City Architect, Town Hall, Sheffield.

FEBRUARY 19. — **Whitby.** — ROOMS.—For erection of new guild rooms. Plans and specifications with Mr. E. W. Smales, architect, 64, Baxtergate, Whitby.

FEBRUARY 20.—**Bilston.**—FIRE-STATION, ETC. For erection of a new fire-station in Market-street, and new sanitary depôt and foreman's cottage in Ann-lane. Plans seen and specifications, quantities, and form of tender from Mr. Vincent Turner, A.M.Inst.C.E., Surveyor's Office, Town Hall, Bilston; deposit of 2*l*. 2s

FEBRUARY 20.—**Doneraile.**—HOUSE.—For erection of a dwelling-house at Oldcourt, Doneraile. Plans and specifications with Mr. Wm. F. Mac, C.E., architect, Fermoy, and 51, Grand-parade, Cork.

FEBRUARY 20. **Durham.** SCHOOL.—For erection of new Council school at Easington Colliery. Plans, specification, and general conditions of contract seen, and quantities from J. Morson, architect, 77, Westgate-road, Newcastle-on-Tyne.

FEBRUARY 20. — **Winchester.** — WARDS, ETC. Erection of new nurses' quarters and maternity wards, to be built in the grounds of the Winchester Union Workhouse. Quantities on deposit of 2*l*. 2s. from Mr. Frank Faithfull, Clerk to the Guardians, 105, High-street, Winchester. Drawings and specifications seen at the offices of the architect, Mr. B. D. Cancellor, Jewry-street, Winchester.

FEBRUARY 21. **Foyers.** — HOUSE.—Erection of house for cookery and woodwork classes for Public School. Plans and specifications from Mr. W. W. Mack, Fort-Augustus.

FEBRUARY 21.—**Idmiston.** SCHOOL. For erection of a Council scoool. Plans and specification with Mr. J. G. Powell, County Surveyor, Trowbridge Quantities and form of tender on deposit of 5*l*

FEBRUARY 22. — **Alton.** —SCHOOL.—For erection of Council school and alterations to existing school Plans seen, and quantities, specification and conditions of contract from Mr. A. Roberts, Architect to the Education Committee, The Castle, Winchester. Deposit of 2*l*. 2s. for quantities.

FEBRUARY 22.—**Blaina.**—HOUSES.—Erection of seventy-four houses at Cwm Celyn. Plans and specifications, quantities, and forms of tender from the Council's Engineer and Surveyor, Mr. W. J. Davies, on deposit of 5*l*.

* FEBRUARY 22 - **Bradford.** - ALTERATIONS LABOUR EXCHANGE.—The Commissioners of H.M. Works, etc., invite tenders for alterations to Bradford Labour Exchange. See advertisement in this issue for further particulars.

* FEBRUARY 22. — **Mile End.** — LAVATORIES BATHROOM.—The Guardians of the Poor of the Hamlet of Mile End Old Town invite tenders for building lavatories and bathroom. See advertisement in this issue for further particulars.

* FEBRUARY 23. — **Darlington.** — ENLARGEMENT OF POST-OFFICE. — The Commissioners of H.M. Works and Public Buildings invite tenders for enlargement of post-office. See advertisement in this issue for further particulars.

FEBRUARY 24. — **Carnarvon.** — ADDITIONS. — For additions and alterations to the landing-stage. Plans and specification with Mr. W. Bezer Jones, A.M.Inst.C.E., 4, Church-street, Carnarvon

* FEBRUARY 26.—**Bury.**—COUNTY COURT, ETC. The Commissioners of H.M. Works and Public Buildings invite tenders for County Court, Inland Revenue, and Customs and Excise Offices. See advertisement in this issue for further particulars.

* FEBRUARY 26 **Swansea.** HOUSES.—The Corporation of Swansea invite tenders for five houses in Cwm road. See advertisement in this issue for further particulars.

BUILDING—*continued.*

late given at the commencement of each ph is the latest date when the tender, or ies of those willing to submit tenders, sent in.

BRUARY 26. — **Swansea.** — HOUSES.—The ation of Swansea invite tenders for fifty houses at Trewyddfa Common. See advert it in this issue for further particulars.

BRUARY 26. — **Wakefield.** — EXTENSION OF HALL.—The West Riding General Pur Committee invite whole or separate ten r the work in connexion with the exten the County Hall. See advertisement in ue for further particulars.

UARY 27. — **Lingdale.**—ALTERATIONS.—For ons and improvements at Lingdale l School. Plans and specifications at the Mr. J. G. Wrigley, Secretary, County Northallerton.

UARY 27. — **London.**—CONVENIENCES.—For ction of sanitary conveniences in Black oad, Tooting, and on Clapham Common. lapham Cross. Specifications, drawings, of contract seen, and forms of tender and ies at the Borough Engineer and Sur Office, No. 215, Balham High-road, S.W ft of 1*l.* 1s.

UARY 27.—**Neath.**—INFIRMARY.—For erec f an administrative block, pavilions for id infirm, children's home, porter's lodge natics' ward, laundry, engine-house and nurses' home, boundary walls, roads and and electric lighting in connexion with Graded Infirmary at Penrhiewtyn, Neath. and specification with the architect, Mr. tees, Parade-chambers, Neath. Quantities posit of 5*l.* 5s.

BRUARY 28.—**Enfield.**—TRAINING WORK —The Edmonton Guardians invite tenders rection of three training workshops at t. See advertisement in this issue for r particulars.

UARY 28. **London.**—SHOPS. Erection of training workshops at the Chase Farm s, Enfield. Specification and conditions tract from the architect, Mr. J. C. S. ery, at his office, 13, Fitzroy-square, W

UARY 28.—**Wellow.**—SCHOOL.—For erection ouncil school and teacher's residence at own St. John, Wellow, near Bath. Plans pecification with the architect, Mr. W. F. Midsomer Norton.

CH 4.—**Macclesfield.**—ADDITIONS. Altera and additions to the St. George's School, treet. Plans and specifications and form tract with Messrs. Whittaker & Bradburn, pots, King Edward-street, Macclesfield. t of 2*l.* 2s. for quantities.

RCH 4. — **Salford.**—SCHOOL.—The Salford tion Committee invite tenders for new pal secondary school for boys. See adver nt in this issue for further particulars.

RCH 4. — **Stepney.** — STRUCTURAL ALTERA — The Stepney B.C. invite tenders for ral alterations at the Libraries, Mile End. vertisement in this issue for further par s.

CH 5. **Douglas.** — ALTERATIONS. — For ions to the court-house. Plans and speci ns from Messrs. Cowle & Son, Government pets, St. George's-street, Douglas, Isle of

DATE. **Belfast.** — BOATHOUSE, ETC.—For n of a boathouse and hall. Plans and cation from the architects, Messrs. Con & M'Avoy, M.R.I.A.I., Oxford House, 35, l-street, Belfast.

DATE. **Belfast.**—RESIDENCE. For erection sidence, Cyprus-avenue. Plans and speci n from the architects, Messrs. Connolly & y, M.R.I.A.I., Oxford House, Oxford- Belfast.

NO DATE. — **Bradford.** — SHOP. For erecting shop on the land of the Phœnix Dynamo Manufacturing Company, Ltd., Thornbury Works. Plans and specifications at the Company's Works.

NO DATE. — **Chandlersford.** — HOSPITAL.—For the erection of a hospital for infectious diseases at Fryern Hill. Deposit of 5*l.* to Mr. W. Wallace Gandy, Engineer and Surveyor to the Council, Offices of the Council, Eastleigh.

NO DATE. — **Gateshead.**—HALL, ETC.—Erection of new lecture hall and Sunday schools, High West-street Wesleyan Chapel. Architect, Mr. J. Walton Taylor, St. John-street, Newcastle.

NO DATE. — **Long Whatton.** — CHAPEL, ETC.— Erection of new Wesleyan Chapel and Schools at Long Whatton, near Loughborough. Mr. A. E. Lambert, architect, 28, Park-row, Nottingham.

ENGINEERING, IRON, AND STEEL.

FEBRUARY 10.—**Swineshead.** — BRIDGES.—For the repair of West Bridge, over the South Forty-Foot Drain, near Swineshead Station, and High Bridge, over the Old Hammond Beck, Swineshead. Specifications from Mr Henry Moody, Surveyor, Horncastle-road, Boston.

LAW REPORT.

Muswell Hill Houses: Appeal Case in Divisional Court.

Cable *v.* Lewis.

Tuesday, January 30, a Divisional Court King's Bench Division, composed of es Hamilton and Lush, had before them se of Cable *v.* Lewis, which came before Court in the form of a motion by the iff to set aside a judgment of Master onnell.

David White, appearing with Mr. ams for Mr. Cable, stated that in this Mr. Cable was claiming 38*l.* 19s. 1d., the of some wrought-iron patent window nts, which, he alleged, were ordered by Mr. Lewis for the purpose of being used in buildings the defendant was erecting at Muswell Hill, N. The defendant, Mr. Lewis (said Counsel), was an architect and surveyor, and he had in his employ a man named Curzon, who was a friend of Mr. Cable's. Certain conversations passed between Mr. Curzon and Mr. Cable, and on account of these Mr. Cable called at the premises of Mr. Lewis's firm and saw Mr. Lewis, and pointed out to him the advantages of these window casements. Mr. Lewis said he would use them in these particular buildings, and subsequently Mr. Lewis, in communication to a Mr. Flowerdew, the builder, made references to the casements. In the specifications (Counsel continued) these particular casements were mentioned, and the builder was instructed to use Mr. Cable's patent articles.

Mr. David White went on to say that the man Flowerdew was a man of straw A large amount of property was accumulating upon these works, and in February, 1906, upon the builder failing, Mr. Lewis, who was architect and owner of the property, came and took the property, and his client (Mr. Cable) was unable to recover anything.

He would submit that under the case of Hobbs *v.* Turner—which was on "all fours" with the present action—Mr. Cable was entitled to recover from Mr. Lewis

Replying to Mr. Justice Hamilton, Counsel stated that he submitted the goods were delivered to Flowerdew after an order had been given by the defendant. The Master, it was true, had found that in fact Mr. Lewis did not give the order and was not liable, but plaintiff appealed on the point of law. The order was given (he contended) by Mr. Lewis by word of mouth.

Mr. Justice Hamilton: The Master believed Mr. Lewis.

Counsel: Yes, but the correspondence shows that he is wrong.

Mr. Justice Hamilton said he noticed from the documents before him that the Master had said he found as a fact that the order for the casements was not given by the defendant.

Mr. White proceeded to further argue that in this case the building owner, Mr. Lewis, was the architect, and clearly he had taken possession. He added that none of the people who had supplied goods for the seven houses had been paid a penny.

Mr. Justice Lush remarked that whether Mr. Lewis did give the order or not was purely a question of fact.

Counsel said that he asked the Court to give Mr. Cable judgment or leave for a new trial. He mentioned that originally there was application for judgment under Order 14, and the matter was referred to the Master. It ought never to have been referred to the Master.

Mr. J. R. Macoun (for the respondent) stated that the reference was by consent.

Mr. White further argued his case, and handed in the specifications, from which, he said, their Lordships would see that the name of Mr. Cable appeared and a reference to his patent casements. Concluding, he submitted that Mr. Lewis, as the builder, gave the order to himself as architect, and as architect he gave the order to Mr. Cable.

Mr. Justice Lush remarked that Master Macdonnell had found against Mr. Cable on the facts, and it seemed to him that the cases that Counsel had cited had nothing to do with it.

Mr. White replied that in the event of the Court deciding against Mr. Cable he would ask for leave to appeal from their decision, as this was a most important matter so far as builders' merchants were concerned with regard to the supplying of goods in these circumstances.

Without hearing any argument by Mr. Macoun, Mr. Justice Hamilton delivered judgment. His Lordship remarked that the price of the goods was under 40*l.*, and, an issue having been raised that appeared to be one of fact, it was referred to Master Macdonnell, who on hearing the evidence decided in favour of the defendant.

The plaintiff had moved to set the judgment aside, and for judgment to be entered for the plaintiff on two grounds:—(1) That the Master misdirected himself on the facts in holding that the plaintiff had not made out his case; and (2) that he was wrong in law in not holding that the order for the goods was given by the defendant as the real principal. Mr. White had argued that the Master should have found that the plaintiff could recover against the defendant because there was somebody—a man named Flowerdew—who had pledged the defendant's credit for the plaintiff, and established privity of contract between the parties to the action. That, however, did not appear to accord with the evidence actually given before the Master, because, although the plaintiff said he had had an order for the goods given direct by Mr. Lewis, the defendant had sworn that no such order was given, and the Master believed the defendant and not the plaintiff. The case that had been quoted for the appellant did not apply, and the conclusion that the Court had arrived at was, that they could not interfere with the discretion of the Master, and the appeal must therefore be dismissed with costs.

Mr. White raised the question of leave to appeal against this decision, and Mr. Justice Hamilton said: "We do not give leave—you must take your own course."

PATENTS.

APPLICATIONS PUBLISHED.*

269 of 1911.—Joe William Grinshaw and Ralph Thomas Mallalieu: Ventilator terminals and chimney-cowls.

348 of 1911.—Leonard Milne: Electric wiring of buildings.

679 of 1911.—Frederick William Campbell: Concrete piles and the like.

TO CORRESPONDENTS.

NOTE.—All communications with respect to literary and artistic matters should be addressed to "THE EDITOR" (and not to any person by name); those relating to advertisements and other exclusively business matters should be addressed to "THE PUBLISHER," and not to the Editor.

All communications must be authenticated by the name and address of the sender, whether for publication or not. No notice can be taken of anonymous communications.

The responsibility of signed articles, letters, and papers read at meetings rests, of course, with the authors.

We cannot undertake to return rejected communications; and the Editor cannot be responsible for drawings, photographs, manuscripts, or other documents, or for models or samples, sent to or left at this office, unless he has specially asked for them.

All drawings sent to or left at this office for consideration should bear the owner's name and address on either the face or back of the drawing. Delay and inconvenience may result from inattention to this.

Any commission to a contributor to write an article, or to execute or lend a drawing for publication, is given subject to the approval of the article or drawing, when received, by the Editor, who retains the right to reject it if unsatisfactory. The receipt by the author of a proof of an article in type does not necessarily imply its acceptance.

N.B.—Illustrations of the First Premiated Design in any important architectural competition will always be accepted for publication by the Editor, whether they have been formally asked for or not.

TENDERS.

Communications for insertion under this heading should be addressed to "The Editor," and must reach us *not later than* 10 *a.m. on Thursday.* [N.B.—We cannot publish Tenders unless authenticated either by the architect or the building owner; and we cannot publish announcements of Tenders accepted unless the amount of the Tender is stated, nor any list in which the lowest Tender is under 100*l.* unless in some exceptional cases and for special reasons.]

* Denotes *accepted.* † Denotes *provisionally accepted.*

THE R.I.B.A. PUGIN STUDENTSHIP. AWARDED TO MR. JAMES MACGREGOR.

EAST SUSSEX HOSPITAL, HASTINGS · FIRST PREMIATED DESIGN, BY MESSRS. JOHN SAXON SNELL AND STANLEY M. SPOOR.

Puente del Diablo, near Barcelona.

From a Sketch by the late Alfred Waterhouse R.A.

(Referred to in the lecture by Mr. Paul Waterhouse on "Bridges," delivered before the Architectural Association on Monday. See page 172.)

ARCHITECTS, CLIENTS, AND SPECIALISTS.

cases where a building and its equipment are designed entirely by the architect, and completed his direct superintendence, the ns between the latter and his rest upon a perfectly satisfactory It happens, however, in the t day that the work of engineering ists enters so largely into the n of building construction, using rm in its broadest sense, that the ct cannot always undertake the of the details unless he happens structural, mechanical, electrical, lic, and sanitary engineer as well architect.

Consequently there is need for expert engineering assistance, which is easily obtainable, but for which the architect's client is not always ready to pay, for the reason that he considers the architect's hardly-earned fees ought to cover everything in the nature of professional advice. When this exceedingly complimentary view is taken of the architect's competency only two alternatives are open in respect of highly-specialised branches of building construction and equipment. One is for the architect to enlist the aid of professional specialists and pay their fees out of his own pocket, a course he cannot reasonably be expected to adopt, and the other is for him to invite competitive specifications and estimates from commercial specialists, who are always ready, and usually advertise their readiness, to furnish projects and drawings "free of charge."

The architect cannot be blamed if he is driven to accept the second alternative, choosing the scheme or schemes best suited to his requirements, making such modifications in his detail drawings as may be necessary, and undertaking the supervision of, and responsibility for, the works executed. Thus, still acting as the *ἀρχι-τέκτων*, he earns and is fully entitled to the customary

fees, and the client fondly believes that he has saved money.

As a matter of fact, however, the system of providing expert advice "free of charge" is far more illusive than the equivalent practice of giving away free various articles with a pound of tea. The enterprising tea merchant merely gives up a percentage of profit on goods actually sold and recoups this by increased sales, being thereby enabled to keep down his price to the current market rate. On the other hand, the structural or engineering specialist gives away specifications and drawings to any person who may ask for them without the certainty of selling anything in return. So universal has this pernicious system become that the commercial specialist is fully aware of the fact that all his competitors are engaged in it, and that he must count himself fortunate even if comparatively few of his projects result in profitable business.

Now let us see how this works out in practice. The steel contractor, reinforced concrete specialist, heating engineer, or electrical engineer has to maintain a costly drawing office and estimating department for the preparation of technical projects. If every one of these were accepted the cost would be equivalent to a very small percentage of the estimate price, and the architect's client would suffer no loss. But owing to the competition of rival firms the specialist can only hope to be successful occasionally, and it is found even by firms in an exceptionally favourable position that the net cost of producing schemes and drawings to be given "free of charge" amounts to from 5 to 10 per cent. on the resulting annual turnover.

The net upshot is that for work which could otherwise be executed for 10,000*l.* the specialist is obliged to charge from 10,500*l.* to 11,000*l.* in order to get back the money wasted on unproductive projects. The figures here used for the purposes of illustration may not be of universal accuracy, but there is no escape from the inexorable conclusion that enormous sums of money are being paid every year by architects' clients, quite unconsciously, for the wasted work done in the drawing offices of commercial specialists, a state of things for which architects are in no way responsible.

Perhaps it may be thought by some of our readers that the same could be said of building contractors and their estimates. We are quite aware that builders have to face a certain proportion of unremunerated work as the result of competitive tendering, but their position is more favourable than that of engineering and structural specialists for the reasons that they are never asked to prepare designs, and that the quantities issued by architects reduce the work of estimating to a minimum. Moreover, builders only tender for work that has been definitely authorised, and each competitor knows that his tender has a fair chance of being accepted.

The specialist is not by any means on so good a footing, having to prepare designs, work out details, and get out quantities, in addition to the preparation of estimates, and, further, he is willing to do all these things for the convenience of architects and others who merely wish to consider whether or not the kind of construction or work involved shall be adopted, or to aid the architect in preparing designs to be submitted in competition with those of other architects.

The position is not an easy one to deal with, for it has arisen largely from the anxiety of specialist firms to secure the favourable consideration of architects. The same kind of thing prevails in engineering practice, as shown by the presidential address of Mr. Michael Longridge to the Manchester Association of Engineers only a few weeks back. Consequently the waste of money in speculative estimates and designs would not be absolutely stopped if consulting engineers were associated with architects in all necessary cases. Nevertheless, the more general adoption of such co-operation would be a move in the right direction, and there is no doubt that if clients would pay directly for all necessary professional aid there would be an important reduction in the indirect payment now levied in the form of enhanced prices for work done by commercial specialists professing, but really unable, to furnish plans and specifications free of charge. In the case of many important buildings completed during recent years co-operation of the kind mentioned has been adopted on the recommendation of the architects, and we feel sure that the practice would be generally followed by the profession, where advisable, if clients would be more ready to recognise its advantages.

ARCHITECTURAL ASSISTANTS AND THE OFFICE OF WORKS.

ACCORDING to letters which have appeared in our "Correspondence" columns since November last, on the subject of Architectural Assistants and the Office of Works, a class of professional men, termed "Architectural Assistants," have been engaged for a number of years in H.M. Office of Works (from five years (eight) to twenty-four years (four), or an average ten years' service for the whole class of forty) upon daily duties requiring the skill of a practising architect, and who are permitted to hold only subordinate and temporary positions, and at a rate of remuneration in most cases less than they might reasonably expect to receive in outside offices upon mechanical work. It appears they have specifically stated their grievances on four separate occasions by memorials to the Secretary (the first in 1896 and the last in 1907), but without any tangible result, except upon the last occasion, when their original designation, "Draughtsman" — always a misnomer—was changed to "Architectural Assistant," and each received a technical certificate of professional efficiency, the value of which should equal those of a similar nature issued by the Civil Service Commissioners. These memorials delivered to the Secretary of the Board have always tersely and categorically stated the duties performed by them to be:—"(*a*) The sketch plans; (*b*) the surveys; (*c*) the working designs; (*d*) details; (*e*) specifications; (*f*) preliminary estimates; (*g*) superintendence of buildings in some cases," which comprised the departmental work supposed to have been done by established officers, and, as far as we know, not one of these statements has been questioned or denied. The claim is for departmental status by establishment and adequate pay, and it is asserted that neither have been accorded them up to the present. Instead the Board arranged a number of Civil Service Examinations, with Junior Draughtsmen as candidates, to perform the above duties, previously satisfactorily performed by the class under review, and about thirty of these Draughtsmen since 1907 have obtained established positions. The Architectural Assistants, who are ineligible by age to enter for these examinations, even if, from other points of view it were equitable that they should be asked to do so, naturally object to taking instructions from those who may have been their former pupils, and as a condition of friction and dissatisfaction has been caused, adversely affecting, we should think, the value and quantity of the work.

While there may be difficulty in placing the ordinary clerical Civil Servant upon the established list without examination, no difficulty appears to exist in this case. They are wholly a professional class (nineteen of the forty being Associates or Licentiates, we are informed, of the R.I.B.A.), and by a proper representation addressed to the Treasury they can be established without any examination. This is provided for by an "Order in Council," dated June 4, 1870.

In the House of Commons, on November 24 last, Mr. Dudley Ward on behalf of the First Commissioner replied to Mr. Philip Snowden that "he would consider establishment for the professional class, numbering forty holding the technical certificate of the Board," and added, he was "not sure that those gentlemen who might be considered eligible would submit to the necessary reduction of their income according to Regulations." And again on December 7 last, Mr. Dudley Ward replied "that the desires of every member of the class would be ascertained with a view to their establishment." In spite of that we are informed that the members of the Architectural Assistant class have received no official intimation whatsoever, though the statement of their case embodying their desires for amelioration was placed in the hands of Mr. Dudley Ward early in December last. It should be emphasised that a reduction of salary is not necessarily demanded by the Treasury if the Office of Works Board represent not unsympathetically the case to them; the cost of their unusual or professional education cannot have been less than from 450*l.* to 600*l.* over and above the usual education of the clerical staff of the department, who receive a larger salary; and, for precedent, one Architectural Assistant was, in May last, established, it is understood, with an increase not a reduction of his income. We cannot help thinking that a case is made out for granting the claims of a deserving though small body of men. Their case appears to demand at the least equivalent conditions of service with the Assistant Architect class, their work being similar in character, and their experience greater.

NOTES.

ofessor mfield's Lectures.

Professor Blomfield was happily inspired when he determined to devote his course of lectures at Royal Academy to architectural ng and draughtsmanship. We ob- however, that his historic survey not include some of our earlier sh draughtsmen. They cannot, of e, vie either in numbers or (with the tion of Inigo Jones) in quality with Continental brethren; but they have saic interest which is not without in the consideration of architectural htsmanship as a whole. The part of Professor Blomfield's first e was devoted to the considera- of the work of that delightful c artist, Villard de Honnecourt; in dismissing the sketch-book of am Burges, now in the possession Institute, as a mere imitation, or called it "an exercise in style" he manner of De Honnecourt, as surely less than just to the dual quality of Burges's serene nd-ink work. Professor Blomfield yed on the screen one of Piranesi's ngs as a supreme type of graphic In discussing the tendencies of rn drawing the lecturer suggested the French convention (which is ring important influence on this of the Channel) is not without its ts. In advising the students not tempt the delineation of their ideas e they had evolved clearly in their he was, we fancy, touching upon ods of creative work for which it little difficult to establish a wholly actory working principle. In such ers what one calls temperament ts for a good deal.

London ociety.

The important and influential meeting held on Friday last week at the ies of the Royal Society of British ts, "to approve of the formation of iety with the object of fostering an est in London in the minds of its ns and of those in the kingdom who d it with affection," was the first e expression, we believe, of opinions n have been held for some time— and there somewhat vaguely, it ue, but with growing strength and ction by many thoughtful art ers and leaders of public opinion in great city—as to the need for the ition of a body concerned with the y and amenities of London. And that the London Society has been erly started we venture to think it has a career of great usefulness e it. Though perhaps its way be beset with some difficulties at it should, if guided by patience and ght, gradually become recognised as thority on all matters affecting the y of London which no individual, dy of individuals, would even wish ppose. In all matters affecting the vements of a town or city sooner ter the question of cost has to be with, and this no doubt will be one e difficulties which the Society will to face; but, as it will exist for the se of "fostering an interest in the minds of the citizens of London," there will be many opportunities for the exercise of that powerful influence which will inevitably follow the formation of a Society supported by so many able and enlightened men.

Edinburgh and London.

A good many interesting remarks were made at the meeting, as will be seen from our report on another page, but we should like to refer specially to what Captain Swinton said in reference to the Cockburn Society, which has existed in Edinburgh for some seventy or eighty years. Edinburgh is generally acknowledged to be one of the most beautiful cities of the British Islands, if not the most beautiful, and though much of its charm is undoubtedly due to its situation, affording another illustration of the adventitious help which Nature can give to art and design, still, the city has been made more beautiful and kept beautiful—in spite of some lapses about which there may be differences of opinion—by an enlightened public opinion created or strengthened by the work of the Cockburn Society. London is not Edinburgh, but the possibilities are great, and our city is the largest and richest city in the world. We already possess some fine thoroughfares, many historical and beautiful buildings, and under wise guidance and control a standard can be set which, without destroying individuality, will do much to make the city what all her citizens must desire her to be—*i.e.*, the most beautiful as well as the largest and richest capital of the world.

The Corporate Life of London.

It certainly is about time that something was done to create an interest in London. For a variety of reasons, such as size and method of government, London as a whole appears to lack the corporate unity and civic patriotism which is so noticeable in other great cities. The corporate life of London seems to sleep, or never to have attained self-consciousness. The first and most important work of the London Society will be to awaken it. Here is a work in which the artist, the scientist, the sociologist, the humanitarian—everyone, in short—can join, and we hope that the Society will be so constituted as to include intellectual workers and reformers of every description. In this connexion the question of the amount of the subscription is not altogether unimportant, and we hope the promoters will bear it in mind.

The President's Address to Students.

The annual address to the students by the President of the R.I.B.A. had this year an unusual touch of human interest which, no doubt, appealed more forcibly to the students than the most high-sounding and eloquent of official harangues. From his own mistakes the President sought to draw a moral for the benefit of those still young enough to profit by it. To be content to climb the ladder step by step and not to rush into practice too soon is surely sound advice, even though some may feel that, however soon they may start, life is never long enough to obtain the practice which makes the perfect artist. No doubt it has been contended that, from the artistic or structural point of view, the sooner an architect begins to handle real bricks and mortar, and obtain experience in the actual effect of his designs when executed, the better it is for him. But, even if this be so, present-day conditions are such that the practice of architecture involves certain professional responsibilities which should not be undertaken by those who are not yet qualified to discharge them. Although mistakes which eventually lead to the Presidential chair may not necessarily appear to the aspirant to similar honours as things to be avoided, yet the students no doubt will have sufficient common sense to realise that everyone is not sufficiently gifted to do good work and succeed in spite of them. In advising the students never to play up or down to their judges, but to do justice to themselves and not to bother about anyone else, the President uttered a warning which might be borne in mind by those students of a larger growth who take part in public competitions. The tendency to play up or down to the assessor is, perhaps, accentuated by the present system of appointing a single assessor. It is a tendency which hampers the free expression of original ideas, and so impedes the advancement of architecture. Although the Institute cannot be held responsible for the weakness of human nature, it is in a position to mitigate this evil by the adoption of the jury system for public competitions. This system has always been employed by the Institute in judging its own students' competitions. What is sauce for the gosling should be sauce for the grown-up goose.

The Pugin Studentship, 1880.

In his address Mr. Stokes alluded to the only prize he ever won—the Pugin. It was "more by good luck than anything else, for there were two other men better than I was, but they were so equal that the judges could not make up their minds which was the best, so they gave it to me." The present generation may like to be reminded of the competitors for the Pugin in 1880, and to be given the opportunity to guess the two men who were better than the present President of the R.I.B.A. The nine candidates were J. Bradshaw Gass, F. Hemmings, A. Hemingway, jun., Mark J. Lansdell, B. P. Shires, John W. Simpson, Leonard Stokes, R. S. Topham, and S. H. Townsend.

PROVIDENT INSTITUTION OF BUILDERS' FOREMEN AND CLERKS OF WORKS.

Sir Aston Webb, C.V.O., C.B., R.A., will preside at the next annual dinner of this Institution at the Holborn Restaurant, on Saturday, February 24 next. This is the seventieth year this Institution has been assisting members who are engaged in two of the most important and responsible positions in the building industry. The Institution was founded for the purpose of granting pensions to aged and infirm members, their widows and children, and for making grants of temporary relief to necessitous members. Total amount paid in pensions, 17,309*l.* 7s. 6d. Paid in pensions, 1911, 772*l.* 17s.

COMBINED MEETING WITH THE JUNIOR INSTITUTION OF ENGINEERS.

A MEETING of the Architectural Association combined with the Junior Institution of Engineers, was held on Monday at No. 18, Tufton street, Westminster, S.W., Mr. Gerald C. Horsley, President, in the chair.

Mr. Hall, Hon. Secretary, made the following announcements :—

The third Spring visit on Saturday, February 17, to the British Museum Extension. Architect, Mr. J. J. Burnet. F.R.I.B.A. Members to meet at the building at two o'clock.

The Annual Smoking Concert and Revel of the A.A. Athletic Club to be held on March 26, at the Pillar Hall, Victoria Station Restaurant.

On the motion of the President, Mr. F. Jackman and Mr. H. V. Simpson were elected members of the Association.

The President then proposed a vote of condolence to the relatives of the late Mr. T. M. Rickman, who died on Saturday last, the 10th inst. Mr. Rickman was president of the Association in 1854-5, and he outlived ten or twelve presidents who succeeded him. He was always interested in the work of the Association, and he really was one of the founders. The motion was agreed to in silence, the members standing in their places.

The President, in calling upon Mr. Paul Waterhouse to read a paper entitled "Bridges," explained that this was a combined meeting of the Association with the members of the Junior Institution of Engineers. Such meetings were held each year, and the members of the Association welcomed their engineering friends very cordially.

BRIDGES.

Mr. Waterhouse then read a paper on "Bridges." He said :

"Familiarity," said my friend, "breeds contempt." He is a man of such rare thought and of such carefully chosen language, that the utterance by him of this trite proverb struck me dumb. To my astonishment he repeated it, and I suggested—for we are old friends—that I had heard something to that effect before. "Quite so," said he, "that is the point of my remark." "What mark?" I rejoined, and the battle of wo for which he was obviously eager was fa set going.

The friend I speak of was John Pargit of whom some of my architectural hear and readers have known me to speak befo He is not an architect in that he neith makes money by architecture, nor is he any degree a draughtsman, but in all oth senses he is more of an architect than m of those who profess our craft. Whether inclination or by intuition, or, m probably, by some strain of mental inhe tance, he has in him to an unusual deg the power of understanding the inner mea ings of our ancient and historic art.

Harper, an architect friend of mine w often joins in our conversations, says that Pargiter the imagination outruns the reas but Harper is rather too much the slave of fa and logic, and I sometimes think that the re explanation of Pargiter's apparently fanci ramblings is that since knowledge does n only come to us through our five senses often has in him, and brings out, ideas whi are none the less true for not being proval by rule and line.

For the third time, said Pargiter, "Fam arity breeds contempt." "The proverb he went on, "is so full of truth that it true even of itself. You are so famili with the saying that its very meaning brought into contempt. Have you ever co sidered what a miracle is? You wou probably define it as a suspension or infra tion of one of the laws of nature." "Qui so," said Harper. "Quite wrong," said o friend, "for if it were that it could nev have happened, and so would not have be a miracle or marvel at all. A miracle, is true, is a contradiction of man's formu of nature's law up to the date of its occ rence which formula is thereafter—if miracle be properly attested and accepted revised to meet the new knowledge Harper broke in at once, "Forgive me," said, "if I suggest that we do not want talk about miracles at all, but have com here to have one of our architectural conve sations." Pargiter smiled. "Yours is a unfortunate distinction," he said, "for archi tecture would have died in infancy if ma had denied it from the start the right to pe form miracles.

I understand your meaning, however, a may tell you that when I saw you coming was preparing to ask your opinion on a architectural subject, which, as a matter fact, gave rise to my stale but true quota tion. In this connexion, I was going to remark, that one of the reasons why famil arity breeds contempt is that even miracle cease to be miracles when they are familia We adjust, as I said before, our notions the law of nature to include them, and on included in the normal scheme of nature the retire from the realms of the marvellous.

I think that all the same we are rathe ungrateful to the world's miracles when w too readily accept their retirement from th miraculous."

Harper and I looked at one another, fe ing that John Pargiter was after all never coming to his subject. He intercepted th look, understood it, and said, "I am really working round to architecture, but there is one more thing I must say about this subject the degradation of miracles, or, rather, about a similar subject. Our lives are surrounded and made the pleasanter by an immense number of things—products of art, products of ingenuity which, without being miracles in the large sense of the word, are marvels to a degree which we daily fail to recognise. We can easily test the depth of this con tempt by imagining the consequence either of the new appearing of these things or of their total disappearance. Conceive for a moment the effect on mankind of a morning on which it should be suddenly discovered that buttons, matches, and glass (to take only three simple examples), had absolutely dis appeared from the reach of humanity.

Think of the consternation of the gentlemen in the second-class carriages and their excited conversation on the way up to London. Imagine the poor things, their clothing hung upon them with string and safety pins, shivering in the windowless compartments, borrowing a light from that the one popular man who had a petrol pipe-lighter,

Design for Decorative Panel in a Municipal Building.
By Mr. George H. Day, A.R.C.A.

The painting from which our illustration is taken is a sketch design to scale of a decorative panel for a town hall. The full-size panel would be executed in a wax medium. Mr. Day is the holder of the prize travelling studentship for Decorative Painting of the Royal College of Art, South Kensington.

all talking on the one great threefold
ect of the hour.
ithin a fortnight or less civilisation
ld have devised substitutes—the ungainly
and string would have given place in
r clothes to an adroit system of lacing
er after the Elizabethan fashion. Tinder
es would have come upon the market to
t the smokers' needs, and the railway
pany, after an interlude of oilskin cur-
s, would have fitted talc on the no longer
ighty windows. At last, when men had
e to think that after all they were not
g so badly, a blessed day would dawn on
ch the same fairy who had spirited away
buttons, matches, and glass, would bring
n all three back. Then, and not till
, would men realise once more that they
been all their lives ungrateful churls in
doing a more respectful homage to three
he little miracles that make the comfort
ife.
r, again, imagine if you can, a day on
ch the evening papers were full of the
overy of a manuscript in Egypt contain-
a piece of literature which we had
erto never known—no other, in fact, than
150 psalms of David. The dullest of
stians and the least literary of men would
airly on fire with their poetry and their
zing force. Familiarity alone is the
et of our unreasonable misappreciation.
l this, forgive my ramblings, is leading
o the subject of Bridges."

Are Not Bridges Architectural?

Harper's face fell, he showed outward
open disappointment, and Pargiter
ired the cause. "Well," said Harper,
thought you were going to let us
about some definitely architectural
ect." "And pray," said Pargiter,
e not bridges architectural?" "Hardly,"
the other. "It is true that bridges
sionally seem to demand and some-
s get a sort of architectural finish
off such as the Doric columns applied to
erloo Bridge*; but I regard a bridge
se as a mere constructional problem, the
ing of a special need by an orderly and
omic use of the particular material most
d to the special exigencies of the place
the age. Don't cut in for a moment,"
vent on, for Pargiter was preparing to
k, "I have something to add, for I
thought a good deal about this matter.
consideration of beauty in bridges leads
to the conclusion that beauty in their
is merely fitness, and that our notions
pplying architectural trappings to what
ally a mechanical—in other words, an
neering—device or expedient are gener-
a woeful waste of entirely misapplied
nuity."
arper ceased, and Pargiter looked at
with astonishment. "You are an archi-
Harper," he said, "and it amazes me to
you say such a thing. I am at one
you about architectural trappings, there
such thing as applied architecture, but
most excellent definition of a bridge is.
y mind, also the most complete defini
of architecture that I have ever heard.
meeting of a special need by an orderly
economic use of the particular material
suited to the special exigencies of the
e and age.'
closer expression of the nature of archi-
re could possibly be devised, and yet you
ly say that a process so described is by
nature of the case not architecture, but—
understand—engineering."

Architects, Engineers, and Bridges.

"Not quite that," said Harper, "but look
this way. You must admit that there
ch a craft as engineering, and that it
necessary craft. We know that an archi-
by himself could not be entrusted un-
l with such a problem as a bridge to span
Thames, and by admitting an architect's
ces as desirable for the finishing off of
structure which the engineer has de
ed, we simply insult both forms of art,
probably get a result in which the archi-
re, struggling with the engineering, pro-
s a complicated falsehood which by its
falsity fails to be worthy of the name
t." To which Pargiter answered, "My
Harper, your explanation of your posi-
only makes it the more untenable.
Engineers are useful people as you justly observe, their calling is an honourable one and their work is indispensable, but so for that matter is the work of a host of other persons who might legitimately find employment in connexion with a bridge, but who would, nevertheless, be quite unsuited to act as the supreme designers of it. All that you can say about the attachment of so-called 'architectural' trimmings or trappings to an engineer-designed bridge is perfectly fair, but the indecency of them is due to the fact that the so-called architect who applies them is, by his very act, proving himself no architect. Whether engineers approve of the fact or not, a fact it still is that an architect, if he be anything at all, is by virtue of his name an *over-workman*. A bridge in an important city is obviously and necessarily an important and conspicuous mass of building, as such it is, if I understand architecture at all, a thing to be committed to and produced by an architect. If the problem involved is such that it demands structural knowledge of which no living architect is capable, that is no sufficient reason why the promoters of the bridge should bar all architects from appointment. Appoint the architect say I, the best you can find, and let him as over craftsman have under him, among his many underlings, the best engineer he can get."

"O come," said Harper, "I'm all for giving architects their due, but I should never think of putting the engineer second in a case where the use and even the beauty of the structure depends upon that nice adjustment of material to function which only a highly trained engineer can calculate."

"Then, once more," said Pargiter, "I consider that your ideas on architecture and architects are at fault. Any architect who is worth his pay, by which I mean any architect who is an artist, would realise as fully as you do the very sentiment you have just expressed. Architects are expected to have an almost encyclopædic knowledge, but even the best equipped architect will, if he is wise, continually consult the chiefs of his little army of craftsmen on the methods which will produce the best results in the lines on which each is a specialist, and that is exactly what the wise architect would do with the engineer, and the wise engineer would fall in ungrudgingly with the architect's consultant but still supreme attitude. The relative positions of architect and engineer which I here suggest involve no possible degradation to the profession—the noble profession—of the constructional engineers.

The Primæval Bridge.

But somehow or other your questions and my answers have led us to the wrong end of our subject. I wanted to show you how strangely we have been led by familiarity to ignore the miracle of bridges, but we have become plunged into the final and crowning topic, the artistic construction of large bridges in important cities. May I lead the discussion back to the other end of the scale—the primæval bridge?"

"By all means," I said, and Harper said

Toledo.
From a Sketch by the late Alfred Waterhouse, R.A.

n unfair description of that noble design.—

"by all means" also, but he said it as it seemed to me with half a sigh of resignation. Our talk had so far been in Pargiter's little summer-house, built against an angle of his square-walled garden, but as he suggested that we should continue the conversation in the house we both rose to follow him, and Harper, motioning to me to hang back, began murmuring, "I can give you the heads of our friend's discourse beforehand. Aboriginal savage at bank of stream; food supplies or prospective wife viewed on opposite bank; tedium of travelling up stream to find shallows for fording; accidental discovery of fallen tree across stream; application of reasoning faculty; tree felled on purpose in favourable wind; tree too short; selection of rock in midstream; device of two trees resting on said rock; dawn of engineering; rudiment of pier; further advance by use of two trunks and transverse sleepers, development of lintel or beam bridge. Conqueror introduces arch; astonishment of savage; progress of arch construction: introduction of iron; arch superseded; return to lintel forms; invention of cantilever. Digression on trusses, and bearers again introduced to useful savage in order to trace development of suspension bridge from lowly origin as a mere throng of bullock's hide slung across the stream from tree to tree, up to the elegant structure at Clifton."

Low as Harper spoke, the conclusion of his

Monnow Bridge, Monmouth.

summary was greeted by a clapping of hands from Pargiter, who, apparently, had heard every word of it. "A very good analysis," he laughed, "of the history of bridges, but I fear I must disappoint you for I have no inclination to follow the subject on those lines. Historical development is all very well and very interesting, but I think we shall give ourselves more pleasure by studying the matter in another way.

What is a Bridge?

Suppose we begin by asking one another, "What is a bridge?" "That is easily settled," said Harper. "A bridge is an arched or other structure across a stream or river." "And what do you say," said Pargiter, turning to me. "Harper's definition," I answered, "is a little too narrow, for, to begin with, the bridge needn't be across a stream at all, but might be, and often is, across a road or across a dry chasm." "Yes," said our friend, "and there are also cases where, instead of carrying a road over water, the bridge carries water over a road. I expect that the best definition of a bridge that we can give is, 'a structural device for carrying a road over an obstacle, or an obstacle over a road.' For general purposes that will meet the case, though there would be exceptions even to this, as in the instance, for example, of an aqueduct carrying a canal or a water supply over a river.

The Miracle of the Bridge.

I said (he continued) that I did not want to start historically with the savage and the tree trunk, but I must ask you, for the interest of the thing, to imagine yourselves for five minutes to be men whose civilisation has never brought them within reach of the wonder of the arch. You live, let us suppose, by the shore of some mighty river, one of those terrific giants that cannot be bred in an island as small as ours, but need for their nurture long miles of wide continent. Your river comes from hills so remote that you have never seen them, and has rushed through plains so vast that other kings than yours reign over them. Indeed, so great is its force and its severance that the very folk you see lessened by distance on the other bank speak a tongue that you can scarcely understand.

One day a man comes among your townsmen and says, 'Give me of your money and I will make it easy for you to walk dryshod in ten minutes from shore to shore.' You laugh at him and suggest that the days of Moses and the Red Sea, of Joshua and Jordan are not your days. But the man persists, and you ask him how. "A bridge," says he. "A bridge," you answer, and laugh with greater scorn. You have seen to be sure the arrangement of planks and beams which crosses the stream in your own street, but you know that no such structure could possibly be made to cope with the vast width and the murderous floods of the cold grey monster of which you are so proud and so afraid.

Then the man speaks again and more madly as it seems. 'I shall do this thing, he says, 'not with the lightest and longest materials, but with the shortest and heaviest. Some of you have become used to the wonder of stones piled on stones to make a house, it is on stones that I will cross, and make you cross your river. Not stepping stones, nor a paved ford, but stones that leap from shore to shore, resting here and there on the solid bottom, but bounding from one resting-place to another, flying in curve after curve, but owing all their flight to that very weight which seems to make the deed impossible.'

Would you believe him? not you. The thing is a miracle, you say, and miracles do not happen. Your madman makes his bow and goes. You have your laugh out, and a merry laugh it is, for you have kept your money and got rid of your dreamer. And after all you say it is of no use to go against nature, and the river was placed where it is for good reasons.

Next year you see a man on the opposite bank. Those few who sometimes venture out upon your river in perilous boats have seen him nearer, and assure you that he is your old friend the madman. You laugh again, realising that the silly citizens of the further shore are likely to be wheedled out of their money in a fool's venture.

The weeks, the months go by, and at last you see that at the dry end of the summer the man is in very truth at work building a pile of masonry on the bit of shingle that crops up in the centre of the river-bed during August. This is followed by a clever diversion of the current from another part and the building of another heap of mortared stone. Bit by bit through two long seasons, hindered constantly by rising water, and stopped for whole months by the spring's deep floods from the melted snow, the work goes on, till a goodly row of stout mounds of masonry stem the water with their prow-like starlings. You laugh less; but next summer you laugh louder again, for you see timber, undoubted timber, stretching from one pier to the next. Our fool, you cry, has failed at last. His dream of leaping stones is over. He sees that he cannot span his spaces with boulders, and has gone back to the old tree trunk device, which is good enough for the little stream up street, but will, as we know, be carried away by the first rush of winter water. But your laugh is not long. The logs were carried away, sure enough, but not by storm and stream. They were neatly taken down and stored when they had borne for a while the weight of the first proud bow of hewn rock that was a summer's work of the man with the mad vision. And so, arch by arch, it came. A man like yourselves only, as you say, madder (as some say wiser)—took of the stones that sink, took of the very sand that the river makes by the boisterous pounding of rocks, took of that human skill which the hungry waters delight to drown, and made fr them the conquering, arching, all but livi thing on which one autumn day you ce brated, with fluttering flags and music, w wine and gay clothes, the triumph of hum wit over inhuman water."

"Anyway," said Harper, "we p savages let the people on the other side p for what was presumably a gain to ourselv as well as to them." "I am not so sure that," said Pargiter, "for the miracle of t bridge went a bit further. The clever fe on the other bank debated, it is true, whet they should charge you a bridge toll or pu small protective duty on the few things y would bring across for sale, but in the e they decided that your rather timid spir might be unduly thwarted by either of th impositions; they wanted your custom m than your taxes, so they let you come o free, and in a very few years the bridge the conjurer—had satisfied its builders t you were paying in your simple, blind w quite enough interest on their outlay. B we are getting into political economics; me bring you back to bridges by telling y why I suggested that our talk should finished indoors. I have here a portfolio water-colour sketches by one who possess what I may call the poetry of the brush. poetry in the pen-written sense he never, as know, wrote a single line; but poetry, distinct from prose, consists, as you aware, of the expression of things perceiv in such a way that they appeal to the high and simpler side of the intellect. Such pression can be wrought by any instrume of representation, and may therefore be product of paint and water no less than ink. I claim that these drawings—made the leisure hours of an exceptionally bu man—will help us towards that inner view the subject which we are attempting to ta I might, of course, bring the portfolio do into the garden, but for some reason wh I cannot explain pictures of this kind, thou made in the open air, never look their b out of doors. Here is the first of them, t bridge at Valencia, which might well se as illustrating our imaginary miracle that madman made."

The Artistic Character of Bridges.

"Before we get into too exalted a fra of mind on this subject," said Harper, "n I venture to point out that, interesting bridges are from a structural point of vie they are (even if I admit your claim t they are architectural) necessarily, and very clear reasons, lower down in the sc of sublimity than most other architectur projects. Their utility, their strenuo economy of material, their publicity—t they are generally for public or common and, in fine, their rather commonpla drudgery of service, all serve to mark th off from the monumental aspects of archite ture as belonging to a very useful and v necessary, but not in the highest se artistic, class. In fact, if you are going make much of bridges you must logically on to make architectural capital out of roa for, say what you will, bridges are for most part very little more than incidents road-making. And it would puzzle even yo Pargiter, to preach an art sermon on hi ways."

I realised that Harper, who began th remarks in all seriousness, had ended saying a good deal more than he mean probably for the direct purpose of getti our friend into warmer enthusiasm. He w quite successful; Pargiter was glowing, t with a sudden thought he pulled himself and said very calmly, as if changing subject, "Did I ever tell you the story the Sunday-school teacher from Norwood

"I had met the man," said Pargiter, Nimes. We travelled together for a f days, for I found that the little creature w very full of real interest in historical matte he had quite a poet's heart, and was capab of excitement when other people better bre but with blunter appetites, would only sh languid appreciation. So I arranged to with him to the Pont du Gard. He kn that he was to see a Roman aqueduct, a he knew what an aqueduct was, but I want him to come upon it by himself. So we h our out-of-door *déjeuner* at the little i which stands just out of sight of the gre arches, and when it was over, I told him

nder slowly up the valley, and I would low him.
udging the time, I set out, and go to point of view without discovering him. was nowhere in sight, but he was in nd. At least, that voice was surely his, the words seemed unnatural to his meek well-ordered mouth, for they were the ds of a swearer. 'Anything wrong?' I uted, supposing that a sprained ankle was cause. 'Wrong?' he answered. 'No, I 't think anything is wrong. Why?' h,' I said, 'you were using pretty strong guage when I came up!' He blushed. ou didn't think I was profane, I hope,' said. 'I really wasn't, but there is some- ng about this—this monster that made me out in the strongest and largest words I w. Of course, I know it is only a water- in, just like the pipes under the road at ne in South London, but somehow, coming it all of a sudden in this country valley ong all the flowers and butterflies, and ing it that size, filling the whole place up that—sort of drowning the landscape—l, I don't know but what the water-main a doesn't fairly make it worse. It upset Now, if it had been a triumphal arch, a bit of a basilica or something, I could e taken it quietly, but to find a lonely, -of-the-way valley simply absorbed by a ss of pure common sense, so huge and so ient, makes me feel that I must either ar at it as a work of the Devil or say prayers. Either way I get into the big ds.'

explained to him that his attitude was perfectly proper one, that it had an exact nterpart in the feelings of the Queen of ba, in whose case the crowning wonder, t made her feel that she had no spirit left her, was not the temple or the palace, but e way by which Solomon went up' from to the other—doubtless a bridge—and I ther assured him that the Romans them- es were so satisfied of the Divine potency bridges as to call their own high priest the simple title of chief bridgemaker, a e which to the present day a great part Christendom gives to its head bishop—ntifex or Pontiff. On the whole I recom- nded him, of the two alternatives, to say prayers, for, whatever moral failings the mans may have had, they certainly rose ve common humanity in the building of dges, and there is no reason for suggest- that this rising was in the direction of, even under the direction of, Satan.

Devil's Bridge, however, is a title which en alights upon a bridge, especially upon h a one as stands inhumanly supreme in lesolate place. Here is one—another of sketches—from the neighbourhood of rcelona. Puente del Diablo they call it, l it happens, though you would not think to be of Roman origin. The little struc- e at the far end is the relic of a Roman mphal arch, and the tall, pointed central h, from which all Roman character has appeared, is a later substitute for two er arches, the central pier having no doubt led.

The relation of the whole design to its man original seems to me analogous to the anish language—a half-Moorish graft upon tin. The change of the Latin *Pons* to ente is the same frivolous* transformation t the old bridge has undergone."

In consequence of the pressure upon our umns we are compelled to hold over the mainder of this paper and some notes of discussion which followed, until next ek. Ed.]

THE ROYAL ACADEMY LECTURES.

Professor R. T. Blomfield, A.R.A., vered the third of his Royal Academy ures on Monday, on "French Draughtsmen the XVIIth Century."

He said that the successors in France of Cerceau were rather more cautious, and, a rule, produced collections of designs for cial arts and handicrafts, such as the treatise ironwork issued by Mathurin Jousse of La Flèche, in 1625, a work prepared with some regard to the actual processes of the metal worker. Of Barbet and Collot, who both issued collections of architectural details a few years later very little was known. Barbet dedicated a book of altars and chimneypieces to Richelieu, engraved by Abraham Bosse in 1635. Collot's work belongs to the same period, and both men were contemporaries of De Muet, the well-known architect, and of Francini, the engraver and water engineer of Florence, whose designs of doorways, according to the Five Orders, were in the taste of the worst designs of the time of Louis XIII. Pierre de Muet was a very able architect, and his "manière de bien bastir" was the first serious attempt to deal with domestic architecture since the days of De l'Orme's colossal undertaking. The plates were well-drawn, and well engraved. From the point of view of the draughtsman and designer of architectural detail, far the most important figure in France in the third quarter of the XVIIth century was Jean Lepautre, brother of the well-known architect, Antoine Lepautre, an artist who shared with Daniel Marot the distinction of being the most prolific and brilliant draughtsman of the XVIIth century. Lepautre's first published work was issued in 1644, and for a time he devoted himself to the reproduction of pictures by various masters. His real interest as an artist began with his amazing series of designs for decorations, of which the earliest known example is dated 1657. The series was almost inexhaustible, designs for every conceivable decoration, chimney-pieces, ceilings, alcoves, cartouches, grottoes, fountains, vases, were turned out in series after series. Manette said that Lepautre hardly took the trouble to make any preliminary studies, but began straight away on the copper, improving, as he went. His mind must have worked with extraordinary rapidity, but there was little trace of profound study in his work, and no affectation whatever of archæological research. His industry was prodigious, and only equalled by his amazing facility of design and draughtsmanship, Destailleur estimates that he engraved at least 2,000 plates as against some thirteen to fourteen hundred by Du Cerceau, and in addition he must have made sketches innumerable for every sort of purpose. His record had been beaten by Hollar alone, who produced over 2,700 engraved plates in some fifty years, and even Piranesi falls short of him in quantity, though it must be borne in mind that many of Piranesi's plates were very elaborate, and very much larger. Lepautre was far too facile in conception and execution to be capable of striking out one of those great imaginative designs which hold the mind as something beyond the reach of other men. Where he was strong, and perhaps unsurpassed by anyone, was in his power of presentation. His imagination was essentially dramatic, as indeed was the age in which he lived. Le autre was quick to seize on features which would at once arrest attention, and he could combine his motives with a freshness of invention and brilliancy of draughtsmanship such as few men have ever possessed. Though he was continually drawing architecture his thought never shaped itself in architecture; he could only think and clothe his thought in terms of ornament. In this he was the exact opposite of Piranesi, but, on the other hand, his ornament was exceedingly fine in its way, large in scale, and conceived of on a great decorative plan. There was a notable difference between the work of Lepautre and the work of Du Cerceau; where the latter was trifling in scale and laboured with a fancy that never rose above the mesquineries of ornament, the imagination of Lepautre ranged far and wide, his schemes of decoration were organic in the sense that he aimed at a large unity of effect, in which each detail of his ornament was subordinated to the whole. It was here that he was so immensely superior not only to Du Cerceau but to Berain, who succeeded him. Berain was a skilful artist, dexterous with his needle, but his imagination never soared into the empyrean. From the historical point of view the work of Lepautre was important, because it gave full expression to that mature art which the labours of generations of Frenchmen had built up, and which reached its culminating point in the reign of Louis XIV.

Another very able draughtsman was Daniel Marot, the son of Jean Marot, the architect, and his work came to resemble so closely that of Lepautre that, except for the signatures, it would be difficult in certain cases to tell the work of one from the other. Marot made it his business to supply "pensées," as he called them, for architects, painters, sculptors, jewellers, gardeners, and others; in other words, his books were pattern books, naked and unashamed. If, as appears to be the case, there is no escaping those parasites of modern architecture, one could only wish they were up to the standard of Marot and Lepautre. Such was the brilliancy of Marot's drawings that many of his engravings were works of art in themselves, of great beauty, and some of his ceilings were finer than almost anything by Lepautre. Lepautre and Daniel Marot were perhaps the finest masters of decorative draughtsmanship that have ever existed, and in saying this he did not place them in competition with the Italian painters who had imagined and carried out great schemes of decorative painting.

Jean Berain was born about the middle of the XVIIth century. He acquired a considerable reputation for little quips and cranks of design, and he was at his best in his designs for the surface of walls and ceilings.

The lecturer then dealt with the other side of French architectural draughtsmanship in the record of existing buildings. It was a less ambitious aim than that of the artists he had been discussing, but the work done by such men as Du Cerceau in the XVIth century, and Jean Marot, Israel Sylvestre and the Perelles in the XVIIth, was of far greater value to the historical student. Jean Marot's engraved design for the completion of the Louvre was at least as good as Lemercier's. His really valuable work was his "Architecture Française," 195 plates, known as the "Grand Marot," and the little folio containing 112 geometrical drawings of notable buildings of the time, known as the "Petit Marot," one of the most perfect little books of its kind in existence. To Sylvestre and the Perelles we owe a new departure in architectural drawing, and that was the perspective with the sight line high up in the picture, the great birdseye view of houses and grounds stretching away for miles into the country.

There could be little doubt that in the second half of the XVIIth century, or in quite modern times, the French were the masters of the time in architectural draughtsmanship, and set the standard of that art and established its finest traditions in every civilised country. He would almost advise them to turn their back on the present and on the immediate past and endeavour to extend their intellectual and imaginative horizon by studying the work of those half-forgotten artists. That would do something to check one of the most crying faults in the practice of modern architecture, its ignorance of antiquity, its failure to realise the wider scholarship of art.

ARCHITECTURAL SOCIETIES.

Leeds and Yorkshire Architectural Society.

A general meeting of this Society was held last Thursday, February 8, the President, Mr. Sydney D. Kitson, in the chair. Mr. E. Caldwell Spruce read a paper on "The Present-day Sculpture in France." The lecture was illustrated by many slides of modern works from the schools in Paris, Rodin's work being chiefly in evidence. In speaking of the realistic and emotional types so popular at the present time, Mr. Spruce expressed the opinion that such works representing repulsive or disgusting subjects should not be encouraged, as it is violating in every way the mission of art.

Edinburgh Architectural Association.

The third ordinary meeting of the session of the Associate Section of the Edinburgh Architectural Association was held in the Association rooms, 117, George-street, on the 7th inst., Mr. W. J. Walker Todd presiding. Mr. Oscar Paterson, Glasgow, read a paper on "An Elementary Introduction to the Study of Taste in Stained Glass." He pointed out that the faculty of taste was a developed process of appreciation, and spoke of the development of an idea, of the character of the material and its capacity of eliciting certain emotions of taste. After dealing with the early associations of art with the Church, he proceeded to speak of form and colour and the identification of character by lines, the mixing of light, temperament, the selective force, and the mental process of appreciation.

It is not really frivolous of course; the dis- ery that a pointed arch might meet the needs he bridge was a very serious and able feat of hanics.—P. W.

THE SOCIETY OF ARCHITECTS: HOUSING OF THE WORKING CLASSES.

THE fourth ordinary meeting of the Society of Architects for the session 1911-12 was held at 28, Bedford-square, W.C., on February 8, Mr. Percy B. Tubbs, F.R.I.B.A. (Vice-President), presiding in the unavoidable absence of the President, Mr. Bond.

The ballot was taken, and the following candidates were declared to be duly elected :—

For Membership.

C. Chart, F.S.I., Croydon
W. G. Couldrey, Paignton
J. A. Dartnall, Leytonstone
J. P. Firth, Wakefield
W. H. G. Hubbard, Luton.
R. Medcalf, Liverpool
T. B. Medcalf, Liverpool
G. Newton, Bournemouth
J. Thompson, Alderley Edge
L. S. Youngman, Bournemouth

For Studentship.

J. S. Clutterbuck, Battersea Rise, S.W.
H. C. Low, Wimborne
H. Rhodes, Gorton
H. W. Sheffield, Earl's Barton
D. M. Wilson, Horsforth

Mr. E. C. P. Monson, F.R.I.B.A., F.S.I. (Vice-President), then read a paper on "The Housing of the Working Classes," illustrating his remarks by lantern slides and a number of contract drawings and sketches. In the course of his remarks he said :—

"In the XVIIIth and XIXth centuries great strides were made in building houses for the middle and poorer classes of the community, and in London itself many hundreds of streets were laid out and developed about that time. In fact, previous to then London was more or less a small place to what it so soon afterwards became, owing to all sorts of restraints, Acts of Parliament and the like which have been attempted and passed to keep down house building. Many of these areas, however, which were so hurriedly covered with speculating built houses soon came to grief and developed into slums, and, besides being insanitary, were badly designed, and numbers were built either on the old-fashioned back-to-back principle, or else provision was made for only a very small back yard, and only in the cases of the large and more important houses was there any more than a very limited air space provided, and anything was thought to do for the poor. These are now being or have had to be removed to make way for something else. Better houses, however, were built, fronting around a square, which, of course, was what we consider more up to date.

Around all the munificent gifts and charities and Garden City schemes rage several points which I propose to go into a little more in detail, and they are as follows :—

Which is it advisable to build?—

(1) Block dwellings; or (2) cottages; (3) the block *versus* the cottage; (4) if cottages, whether detached, semi-detached, or in rows; (5) number of houses to the acre; (6) the essentials of the best house built cheaply.

Block Dwellings.

These are divided into two kinds : (*a*) *The Associated.*—A type, however, which is quite out of date, and which nobody in his senses, and thinking of hygiene or of the ordinary care of life, would suggest; very many of these, however, have been built, and it is only more or less recently that they have been discarded.

(*b*) *The Self-Contained.*—This type is good, each flat being what it says, self-contained, that is, having everything which an ordinary cottage would have and combining all the comforts of a house without interference from anyone.

The cost of block dwellings, according to Alderman Thompson, altogether apart from the cost of the land, averages about 100*l.* per room, and the land cost about 75*l.* per room, making the total about 175*l.* per room. This is higher than the cost of the cottage per room, but it can be readily seen that where the site is in London, or other large cities, it is impossible or impracticable, even from a philanthropic standpoint, to build other than block dwellings. Block dwellings, however, should not be built higher than five stories, and only four if the cost of the land is such as will allow this, owing to the vital question of adequately lighting all the rooms.

In the case of the Trustees of the will of the late W. R. Sutton, the site at the corner of Old-street and City-road, London, E.C., comprised only 1¾ acres, and cost about 95,000*l.*, and the buildings just over 70,000*l.*, a total of 165,000*l.* for 284 tenements and fourteen shops—885 rooms and sculleries and shops, etc., which works out about 80*l.* per room for the buildings and about 107*l.* per room for the land, and on another site where buildings are now being erected at Chelsea the cost of the land was 76,000*l.* for about 3½ acres, and the building contract is 176,000*l.*, a total of 252,000*l.* for 675 tenements and thirty-four shops—2,175 rooms and sculleries and shops, etc., which works out about 80*l.* per room for the buildings and about 35*l.* per room for the land, and in both these schemes, after deducting 40 per cent. for repairs, rates, and taxes, and other outgoings, the rents are so arranged as to produce 2½ per cent. only on the total capital outlay.

The blocks here provide for one, two, three, or four roomed tenements, and in all these tenements accommodation is made for a scullery, bathroom, separate water closet, larder, coal cellar, etc., which is not counted when speaking of the number of rooms. The entrances to the flats are all from staircases. Every floor is of fire-resisting materials, as also are the staircases and roofs; the playgrounds and roadways are made with tar macadam; shrubberies are planted wherever possible, and care is taken to tend the trees and shrubs so that they shall have a fair chance of life. Staircase walls are in glazed bricks, and generally the whole of the work is carried out not so much with the idea of building cheaply as that of saving in the cost of upkeep and renewals.

In Liverpool, where the Corporation have been doing a great and praiseworthy work on the Bevington-street area and where they are proposing to spend a further considerable amount of money, the block dwellings are to comprise living-room, one or two bedrooms, scullery, water closet, but no bath. The entrances to tenements are from balconies placed outside the buildings, but personally I am not greatly in favour with this particular method of entrance. It, however, has something to be said for it. It saves space, because one staircase can be made to serve a larger number of tenements than if the entrances were direct from the staircase.

In Manchester very many dwellings of this latter character have been put up by the Corporation, and it is becoming quite a usual thing for large municipalities to go into the question of doing (as rightly they should do) something for the poor, but I am of opinion that in doing this the buildings should be kept of such a character and at such rents as should make them self-supporting with no charge on the rates.

Cottages.

The Sutton Trustees are purchasing a site at Birmingham, about 21½ acres in extent, at a cost of about 18,500*l.* including roads and sewers, and the proposition is to build 215 houses and cottages of varying sizes, from six rooms to one room two-storied maisonettes accommodating a total of 251 families in 1,050 rooms and sculleries, the whole scheme working out with roads and sewers at about 60,500*l.*, which gives an average cost per room of 40*l.* for the buildings and 18*l.* for the land and roads.

These figures from my own work prove conclusively that the cost per room in the cottage for buildings and site is less than the cost per room and site in the block. The cost of cottage building as given in "Housing Up to Date," by Alderman Thompson, averages roughly from 50*l.* to 70*l.* per room, and the average site cost about 7*l.* 10*s.* per room, but it is impossible to make any comparison, because, as I have said before, cottages can only be built to be productive where the cost of the ground is comparatively low.

The Block *versus* the Cottage.

The great question with regard to block dwellings is whether they are more or less healthy than the cottage, and it must be admitted that good health is dependent not on one condition but on many.

The primary command of creation was "Let there be light," and it is because the builders of block dwellings in some countries have neglected to obey this command that the block dwellings exercise such a mischievo influence in regard to the health of th people. In the New World as well as in th Old this primary command had not bee obeyed.

Another point against block dwellings that they are liable to be overcrowded; thi however, ought never to happen where th superintendent and his assistants keep sharp look out.

Although I am designing many bloc dwellings I am not greatly in love with them and if I were able I would build cottages the type which I consider a workman's hom should be; but with sites of the cost valu of those just referred to it is manifest impossible to consider the question of cottag thereon, even when the small return of 2½ p cent. is taken into account.

In discussing this housing question wit workmen I find that no point is more popul than that of the need for proper bedroo accommodation. Each normal dwelling f a workman's family should also have a goo living-room—spacious, well lighted, brigh and clean. It should be the brightest an most cheerful room in the house. It has t serve as the workroom for the wife, the play room for the children, and the dining-roo for the whole family.

Connected with this room there should be scullery in which the rougher domestic wor of the household can be performed. Eac dwelling should also be provided with a bat and the practice of placing this real necessit of modern healthy life in the scullery may b recommended where the cost of a separat bathroom cannot be afforded.

With regard to the provision of a best roo or parlour, there is much difference of opinio amongst housing reformers in Great Britai Personally, I am a strong advocate of th parlour or best room. I regard the quie but strong desire of the workman's wife t have one good room for pleasure as a health desire of great social value.

This, then, is the standard of a normal healthy home for a workman's family—thre bedrooms, large living-room, scullery an bath, and wherever possible a parlour There is one external feature of the goo home which should also be clearly stated viz., the need for garden space. No work man's home can be regarded as properl equipped unless it has a garden, howeve small.

On the broad question, taking all thing into consideration in connexion with thi clause, I think, all will agree with me tha the cottage comes out best and wins the case and should be built wherever possible, course every care being had and due accoun being taken of the situation of the buildin and the cost of the land.

The Cottage: Whether Detached, Semi-Detached, or in Rows.

Whether the cottage should be detached semi-detached, or in rows depends ver largely upon the number it is desired to plac upon any given plot of land, and makes considerable difference in the number to be s placed, because if they are in rows more lan is available for building—and the ove crowding of houses is to be deprecated—bu even if they are so placed it is far better in my opinion, to provide a small yard, ther the back way, and beyond that the garden and to, say, every four or six houses ru a passageway from back to front, with room over, to connect up the back way as much and as often as possible, and prevent becoming the nuisance it sometimes does but if the number of houses to be erected to the acre is, generally speaking, says Mr. Raymond Unwin, reduced to anything like fifteen, terrace houses with back passages will be found to be a more expensive method of development than with passages between the houses.

Is it better, however, to build houses semi-detached? Here, again, the question o money comes in, for it is impossible to build in this manner as cheaply as terrace houses; there are three main walls to be erected to start with, instead of two. The objectionable features, however, which may arise in connexion with the back way in the terrace house are done away with, and every house has its garden directly attached thereto. Detached houses are much better, but again the cost is still more.

ing at this matter dispassionately in lights, I consider that the best way of ng houses economically is semi-de- but the passage between the houses be not less than 4 ft. wide, and can d jointly by the occupiers on either this method does away with the ous back passage and is the easiest n of that very irritating by-law ng back ways which at one time ocal authority sought and fought for they found out the cost of upkeep, g, etc., and which they would now be be rid of.

r of Houses to be Built to the Acre.

is a very vexed question and one has already caused much heartburning esent in certain districts as many as o thirty-five and even more houses are an average upon every acre of ground. f course, means overcrowding and dis- t, terrace houses and practically no s; but thirteen to the acre is a very umber and is good. The Birmingham ation in their Town Planning Scheme st Birmingham have fixed the limit at r gross acre with a density rate of per gross acre; this has, however, not satisfaction, and the builders and ners are grumbling. Personally, I a good all-round average is thirteen to n per gross acre, and with this number ssible to give plenty of garden ground, be seen from my first scheme for the gham site above spoken of and the w suggested to be carried out.

rring again from a Report by Mr. nd Unwin of the effect of limiting the r of houses to the acre, he says, "For nent let us confine our attention to orth 300*l.* per acre, which will be found a fair average for undeveloped land sed in large quantities on the outskirts isting towns. Two diagrams give graphic form the main fact that the age of increasing the number of houses acre is very much smaller than would t be supposed even if measured solely money result per plot, while if anything wed for the size of the plot it becomes t that the crowding of large numbers uses upon the land is really a most omical proceeding. The additional f road required to provide the extra ge for the added number of houses es the total cost of development so that raising the number of houses 9·6 per acre gross to twenty-five per ross only reduces the cost of land ads per house from 68*l.* to 40*l.*, while e of the plot which each house enjoys ced from 423 yds. to 127 yds."

ut it in another way, with twenty-five to the acre, the tenant pays 7½*d.* per for 127 yds. With 9·6 houses to the f the tenant paid 1*s.* 0½*d.* per week, ld have 423 yds. for his plot, and the rd would make the same profit upon d, because while the effect of reducing umber of houses to the acre from y-five to 9·6 is to increase the cost per y 68 per cent., its effect also is to e the area of the plot by 333 per cent.

put it in still another way from the s' point of view, with 9·6 houses to re he pays at the rate of 778*l.* per acre he net area of his plot, which is d. per yard, while with twenty-five to the acre he pays 1,515*l.* per acre net area of his plot, or 6*s.* 3½*d.* per

How to Build Houses Cheaply.

der the Housing and Town Planning nd the various Small Holders and other great incentive will be given to people ld houses for themselves, either through of the approved societies or by borrow- he money in other ways with the aid e Acts.

o not propose to go into the many ds in which this can be done, but will say that I consider the best way to cheaply is for the client to employ a ghly practical and responsible archi- not a faddist or dreamer after the sible, but one who understands his ct and can give the best results for east money, due care being had to all onditions obtainable."

Mr. H. Freyberg (London),

in proposing a vote of thanks, said they not only had to erect new and sanitary buildings for people who could not help themselves, but they also had to do away with those insanitary spots in London that had grown up in past years, and the difficulty there was that as fast as slum areas were cleared away they blossomed out in all their fruitfulness in other parts of London. It was absolutely useless for individual effort to go on unaided, and it was of no great practical value for any municipal body to clear away slum areas in their own particular municipality if they were allowed to settle in others.

Mr. G. A. T. Middleton (Past-Vice-President) seconded the vote of thanks.

Mr. Henry R. Aldridge (Secretary, The National Housing and Town Planning Council)

supported the vote of thanks and said that Mr. Monson was doing what was absolutely essential at the present time in trying to work out from the architects' point of view some of the very difficult housing problems. It was comparatively easy when they had unlimited means to dispose of to design a middle class house which would readily meet the tastes of the client and provide for him a comfortable home, but when they had to deal with the problem of the maximum of room at the minimum of cost it became a very different task. The poorer type of workman in England, those breadwinners earning no more than 18*s.* or 1*l.* per week, were largely beyond the scope of housing authorities. Taking the standard set out by Mr. Monson of what a good home should be, with three bedrooms on the upper floor there must be a corresponding number of rooms below, fireplaces on the ground floor to correspond with those above, and so on; in fact, a well equipped home with bath really meant a five-room cottage which could not be built in any part of the country to let at an economic rent of less than 5*s.* to 7*s.* per week. Those engaged in estate development had declared that the cost of the roads again and again equalled the cost of the land, but it could be taken as a general rule that the cost of road-making at least equalled the cost of the land. It was quite unnecessary that those subsidiary roads which only had to carry a milk cart should have to be made strong enough to take a traction engine, and when this element of cost was taken into account it would, he thought, bridge over the difficulty in regard to the number of houses per acre. If there was any type of development which the ordinary medical officer of health had condemned it was the cul-de-sac, but he asked whether there was anything very wrong with a scheme which provided a cul-de-sac containing only twenty houses, with a 20 ft. road and the houses set back 30 ft., making a distance of 80 ft. from house to house. It was quite possible, he thought, to get Mr. Monson's ideas brought in with due economy, and, unless economy went hand in hand with development, they would never get town planning to help the people it was intended to help.

Mr. Noel D. Sheffield

said that the title of Mr. Monson's paper might have been 'The Housing of the Better Class and Better Paid Workman." The class of men and women who might be called casual labourers seemed quite beyond any scheme for promoting their welfare. In many cases it was the occupier who made the slum, and even if persons of that type were shifted to another district and healthy surroundings, they would very soon convert the whole neighbourhood into a slum area. Block dwellings were used to a great extent by poor women who were compelled to earn their own livelihood, and he put forward the suggestion that, if possible, in every block of dwellings a large and airy room, say, on the ground floor, should be provided and fitted up as a crèche.

Mr. Chas. F. Mitchell

said it was their duty to see whether it was not possible for those earning 18*s.* to 1*l.* per week to be made a real asset to the State by the improvement of their social conditions. It certainly did appear, at first sight, an insolvable problem, but he thought that experience would show that the difficulties to be met with were not insuperable. He was glad that it was in the cottage rather than the block dwellings system that the solution lay.

Mr. F. Endell Rosser

agreed with the lecturer in his advocacy of the parlour, which, he thought, gave to the working man and woman a certain amount of self-respect.

Alderman W. Thompson (Chairman, The National Housing and Town Planning Council)

said that if the State was justified in finding large sums of money to deal with the products of slum areas, then he thought it would be equally justified in subsidising schemes for the better housing of the working population, seeing the vast importance of the human element in the problem before them. He believed in the working man's parlour, as it increased the occupier's self-respect, and when they possessed that the solution of the other problems was not far off. He was not altogether sure that they could solve the problem of the country village without a subsidy of some kind. They all made up their minds some time ago that it was necessary, as a commercial undertaking, for a three bedroom cottage should be built for not more than 150*l.* Capable men had laughed at them, and expressed the view that it was impossible to reduce the cost to that figure, but they had been completely floored by the fact that it had since been done. It was only here and there that they were able to do this, and it must be borne in mind that they were as yet in the experimental stage. Architects had only recently, comparatively speaking, turned their attention to the cheap house. It had never paid them to give the matter serious thought; the design of a cottage and the superintendence of its erection required as much care and trouble as larger work, and when it was completed, the result of their efforts was often "lifted" by builders and others almost to the brick without any kind of fee. If architects could devise some reasonable means, without putting any unfair oppression upon the production of houses, which would protect a man who had given his life to the consideration of the subject, they would be justified in asking Parliament to accede to the demands. The present Act was not strong enough to get at the trouble. So far, every house erected on their estate had been designed by a proper architect; every house would have to be examined by an architect, and they would insist upon having a competent man for every house put up. The average number of houses there to the acre was not more than six. The maximum number was twelve to the acre, and the opinion throughout the country seemed to be hardening on the question. The zone system of streets radiating from the centre would have to be adopted when land was purchased which already had houses standing upon it. There could not be a slum anywhere within ten square miles of their estate, their neighbours benefitting by their scheme. On an estate 200 acres in extent, twenty acres were given up to open spaces. The problem before them would be very much simplified by getting through one or two practical schemes on well laid out pieces of land; 150*l.* seemed to be about the limit, but if it were possible to get below that figure with dignity and self-respect, it would be well to do so.

Mr. Ewart G. Culpin (Secretary, Garden Cities Association)

said that it was a glad sign for housing reformers that architects were taking up the subject. They had all suffered so much from the deadly monotony of streets of houses erected from builders' plans, the cost of building and establishment charges being out of all proportion to the result obtained. The lecturer had proved to housing reformers the world wide that the block must give way to the cottage, for from every point of view, health, morality, and society, the cottage must be the unit of town development. He had spent the last three months in South Wales examining the question, and it was a common thing to find houses built in a hill side with one and sometimes two stories backed by the earth itself, without any possibility of ventilation. It was bad enough

with one only, but often two could be seen; and the plans of those buildings had been passed by the Local Authorities within the last three to five years, in spite of the protests of their medical officer of health. The waste of life to which Alderman Thompson had referred could be seen in the figures of the comparative death rates of large towns and garden cities. The death rate of Birmingham was seventeen, that of Bournville only seven, and while the infantile mortality of the former was 170, the latter was as low as seventy. Without doubt it was evident that the cottage condition was going to be the salvation of the worker, and that the open spaces of the garden cities would do for their children what the private park and public playground did for the children of the wealthy.

The Chairman then made a few remarks and put the motion to the meeting, and a hearty vote of thanks was accorded to Mr. Monson for his lecture.

Mr. E. C. Monson,

in reply, said he concurred with the statement that the cost of the roads in many cases exceeded the cost of the land. With regard to the question of paper *versus* distemper for walls, a housing reformer, Mr. Lovegrove, of Hornsey, had recently advocated paper because with the class of tenant they were catering for distemper was apt to get very much rubbed, when it got into a horrid greasy condition which would never wash off, whereas with paper the walls could easily be stripped and repapered. Vermin, of course, was another question, but with care and proper attention would become, he thought, a thing of the past. With regard to the removal of dust and house refuse, that was quite a simple matter. Every tenement had its own dust pail which was perforated to prevent its misuse by the occupier, and it was one of the duties of the superintendent of the dwellings to see that the dust pail was emptied once every day into the dust bin provided for it. In Liverpool, they had a system of dust shoots with automatic flaps, one dust shoot to every two tenements, and the refuse fell directly into a large receptacle at the bottom of the shaft. It was quite possible to build a cottage for 150*l*. He had, a few days ago, obtained an estimate from a builder for a house in connexion with the Banbury Competition, and the builder could erect the house to his design for 135*l*. The accommodation provided was three bedrooms, living-room, and a scullery. There was hardly any passage room, and the whole thing was about as compact as it was possible to get it. The whole of the rooms were under one roof with no outbuildings.

The proceedings then terminated.

STAFFORD PUBLIC LIBRARY COMPETITION.

THERE is perhaps no simpler problem in the planning of public buildings than that which a small library presents to an architect, and in this present case the competition proved attractive enough to evoke no fewer than 210 sets of drawings. The cost of the building as stipulated by the conditions was not to exceed 4,000*l*., the assessor being Mr. Henry T. Hare, F.R.I.B.A., who, it may be remembered, was the architect of the offices of the Stafford County Council erected some years ago.

In reviewing a competition where so large a number of designs have been submitted, and especially where the successful competitor only secures a comparatively small commission, one feels impelled to deplore the waste of time and labour to the profession generally, unless the considerable number of evident tyros among the competitors reap some benefit from studying the winning design afterwards. Certainly an inspection of the Stafford plans shows that about two-thirds of the designs sent in did not merit even scant consideration on the part of the assessor.

The site of the proposed library occupies a very prominent position. It is triangular in shape, and situated at the junction of Lichfield-road and Bailey-street, the apex of the triangle facing the end of Bridge-street, the principal thoroughfare of the town.

The case is one in which a glance at the actual surroundings show at once that it was inadmissible to plan the public entrance elsewhere than at the angle, but this was not so obvious from the block plan sent out to competitors, many of whom went astray in this respect, and there are a few excellent designs with the entrance and principal façade to Lichfield-road.

Mr. Hare spent the greater part of three days in making his examination of the designs, and selected a short list of sixteen for final consideration, eventually placing those of Messrs. Briggs, Wolstenholme, & Thornely, of Liverpool, first; Messrs. Sutton & Gregory, of Nottingham, receiving the second place, with a premium of forty guineas; and Messrs. Castle & Warren, of Norfolk-street, Strand, London, third place, with a premium of twenty guineas.

A word should be said for the excellent conduct of this competition on the part of the Stafford Council. The conditions, which were placed in the hands of the assessor to draw up, were, as might have been expected, very clear and concise. The arrangements for viewing the drawings exhibited on Friday and Saturday last in the Borough Hall were quite satisfactory, and a notable feature was the grouping of the designs in the short list together with the premiated ones in the centre, and so placed as to be the first in evidence upon entering the room.

We do not think there can be a word of adverse criticism on the result, the selected design by Messrs. Briggs, Wolstenholme, & Thornely is most carefully and logically worked out, and does not show an inch of waste space.

The size of the rooms conform very fairly to the stipulated areas. The entrance is, of course, placed at the angle, and the inner hall gives access on the left-hand to the ladies' reading-room and the magazine-room. Directly in front is the lending library counter, and on the right the news-room and staircase to the upper floor. Upstairs one crosses a landing to the reference-room, which is lighted from above. Beyond the reference-room is the librarian's-room, immediately above the book store, and having private access by a stairway from the lending department the librarian is in close touch with the whole building.

The arrangement of the counter forming a borrowers' enclosure to the lending department makes up the 40 ft. asked for in an ingenious manner, but apparently the assessor has suggested straightening the sides to give a little more freedom of movement for the assistants. The caretaker's day-room would have been better placed on the ground floor had it been possible. The principal feature of plan which calls for criticism is the shape of the entrance lobby and hall, which appear to have come mainly by chance. The ladies' reading-room is also far from perfect in this respect.

The elevations are proposed to be carried out in red brick 2 in. thick (following Mr. Hare's County Council offices) and Hollington stone dressings. They are treated in a dignified manner, but will probably prove too expensive. We think there is too much work above the cornice, which is kept so low as to make the general proportion rather unhappy. The angle portico with its half-dome of stone is adequately dealt with, but one questions the effect produced by the dressed stone tablets flanking it, when it is seen that the authors propose eventually to cover these features with notice boards. The authors' estimated cost is 3,965*l*.

Messrs. Sutton & Gregory's plan is generally good, but it is not on such simple lines as the first. The caretaker's day-room should be situated to give control over the main entrance, as, with a small staff working the building, the assistants should be relieved of general supervision as much as practicable. As to the upper floor, the librarian's-room is separated from the reference-room by a so-called service corridor without much obvious purpose. The elevations are on safe lines, though inclined to tameness, but would probably look better in execution than on paper.

In the third premiated design, that of Messrs. Castle & Warren, the lending library takes up too much of the ground floor space, and is not pleasingly disposed. This necessitates placing the ladies' and magazine-room upstairs, and the apparent simplicity of the upper floor plan is produced at the expense of entering the ladies'-room through the last-named department. Both these rooms would be better placed on the ground floor. The librarian's-room is of indifferent shape but well placed. The elevations are severely treated, mainly in brickwork, and the angle portico, elliptical on plan, is handled on too insignificant a scale altogether.

Amongst the other designs included in the short list is an interesting treatment of the angle by Messrs. Bowden & Wallis, of Londo... The drawings are effectively got up, but ... design generally shows far too much stonew... for a brick district. This unsympathe... attitude towards local conditions is common... adopted by competitors. Mr. J. H. Wenyo... of Dudley, has a sound if not striking plan, ... far too elaborate and expensive elevations.

Mr. Vernon Hodge shows a proposal ... making the news-room, magazine-room, ... borrowers' space all in one, with no scre... division, which would certainly facilitate supe... vision, and follows a hint, if we mistake ri... given by Mr. Hare himself some time ago in ... paper which he read on the planning of publ... libraries.

On the whole, the promoters of the compe... tion may be congratulated in having obtained ... satisfactory design for the building on a s... which presented considerable difficulties ... evolving a practical working plan coupled wi... adequate architectural expression externally.

THE LONDON COUNTY COUNCIL.

THE usual weekly meeting of the Lond... County Council was held on Tuesday in ... County Hall, Spring-gardens, S.W., Mr. ... White, Chairman, presiding.

LOAN.—The Finance Committee recom... mended, and it was agreed, that a loan ... 6,174*l*. should be made to the Lambe... Borough Council for repaving.

NEW COUNTY HALL.—It was reported ... the General Purposes Committee that ... Majesty the King, who will be accompani... by her Majesty the Queen, has intimat... his intention to lay the foundation-stone ... the New County Hall. The ceremony ... take place at twelve o'clock on Saturd... March 9.

NEW SCHOOL.—It is proposed to erect ... new public elementary school on the Ocea... street site, Stepney, and the Randall pla... School, Greenwich, is also to be enlarged a... remodelled, at an estimated cost of 400*l*.

BARKING OUTFALL.—The river wall on la... adjoining the outfall works is to be repair... at a cost of about 250*l*.

COMPETITION NEWS.

Port of London Offices.

The preliminary designs for this import... building are to be sent in to-morrow ... twelve o'clock. Not more than six of ... competitors will be selected by Sir Aston ... Webb, R.A., to submit designs in the fi... competition, at an honorarium of 200 guine... each; and six other architects may be invi... to prepare schemes.

Public Library, Stafford.

In the competition for the Public Libra... Stafford, Messrs. Briggs, Wolstenholme ... Thornely, Pier Head, Liverpool, have been ... placed first; the second premiated desig... was by Messrs. Sutton & Gregory, Bromle... House, Nottingham; and the third, Messrs ... Castle & Warren, Amberley House, Norf... street, Strand.

Enlargements at Warrington Town Hall.

The Town Hall Committee of Warrington ... Town Council have decided to invite architect... to send in competitive designs and to o... three premiums of 20, 10, and 5 guineas ... the enlargement of the Council Chamber an... also the provision of additional office accom... modation at the Town Hall. They have als... given instructions to the surveyor to prepar... conditions for such competition and to submi... the same for their approval.

Birmingham Blue Coat School.

Local architects only are eligible to com... pete for the proposed new school at Oldbu... Three designs will be selected, and under ... certain conditions the authors will be paid ... 50*l*. each to develop their plans. Mr. G. H. ... Hunt, F.R.I.B.A., and Mr. E. Bateman, ... F.R.I.B.A., are the assessors.

Church of St. Luke, West Hartlepool.

The limited competition for this church, in ... which Mr. W. D. Caröe acted as assessor, has ... resulted in favour of the design submitted ... by Messrs. Lofting & Cooper, of 44, Bedford ... row, W.C.

Fire Station, Cardiff.

a meeting of the Cardiff City Council Monday, Mr. J. T. Richards explained in connexion with the new fire station, President of the Royal Institute of h Architects had been asked to nominate ssessor for the competitive designs sent id that a copy of the draft conditions e competition had been sent to that eman.

GENERAL NEWS.

Professional Announcements.

Phillips Fletcher, F.R.I.B.A., F.S.I., Inst.C.E., of Messrs. Banister Fletcher ns, 29, New Bridge-street, Ludgate s, E.C., has been elected by the Black- Bench of Magistrates as their advisory ect.

Harold I. Merriman, A.R.I.B.A., has ved from No. 4, Newman's-row, Lincoln's elds, W.C., to 4, Staple Inn, Holborn.

Royal Academy Exhibition, 1912.

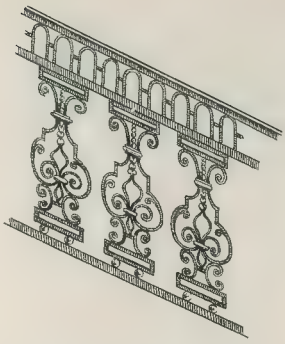
e following are the days for receiving ibutions for the Royal Academy Exhibi- this year :—

day, March 29 : Water-colours, pastels, tures, black and white drawings, en- ngs, and architectural drawings.

urday. March 30, and Monday, April 1 : aintings.

esday, April 2 : Sculpture.

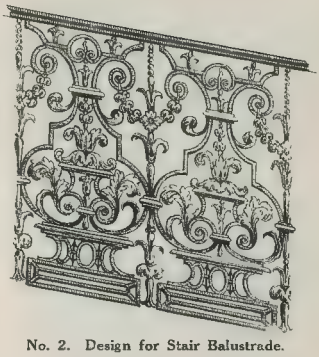
A Picture Gallery for Salisbury.



a meeting of the Salisbury Town cil it was announced that Mr. Edwin g, a painter of water-colours, has ed to build and endow a picture y for the city. Mr. Young, who is a e of the city, has offered a collection s own sketches of old Salisbury, and he onveyed by deed of gift property pro- g 80*l.* per annum, the income to be for the expenses of the gallery and to de additional works of art.

The Centenary of Waterloo.

e Brussels correspondent of the *Times*, ng on January 20, says that the com- e which has been formed under the lency of General Baron de Heusch to ge for the celebration, on June 18, 1915, e centenary of the Battle of Waterloo, ecided on the construction of a mauso- at Plancenoit or Braine l'Alleud. The rial, according to a design which is to bmitted for final decision to a council ritish, German, Dutch, French, and an artists, will consist of a mass of dark ery on which the principal group, d in white marble, will stand out in , with bronze figures round it repre- g the various nations. All the bones on the field of battle will be laid n this mausoleum, which will thus in a re become the tomb of all who fell at rloo.



ons and Footpaths Preservation Society.

d Eversley presided over the monthly ng of the Commons and Footpaths rvation Society, held at 25, Victoria- , Westminster. The Solicitor, Mr. val Birkett, presented a report upon rovisions of private Bills to be intro- into Parliament during the coming n and which will affect commons, open s, and rights of way. It appeared that y-two gas, water, railway, tramway, age, and improvement schemes seek to take in the aggregate about res of common land or open space. Of Bills it was decided to oppose the politan Railway Bill, under which bury Park, Watford, is threatened with ion. It was also decided to oppose the ng Gas Bill, which proposes to authorise ppropriation of 4½ acres of Horsell ion. It was decided to institute ries in regard to a number of other including the Swansea Corporation under which Mumbles Hill will be ed, and eleven railway Bills which power to block up public footpaths. s reported that the total income of the y for the year 1911 had amounted to ., and the expenditure to 1,498*l.*, includ- Parliamentary and legal expenditure nting to 301*l.* The Secretary, Mr. L. W. Chubb, stated that Mr. E. N. Buxton and himself had been nominated to act on behalf of the Society as arbitrators in settling disputes in regard to eighty-three disputed footpaths in the Home Counties. The nominations had been made by the land-owners and Parish and District Councils.

No. 1. Design for Stair Balustrade.

By Hugues Brisville, published by N. Langlois about 1670 and engraved by Jean Berain.

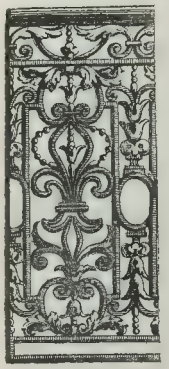
No. 2. Design for Stair Balustrade.

By Jean Tijou, published in London in 1693.

CORRESPONDENCE.

The Over-Elaboration of Plans.

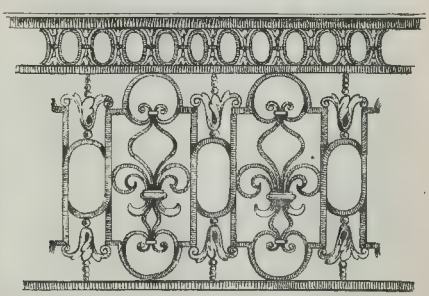
SIR,—I have read with much interest your "Note on "The Over-Elaboration of Plans," which coincided with my view of the matter when I read Mr. Mackenzie's paper. To my mind, the false sense engendered by the use of the title to an excess of thought (which can rarely, if ever, be too much indulged in if the house is made a success of) would be better and more easily explained, in default of another and a better one, by the little French word "*étude*," about which there can hardly be any doubt. The simpler the plan the better, but simple plan, if satisfactory, can only be brought about at all by much *étude*. "The House at Hampstead" on p. 142 forms a good explanatory example of simplicity, evidently brought about by the use of it. E. SWINFEN HARRIS. F.R.I.B.A.



Ironwork by Tijou.

SIR, Your kindly review of my book, with its many shortcomings, induces me to send you two interesting examples of designs in Tijou's book, and of the source which, I believe, inspired them. A small folio book of designs, entitled "Diverses pièces de Serruriers inventées par Hugues Brisville, Maître Serrurier à Paris," was produced about 1670, and published by N. Langlois, "avec privilège du Roi." The designs are no doubt earlier, as the fine portrait of Brisville with flowing locks and deep lace or embroidered collar which forms the frontispiece, was engraved by G. Ladame in 1663. Fourteen of the sixteen plates are of finely-chased and *repoussé* escutcheons for locks, richly worked borders, etc., all of great elaboration. The publication in its entirety seems to have inspired, or at least been taken more or less as a model, for the costly book of designs published by Tijou in London in 1693; and for which some of the best known artists of the day made the engravings. The work also directly inspired many of Tijou's designs. The two balustrade or stair-rail designs, No. 1 and No. 4, reproduced from the last plate but one of Brisville's book, have, it appears, obviously suggested those marked No. 2 and No. 3 from Tijou's. The latter design, stripped of its floral enrichments, presents several elements in common. As a *motif* it has since been largely used both in France and in England by a succession of later designers, and it thus becomes of interest to trace it to its source. It was used by Tijou for the grand staircase at Chatsworth, but in a simplified form. A photo of one of the original balustrades made by Tijou, which has been sent to me for reproduction in consequence of alterations at Chatsworth, is appended, No. 5.

The second design, by Brisville, is seen in No. 4, the central figure, as in the former case, being the fleur-de-lis. Tijou's rendering is seen in No. 3 with additional floral embellishments, but otherwise practically identical. It was used as the *motif* for the balustrade at the head of the Long Water at Hampton Court, but in a much simpler form, as seen in the illustration No. 6.

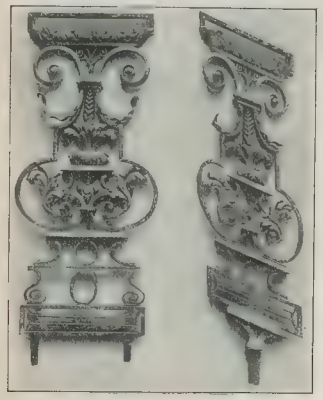


J. STARKIE GARDNER.

Star Works, Tradescant-road, S. Lambeth, S.W.

No. 3. Design for Balustrade.

By Jean Tijou (1693).



No. 4. Design for Balustrade.

By Hugues Brisville, published by N. Langlois about 1670, engraved by Jean Berain.

The London Building Requirements.

SIR,—I have read with interest in the current issue of your journal the leading article which deals with the requirements affecting the erection of skeleton-frame buildings in London. All who are concerned in the erection of such buildings will, I am sure, agree with your appreciation of the recent action of the District Surveyors' Association in endeavouring to obtain uniformity in the preparation of structural calculations for such buildings. But the writer of your leader has omitted to mention one very important point in connexion with the administration of the provisions of the London County Council (General Powers)

No. 5. Two Balusters of the Grand Staircase at Chatsworth as at present existing. (Presumably by Tijou.)

Act, 1909, in regard to skeleton-frame buildings. He says that, as regards the plans and particulars required to be submitted under such Act, "the architect is left entirely at the mercy of the particular District Surveyor with whom he may have to deal." This statement is directly at variance with sect. 22 (33) of the 1909 Act, which provides that any person dissatisfied with any requirement of the District Surveyor under such section (which section contains nearly all the general requirements in regard to skeleton-frame buildings), may, within fourteen days of the date of the service of a notice from the District Surveyor, appeal to a petty sessional court. Opinions may vary as to whether a police-court magistrate is the most suitable person to decide disputes of this nature, but the right of appeal exists, and it undoubtedly tends to obviate any high-handed action on the part of an administrative official.

The London building law is admittedly a most complicated subject, and criticisms of its provisions are of frequent occurrence. I suggest, however, that such criticisms would be much less prevalent if the existence of the very extensive rights of application to the County Council, or appeal to the Tribunal of Appeal, or some other body, were more fully appreciated. I note that in the same issue of your paper a report is given of a lecture by Professor Beresford Pite on "London as an Architectural Syllabus." Professor Pite quotes as an example of the tyranny of the London building law the provisions of sect. 73 of the London Building Act, 1894, in regard to projections, and he is reported as stating that in consequence of such, it would be "quite impossible" to build, in the London streets, structures like the Strozzi and Farnese palaces, because of their projections. Such a statement, although it has been made so often as almost to rank as a truism in the eyes of many people, is not borne out by facts. The opening words of sect. 73 are rarely quoted, but they are undoubtedly the most important in the section, viz.:—The following provisions shall (*except with the consent of the Council*) apply, etc. They clearly imply that it is the intention of the legislature that the Council shall allow departures from the ordinary requirements in special cases, and, as a perusal of other columns of your paper will show, "consents" under this section are given almost every week. Presumably, if the architectural treatment of a building in an important street required the provision of a cornice with a big projection, consent could be obtained from the Council without much difficulty.

Architects who find themselves in trouble with any undesirable requirement under the London building law, will be well advised to ask themselves two questions:—1. Does the requirement correctly apply to the case under consideration? 2. If it applies, is there any way of "getting out" of it, either by application to the County Council or by appeal to the Tribunal or some other body? In quite a number of cases it will be found that the legislature has considerately provided some means by which the case in question can be judged upon its merits, and in reference only to the spirit and not the letter of the law.

HORACE CUBITT, A.R.I.B.A.

INTERCOMMUNICATION COLUMN.

Rotting of Floors.

SIR,—My experience of twenty-seven years as a builder leads me to believe that the rotting of floors under lino is primarily due to the want of air circulation, and in many cases I have greatly improved matters by cutting through external walls and inserting air-bricks with a through draught, if possible, th obtaining a current of air in contact with t underside of the floorboards. It is also adv able to fix small flush gratings in the flo itself, cutting away the lino in small n squares. I may say that I have known absolutely new floor, laid with dry boar when covered with lino to rot away in t years. BINNING CANDLER.

12, *Mortimer-street, W.*

SIR,—It is quite incorrect to imagine th "the washing of the floor and the soaking the water through the linoleum caus the injury." The washing has nothing to with it. It would be a rare case in which washing would be so excessive and the linole so poor as to make access of water possibl The cause of the decay in a linoleum-cover ground floor is no accident or mystery. It simply sealing down woodwork to which dam has access (or which is itself damp), and preventing the surface evaporation. Remov of the linoleum will always lessen and mos arrest the decay. I should be interested know the result of the sand remedy.

T. R. HOOPER.

Architectural Assistants to the Office of Wor and the London County Council.

SIR,—I should be very much obliged if y will inform me as to the proper way to app for a post as Architectural Assistant to H.M. Office of Works, and also to the Architectur Department of the London County Council.

R. P.

[**** Applications cannot be made as "Architectural Assistant" at H.M. Office Works, but as a "Draughtsman." They shou be addressed to the Secretary, H.M. Office Works, Storey's-gate, S.W., stating brief qualifications, where previously engaged, a salary required. Age must be under thirt Applications for London County Coun should be addressed "Chief Architect." wi similar particulars.—ED.]

Gas Fittings.

SIR,—I would be greatly obliged if you w be so good as to give your opinion in t circumstances mentioned below. As it is matter affecting the trade, it may be general interest. A gasfitter undertook "take down several pendants, alter the servic to the required positions ready for new fitting refix one pendant, supply all necessar materials and labour for so much money. The work was completed satisfactorily. Th customer claimed the old fittings taken dow The gasfitter says—(1) The old materials we allowed for in the price agreed upon. (2) is the custom of the trade in a contract tha all old materials become the property of t contractor. A. G.

[**** We cannot advise you on this point wit any certainty; it is really a question for yo lawyers. As to (1), if it was clearly understoo that the value of the old material was considere in the price agreed upon for the work, th question of custom does not arise; but if a pity this was not expressed in the contrac and it is a question whether evidence wou be admitted to explain the written contrac The refixing of an old pendant would itself seem rather to indicate a contrary in tention, and in any case we doub whether the evidence would be admitte As to (2), we have no personal knowledge o any such custom. A custom must be certai and reasonable, and so universally acquiesce in that it may reasonably be presumed to ha been known to the parties, and tacitly im ported into the contract. You should tak legal advice before embarking on litigation.—ED.]

Damp Plaster Wall.

SIR,—In reply to "Q. S.," a firm in the Cit supply a solution which will keep back damp. had occasion to use some in a very bad case a Hampstead some years ago, with an excellen result. I found it necessary, after giving th damp wall two coats of solution, to give it a coat of knotting, then paint stood well.

W. WHITBREAD.

No. 6. Balustrade as actually carried out at the head of the Long Water, Hampton Court. (Presumably by Tijou.)

METRIC EQUIVALENT TABLES.

A publication issued by the Central Trans lations Institute, of 18, Eastcheap, E.C., includes fifty useful tables of metric and British equivalents, the values being based upon figures supplied by the Board of Trade and guaranteed to be absolutely correct. The tables relate to measures of length, area, and volume, weights and money, and are published in convenient form at a nominal price.

DITORIAL SUMMARY.

e leading article deals with some questions ing Architects, Clients, and Specialists.

second article, entitled "Architectural ants and the Office of Works," refers to ecent correspondence in our pages on the ct (p. 170).

"Notes" Column (p. 171) will be found vations on: "Professor Blomfield's R.A. res"; "The London Society"; "Edin- and London"; "The Corporate Life ondon"; "The President's Address to nts"; "The Pugin Studentship, 1880."

combined meeting of the Architectural iation with the Junior Institution of neers was held on Monday, when Mr. Paul rhouse, M.A., read a paper on "Bridges," howed some water-colour sketches by his , the late Alfred Waterhouse, R.A. p. 172.)

fessor Blomfield's third Royal Academy e, entitled "French Draughtsmen of the th Century," was delivered on Monday. bstract appears on p. 175.

der "Architectural Societies" (p. 175) notices of the following societies appear: ds and Yorkshire Architectural Society"; nburgh Architectural Association."

nabstract of a paper by Mr. E. C. P. Monson The Housing of the Working Classes," before the Society of Architects, appears 176.

article on the "Stafford Library Com- on" appears on p. 178.

MEETINGS.

FRIDAY, FEBRUARY 16.

Sanitary Institute.—Dr. G. F. McCleary on entary Statistics." 7 p.m.
Royal Institution.—The Rt. Hon. Sir J. H. A. nald, K.C.B., LL.D., on "The Road: Past, t, and Future." 9 p.m.
rrea Polytechnic (Illuminating Engineering).— S. Dow, B.Sc., on "Practical Lighting Problems." n.
burgh Architectural Association. — Associates' dinner. 7.30 p.m.
ow Technical College Architectural Craftsmen's .—Mr. J. Muir on "The Management of Building cts." 7.45 p.m.
tution of Mechanical Engineers.—Annual general g. 8 p.m.
tution of Civil Engineers (Students' Meeting).— ernon-Harcourt Lectures on "Works for the tion of Coast-Erosion," by Mr. W. T. Douglass, .C.E. 8 p.m.
Institution of Civil Engineers. The Vernon- rt Lectures on "Works for the Prevention of Crosion," by Mr. W. T. Douglass, M.Inst.C.E.

SATURDAY, FEBRUARY 17.

itectural Association.—Third spring visit, to the Museum Extension. 2 p.m. at the building.
tern Architectural Association.—Mr. J. A. Ogg on "The Educational Buildings of America." ated. 7.30 p.m.

Junior Institution of Engineers.—Annual dinner, at the Hotel Cecil, London. Commendatore G. Marconi, D.Sc., President, in the chair. 7.30 p.m.

MONDAY, FEBRUARY 19.

Royal Institute of British Architects.—Mr. Edward Warren, F.S.A., on "Collegiate Architecture," with lantern slides. 8 p.m.
Royal Academy of Arts.—Mr. A. P. Laurie, M.A., D.Sc., on "Pigments, Old and New, and their Value in Detecting Forgeries." 8 p.m.
Royal Sanitary Institute.—Dr. G. F. McCleary, B.D., D.P.H., on "Water: Composition, Pollution, and Purification." 7 p.m.
Liverpool Architectural Society. Mr. T. E. Eccles on "A Holiday in Piedmont." Lantern slides.

TUESDAY, FEBRUARY 20.

Northampton Polytechnic (Illuminating Engineering).—Mr. S. D. Chalmers, M.A., on "The Use of Shades and Reflectors." 7.30 p.m.
The Institution of Civil Engineers.—Paper on "Some Features of the West African Government Railways," by Mr. Frederic Shelford, B.Sc., M.Inst.C.E. 8 p.m.

WEDNESDAY, FEBRUARY 21.

Carpenters' Hall, London-wall (Lecture on Arts Connected with Building).—Mr. W. H. Bidlake, M.A., on "Mediæval Sculpture." 7.45 p.m.
Royal Society of Arts.—Mr. Frank Warner on "Silk." 8 p.m.
Edinburgh Architectural Association (Associate Section).—Mr. Geo. P. Bankart on "Plasterwork." 8 p.m.
Royal Academy of Arts.—Mr. A. P. Laurie, M.A., D.Sc., on "The Chemistry of Pigments." 8 p.m.
Royal Sanitary Institute.—Mr. Alan E. Munby, M.A., on "Elementary Science: Physics, Chemistry" I. 7 p.m.
The Institution of Civil Engineers. Students' visit to the Great Western Railway Reinforced-Concrete Warehouse, near Battersea Park Station.

THURSDAY, FEBRUARY 22.

Carpenters' Hall (London-wall).—Mr. W. St. John Hope, M.A., on "The English House from the Normans to the Tudors." 8 p.m.
London Master Builders' Association. Annual dinner, Whitehall Rooms, Hotel Metropole, Charing Cross. 7 p.m.
Society of Antiquaries.—8.30 p.m.
Institution of Electrical Engineers.—Mr. J. C. Macfarlane and Mr. H. Burge on "The Supply and Transmission of Power in Self-contained Road Vehicles and Locomotives." 8 p.m.

FRIDAY, FEBRUARY 23.

The Royal Institution.—Mr. George K. B. Elphinstone on "The Gyrostatic Compass and Practical Applications of Gyrostats." 9 p.m.
Royal Academy of Arts.—Mr. A. P. Laurie, M.A., D.Sc., on "The Chemistry of Pigments." 8 p.m.
Leicester and Leicestershire Society of Architects.—Paper by Mr. H. L. Goddard, M.A., entitled "Rambles and Reminiscences." 8 p.m.
Institution of Civil Engineers (Students' Meeting).—The Vernon-Harcourt Lectures on "Works for the Prevention of Coast Erosion," by Mr. W. T. Douglass, M.Inst.C.E. 8 p.m.

MAGAZINES AND REVIEWS.

THE *Art Journal* contains some illustrations of furniture at Kedleston by Robert Adam, and the original designs in the Soane Museum are shown in some cases for comparison. The palm-tree forms of the bedposts and *torchères* in the State bedroom seem florid and inappropriate, and we prefer the more usual designs associated with Adam's decorative work, such as the fine basket-grate with fender. Another article on Drayton House is informative with its illustrations, and the same may be said for the note on some "Chimneypieces of the Early Georgian Period," including examples at Holkham, Temple Newsam, Eltham, Devonshire House, and elsewhere.

The *Burlington* is a particularly good issue, in both literary and artistic matter. Sir Charles Holroyd and Mr. Thomas Okey give some personal reminiscences of Alphonse Legros, which will be read with interest; and a second article by Mr. D. T. B. Wood appears on "Tapestries of the Seven Deadly Sins," with illustrations. An article on "Constable as a Portrait-Painter" is contributed by Mr. D. S. MacColl, and one on "Three Little-noticed Paintings in Rome," by Gustavo Frizzoni, reproductions of the paintings being given. Other illustrations are from "Some lost drawings by or near to Raphael." The magazine also includes another of Mr. Lionel Cust's articles on "Pictures in the Royal Academy Collections."

The *Connoisseur* for February gives the second part of Mr. Leonard Willoughby's article on "Sherborne House," with a good many interesting illustrations, the interior arrangements of the building and its contents being described. Mr. R. L. Mason has an illustrated article on "English Furniture of the XVIIIth Century"—a review of Mr. Herbert Cescinsky's second volume on the subject; and other articles are "The Historical Collection of British Water-colours at the Grafton Galleries," by Mr. Alexander J. Finberg, and "The History of English Silver Plate." The illustrations this month include two coloured plates—"Mrs. Anne Pitt, by George Romney, from an engraving by Will Henderson," and "Lady Douglas in the Garden, by Thomas Gainsborough, from the engraving by A. Jamas."

Mr. Montgomery Schuyler describes "the New Washington" in *Scribner* in an article of some importance, in the course of which he says that the city has been elaborated in the last ten years along the lines of a definitely-conceived plan for its beautification. Three new department buildings, to be seen together and in architectural harmony are soon to be undertaken. In the course of the article the author says:—

"He who visits Washington now after ten years, who has not seen it, say, since just after the war with Spain, finds so great a transformation that he is fain to take his bearings anew from the ancient landmarks, and is relieved to find the Capitol and the Monument still predominant. Even after five years one finds the new monuments, architectural and sculptural, vying in interest with the old. But the decade is a more eligible period than the lustrum, for the purpose of comparison, because it is ten years since the Senate authorised its District Committee to employ experts 'for the improvement of the park system of the district of Columbia,' and it is from that authorisation that we may date the beginning of the New Washington. A chief element of one's wonder is the costliness of the new erections. . . . The expenditure on all these new expanses of hewn granite or elaborated marble has been not only ungrudging, but lavish. The three new department buildings which form the immediate occasion of these remarks are estimated to cost eight millions. . . . Why should not the official guardians of the 'beauty and harmony' of the capital be clothed with the powers necessary to perform their function, with the powers, say, of a Roman ædile or of a French prefect, and thus enabled to protect the community from the ravages of individualism? It is certain that only by the lodgment of such a power somewhere can beautiful and harmonious cities be made. . . . Surely the beauty and harmony of their capital should be an object to the people of the United States! This view seems to be making its way into the minds of the representatives of the people in Congress assembled. It is noteworthy and encouraging that, after many years, an 'art commission' has been authorised and appointed for the Federal building of the capital, including the surviving architect-member of the Commission of 1901. Considering the Congressional, which is to say the popular, dread and distrust of 'expertise,' this is a signal victory for 'collectivism.' It is true that the powers of this body seem to be thus far limited to answering, and possibly to asking, questions. But the camel's nose is in the tent. If the Commission continues to commend itself to public confidence there is every reason to hope that its power will be enlarged to include a permanent and salutary check upon the public, if not also upon the private, building of the district of Columbia. With the enlarged powers which are also to be expected for the authorities of the district, it is not wildly unreasonable even to hope that the end of the XXth century may see what is already recognised as 'the handsomest city in America' recognised as the handsomest city in the world."

The article is illustrated from drawings by Mr. E. C. Peixotto and by photographs. Mr. Elmer Roberts continues his discussion of modern industrial conditions in Germany with "The Passing of the Unskilled in Germany." The processes at work in that country tend, he declares, to convert the whole population into users of tools and machinery. Mr. S. S. Howland, an American gentleman who has travelled a great deal, describes "Cuzco, the Sacred City of the Incas."

Harper's Magazine is an interesting number, but the February issue contains nothing of special interest to our readers.

The Countess of Stradbroke has an article in the *National Review* on "Trade Unionism and Character," in which will be found some obvious truths expressed in forcible language. In the course of the article the writer says:—

"The idea of the trade unionist that if a workman works eight hours instead of ten, and that if during the eight hours he only does the work of six hours, he is thereby

finding work for some of his unemployed mates, is a delusive and a destructive fallacy. Suppose a bricklayer can lay one thousand bricks in eight hours, and he chooses only to lay seven hundred and fifty—that is, he reduces his output of labour by one quarter. And suppose three other bricklayers do the same. They imagine that between them they are finding work for a fifth man. Well, imagine this fifth man to be engaged, what is the position? We have five men doing the work of four—in other words, the builder has to pay one man's wages for nothing. That fifth man's wages goes to increase the cost of building, and the effect of this is that people who meant to build will not do so now that the cost is greater, which means that hundreds of men who would have been employed in erecting these new houses have now no work to do. Thus the principle of the action of the four bricklayers, though finding work for the fifth man temporarily, is actually the means of depriving very large numbers of their daily labour and daily bread. This is exactly what has been going on all over the country, not merely in the building trade but in every other industry materially affected by trade unionism. The efficiency of the individual workman has been reduced in two ways, either by retaining inefficient workmen or by constraining efficient men to reduce their efficiency, in each case burdening industry with a heavy charge. This leads either to diminished production or to an increased labour bill for the same production, and in either case the price of the product is raised to the public. Consequently the public buys less, demand falls off, factories have to be closed, and the ranks of the unemployed are swelled by workmen who would have been kept on if the price of the commodity they produced had not been artificially raised by the mistaken action of the trade unions in tampering with the efficiency of the workman. . . The regulations and customs of trade unions are unfavourable to the development of habits of diligence and application; their very genius makes for the repression rather than for the stimulus of industry; they encourage the slowest man to set the pace and the mediocre man to set the standard of quality. Consequently they are unjust both to the employer and the workman, and to the general public besides, because they prevent the workman from making the most of his own faculties and the employer from receiving the best that his men can give, whilst by restricting production they raise the price of commodities to the people generally. Therefore they operate in restraint of trade and are inimical to the interests of the community. In plain English they foster idleness."

ENGINEERING SOCIETIES.

The Concrete Institute.

A meeting of the Concrete Institute took place at Denison House, 296, Vauxhall Bridge-road, Westminster, S.W., on February 8, Sir Henry Tanner, C.B., I.S.O., F.R.I.B.A., presiding. The following were elected members :—

Mr. Ewart S. Andrews, B.Sc., London.
Mr H. P. Boulnois, M.Inst.C.E., London.
Mr. David Donaldson, London.
Mr William E. J. Fett, Hull.
Mr. James A. Malcolm, London.
Mr L. R. Nicol, Padstow, Cornwall
Mr. George S. Roberts, London.
Mr J. Vaughan Stewart, jun., Lebu, Chile.

It was announced that the Council had admitted Mr. Wilfrid Lever, of Ashton-under Lyne, as a student.

A paper by Professor Beresford Pite, F.R.I.B.A., entitled "The Æsthetic Treatment of Concrete," was submitted, and the following took part in the discussion :—Mr. Arthur T. Bolton, F.R.I.B.A., Mr. E. Fiander Etchells, F.Phys.Soc., Mr. A. Alban H. Scott, M.S.A., Mr. L. Serraillier, Mr. Herbert Shepherd, A.R.I.B.A., Sir Henry Tanner, C.B., and Mr. E. P. Wells, J.P.

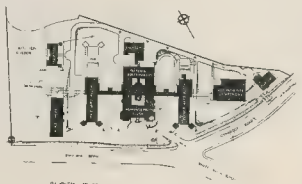
A report will appear in our next issue.

ILLUSTRATIONS.

R.I.B.A. Pugin Studentship.

THE illustrations of Beverley Minster and the Chapel, Vicar's Close, Wells, are part of the set awarded the Pugin Studentship, 1911-12. "Mr. James Macgregor," said Mr. Gerald C. Horsley in his criticism of the prize drawings, "has won the first place by the excellent quality of his workmanship and full set of drawings," an opinion in which we concur.

East Sussex Hospital, Hastings.



As announced in our last issue, Messrs. J. Saxon Snell & Stanley M. Spoor, of London, are the successful architects in the East Sussex Hospital, Hastings, competition (King Edward VII. Memorial).

The problem set in this competition was the provision of a general hospital on the pavilion system for 100 beds on a site of about 4 acres in an elevated position overlooking the sea, such site having a fall of over 50 ft. from west to east.

The instructions definitely demanded the provision of one lift only to serve all floors, and that the administrative block should occupy a central position. Advantage has been taken of the very great fall in the ground to place the women's and children's block on the lower portion to the east of the administration block, and build this pavilion three stories high, thereby providing, in accordance with the schedule of requirements, accommodation about one-third in excess of that of the male ward block, which is of two stories only, and is situate on the west side of the administration block. The area occupied by either pavilion is, therefore, practically identical.

The main ward blocks call for little comment, and are of the usual pavilion type. Diversity in units of each class of patients has presented some difficulty, and the design as now drawn shows a lack of symmetry which, in the smaller units especially, will no longer obtain when the hospital is completed by the addition of large ward units to the north side of the main corridor, in the manner indicated by dotted lines on the block plan.

The surgical wards are shown on the top floor in both pavilions for easy and level communication with the operating unit, which is central, opposite to the lift, and placed in this

BLOCK PLAN

East Sussex Hospital, Hastings.

position for the best conditions of light and ventilation. The sanitary annexes are placed at the end of the large wards and embrace large balconies for the use of patients, which face almost due south, and overlook the sea. The cubic contents of the wards allow each adult patient upwards of 1,400 ft., children receiving just over 1,000 ft.

The finishings to the ward blocks include teak floors and joinery, tiled dados in annexes, and provision is, of course, made for the usual rounded salient and internal angles. Ventilation is provided by natural method only, and consists of an ample provision of adjustable inlets and outlets. The wards are heated by low-pressure hot water; open fires, however, being provided to insure a cheerful aspect to the occupants.

The administration block, as to that portion placed to the south of the main corridor, comprises the following :—

On the lower ground floor—Casualty department and in-patients' entrance and hall, X-Ray-room, etc., and the main porters' office and telephone exchange.

On the ground floor—Entrance for officers, members of the committee, and public visitors, board and committee-rooms, secretary's office, waiting-room, etc., house surgeons' and matron's quarters.

On the top floor—Domestic servants' sleeping accommodation.

On the north side of the corridor the accommodation is :—

On the lower ground floor—Porters' apartments, boiler house, engineers' workshop, etc., steam and house coal cellars, wine cellar, box-room, and various stores.

On the ground floor—Nurses' dining-room, servants' dining-room, sewing-room, linen, mattress, and like stores, kitchen, sculleries, servery, pantries, and the usual food stores.

On the top floor is placed the operating unit consisting of: -Operating-room, anæsthet and after-recovery rooms, sterilising-roo surgeons' robing-room, and compartments splints and bandages, etc.

The main staircase with electric lift is plac centrally to serve the upper, lower, and midd corridors, it serves the operating-room dire and is also opposite to the service from kitch and in the basement the coal supply, it is sufficient size to carry a bed with lift attend and nurse. A hand lift is also shown for fo and medicine.

The laundry is shown at the rear of the kitch and offices, and is attached thereto by a cover way. A lower story comprises disinfect destructor, and a small steam engine for drivi the laundry plant.

The isolation block has been placed in t north-west angle of the site, and distant o 50 ft. from any building shown or boundary subsequent addition contemplated. The cu allowance to each patient in this building 2,000 ft., and the finishings are generally described to the main wards.

The nurses' home is placed as far from t hospital buildings as the restrictions of the s permit, and has a garden and tennis court the west side. The home provides bedroo accommodation for six sisters, ten staff nurse fourteen probationers, and two domest servants. Night nurses are accommodated the top floor and a sick bay is also provided h which can be entirely isolated from the rest the building if occasion demands. Separa sitting-rooms are provided for sisters, st nurses, probationers, and servants respective on the ground floor, and in addition to the fo going bed and sitting-rooms of more am proportion for the assistant or home matron

The mortuary, shown on that portion of site which is farthest from the hospital prop nearest to the town, and screened from t wards by the out-patients' block; it compris lockers for six bodies, shell store, viewing cha and waiting-room, and adjoining a postmorte room, pathological laboratory with dark ro and specimen museum, the latter rooms be served by a separate entrance.

The out-patients' department compris waiting-room for 200, consulting-rooms, dressi and recovery-rooms, dispensary drug store a dispensary waiting-room. The rather exc tional proportions of this building were dictat by the specific requirements set forth in "Conditions of Competition." Lighting will by electricity throughout all the buildings, w emergency gas jets at different points.

A dual system of fire hydrants is provid throughout of the main and establishme tanks respectively, and the usual fire-esca staircases, etc., are indicated.

The future extension contemplated in preparation of the design, and as indicated dotted lines on the block plan (after allow for the displacement of some of the ward u on the north side of the corridor necessitated such extension) includes thirty-two beds each sex, twelve additional bedrooms in nurses' home, five bedrooms for domes servants, and corresponding enlargement e where.

Externally the walls, which will be mai built hollow, are intended to be faced w pressed red facings relieved with brindled quo and string courses. Some stone has be introduced in the bays, entrances, etc., of administration block, and the roofs will b covered with green slates.

Some endeavour has been made to create domestic feeling in the elevation of the nurs home. The other buildings, if of unpretentiou design, may, it is believed, not prove unattra tive.

FIFTY YEARS AGO.

From the *Builder* of February 15, 1862.

The Proposed Abbatoir for Brighton.

THE Town Council of Brighton hav resolved to alter the proposed site of th abbatoir. Some of the members are fo abandoning the Bill now in Parliament altog gether; but by a majority of 16 to 15 i was resolved to amend the Bill as regard the site.

[*** Vested interests ultimately caused th abandonment of this Bill.—ED.]

MONTHLY HISTORICAL REVIEW.

CHITECTURAL DETAILS IN NUMENTAL BRASSES.—II.*

. S. M. WARD, B.A., F.R.Hist.Soc.

E referred in our previous article to the brasses with a double canopy for two persons, and will now deal with a few examples characteri tic type.

metimes the central shaft extends the length of the composition, but more it terminates in a bunch of foliage. illustrate this class we will take two .

first, Sir John Cassy and wife, 1400, Deerhurst, Glos. He was chief of the Exchequer. The minever of his mantle is very well shown, if is of two pieces, laced together over ad. His wife rests her feet on her pet 'erri, whose name is written underneath. once existed at Ingham, Norfolk, r named pet dog, Jakke, but this with many others, was sold for old in 1800.

Deerhurst brass has, since this rubbing aken, lost the figure of St. John the t; the other figure is of St. Anne and irgin.

marginal inscription is in raised letters foliage and a strange little dragon. osettes in the centre of the pediments be noticed. The length is 7 ft. 4 in., 3 ft. 1 in.

n Martyn (and wife), Graveney, Kent 8), was a judge of the King's Bench mmon Pleas, and died 1436. His measures 9 ft. 6 in. by 3 ft. Four out five shields in the upper part of the sition are missing, the fifth shows covered cups of typical mediæval . The shafts are very fine.

to this point we have not noticed gn of the gradual coarsening of work had already become noticeable in of the other brasses. This affected es in several ways. In common the rest of the brass the engraving o become shallow and too much detail vded in.

ew and unsatisfactory mark of the is the frequent introduction of g, which was not attempted in the brasses. The crockets, etc., become ely heavy. This process continues nopies practically disappear at the f the Renaissance. A good example h not illustrated here) is to Sir John and his wife and family, Cobham, ut Sir John is lost.

shafts, which are mutilated, are very and the representation of the Trinity, is good for its date, shows that the sition is based on the earlier Cobham hown. In the centre of each pediment eld with the instruments of the passion e five wounds respectively.

t this date the custom became of engraving the whole brass on a ke a picture. In a few of these what e considered canopies appear. The are late Tudor, such as that of Robert ode, Canon of Windsor, 1522.

the Renaissance the old type of disappears. At Hereford Cathedral s a fine triple canopy in the brass of Trowsetowre, 1529, in the style of the sance, but this is the only example.

e are several plates, however, of te which try to reproduce the canopy; t is at Little Wittenham, Berks, to n Dunche and wife and two sons, .

has what is practically a double in the classical style.

ilar one, which is less well known, is e Griffyn, Wexford, Warwickshire.

* See our issue for January 19, p. 69.

One would think from the engraving he was at least seven years old, but the inscription tells us he was "¾ of a year old." He died 1597.

It is a pity that the coat of arms is so large in comparison with the figure which kneels before a communion-table. Length 16½ in. by 9½ in.

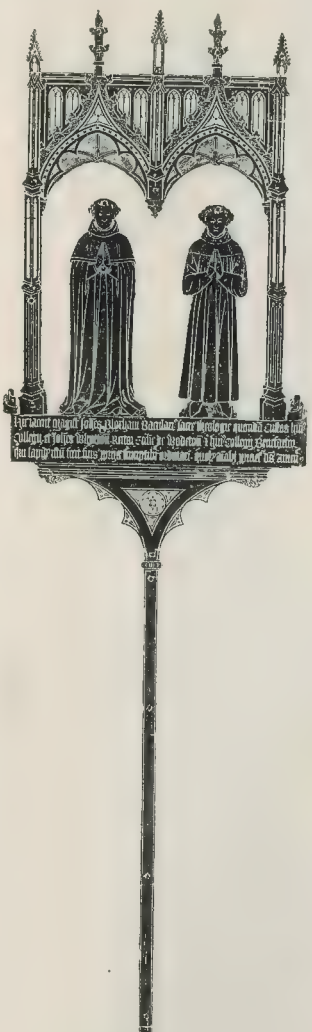

Fig. 6. John Bloxham and John Whytton c. 1420 (Merton College, Oxford).

So far as the author is aware, there are no later brasses with any attempt at a canopy.

After the canopies the bracket brasses are perhaps the most interesting class.

We should expect to find the dead person depicted as kneeling at the foot of a bracket on which stand saints.

However, only two examples survive—one at Burford, Oxford, 1437, much mutilated, the other at Upper Haldres, Kent, where John Strete, a priest, kneels at the foot of a bracket on which stand St. Peter and St. Paul. There is no canopy.

In the more usual type the persons themselves are depicted on the bracket. A very fine and perfect example is that at Merton College, Oxford, *c* 1420 (Fig. 6).

It commemorates two priests, John Bloxham and John Whytton. The stem rises from a small tabernacle containing the lamb and banner of St. John the Baptist.

Though laid down early in the XVth

century, it will be noticed that groining is shown.

Brackets naturally lead us on to cross brasses, which fall into three divisions:—(1) Plain; (2) with saints in the centre of the cross; (3) with the deceased person in the centre. No. 1 needs little description.

No. 2 includes several very fine examples. Of these the Hildersham brass, Cambridge, 1379, is probably the best. Robert de Paris and his wife kneel on either side of the stem which terminates in an octofoil cross enclosing the Holy Trinity.

No. 3 is represented in Fig. 7 as a quatre-

As already stated, numbers of these
abs still survive, in some instances
he clear cut incisions of the old
t in many cases so defaced by wear and tear as to be quite indecipherable. Careful research into the nature of these stones must prove both profitable and interesting to those who have sufficient knowledge of geology to identify the material, and the opportunity of visiting churches covering a wide area and usually situated at considerable distance from a railway-station. Such slabs have been indiscriminately referred to as marble or stone without any intention to define their composition. The task of identification is the more difficult because, owing to the lack of means of transport, the nearest local material was frequently used, which is now no longer quarried and consequently is almost unknown. Time and atmospheric action have also had the effect of disguising if not actually changing the nature of the surface now open to inspection. Fragments of a XVth-century slab were recently unearthed under the tower of Magdalen College, Oxford, and a mason who had fairly tested the surface gave his opinion in favour of "Headington hard," but on further expert examination, when a new face was worked, they proved to be Purbeck marble.

Evidence drawn from contemporary wills, documents, monumental inscriptions, and later records throws no light upon the subject. A few examples will suffice. The earliest matrix of a brass known in England, from which the metal has long since disappeared, lies in St. Paul's, Bedford, evidently placed there about 1208. Of this Leland writes that the brasses were "set in a flat stone." An inscription on brass from South Tidworth (*c.* 1514) commences with the words, "Under the harde stone of Marbyl." A similar expression occurs in the will of Thomas Salter, chantry priest of St. Nicholas Acon, London, 1558, who desired to have a "graye marble stone leyd upon" his grave with the image of a priest in copper. William Salmon, of Brentwood, willed on May 6, 1504, "to have a stone of marbyll to be leyde upon (his) grave of the valewe of iiij marks." In the "Rites of Durham," compiled in the XVIth century, the large casement in Durham Cathedral, from which has disappeared the fine brass to Bishop Beaumont, is described as a "most curious and sumptuous marble stonn." From many such references it is quite clear that the terms marble and stone were employed without any definite meaning other than that of a slab of hard natural and probably local substance.

In the earlier days of incised slabs, before inlaying of brass was introduced, black and white marbles were used. The greatest authority on the subject, the Rev. W. F. Creeny, reproduces many of these, and mentions the following among numerous other instances. In Laon Cathedral, a black marble slab with white marble border, all polished; an unknown bishop, *c.* 1450, at Siena, incised in white marble; and a considerable number of effigies in various places in which faces and hands were inlaid in white marble. Besides the use of marble for this purpose he frequently mentions stone of different qualities, such as a "blue tawny" stone, *c.* 1150, at Seclin, near Lille; a "very hard blue grey stone," 1459, at Louvain; "a tawny coloured stone of very fine hard texture and very smooth," 1248, in the Brussels Museum; a "tawny lias stone," 1260, on which is outlined in lead a falconer on horseback, at St. Memmie, Chalons-sur-Marne; a "blue stone of a slaty texture" to an abbot, *c.* 1300, at Ghent, the surface of which is flaking off; a "slaty, softish stone," 1391, to Bishop Nicholaus in Sweden; a "hard grey limestone," 1312, at Abee, in Belgium; a "red sandstone," *c.* 1250, at Rouen; and another containing "a few thin irregular streaks of hard white stone which neither feet nor weather could wear," 1262, at Niverlee; to which he adds whitish stones at Reims and elsewhere, about 1263, and many hard stones which now look grey. The Rev. Charles Boutell, an equally high authority on English incised slabs, states that in most parts of this country are to be found examples of Purbeck and Forest marble from the Kirkford Quarries in Sussex, and "any of the more durable kinds of marble in ordinary use, or sometimes common paving and even sandstone; in some examples also the alabaster of Derbyshire is found to have been employed." As instances he cites a cross-legged knight, 1260, cut in sandstone at Avenbury, Hereford; effigies of John Butler and two wives in a slab of alabaster at Walton, the lines being filled with black composition; alabaster altar top at North Mimms, with effigy of lady, 1584, also outlined with black composition; and he affirms that the fine brass to Abbot Delamere, *c.* 1396, at St. Albans, was formerly laid in Purbeck marble.

Much alabaster was, of course, utilised in the building of large tombs and monuments, especially in the XVIth century, the surfaces being highly decorated with colours and gold, which, no doubt, served to preserve the material until after ages of exposure it has become considerably hardened. In addition to these monuments we find in Staffordshire very many incised slabs of alabaster, the small cost of obtaining the material no doubt accounting for its frequent use locally, when from the point of view of resistance to wear and tear it might well have been deemed unsuitable.

The Rev. Herbert Haines, whose careful study of ancient brasses in England resulted in the production of a most useful manual on the subject, together with a fairly accurate catalogue of all the best brasses known in his time, also provides some information. At Boston there is a very fine incised slab of foreign workmanship, consisting of hard blue-grey marble whose origin he traces to the hills of Liége or the banks of the Meuse, which are composed of carboniferous limestone, such as is used on the continent for similar memorials. Others at Sudbury and Brading are probably of French source. Unfortunately, like other writers, Haines attaches no definite meaning to the word stone in regard to its nature and quality, and is content to call the slab a stone of very dark colour or blue stone. As examples he mentions a blue stone in the Notre Dame Church at St. Omer, 1462, incised and filled with white mastic, the ornaments of the vestments, the symbols, etc., being of yellow stone, incised and filled with a red composition; some blue slabs in Hereford Cathedral inlaid with white marble; and a blue marble slab, *c.* 1300, at Ashby Puerorum, Lincolnshire.

Randle Holmes, the historian of Old Chelsea Church, records the existence of a "slab of grey touch in the floor of the porch," and "a slab of touch" in the chancel, both bearing memorial inscriptions. According to Parker's "Glossary," touchstone is a name applied to dark compact stones such as Purbeck and Sussex marble. True touchstone was a hard black stone used by goldsmiths when testing gold by acid. Ordinary limestone blackened with the dirt of ages has been mistaken for this stone.

Quotations might be drawn from many antiquaries whose MSS. recording their visitations of churches in certain counties or districts have been preserved, taking, for instance, Rev. D. Powell, who, in 1805, visited Little Shefford, in Berkshire, where he sketched a canopied tomb, 1524, of "blue Sussex marble"; and at Marcham, in the same county, "a dark blue speckled marble" tomb, 1540. A chronicler of the county of Essex informs us that the altar tomb of Sir Anthony Browne, 1567, at South Weald, bears a top slab "of highly polished black marble" containing effigies and inscriptions in brass.

During a recent restoration at Islip, Northants, a slab of Ketton stone, a local material, was used, and at the same time the writer observed a memorial tablet to a lady of the Washington family said to be of stone from the neighbouring quarries at Raunds.

Chalk has also served the purpose where it was available, and at Sparsholt, in Berks, one or two Elizabethan monuments that are breaking up appear to be largely composed of this substance. Chalk was much used in the early Middle Ages for building purposes, as, for instance, the tower of Bisham Church on the Thames, and it is quite possible that more examples of its use for memorial purposes may exist.

From the foregoing it may be gathered that black and white marbles were frequently employed for the purpose, especially when the slab formed the top of an altar tomb, in which case the marble would be highly polished; probably more often still the material was a stone from the neighbourhood in which the workshop was situated, thus accounted for the fact that slabs of imported

foreign workmanship existing on our east coast, as at Boston, are of the same nature as those at Chalons, Liége, and other continental churches. For the same reason we find alabaster slabs in Staffordshire and parts of Yorkshire. Alabaster was also exported, for at least one English slab is known abroad, namely, at Rouen. In the southern counties Blue Sussex and Forest of Kirkford marble have already been noted, and Purbeck was very largely used both locally and all over the country. Perhaps, however, that most often used is stone known as lias in its numerous varieties. Its hardness and its bluish tone would account for the many references to blue stone or marble that so commonly occur. The word lias, supposed to be derived from the Somerset quarrymen, who thus pronounced the word layers, denotes a bed below the oolites, which extends right across England from Dorset to Yorkshire.

Between Purbeck and lias there appears to be but little to choose in the matter of durability. The former is well known for its hardness, and the latter has worn well, although some of it is rather inclined to flake, as may be observed in the crumbling away in layers of the surface of many of these slabs during centuries of exposure.

Granite has not found a place in these remarks, for I have not come across its use for this purpose, possibly on account of its great hardness, which made it impracticable, either for incised inscriptions or for inlaid brasses, in the days when tools were not brought to such a state of perfection as at the present time. The Egyptian use of granite was in those days a lost art, if not even now."

In the discussion that followed a member stated that some years ago he examined an incised granite slab from Egypt, the lettering on which was not V-cut, but flatted out in a manner not even equalled by the use of modern appliances. He stated that steel tools would not cut such granite, and suggested bronze tools hardened in a manner now unknown. The use of granite for this purpose in mediæval England appeared to be unnoticed by anyone.

SOCIETY FOR THE PROMOTION OF ROMAN STUDIES.

THIS Society has been formed to effect for Roman history and archæology what the Hellenic Society has for many years been doing with admirable results for Greek history and archæology.

The need of such a Society was first brought before the Council of the Hellenic Society two years ago. Inquiries were then made among the members of that Society and others as to the extent of the demand, and the replies showed the need to be real and the demand substantial. A full interchange of views has taken place between the representatives of the Hellenic Society, the British School at Rome, and the Classical Association, resulting in unanimous agreement in favour of founding the new Society which has now taken definite shape.

The scope of the Society embraces the history and archæology of Rome, Italy, and the Roman Empire down to about A.D. 700. Mediæval and Renaissance Italy have been left to other societies already engaged in carrying on excellent work. No society, however, exists for study of the ancient Roman world, and this is, therefore, the special province of the new Society.

The Society issues to its members a journal resembling the *Journal of Hellenic Studies*, and holds an annual meeting in May and occasional afternoon meetings for discussion. In connexion with the Hellenic Society it maintains at 19, Bloomsbury-square, a joint library of Greek and Roman archæology and history and a collection of lantern slides, both of which are now open to the members of each Society. By permission of the Society of Antiquaries the meetings of the Society will be held at Burlington House.

An arrangement has been effected between the Roman Society, the Hellenic Society, and the Classical Association by which the journals of the three bodies will be conducted in harmony, and will normally occupy distinct provinces of learning.

We have received a copy of Part 1, Vol. I., of the *Journal of Roman Studies*, which the Society issues, and we note that the Council have been able to include articles by Professor A. von Domaszewski, M. Salomon Reinach, and Professor H. Dragendorff. The longest article in the first number, by Mrs. Strong, Assistant-Director of the British School at Rome, describes in detail, with many illustrations, the exhibition of Roman antiquities held at Rome in 1911, which was an event of considerable interest in Roman archæology. The article also contains suggestions relating to the character of Roman art both in Rome and in the provinces. Professor von Domaszewski has contributed an article on a religious cult which is frequently mentioned in Roman inscriptions, and was obviously of great importance in some sections of the imperial world. Mr. Warde Fowler deals with the early Republic and its religious ideas in his inquiry into the true meaning of the important word "sacer." M. Salomon Reinach discusses a very interesting bronze statuette in the Saint-Germain Museum which he has admirably organised and studied. Dr. Reid, Professor of Ancient History in the University of Cambridge, treats of some technical but highly important questions of Roman public law. Miss E. R. Barker has contributed an exhaustive account of the Catacombes of St. Calixtus at Rome, which the Society has been permitted to illustrate by reproductions from the two monumental works on the subject. It is hoped that this article sums up all that is at present known of this extensive catacomb, and that it may be of particular use to the students of Roman Christianity in its earliest days. Among the reviews the Council specially note a study by Professor Dragendorff of Mr. Curle's recent account of the Roman fort at Newstead.

HISTORICAL NOTES.

Donibristle Mansion, near Aberdour.

THE "mansion house" of Donibristle, near Aberdour, in Fife, one of the seats of Lord Moray, which has stood a roofless building since the last fire in 1858—fifty-three years ago—is to be restored, says the *Scotsman*. Workmen are now engaged demolishing the blackened walls, which will take a matter of two months to level with the ground. Lord Moray, who is at present in residence, is taking a personal interest in the work, and fired the charge which brought down the tall gable of the old house. The ornamental gateway, close to the Forth, through which the approach is made, is of fine hammered ironwork, the present for Queen Anne of Denmark two centuries ago to the then Lady Moray.

Chinese Art.

AT the London Institution, Finsbury-circus, recently, Mr. Laurence Binyon gave a lecture on "Chinese Art," illustrated by examples from the collection in the British Museum, which has been on exhibition for the last year and a half, but is soon, the lecturer stated, to be removed. Mr. Binyon said we had been familiar for some two centuries with the decorative art of China, especially the porcelain, but hitherto the creative art of China, the painting and sculpture, had been almost unknown. The Chinese did not like exhibitions. The great treasures of Chinese painting, therefore, were in private collections. The lecturer traced the history of Chinese painting back to the VIth and VIIth centuries B.C., the earlier art being of an epic kind, devoted to representation of national heroes and the portraits of sages. The pictures of the IVth century A.D. represented a reaction from the social system of Confucius in favour of individual liberty. The influence of Buddha, he thought, had been exaggerated, although that influence had been nevertheless very great, and he showed some specimens of early Buddhist sculpture found in Turkestan and elsewhere. The VIIIth century was the time of the greatest painter of China, Wu-Taotze. Almost nothing was known for a long time of that period, but Dr. Stein's recent discoveries had added greatly to our knowledge. Then came the Tsung period, with its idealisation of Nature and its wonderful landscapes and pictures of flowers inspired by conceptions which might be compared to those of Wordsworth's poetry. From the XVth century there was a gradual decline, and modern painting in China seemed to be rather degenerate.

Kempley Church, Gloucestershire.

MR. ST. CLAIR BADDELEY, Castle Hale, Painswic Gloucestershire, ex-Presider of the Bristol and Gloucest Archæological Society, writ to ask for funds to rescue from ruin and resto to its use the little Norman church of St. Mar Kempley. It was built before A.D. 1121, an like the Chapel of St. John in the Tower, retai intact its original barrel vault, while its wa have preserved almost in their entirety t Norman paintings. The tower is in so perilo a state that it threatens to collapse, while t church throughout must also receive immedia attention. It is estimated that 1,600*l.* will required for this work, of which about 30 has already been procured. Donations w be received by the Hon. Treasurer, the Re C. L. Money-Kyrle, Much Markle, Herefor shire.

Paisley Abbey.

THE Kirk Session are now a position to proceed with t restoration of Paisley Abbe the plans for which will prepared by Mr. P. Macgregor Chalmers, Glasgow. In 1859 the place, it is said, w "like a charnel house," with the burial-grou outside reaching above the sill of the windov several of the beautiful windows being clos with stone, and the accumulation of soil wit the sacred building was in some places 4 deep. Most of these objectionable featu were removed and the surroundings of t church improved. About ten years ago t late Rev. Dr. Gentles carried out furth improvements. At a cost of 20,000*l.* he re vated the nave, restored the transepts, and l the foundations and built a portion of t tower, the original height of which was 300 All that now remains to be restored are t choir, the cloisters, and the tower.

The Egypt Exploration Fund.

REUTER'S Agency is inform that the chief work this y of the Egypt Exploration Fu will be the excavation of Osireion, the great subt ranean building in Abydos connected with Temple of Seti, which is regarded as one of important tasks which still have to be acco plished in Egypt. The excavation of Osireion was begun nine years ago under general supervision of Professor Petrie, but work was not continued, and it is now propo if possible, to prosecute it to its conclusi The building, at first thought to be the tc of the supposed Pharaoh of the Exodus, in reality a subterranean temple, proba intended for the performance of the mysteric Osiris. Its stone walls are covered v sculpture and hieroglyphs illustrating a por of the Egyptian scriptures dealing with adventures of the soul in the underworld a death, and contain charms and prayers protect Pharaoh against the assaults of de So far as at present excavated the Osir consists of a broad way descending to a great from which opens a large chamber and a sec hall leading towards the temple.—*The Times*

Antiquities in Rotherhithe.

THE members of the Lon and Middlesex Archæolo Society paid a visit recentl the Church of St. Mary, Rot hithe, when a paper on the building was rea Colonel M. B. Pearson, who said that the of St. Mary's Church was practically on river bank. It was likely that a Saxon ch once stood there, and was succeeded b mediæval church probably in the early pa the XIVth century. The present church built in 1714-15, and fitted with a three-de pulpit, high family pews of all shapes and s and a row of benches for the poorer congr tion. In 1876 the old pews and a large pa the galleries were removed, and also a l where bread was distributed. The church contained some specimens of early XV century work, a century when a great de plate was melted down. The earliest w silver cup dated 1619 and bearing the Lo hall-mark. The Rector, the Rev. J. C Durell, drew attention to the four p supporting the roof of the church. Each sisted of a single oak-tree, and he knew no to equal them except the oak-trees suppo the octagon of Ely Cathedral. After company had inspected the monuments an tombs in the churchyard a visit was paid t engineering premises of Messrs. Willmo Cobon, where the remains of a house o XVth or XVIth century was inspected.

THE BUILDING TRADE.

THE INSTITUTE OF BUILDERS: HOW TO CHEAPEN TRANSPORT.

MR. A. W. GATTIE recently read a paper on this subject before the Institute of Builders and the London Master Builders' Association, in the ...se of which he said :—" Millions of money ... been wasted, but nothing has been done to ...ify the uneconomic basis on which transport ...his country is conducted. Transport rates ...his country are the highest in the world. ...t means that, *pro rata* on capital expended, ... country benefits least of any country in ... world from the locomotive steam engine. ...paring freight rates in Germany and ...ght rates in this country, we find that, in ...y instances, and for parallel services, the ...s in this country are double the German ..., and Germany is our great trade rival! ...ion is, of course, still the greatest port in ... world, but I cannot but feel that its pre...nence cannot continue under existing con...ons. If we examine a railway goods station ...find that there is nothing about it which, ...n an engineering point of view, can be ...d design. It is usually a wilderness of ...ngs, sometimes nearly a mile in length and ... aps a quarter of a mile broad or more. It ...rnished with a loosely congregated jumble ...heds which are dotted over it higgledy-...tedy from one end to the other. It has ...olutely no design and it is too unwieldy and ...tered to admit of the rapid intercom...ication of parts which is essential to a ...ding intended for a place of exchange. Its ...pment often consists of no more than two ...three dozen wretched hand cranes and a few ...raulic capstans. The original shed, erected ... years or more ago, has been either added ...r enlarged, or both, but it has not been ...roved.

"Railway managers, by adhering to their ...ched way of doing their business, are ...ering it physically impossible for a work... to earn the very low wage that he is paid, ... in thus offending against a fundamental ...omic law, railway managers have brought ...sport conditions to the pass in which we ... find them. I repeat, it is absolutely ...ssary that the workman in any industry ...ld be able to create by his labour a capital ...e greater than the amount of the wage ... him.

"There are very serious objections to be raised ...e absence of design, lack of equipment, and ...equent inefficient operation of the existing ...is station. In London there are no fewer ...n seventy-four of these goods stations, and, ...rder that they may intercommunicate, ...e are a varying number of over 700 trains ...y running between them. I do not know ...t the cost of loading, unloading, and ...rating these trains may be, and I am quite ... that the railway managers will not tell you. ...mply mention the number because, if, in ...e of seventy-four stations, one central ...ling could be established as I propose ...re all, or nearly all, the work, with the exception of coal and cattle, could be done, there would be no need for any of these 700 trains. All parts of the proposed London Goods Clearing House are in immediate electric intercommunication with each other. Any parcel, bale, or load can be taken from any spot in the Clearing House and conveyed to any other desired spot in the building without any interruption or delay ; in some instances, in a few seconds, and in others in a few minutes.

We will say that a truck-load of 2,000 glazed bricks arrives from Yorkshire at a London goods station. Let us consider what happens to this truck-load. First of all the truck has to be detached from the rest of the train, which perhaps takes an hour. It is then put on to a lift and lowered to a level beneath the level on which it arrives. When the truck is too large for the lift upon which it is put, it is found that the buffers foul the sides of the well in which the lift works, and in those circumstances the bricks have to be unloaded where they are. I merely quote this as an instance of how work is carried on at a goods station. However, as a general rule, the truck is manœuvred on to the level below the rail, and after having been manipulated on turn tables and over points, *ad nauseam*, it eventually arrives after perhaps another hour's delay at the siding used by the brick-owner, and it there remains for about forty-eight hours as a rule. During that time a labourer will unload it, and stack the bricks on an adjacent bank. This work takes him nine hours. By Clearing House methods, and under Clearing House conditions, bricks would arrive as originally packed in specially designed skips, and on the train coming to a standstill in any of the thirty berths in the Clearing House these skips would be lifted four at a time by each crane available for use over that berth, or over any portion of it the length of the train might occupy. Assuming that eight out of our 288 cranes installed were brought into action over this particular train of bricks, thirty-two skips could be simultaneously lifted from the train and lowered into the crypt below in less than a minute. Other cranes and apparatus in the crypt would deposit them where required. If, however, these bricks, or any of them, were required for immediate dispatch, they could be hoisted by the same cranes and placed on the road level bridges intersecting the clearing house, where cars would be waiting to receive them, and they would be taken immediately to the job. It will be seen, therefore, that it would be quite easy to unload an entire train of bricks in five minutes, and there would be no necessity to detach and detain the waggons during unloading for forty-eight hours or *over five hundred times as long*. The train, relieved of its load of bricks, would be immediately available for the dispatch of goods of any kind whatever. As the Clearing House *ex hypothesi* is London's seventy-four goods stations in one, it is obvious that it would have within its walls all goods destined for the north, and the empty brick train would consequently take on its return journey all that there was available to take at that time. This loading operation would be done by the same, or some other cranes in the Clearing House, as might be convenient, in the same manner, and with equal rapidity. With regard to the return of empty skips, these would be collapsed, and packed in bundles as small as possible, as will be explained later on.

The advent of the Clearing House would not immediately *necessitate* any alteration in railway rolling stock other than a great reduction in the number of vehicles used. There would be no need for at least two-thirds of the waggons now used for general merchandise.

I imagine there is no group of men more interested in cheap transport than the building trade, and I am, therefore, now going to particularise in the direction of the transport of building material.

Let us say that a truck-load of glazed bricks has come from Yorkshire. The truck itself would probably have been waiting empty on a siding in the brick factory for some days. It would be loaded by two men in about half a day, and in due course taken away by an engine, frequently shunted, and eventually brought to London. The journey would take about seventy-two hours, and you see the speed would be, for 200 miles, less than three miles an hour. Its detention would be, say, forty-eight hours, and normally it would then go back, together with a multitude of other empty trucks, to the north of England.

The unladen mobility of a waggon is almost the same as its laden mobility. Perhaps I had better say here that it is absolutely necessary that there must be a moderate percentage of empty trucks leaving London, because London is an accumulation of innumerable things, particularly an accumulation of building materials, and it is also an enormous consumer of perishable things, consequently more must come into London by road, rail, and river than can go out of it by these means. Also it is no doubt necessary that a certain portion of the life of a railway waggon must be absorbed in detention, but that its laden mobility should be less than 2 per cent. of its time is preposterous, and I think that this very low efficiency explains why the working expenses of railways have risen so enormously in ratio to their gross receipts. An attempt has been made by railway apologists to ascribe this apparent shortage of 20,000,000*l.* a year (1) to the increase in demands of labour ; (2) increased cost of railway material ; and (3) increase in rates and taxes. With reference to the demands of labour, this statement is hardly justified, as has been amply proved by Mr. Richard Bell, M.P. In the matter, however, of the cost of material, it is the opposite of the truth, as steel manufacturers, for instance, during the period in question have dropped something over 64 per cent. in price, and, although there has been a slight rise in the price of coal, there has also been a relatively much greater concurrent improvement in the locomotive during the same period."

[For want of space we are compelled to hold over the remainder of our abstract of Mr. Gattie's paper until next week.]

BRISTOL MASTER BUILDERS' ASSOCIATION.

THE annual dinner of the Bristol Master Builders' Association has just been held at the Royal Hotel, College Green. The President, Mr. F. Chown, was in the chair, and amongst those present were the Lord Mayor of Bristol (Councillor Frank W. Wills), the Sheriff of Bristol (Mr. R. E. Bush), Mr. James Wright, Nottingham (President National Federation of Building Trade Employers), Mr. G. Palliser Martin (President Bristol Chamber of Commerce), Mr. R. W. Moon (President Newport Association), Mr. A. P. I. Cotterell, Mr. A. G. White (Secretary National Federation), Mr. F. Chancellor (Vice-President Bath Association), and others. The loyal toasts having been honoured, Mr. Louis Bamberger, C.C., proposed "The Lord Mayor, the Sheriff, and the Corporation of Bristol."

The Lord Mayor and the Sheriff replied.

Mr. W. E. Hicks proposed "The Trade and Commerce of Bristol," and in the course of his remarks said it must be a source of satisfaction to all patriotic citizens to see how the old city of Bristol was progressing, that new businesses were springing up, and in that way giving additional employment to their fellow citizens.

Mr. G. Palliser Martin, who responded, said it had been his duty to act as Chairman of the Conciliation Committee in the month of August last—a month they would always remember—and he hoped that the conclusion they then arrived at was such as would enable the trade of the city to be carried on for some time without any similar trouble.

Alderman Twiggs gave the toast of "The National Federation of Building Trade Employers of Great Britain and Ireland," and, referring to the work of that organisation, he spoke of the successful way in which labour disputes had been avoided in the trade. This, he thought, was due to the completeness of the organisation of the Federation, which, he said, did not exist to oppress the employees or keep down wages, but to improve the conditions of the trade generally. The greatest enemies they had were, without doubt, those builders who kept aloof, and he ventured to suggest that those employers were their own enemies. With the toast Alderman Twiggs

coupled the name of the President of the National Federation.

Mr. James Wright replied, and spoke of the improvement in trade. He was glad to hear from the Lord Mayor that Bristol seemed likely to share in that improvement; and, that being so, he would like to impress upon them the necessity of closing up their ranks and consolidating their local associations. Although the building trade had been bad for some years, the trade unionists had been strong, active, and aggressive, although, after all, they were only looking after their own interests, and it was the builders' business to look after theirs. And the best thing they could do was to take precautions to complete their own association, and make it as strong and united as possible. As to the work of the Federation, the national conciliation scheme, he said, although not perfect, had resulted in differences being arranged between employers and employed by reason and common-sense instead of by strikes or lock-outs. He thought in that respect the master builders might claim to have done much in the interest of the trade and industry of the country. He referred to the national agreed form of contract, and to other trade matters; and, with regard to the effect of the Insurance Act, he said that was hardly the time or place for him to give vent to his own personal opinion, but he should like to say that the unemployment contribution pressed hardly upon the trade; and if unemployment was such a great national evil, it should be made a national charge rather than that one or two trades should be put to such a severe strain. The Workmen's Compensation Act, he said, was also becoming a heavier burden, and the Federation hoped to bring about an improvement in the administration of that Act. They were suggesting that the Government should make it possible for medical referees to assist the judge in County Court cases, so that much of the expense involved in pettifogging cases should be avoided.

The other toasts were "Architects, Engineers, and Surveyors," proposed by Councillor A. Dowling and responded to by Mr. W. S. Skinner and Mr. A. P. I. Cotterell; "Kindred Associations and Visitors," given by Mr. F. N. Cowlin and replied to by Mr. A. C. May and Mr. R. W. Moon; and "The Bristol Master Builders' Association," submitted by Councillor W. M. Blackmore (Newport) and responded to by the President.

BELFAST BUILDERS' ASSOCIATION.

THE annual general meeting of the members of this Association was held on the 30th ult. at the offices, 14, Arthur-street, Belfast. The Vice-President (Mr. R. B. Henry, J.P.) presided.

Before entering on the business of the meeting the Vice President stated that since their last meeting the Association had experienced a great loss in the death of the President. Mr. John Martin, J.P. He begged to move:—"That the members of the Committee of the Belfast Builders' Association, in full meeting assembled, desire to place on record an evidence of appreciation of the eminent services ever cordially and devotedly rendered to the organisation by their late President, Mr. John Martin, J.P., and to express their deep sense of sympathy with the bereaved. They greatly deplore the circumstances that have deprived them of one who was an honoured colleague and sincere friend, whose kindness of heart and hand was generally known. In this expression of condolence with those whose affliction by his irreparable loss is distinctly acute, the members of the Committee sincerely trust that Providence in His mercy may graciously sustain them sorrowing."

Mr. W. H. M'Laughlin, J.P., seconded the motion, and, Mr. John Courtney and Mr. W. J. Stewart having also spoken, the resolution was passed unanimously.

The Secretary (Mr. J. Alfred M'Auley) submitted the Annual Report, which was unanimously adopted. It contained the following: "The prospects of our industry at the commencement of the year were of a bright character, in comparison with the depressed condition prevalent for the past few years, and it was fully anticipated that greatly improved conditions had set in; but regret is felt that the concluding portion of the year has not been up to general expectation. Trade on the whole has been exceptionally good in the country, and the briskness of our industries should afford a fair indication as to the state of affairs prevalent in our own industry, for when the building trade is in a depressed condition other industries as a natural sequence are not so active. The improvement in the demand for labour—in particular carpenters and joiners—has been a matter of gratification. It is gratifying to record that the year has been practically void of disputes, only one Court of Conciliation being called to settle a slight difference between one of your members and the Bricklayers' Society regarding the laying of tiles, but the matter was amicably settled. With regard to any contracts let out during the past year, they have undoubtedly been taken at unremunerative prices, and, with the upward tendency in the prices of all materials, it is apparent that contractors, in order to obtain better prices in future, will require to revise the pricing that has hitherto been prevalent. The National Federation have the Insurance Act under consideration at the present time, and their advice as to the general bearing and what course to adopt will be received in due course. It is important that the Association should continue members of the National Federation, especially when it is anticipated that the general effect the Insurance Act will have will be to saddle employers with a heavy expenditure that hitherto did not exist; and, in addition, there is no chance of the workmen's compensation rate being reduced—in fact, it is almost certain to be considerably increased. The unfair competition from which members suffer by reason of non-members not paying the standard rate of wages gave rise to considerable discussion during the year. The general opinion of members was against tendering under certain conditions in competition with non-members, but to ensure the amicable carrying out of this it is essential that the architects should give the builders their unanimous support."

The election of office-bearers resulted as follows:—President, Mr. R. B. Henry, J.P.; Vice-President, Mr. W. H. M'Laughlin, J.P.; Honorary Treasurer, Mr. J. O. Campbell, B.A., B.E.; Committee, Messrs. J. O. Campbell, John Courtney, James Lees, Henry Martin, Jas. Miskimmin, John Smith, W. J. Stewart, and S. B. Thompson; Ulster representative on the Council of National Federation of Builders, Mr. Robert B. Henry, J.P.

GENERAL BUILDING NEWS.

NEW CHURCH, DAWDON.

This church has been erected from the designs of the late Mr. C Hodgson Fowler, F.S.A., under the supervision of Mr. W. H. Wood, F.R.I.B.A., of Durham, at a cost of about 6,500*l*. The building has been constructed of red Lincolnshire bricks with red stone dressings, and the church is heated by hot water on the low-pressure system. Messrs. John Clark & Sons, of New Seaham, were the contractors, and Mr. A. Gordon was clerk of works.

RUSKIN COLLEGE, OXFORD.

The first section of the new buildings of Ruskin College, near Worcester College, will be erected by Messrs. T. H. Kingerlee & Sons, of Oxford, who tendered for 9,255*l*., from the plans and designs of Messrs. Joseph & Smithem. The college was originally founded as Ruskin Hall, in a house in St. Giles' some twelve years ago, mainly through the instrumentality of Mr. Walter Vrooman.

NEW PARISH-ROOM, CANNON PYON.

Mr. Herbert Skyrme, architect, of Hereford, designed this building, which has been erected at a cost of about 450*l*. The building includes a main room, 40 ft. by 23 ft.; a committee-room, 10 ft. by 10 ft.; and a kitchen, 12 ft. by 10 ft.; the whole being heated by Messrs. Musgraves' slow combustion stove. The work was carried out by Mr. C. Cooke, of Hereford.

HORNIMAN MUSEUM EXTENSION.

This new hall at Forest Hill has been erected by Messrs. Gathercole Brothers at a cost of about 5,000*l*. The lecture hall will accommodate 215 persons, while above that is a library and reading-room seating twenty-four, and a book-store with accommodation for about 7,500 volumes. The building was designed by Mr. C. H. Townsend, architect to the Horniman Museum, and erected under the supervision of Mr. W. E. Riley, architect to the London County Council.

NEW BUILDINGS IN LONDON.

Warehouse, Cephas-street, E., also extensions to Stollwerck's Factory, Nile-street, W.; Messrs. Hobden & Porri, architects, 39A, Finsbury-square, E.C. Offices, St. Helen's-place, E.C.: Mr. H. C. Clarke, architect, 102, Bishopsgate, E.C. Schools, St. Alphonsus-road, Clapham, S.W.; Mr. E. Doran Webb, architect, New-street, Salisbury. Proposed addition to hospital of Epilepsy and Paralysis, Maida Vale, W.; Mr. H. W. Burleigh, Secretary, 4, Maida Vale, W. Enlargement of Bying-road School, Barnet, N.; Mr. U Smith, Surveyor, Herts County Council, field. Building, Ladbroke-grove, Paddin W.; Mr. Percy Pitt, Prudential Assur buildings, Holborn, W.C. Banking pre for Messrs. Barclay & Co., with offices Vere-street, W.; Messrs. Elliott, Son, & ton, agents, 5, Vere-street, W. Building, Burlington-street, W.; Messrs. Dove Bro builders, Islington, N.

The insta is designed to work in conjunction wi electric generating plant, and the e steam from this will be utilised. The v to be carried out under the supervis Messrs. Tennant & Barrs, consulting eng Newcastle-on-Tyne.

The Salisbury and District Isolation H is being supplied with Shorland's fronted patent Manchester stoves, paten chester grates, and special extract an ventilators, by Messrs. E. H. Shorl Brother, Ltd., of Failsworth, Manchest

PROPOSED BRICK-MAKING COMBINATIO

The Birmingham correspondent of the states that a proposal is under consid for the federation of about seventy fi gaged in the manufacture of bricks Midlands. The object of the scheme regulate prices and production, a federation would control the manufact sale of something like ten millions o per week. The proposal has already the approval of some the principal m

The brick manufacturers of the Country" have decided to raise the common bricks by 2s. per thousand, a bricks by ten per cent., owing to the the cost of fuel.

APPLICATIONS UNDER LO BUILDING ACTS, 1894 to 1

AT Tuesday's meeting of the London Council the following applications u London Building Acts were dealt wit names of the applicants are given i theses):—

Lines of Frontage and Projectio

Dulwich.—Erection of two building north-western side of Henslowe-road, next to Upland-road (Mr. W. G. Sc Consent.

Dulwich.—Erection of a wooden front of No. 89, Camberwell-grove, Ca (Mr. J. F. Chiverall).—Consent.

Lewisham.—Erection of porch windows, and bargeboards to houses eastern side of Guibal-road, Lee (M Roberts & Co.).—Consent.

Lewisham.—Erection of a buildin northern side of Chudleigh-road, L with its eastern corner abutting western side of Francemary-street J. W. Heath & Sons).—Consent.

Lewisham.—Addition in front of Perry-vale, Lewisham (Mr. E. C. Chr Refused.

Marylebone, East.—Addition to a porch in front of Woodstock-lodge, V road, St. John's Wood (Mr. J. J. for Mrs. Caird).—Consent.

Marylebone, East.—Erection of a hood, balcony, and oriel windows i Nos 48 and 50, Mortimer-street, St bone (Mr. F. M. Elgood for Mr. S. Consent.

Paddington, North.—Erection of a iron balcony in front of Nos. 13, Blomfield-place, Paddington (Mr. W —Consent.

uddington, South.—Erection of a building n the site of Nos. 25 and 27, Hereford-road, swater (Mr. E. J. Stubbs for Messrs. dley & Sons). Consent.

otherhithe.—Retention of two showcases at 163, Southwark Park-road, Bermondsey ssrs. Hooper & Hawkins).—Consent.

rand.—Retention of an iron and glass ter at the entrance to Nos. 37, 38, and 39, ile-row, St. James (Messrs. H. Poole & . Consent.

oolwich. Erection of an iron balcony in t of Granville House, Green-lane, New am Messrs. Chudleigh Brothers).—Con-

Width of Way.

rixton.—Retention of Nos. 20 and 22, rhton-terrace, Brixton, with a forecourt e at less than the prescribed distance from centre of the roadway of the street (Mr. P. Wyatt for Messrs. J. H. Howard & .—Consent.

ammersmith.—Erection of a building at rear of Nos. 106-108, King-street, Hammer-h (Messrs. J. S. Quilter & Son for Mr. . Platt).—Consent.

ampstead.—Erection of a one-story build-at the rear of No. 3, Greville-road, Hamp-d (Mr. H. R. Luck for Mr. M. Ward).—sent.

Width of Way and Lines of Frontage.

imehouse.—Retention of a water-closet ding at Trafalgar Wharf, on the western of Church-row, Limehouse (Messrs. W. ner & Sons).—Consent.

th of Way, Frontage, and Deviation from Certified Plans.

George, Hanover-square.—Erection of 54, Upper Brook-street, St. George, over-square, abutting upon the eastern side Blackburn-mews, with a projecting porch, ney-breast, and oriel window, and with rear portion extending above the diagonal (Sir Ernest George, A.R.A., and Mr. B. Yeates for Sir Robert W. Burnet).—sent

Lines of Frontage and Construction.

rixton.†—Erection of a building upon the of Nos. 28, 30, and 32, Denmark-hill, berwell Green, and erection of an iron glass shelter in front of such building ssrs H. Langston & Co.).—Refused.

, George, Hanover-square.—Iron and glass er to the grill-room entrance of the andra Hotel, Knightsbridge (Mr. R. H. nan).—Refused.

andsworth.—Erection of an iron and glass ter in front of a cinematograph theatre at 134, Streatham High-road, Wandsworth ssrs. H. Langston & Co.). Refused.

Width of Way and Construction.

arylebone, East.—Temporary iron roof and l and iron building at Dean's-mews, ndish-square (Belsize London Agency,).—Consent.

arylebone, East.—Temporary building at t's-mews, Cavendish square (Belsize London ncy, Ltd).—Consent.

th of Way, Lines of Frontage, and Building for the Supply of Electricity.

rand.—External fresh-air inlet shaft at Mason's-yard electricity sub-station, on's-yard, St. James (St. James and Pall Electric Light Company, Ltd.).—Consent.

Construction of Buildings.

ckham.—Erection of a residential flat at rear of premises on the southern side of n-street, Peckham (Mr. G. F. Morgan).—ent.

estminster.—Omission of the brick footings e walls and piers of a proposed addition he Institution of Mechanical Engineers, cage walk, Princes-street, and Old Queen-t, Westminster (Mr. J Miller for the tution of Mechanical Engineers).—Consent.

Deviation from Certified Plans.

arylebone, East.—Erection of a building the site of Nos. 40 and 41, High-street, Marylebone (Mr. R. A. Hinds for Mr. H. ards).—Consent.

wington, West.—Erection of an addition he rear of No. 15, Rockingham-street, nwark (Mr. J. Codrington).—Consent.

Cubical Extent.

ammersmith.—Additional cubical extent in exion with the erection of addition stories sram Works, Brook Green, Hammersmith m Lamp Works, Ltd.).—Consent.

xton.—Proposed garage upon a site ap ched out of the western side of Shore-h High-street and the eastern side of t John's-court, Shoreditch (Mr. W. art for Messrs. McNamara & Co., Ltd.).—ent.

Uniting of Buildings.

City of London.—Uniting of No. 23, Cloth Fair, with Nos. 6 and 7, Kinghorn-street, City (Roborat Company, Ltd.).—Consent.

City of London.—Formation of openings fitted with doors of special construction in lieu of iron doors in the party wall between the basement, ground, and first floors of Nos. 38 and 39, Upper Thames-street, City (Checkfire Door Company for Messrs. Siemens Brothers). —Consent.

Islington, East.—Opening, uniting Nos. 131 and 133, Mildmay-road, Newington Green (Mr. F. Prater for Mr. A. C. Lamb).—Consent.

Islington, North.—Uniting of Nos. 11 and 11A, Highgate-hill, Islington, by means of an opening at the ground-floor level (Mr. G. Cox for Mr. A. C. Trout).—Consent.

Marylebone, East.—Uniting of the Polytechnic, No. 309, Regent-street, with premises at the rear, by means of openings at the basement, ground, first, and second floor levels (Mr. G. A. Mitchell for the Governors of the Polytechnic).—Consent.

St. George, Hanover-square.—Uniting of Nos. 17-21, Dering-street, St. George, Hanover-square, with Nos. 315-317, Oxford-street (Messrs. Withers & Meredith).—Consent.

The recommendation marked † is contrary to the views of the Metropolitan Borough Council concerned.

PROJECTED NEW BUILDINGS IN THE PROVINCES.*

ABERDEEN. Convent school, Queen's Cross (3,250*l.*); Mr. W. J. Devlin, 156, Union-street, Aberdeen. Box factory for Mr. John Bisset (2,000*l.*); Messrs. D. & J. R. Milburn, 104, Crown-street, Aberdeen.

Abergavenny.—Pavilion (14,000 places) for the Pavilion Committee of the National Eisteddfod of 1913.

Aldershot.—Theatre; Mr. B. Crewe, architect, 75, Shaftesbury-avenue, W.C.

Arbroath.—Extensions to St. Vigian's School (1,850*l.*); Messrs. Carver & Simon, architects, Brothock Bridge, Arbroath.

Batley.—Picture theatre (3,000*l.*); Messrs. W. Hanstock & Son, architects, Branch-road, Batley.

Battle.—Proposed cottages, Netherfield-hill: Mr. Oxley, architect, Hastings.

Bearpark.—Remodelling of school (3,165*l.*); Messrs. J. A. L. Robson and A. J. Dawson, Joint Secretaries, Education Committee, Durham County Council, Durham.

Birmingham.—Factory, Carr's-lane; Messrs Nicol & Nicol, architects, Colmore-row, Birmingham. Alterations and additions to Council House (3,000*l.*); Mr. H. E. Stilgoe, Surveyor, Town Hall, Birmingham.

Oban.—Additions to Lorn Combination Poorhouse (2,000*l.*); Mr. James G. Falconer, architect, 22, Alexandra-road, Oban.

* See also our list of Competitions, Contracts, etc., on another page.

THE CARPENTERS' HALL LECTURES:

BUILDING CONDITIONS, PAST AND PRESENT.

THE third of the present course of lectures on "The Arts Connected with Building" was delivered at Carpenters' Hall, London-wall, on the 7th inst., when Mr. H. W. Wills lectured on "Building Conditions, Past and Present."

Mr. Pocock presided, and made some interesting remarks on the subject of craftsmanship.

Mr. Wills, who showed a large number of interesting lantern slides, said his thesis was briefly this, that in nearly all ages recorded in history, under varying conditions of life and varying stages of civilisation, great buildings were erected, that every preceding period had had causes which conduced to excellence, but also difficulties which had to be overcome, difficulties special to particular ages, and that the conditions under which we live had also their advantages which might be made use of, and difficulties which might be overcome or avoided, and that the recognition of these root facts might help those who were endeavouring to forward the interests of architecture, which Fergusson rightly described as "the history of civilisation written on stone."

The lecturer proceeded to refer to and illustrate some of the architectural works of Egypt, Greece, Rome, etc., after which he spoke of the Comacine Guild, Romanesque, Gothic, and Renaissance work, and other interesting matters. Proceeding, he said that no reading of the past could be of use which tried to establish an absolute standard of excellence without full regard for the conditions of thought and life at a given time, of which its architecture was the direct outcome. The charm of French planning, which had been consistently studied and carried out throughout the Renaissance epoch, was evident in the many buildings erected before the Revolution, and continued down to the present day, and the art of combining groups of buildings had been more thoroughly thought out in France and Italy than in this country, the more strongly-centralised Government in France and the great culture of many of the Italian rulers having given a great impulse to architecture and a great chance to architects and designers, which was often wanted here.

As to the conditions under which buildings had actually been erected, of the ancient conditions little actually was known with any degree of definition. Slave labour was largely employed by the great nations of antiquity, but the exact status of the designer or the expert, to which he was simply a higher handicraftsman, was a matter of conjecture. Of the Middle Ages we knew a little more, and could trace the guilds which, with their hierarchy of officials and workers, undertook many of the more important buildings of the time, with the results we were familiar with. We knew that the guilds contracted for the execution of the works, but in the absence of working drawings, as we now understand them, such contracts must have been general undertakings to carry out buildings, paying workmen a stated rate of wages, and paying for the materials necessary as supplied. At a later date we have clear records of the various architects who designed buildings after the commencement of the Renaissance epoch, and who probably stood in much the same position with regard to the actual execution of the works as the masters of the masonic lodges, but who gradually had to define their meaning more and more clearly in their drawings, and to rely less and less on the inherited knowledge possessed of the craftsmen and workers under them. The lesser buildings, small houses and the like, were, no doubt, still the work of the craftsmen, showing an inherited power of designing more or less in execution, but the divergence gradually grew until we reach more modern times, when the individual workman, having no inherited knowledge and education in design, depends entirely on the directions and drawings given him.

And with the growing complexity of modern life the architect has to accept responsibilities from which in more fortunate ages he was free. On one side, whether in town or country, he had to conform to complicated sets of by-laws intended to safeguard the health and public rights of the community.

Having mentioned the by-laws in operation in London, the lecturer said:—"We have, in addition, our old friend the law of ancient lights in England, which arbitrarily interferes with our making the best use of a site if a neighbour has enjoyed an unrestricted light over it for twenty years, despite the fact that under the provisions of some of the Acts I have alluded to the public authorities have prescribed the area and extent of the open space which it is necessary to leave in the rear of a building for purposes of public health. This law, so fruitful a source of income to many professional men, is the cause of many of the unsightly gaps and distortions we see in our public streets. Why we should ever have allowed such a custom to grow up, when our neighbours in Scotland allow each man to do what he likes with his own property, subject to conforming with local by-laws, is more than I can imagine. And, secondly, we have to struggle with the ancient system under which a building has to be described and shown at the outset sufficiently in detail to enable a definite estimate to be given for it, whether on the basis of a specification or that of guarantees, which were, I believe, for the first time used in the case of a public building for the Houses of Parliament. The contract system has been abused as an invention of the evil one. I regard it rather in the light of a practical convenience to the employer, which under ordinary conditions he cannot be expected to forego. . . .

The greatest disadvantages under which we now labour seem to me to be rather those which arise out of the greater breadth and diffusion of modern life and the vastly greatly difficulty of obtaining that thorough and careful educated consideration which are absolutely necessary if good work is to be produced. . . . I remember a Mayor of a provincial town, who was on several building committees and keenly interested in their work, who told me on one occasion he did not know whether his house was built of brick or stone; he said he had never noticed which it was. This is typical of to-day, and would, I imagine, have been impossible in the Middle Ages, when most men lived in a house built by themselves or by their ancestors. . . . I do not undervalue the effect or charm of texture of the slight irregularities and traces of individualism which we see in old work, but the enormous importance given by some to these details seem to me to be the mistaking the shadow for the substance. The essential, to my mind, is this, that our work shall be so designed and thought out that it shall take its place as good design and good building when carried out under the conditions which obtain to day.

I want to try to put a concrete case before you to show what these conditions are in our great towns, where the bulk of our building is carried out. A site is acquired for the erection of a block of offices, or a learned society's premises, or a warehouse. In any case a certain expenditure in building is permissible, while a greater expenditure would represent a loss on the investment, or perhaps, in the case of the learned society, a state of insolvency, as members' subscriptions might not cover the cost of interest on money spent on the building and on the site. Obviously, it is absolutely necessary in such a case to be able to contract for the erection of the building beforehand at a given sum. For this purpose, and in order to get the consent of the authorities, accurate drawings must be made, and these drawings must represent the chief designer's or architect's design. You could not employ a committee of craftsmen to draw up a design which would give them their individual opportunities, any more than a committee could settle and direct the operations of an army, nor could a contractor fulfil his work if he had to consult with many instead of one in authority. And the drawings having been made with the necessary minuteness to enable the contractor to estimate the cost accurately all involves settlement beforehand, and with that a limitation in the possibility of giving entire full play to the individual handi craftsmen afterwards. It is true that in the country in exceptional cases you can carry out cottages and houses with some appro to the older methods, but such experim are rather like the attempts made to g vines in northern lands; they involve infi trouble, and can be only applied with pa success. Then, too, our rapidity of l motion is a factor in the case. The sl keeper or merchant living over his plac business in Cheapside or Cornhill was n more interested in his surroundings than same merchant of to-day, who may liv Brighton or Bedford. In many cases result is that he becomes oblivious of surroundings anywhere. Instead of dep ing the want of love of beauty possessed the public, we should, I would rather as it is natural under changed conditions he should be other than he is.

The outcome of this is, to my mind, we must look for salvation, or, at any r for a remission from Hell to purgat firstly, to trained and consistent effor the part of architects and artists dire towards a well-defined goal, and, secon that we must try to influence public bo who have the expenditure of public mo to take large, comprehensive, and enlight views of great problems involving buil and the laying out of towns. Public be usually erect public building as the resu competitions, open or limited, adjudic

Over S. Aisle, St. Paul's Cathedral, Lo

(View showing impeachable construction, ref to by Mr. H. W. Wills in the Lecture report this page.)

on by architects themselves. If the is, as it is in many cases, vulgar and co place, the fault lies either in the qual the works submitted or in the judgm the assessor; in either case the much-a public are blameless. As a profession infinitely fond of blaming the general for faults which are all our own.

Then we have assets in our favour In the Middle Ages it was the exc rather than the rule for one generat see the outcome of any great bu scheme; now we usually know that building can be completed as conceiv is possible to construct as it was possible before, and to be able to ca out results which used to be matters jecture and rule-of-thumb where stab concerned. We have in iron and concrete materials which, rightly used, us to carry out structures hitherto imp and the laws of perspective show us can accurately foresee the appearance buildings from any given point. W think of what the old builders were do, when all these difficulties could solved by rule-of-thumb methods, w admit that we have considerable adv now.

One of the present faults is we wis original, which I believe to be one greatest curses of to-day. The m reverses the volutes of an Ionic ca puts swags in unexpected places mind filled with details utterly unim and petty, but which may, never divert him from considering how produce a good building. It seems t

utterly out of place to use Pentelic marble London streets while brick and native ne are still forthcoming. As permanent vertisement hoardings many modern build- gs are excellent, which otherwise have no rits.

The nearest approach to a right treatment building to-day is, I believe, made in nerica. There we have modern conditions ling, if anything, more strongly against production of good work than they do re. You are told it is the land of haste, materialism, and of the almighty dollar, t designers and architects have put their use in order, in spite of these dis- vantages.

Recognising the importance of system, ir men are, where possible, trained in the ole des Beaux-Arts in Paris, which has ined generations of architects in classical ditions. They have accepted the facts of dern life and faced its problems, with the ult that the best buildings of the United tes have a simplicity and largeness of nception and a reason and dignity in their anning and detail, which is rare here. e American architect has been thought to a fit and proper person to design great lway-stations and other buildings relegated the engineer here, to the detriment of the auty of our towns. The great staffs with ich they carry on their work are in reality sociations of well-paid and well-trained n, who are masters of the various ojects needed for designing great build- gs, engineering, decoration, planning, and like. . . . It is clear to me that the ans by which the arts and crafts con- cted with building can be advanced now st be very different from those which tained centuries ago."

A hearty vote of thanks was accorded to e lecturer.

THE IMPROVEMENT OF LONDON:

THE LONDON SOCIETY.

THE Society has been formed with the ject of fostering an interest in London in e minds of its citizens and of all those in e kingdom who regard it with affection, d an inauguaral public meeting was held Friday, February 9, in the Galleries of e Royal Society of British Artists, Suffolk- eet, Pall-mall East, Sir Aston Webb, R.A., siding.

In a circular issued by the Society it is ted that abundant care and attention ve been bestowed upon those of its insti- ions which concern health, education, and litarian services, but little consideration s been given to its present appearance, its mediate improvement, or its future de- opment. "This is a serious thing for any y, and when it is remembered that London behind all the great Continental and erican capitals in these respects it is felt at it is time something should be done to ganise public opinion and purpose, so that the proper time, by the concerted action this Society, the owners, and the authori- s, something definite may be achieved. . . . well-known author has said:—'Until tional feeling is awakened and we realise at art is not a thing to be taken in specified ses at specified times—the ideal of the city a thing of beauty in all the aspects of eet, square, and park will receive but or support from the general public. . . .' Mr. Daniel Burnham, Chairman of the Fine ts Commission, U.S.A., who has done a eat deal for American cities in this way, s established several commissions with veral hundred representative men on each, d, although all very busy men, they scrupu- sly attend all meetings which concern the ture of their cities, and in New York it gratifying to note that at last their work aking practical form.

It must not be thought that the Society ns at grandiose schemes which could only carried out at the expense of slum aboli- n or other urgent necessities. It is fully ognised that the clearance of slum areas uld stand in the forefront of any improve- nt scheme, but such clearances should be sidered in relation to a general plan of ich, in due course, they form a part.

The work of the Society will be carried t by a Council or Executive Committee, and debates, lectures, and exhibitions will be organised frequently, and an annual report will be issued to all members. . . .

As soon as the Society has had the opportunity of justifying its existence and proving its value it hopes to obtain donations from wealthy citizens for special purposes, as the cost of the initiatory work will be very great, and could never be met out of ordinary subscriptions. This preparatory work will be the most valuable function of the Society, and it will require courage and inspiration, and deserves the sympathy and support of every good Londoner.

London is the metropolis of the world, but, taken as a whole, in scale modern London hardly deserves to rank with cities of secondary worth. This can only be remedied by a new general conception of its future development. As Sir Aston Webb has well said: 'All must agree that we want some advising, directing, and guiding hand, and that we want it soon, or it will be too late; it needs the wisest and most public-spirited men in this great city of ours to lay their heads together and hammer out a scheme. Such a call can hardly be ignored, especially when it is remembered that the task becomes lighter according to the measure of active support given to those who are prepared to make the nesessary sacrifices for the achievement of the objects of this Society.

Subscriptions (which are fixed at a minimum of one guinea per annum) may be sent to the Hon. Treasurer, Dr. Stephen Miall, LL.D., B.Sc., 116, Fore-street, London, E.C.

The subscription for country members (including all residing more than forty miles out of London) will be half a guinea, and for colonial members, 5s. . . .

A number of letters expressing approval of the idea were read, from which we take the following:—

The Right Hon. the Earl of Plymouth:

"Although it may be difficult to accomplish much in the immediate future, I am sure that such a Society ought to be able to lay the foundations of a more consistent and artistic treatment of London improvements, and I wish the movement all success."

Lord Claud Hamilton, M.P.:

"The formation of such a Society on a fairly wide basis is much needed, and is capable of achieving, if ably conducted, an immense amount of practical good at a time when London is being so largely reconstructed."

Sir W. H. Lever, Bart.:

"The wisest economy of public money demands prompt and immediate action. The loss of time and money caused by congested traffic would be appalling if they could be recorded and tabulated. The beauty of London and its great possibilities are lost in a tangle of narrow mean streets.

Sir E. J. Poynter, Bart. (President of the Royal Academy):

"The Society ought to be able to give material help to the Government, or to any municipal body charged with the erection of public buildings or the laying-out of new streets."

Lord Alexander Thynne, M.P. (Chairman of the Improvements Committee of the London County Council):

"I hope that some attention will be directed to the serious disadvantage which London suffers owing to the failure of successive Chancellors of the Exchequer to recognise its Imperial character as the capital of the Empire. In both Paris and Berlin the National Governments have shown great liberality in carrying out extensive public works, and in giving financial assistance to the embellishment of their capitals. In London, however, these matters are mainly left to the municipal authority, whose resources are limited, with the consequence that they are not humanly able to do more than attend to the more urgent requirements of locomotion, which year by year is increasing in volume and rapidity. Owing to this neglect on the part of the Imperial Government, the artistic side is necessarily subordinated to the utilitarian, although in all its recent undertakings the London County Council has shown itself ever ready to welcome criticisms and suggestions from expert architectural and artistic opinion."

Mr. John Belcher, R.A.:

"The beauty of London and Westminster has been steadily increasing, but there are so many contributary features which go to make up a fine city, that special need of some combined effort is necessary, and this no doubt the Society will endeavour to secure.'

Sir William Richmond, R.A.:

"I believe that great strength will be given to your enterprise, and great confidence granted to the public, by a union of thoughtful men in various branches of life and enterprise upon a question which is, in my opinion, not only æsthetic but ethical. More than ever is it desirable to establish such an institution as you have in contemplation; for as the mass becomes more enlightened and becomes, as it must do, more democratic, we are bound to teach the democracy that we cannot live by bread alone, but that the spirit of beauty and good must take a foremost place as a guide in the higher relations of man to man, into citizenship and collective endeavour, so that we may be proud of our city, proud of the men that make it beautiful, and proud of a great commercial nation which helps to that high result."

Mr. Philip Norman, LL.D., F.S.A.:

"Certainly a united effort is wanted for the purpose of instilling into the mind of the average Londoner some feeling for the beauty of the vast metropolis in which he ought by all means to take a special pride and interest. One difficulty is its size, which tends to prevent the inhabitants from feeling as if they belonged to it as a whole. Another lies in the fact that the City and much of the central part further west is now given up to offices, and those who use them as a means of acquiring fortune, or a livelihood, bestow their affections on some place of residence outside the metropolitan area, but easily reached by the present rapid means of locomotion. Perhaps, however, the greatest difficulty is that there is nothing in our modern civilisation which tends to promote any feeling of joy in beautiful surroundings. The modern man, whether brought up at Eton or Oxford or at a board school may develop into a strenuous man of affairs, an able administrator, or man of science, but he cares nothing about art. The beauty or ugliness of life are things altogether outside his point of vision. It is the mission of such a Society as that now contemplated, not to talk about art as of something extraneous, but to do what they can to persuade their fellow citizens that to dwell among beautiful surroundings is an added joy, a great and refining influence for which we all with one accord should earnestly strive."

Sir George Birdwood, M.D.Edin., K.C.I.E., C.S.I.:

"In going about the world I have learned the very old lesson that architecture is, in very truth and deed, the first of all the arts. It has become a commonplace saying with me, when advising on such matters, 'get you first good architecture, and every other good getting shall be added unto you.' During the past forty years, under mine own eyes, numberless noble buildings and monuments have been added to London, but for the most part there has been a really remarkable failure in the co-ordination of them with their surroundings that is a failure 'in street planning,' to use the convenient current phrase. Far worse have been the instances of the disturbances of such correlations; as in the terrible and appalling marooning of the glorious Marble Arch, which, moreover, has been sunk. Two other daily outcrying evils in the street planning of London are:—(1) That in the rebuilding of old streets the rows of new houses are often raised to a far greater height than the breadth of the street they make—a sanitary error as well as soleciesm in street planning; and (2) that in cutting new streets through old streets the razor ends left of the latter are often actually rebuilt as razor ends, instead of being taken advantage of, as on the Continent, to secure the most picturesque architectural effects. I would fain hope it may be to these sins of ædilic omission and commission that the new London Society will give some of its earliest attentions."

It was also mentioned that the Society is receiving the support of the Right Rev. The Lord Bishop of Oxford, Sir Lawrence Alma Tadema, Sir Alfred East, A.R.A., Sir George Frampton, R.A., Mr. H. G. Wells, Mr. Harry Furniss, Mr. Phillip Morrell, M.P., and others

Among those present were:—Sir Thomas Brock, Professor Beresford Pite, Professor Lethaby, Sir John Benn, Captain Swinton, Mr. Harold Cox, Mr. Halsey Ricardo, Mr. T. Raffles Davison, Mr. Max Clarke, Mr. Francis Hooper, Mr. H. W. Wills, Mr. W. J. H. Leverton, Mr. G. E. Nield, Mr. H. H. Bartlett, Mr. Raymond Unwin, Mr. E. P. Warren, Mr. J. D. Crace, Mr. John Slater, Mr. H. H. Statham, Mr. A. R. Jemmett, Mr. H. J. Leaning (Hon. Secretary, *pro tem.*), and others.

The Chairman

briefly outlined, not what the Society ought to be, or would be, but the motives of those who thought that its formation would be useful or needful; and he said he would be content merely to indicate the course of procedure at what was specifically a preliminary meeting. The first object of the London Society was to interest Londoners in London; and they would first ask the meeting to approve the formation of such a society—a body which should inform public opinion, and should in so far as it represented public opinion—make it articulate. The promoters of the Society wanted to create a public opinion which would support public authorities in carrying out different schemes which might appear to be beneficial for London as a whole. The artistic side of the management of London had received comparatively little attention, and it had been thought that, if painters, sculptors, architects, engineers, surveyors, members of Parliament, and all men interested in art, should discuss these matters and inform the public from time to time, by degrees works of which London stood in urgent need might be carried out. The management of London was cut up into so many parts that it was difficult for anyone to think of London as a whole and see what it required. His work had brought him in contact with many Government Departments, and he was himself a member of a Borough Council, and he was perfectly convinced that the desire of those bodies was to do the best they could for London; and if they were backed up by public opinion they would do a great deal more than they could at present. They would want the counsel of the very best men in London, and the assistance of such bodies as the Royal Academy, the Royal Society, the Royal Institute of British Architects, the Institution of Civil Engineers, the Arts and Crafts Society, and all societies concerned with the development, and especially the artistic development, of London. The Royal Society of Arts had already promised to help. Town-planning schemes were springing up all round London, and if they were carried out without reference to the whole scheme confusion would arise, and the best results would not be secured. Then there was the park system. All American cities have a park system, and London, as it developed, would need open spaces round it. Vast sums were expended in removing slums from the centre, with the result that slum areas were formed a little further out only to be bought out at great cost by the next generation. London had a beauty of its own—a softer beauty than the beauty of the Continental cities; and they wanted to get people to realise what beautiful things there are in their city, and what terrible things also. If a body could be formed to set the driving power of public opinion in motion, then, though its aim and its undertaking might seem tremendous, great effects might come from small beginnings—if zeal, knowledge, and enthusiasm inspired them. So the second object with which they met was to give a mandate to the Committee which had called this meeting to draw up a possible constitution, and then to call another meeting. They wanted, besides, a President of acknowledged authority and wide outlook, and a Committee full of enthusiasm and taste, tempered with prudence and foresight.

Professor Beresford Pite

moved the following resolution:—"That this meeting heartily approves of the formation of the proposed Society, and recognises the need for united effort on the part of those interested in the welfare of the metropolis, in order to advance the practical improvement and artistic development of London." He said that the recognition of united effort was the subject-matter of the motion, and he thought that statement of the need of united action ought not to be necessary in the great metropolis of this highly-organised Empire. But London needed to recognise its need. There has been a quickening of the recognition of the artistic interest of London, and that was something to be thankful for. The architectural qualities of London might fairly be described as haphazard: they were many and varied and great. And the haphazard character was probably due to the haphazard line of the river. London was not a city which either in its past history or in its present condition laid itself out obviously as other great cities had. London remained still a riverside port, a city of valleys and hills, and vast and wonderful was its relation to the river. How great had been the improvements in London since the Thames Embankment was undertaken! The view along the Embankment, with St. Paul's at one end, Somerset House in the middle, and the Houses of Parliament at the other end, gave us a line of communication of great artistic quality, and weakened our timidity and fear of London as an artistic city. But there was the south side of the river, which lay fallow, though an important commencement had been made at one end with the County Hall scheme, and we must take care that due attention was given to the whole of the southern side, which really commenced with the Palace at Greenwich and extends up to Lambeth, and beyond, was the Palace of Lambeth. We should probably some day, with the assistance of the Board of Trade, extend London to Hampton Court, giving another splendid palace to complete the link. As to proposed improvements, he almost trembled when some amateur came upon the scene with a new scheme for a fresh rearrangement of London—some rounding off of a corner or other; and it must be part of the Society's work to subdue these unruly proposals and get them into harmony with others, and so, in the long run, attain to good results. London had suffered terribly from the uninstructed enthusiasm of its lovers and from want of foresight in public works. One of the needs of London was pertinacity, so that when a great ideal was set forth it should be carried out. London also stood in need of a great ideal. As to the want of an ideal, a more conspicuous want of it could not be found than the memorial in London to King Edward afforded, and when the question arose of opening up the view of St. Paul's or of Southwark Cathedral, London suffered from the want of well-formed opinion of what London might be, and what we could make it with a little help and perseverance.

Mr. Harold Cox,

in seconding, protested against the suggestion of Lord Alexander Thynne that the public exchequer should be made responsible for the improvement of London, which was rich enough to take care of itself, and did not need to be subsidised by poorer people in the rest of the kingdom. And he objected to the view that the public did not love beautiful things. He believed they did, but they loved them in an unorganised way. London was fascinating, in spite of her faults, but we want her to be more fascinating, and we want to be prouder of her. In India he had seen some of the most wonderful buildings the world contained, such as the Palace at Delhi, the Taj Mahal and the Fort at Agra; they were a joy, and our object ought to be to make our buildings rival those, so that people would come to see London, not because she is the greatest and richest capital in the world, but because she had the most beautiful buildings in the world. We had to think not of the present generation alone, but also of the fact that buildings outlive those who design and build them.

Sir John Benn,

in supporting, said he hoped financial considerations would not deter those who were pushing that movement.

Sir Thomas Brock

also supported, and said that there was lack of intelligence when great undertakings were initiated in London, but usually artistic side was not considered, because was suddenly sprung upon us. A Society such as that suggested would be able to meet difficulty with valuable advice to the authorities at the proper moment.

Mr. T. Raffles Davison

having spoken, remarking on the fact that there was no art committee connected with the London County Council, the resolution was carried unanimously.

Captain Swinton

moved a resolution authorising the existing Committee to draft a constitution and call a meeting to decide any further action. He said that in Edinburgh there was a Society much like the London Society, the Cockburn Society, which had existed for seventy or eighty years. Its object was to look after the beauty of Edinburgh and see that nothing horrible was done, and the value of that Society was great, for it was extraordinary how few bad buildings were put up in that city and how careful people were to conform to the artistic standard. to the London County Council, the Committee which did more for the good of London was the Committee which did the dullest and most laborious work, *i.e.*, the Building Act Committee, and if that Committee had been in existence before Council was established the Marylebone-road frontages would never have been brought forward. The Committee kept back frontages and saw that there was no trespass on the public rights. There was an idea that the Improvements Committee of the Council did not spend much money and did not much work, but during the last sixteen years the Council had spent 11,861,000*l.* on improvements. Someone had to pay for improvements, and when the Society got it working order it should proceed very quickly and in a conciliatory way, keeping its doings to itself, for when a public body talked about its proposals they set up the value of property and improvements became prohibitive.

Mr. Carõe seconded the motion. Mr. Raymond Unwin supported, and it was carried unanimously.

A vote of thanks to the Chairman presiding brought the proceedings to a close.

INCORPORATED CLERKS OF WORKS' ASSOCIATION:

ANNUAL DINNER.

On the evening of Saturday, the 10th inst., the twenty-ninth annual dinner of the Incorporated Clerks of Works' Association was held at the Holborn Restaurant, Mr. Gerald C. Horsley, F.R.I.B.A., presiding.

The loyal toast having been honoured, the

Mr. R. H. Henley proposed "The Architects and Surveyors." He said that when one considers that the architectural profession is one of the noblest, and calls for a large amount of study from those who aspire to be masters of their art; that a successful architect has to be an artist of a high order, a competent engineer, a good lay lawyer, and with the gentleman in all things, with great responsibilities, one realises that he is not appreciated by the public as he should be. The surveyor, too, is a gentleman of tried integrity, who has to show great tact and discretion, and whose adjusting and balancing powers are very prominently developed.

Mr. Edward Warren, F.S.A., F.R.I.B.A., who replied for the architects, said it was a particular pleasure to him to meet gentlemen of their profession in such circumstances because, like most architects, his relations with clerks of works, though friendly, were of a workaday order. About A.D. 1600, when the authorities of Trinity College, Cambridge, set out to build a new court, they appointed one, Wiggrell, master mason or master of works. He appeared to have been architect, contractor, and also clerk of works; but the venture resulted in disaster to him, for he lost one hand, was landed in a law suit. It was evident from this that at the start their professions were one and the same, but now, owing to the complication of affairs, it was necessary for their functions to be divided. The archi-

to rely upon a good clerk of works for proper execution of work, for no matter clever a drawing might be, without proper ution it would bring credit to nobody. success could not be had without con- nce, and if confidence was not given it ld not be received.

r. Guy Nicholson also responded, on behalf the surveyors, and said there was nobody nected with building with whom the sur- ors had more sympathy than with the k of works, for both had to please the nt, the architect, and, as far as possible, builder—it was impossible to please all e. The average person did not rightly reciate the surveyors and clerks of works. hey did their work rightly they had to luce a successful result without friction it was only when trouble arose that it was ised there could be any difficulty about r work.

The Worshipful Company of Carpenters" proposed by Mr. Joseph Davies, who said as an association they need to speak of the Carpenters' Company, who house splendidly and treat them royally. The age person had no idea of the work this pany did, but most of those present knew their work at the schools in Great hfield-street, and if there were any truth he wail we sometimes hear about the rioration of the British workman, it was he fault of the Carpenters' Company.

ie toast was acknowledged by Colonel ton, who said they were trying to do a , solid, honest work for the community at , and he knew it was appreciated by all es of society. In addition to the work he past, they had more to do in the re. The late Sir Henry Harben had left em a convalescent house at Littlehampton, re there were fifty beds, and if any mem- of the Association who were in need of benefits such an institution could bestow would receive favourable consideration ey would communicate with Mr. Freeman arpenters' Hall.

proposing "The Builders," Mr. John ams said it had been his good fortune to with builders who had always been y to meet him and do what was fair and nable, and

. Henry T. Holloway, jun., in reply, said, ugh he was one of the younger builders nt, he had now had nearly eighteen years' rience in the trade, and he could say that y all the clerks of works he had met had thoroughly good men—loyal to their and just to the builder. If the builder convince the clerk of works that he ded to carry out all he had undertaken , he would get much help from the clerk orks, who would act as mediator between tect and builder.

e Chairman proposed "The Incorporated s of Works' Association," and said he not going to sing its praises, as all who members were acquainted with the did work it had done, was doing, and going to do. He thought every clerk of s who was eligible for membership should and those who were not eligible should themselves so. They were all of opinion a clerk of works is a very exceptional n, but there was one side of him which very much like the rest of mankind. If rk of works lived alone and worked , and did not meet his colleagues and w-craftsmen, he was apt to get in a rc.

. C. W. Denny, in response, said it was ssible to lay down hard and fast rules what a clerk of works should do, and, be varied so much, he must adapt himself rcumstances so as to get the best job he for the class of work, and always nber he was the representative of the tect on the job.

he Visitors" was proposed by Mr. John ison, and Mr. W. Harvey Stringer, in owledging the toast, suggested that many ess firms associated with them would be to assist in their work, and might do so coming honorary members and subscrib- small sum annually.

e proceedings closed with the toast of Chairman," proposed by Mr. Lake, to Mr. Horsley briefly replied.

A NEW BUILDING IN PALL MALL.

extension of the United Service Club is in progress, the architects being Messrs. pson & Walford, of Leadenhall-buildings, The building was erected originally 1826 by John Nash, and Decimus Burton additions in 1858-9. The new structure over the land hitherto occupied by Nos. nd 119, Pall Mall.

LAW REPORTS.

COURT OF APPEAL.

(Before Lords Justices FARWELL and KENNEDY.)

Case under the London Building Act: Minturn *v.* Barry.

IN this case the plaintiff applied last week for leave to appeal from a decision of a Divisional Court refusing her leave to appeal, and also for an extension of time in which to appeal.

Mr. Hudson, K.C., in support of the application, said the plaintiff, Miss Minturn, was the freeholder of a house known as 14, Chelsea-embankment, which she had acquired some years ago. About the time that she acquired the house she discovered that a wall at the rear of the house was very damp, and she endeavoured to put that right, but without success. This dampness caused injury to the health of her servants, and she then served a party-wall notice upon the adjoining owner, the defendant, Sir John Wolfe-Barry. That was on June 22, 1910, and the notice was given under sect. 68 of the London Building Act. The notice expressed the wish to excavate on the side of the defendant, and try to remedy the defect by putting in some impervious material. It was found that the wet came into the wall from the defendant's side. The case then went in the ordinary course under the Act to two surveyors, and the two referred it to a third, and the plaintiff then appealed from the decision of the third surveyor, who said that the wall was not defective merely because it was damp. From that decision the plaintiff appealed to the County Court, there being a right of appeal under the London Building Act. In the County Court the defendant took the objection that the wall could not be held to be defective merely because of damp, and the County Court Judge so decided. From that decision the plaintiff appealed to the Divisional Court, where it was held that a party wall could be defective because of damp, within the meaning of the London Building Act. The County Court Judge then retried the case on the material facts. It appeared that the defendant had a creeper growing upon the wall, which the plaintiff complained of as causing dampness. The County Court Judge seemed to think that the creeper ought to be preserved, and that the plaintiff ought not to do anything to it.

Following some remarks made by the Judges in the Divisional Court upon the question whether the plaintiff ought to be allowed to execute work upon the adjoining owner's side, the County Court Judge held that the previous history of the wall might be gone into. He (the County Court Judge) then went into the history of the wall, when he found that originally the plaintiff's party wall was erected upon the top or embodied part of the old garden wall. He then said that if a building owner chose to make use of a wall such as a garden wall, which might have been quite sufficient for the purposes of a garden wall, he could not complain and say afterwards it was damp and defective, and that he could go on the building owner's side and remedy that defect. He made a certain order by which the plaintiff was precluded from going on the defendant's side of the wall and doing something which it was impossible to do on the plaintiff's side. He said that the plaintiff could have an independent wall inside her house. Another alternative was that the plaintiff could cut the wall in two vertically and put in between the two parts of the wall an impervious course.

Lord Justice Farwell asked what jurisdiction the learned County Court Judge had for making such an order.

Mr. Hudson said that his submission was that the County Court Judge had no jurisdiction to make any such order. He had made an order that the plaintiff was not to do any work upon the defendant's side. He contended that that was directly contrary to the Act. The object of the London Building Act was the protection of the public health and for protection from fire. Of course, the plaintiff did not want to inconvenience Sir John Wolfe-Barry.

Lord Justice Farwell: We have only to do with people's rights. He and Lord Justice Kennedy both thought there was a point which was arguable, and that the Divisional Court ought to have given leave to appeal. Leave to appeal would therefore be given.

Mr. Hudson then contended that the plaintiff's time for appealing ought to be extended. What the plaintiff did after the decision was to consult a surveyor as to its effect, and whether she could carry out the particular work, and it was through that that she had allowed the time for appealing to run out. It was the plaintiff herself who was responsible for the delay.

Lord Justice Farwell: How much out of time is she?

Mr. Bliss, for the defendant, said that the plaintiff's time for appealing expired on December 22, and he contended that in the circumstances her time for appealing should not be extended.

At the conclusion of the arguments, their Lordships granted the extension asked for.

Builder and Building Owner's Dispute.

IN a Divisional Court of King's Bench recently, before Mr. Justice Hamilton and Mr. Justice Lush, the case of Elms *v.* Hemsted was mentioned. Mr. Cecil Walsh appeared for the plaintiff and Mr. Bartley Dennis for the defendant.

Mr. Cecil Walsh said he appeared for the plaintiff in this case, and he asked for an extension of time for an appeal to set aside the award of an arbitrator, Mr. Salter, an architect. The action arose out of a contract by the plaintiff to build a house for Mr. Hemsted at Kentbury, Berks. There was a dispute as to certain extras, and a claim was made by the plaintiff for 169*l*. The matter was referred to an arbitrator, and last July an award was made, and the last day for moving to set aside the award was December 21. The award was contained in a letter dated July 18, and was in these terms:—"No further sum is due to Mr. Elms on the work. There is really a sum due to Mr. Hemsted." He submitted that such an award was bad on the face of it. Apart from that point, the plaintiff had delivered accounts showing 169*l*. due to him for work done under the contract and extras, and the defendant, it appeared, had made a counter-claim, on which the arbitrator had made an award, and on which the plaintiff had never been heard at all. In defendant's counter-claim there was a sum of 77*l*., of which plaintiff had never had any particulars. He admitted the plaintiff ought to have moved before, but there had been constant correspondence, and his client could not get a correct copy of the contract, nor yet the details of the award. It was admitted in the affidavit made by the arbitrator that extras were ordered, and also that there was a penalty clause if the work was not completed by a certain date.

Mr. Bartley Dennis, for the defendant, opposed the motion for an extension of time. The whole amount claimed did not come to much more than the contract price of the house.

Their Lordships held that there was some merit in the application, and extended the time for appealing to set aside the award of the arbitrator for eight days

London Drainage By-Laws.

AT Marylebone Police Court recently Mr. Edward White, Chairman of the London County Council, was summoned before Mr. Plowden, at the instance of the Marylebone Borough Council, for within the last three months constructing at 21, Upper Berkeley-street soil pipes of iron instead of drawn lead with proper wiped plumbers' joints, as required by the County Council drainage by-laws, made under the Metropolis Management Acts of 1855 and 1899; and also for carrying out the work without having previously deposited "plans, sections, and particulars" of it with the Borough Council.

Mr. Freke Palmer said that the by-laws required that plans of any sanitary work that was contemplated should be deposited fifteen days before it was carried out; but, as a matter of fact, proper plans had not even now been received. The by-laws permitted an outside soil pipe to be of iron or lead, but required that an inside soil pipe should be of lead and lead only. When written to on the subject, Mr. White submitted plans, but they were returned as they did not accurately represent the work, and were not in accordance with the by-laws. Mr. White thereupon wrote that he had not the slightest intention of altering the iron soil pipe. The Borough Council had, therefore, no alternative but to institute these proceedings.

Mr. White urged that an iron soil pipe was far better from a sanitary point of view than lead, and, since a very small portion of the pipe in question was inside the house, he claimed that it could fairly be described as a soil pipe outside the house, and could therefore be of iron. He admitted that, owing to the illness of his son, the plans were not submitted at the proper time.

Mr. Plowden said the Council were right in taking proceedings against Mr. White in respect of the plans, and inflicted a nominal fine of 10s. with 2s. costs. As to the soil pipe, as far as he could make out, it was half inside and half outside the house, and there

was nothing in the by-law which provided for a pipe so situated. The Council had not convinced him that the whole pipe was inside, and they could not succeed. It was really a drawn battle. Each side was right and each was wrong. He dismissed the summons, but was willing to grant a case.—*Times*.

LONDON COUNCILS.

Acton.—The following plans have been passed:—Mr. R. T. Butler, 10, Brougham-road, Acton, laying out three new streets, also twenty-eight houses, Westbourne-avenue; Mr. Edward Evans, 253, Lavender-hill, S.W., eight houses, Balfour-road; Messrs. Vendervell & Co., extensions to factory, Warple Way.

Bermondsey.—The following plans have been passed:—Mr. J. W. Atkins, builder, 57A, Weymouth-street, Portland-place, W., cinematograph theatre, Southwark Park-road, for Messrs. Nicholson & Wood, Ltd., 256, Southwark Park-road, S.E.; Mr. McLeod, Secretary, South Metropolitan Gas Company, 709, Old Kent-road, S.E., alteration of frontage line and erection of buildings, Rotherhithe street; Mr. H. D. Searles-Wood, architect, 157, Wool Exchange, E.C., alterations of frontage lines, Rotherhithe-street; Mr. W. Nash, builder, Crown Works, Childers-street, Deptford, S.E., additions to Electric Works, Storks-road, for Messrs. Young & Rochester; Mr. W. T. Walker, architect, 40, Finsbury-square, E.C., factory, Tidal-place, for Messrs. H. Grant & Co., Riley-street, S.E.

Croydon (County).—The tender of Messrs. James Smith & Son (Norwood), Ltd., at 2,235*l*., has been accepted for additions and alterations to buildings at the Surrey-street Waterworks. Plans have been passed for Mr. R. B. Manser, 6, Guy-road, for twenty houses in Woodside Court-road, also for Mr. G. Parris, 58, Shelsdon-road, for five houses in Cedar-road.

East Ham.—Plans and estimates prepared by the Engineer have been approved for making-up Sandford-road and Mitcham-road at a cost of 581*l*. and 737*l*. respectively. The foul sewer in High-street South is to be extended at an estimated cost of 194*l*. Plans have been lodged by Mr. H. C. Seymour for ten houses, Haldane-road, also by Messrs. Mitchell, Lucas, & Mitchell, for a public-house at the corner of Macaulay-road and Barking-road.

Hendon (Urban).—Application is to be made to the Local Government Board for sanction to borrow 1,033*l*., the estimated cost of kerbing, channelling, and paving works in part of Lawrence-street, Mill Hill. The following plans have been passed:—Mr. H. A. Champ, four houses, Hammers-lane, and seven houses, Shakespeare-road, Mill Hill. Second Hampstead Tenants, Ltd., six houses and eighteen flats, Addison-way; six flats, Hampstead-way; and six houses, Child's-way. Mr. Charles Phillips, six houses, Uphill road, Mill Hill; Mr. Edward Streather, sixty six houses, Finchley-road, Wentworth-road, and Marathon-avenue, Golder's Green. Mr. E. A. Cooper, garage, corner of Hodford and Woodstock roads.

Lambeth.—A plan has been lodged with the London County Council by Mr. C. G. Miller on behalf of the London and South Western Bank, Ltd., for the erection of a building on site of Nos. 335 and 337, Norwood-road.

Marylebone.—The tender of Messrs. F. & H. F. Higgs, of Station Works, Hinton-road, Herne Hill, at 1,870*l*., has been accepted for the execution of the work of constructing a new wharf wall at the Council's depôt.

Poplar.—The tenders of Messrs. Thomas & Edge, at 4,668*l*., and Messrs. Fairweather & Ranger, at 2,485*l*., as sub-contractors for steel-work, have been accepted for the erection and completion of the superstructure of the extension to the generating-station. Plans have been passed for Messrs. W. T. Bachelor & Sons, for the erection of Bethel Chapel, High-street; also for Messrs. C. & E. Morton for the erection of an additional block at Docksside Preserving Factory, West Ferry-road.

Southgate.—Application is to be made to the Local Government Board for sanction to borrow 6,764*l*. for the erection of thirty-six cottages in Chase-road and Chelmsford-road. Plans, sections, and estimates prepared by the Surveyor have been approved for the making-up, etc., of Chimes-avenue, Palmer's Green. The following plans have been passed:—Messrs. C. J. Newby & Brothers, warehouse, etc., rear of No. 39, Chase-side; Mr. J. Plumb, six houses, Avenue-road; The Garden City Laundry, Ltd., extensions to laundry, Farm-road.

Wandsworth.—The tender of Messrs. J. Mowlem & Co., Ltd., at 1 052*l*., and schedule prices for extras or omissions, has been accepted for paving with Aberdeen adamant (kerb with Cornish granite) part of Roehampton-lane, Putney. A plan has been passed for Mr. E. Worssell for alterations and additions to the Bungalow, Chartfield-avenue, Putney.

Watford.—The tender of Mr. H. Brown has been accepted by the Rural District Council, at 1,009*l*., for making-up a road on the Nascot Estate; as has also the tender of Mr. H. Williams, St. Albans, at 1,664*l*. 12s. 6d., for making-up certain Radlett roads.

OBITUARY.

Mr. T. M. Rickman.

It is with much regret we record the death, on February 10, at his residence, No. 64, Philbeach-gardens, S.W., of Mr. Thomas Miller Rickman, F.S.A., Assoc.Inst.C.E., F.S.I., and formerly of No 8 Montague-street, W.C., aged eighty four years. Mr. Rickman, the son of Thomas Rickman, F.S.A., was elected an Associate of the Royal Association, and was President in 1854-5; and he was President of the Surveyors' Institution, served as a member of the Council; in 1852 he became a member of the Architectural Association, and was President in 1854-5; and he was President of the Surveyors' Institution, 1899. He practised with Mr. E. J. Burr under the style of Messrs. Rickman & Burr, at No. 5, Queen-square, Bloomsbury, as architects and surveyors; in March of last year he retired from practice "without" (in his own words) "severing the friendship which has continued during our business connexion of the last forty years." The firm continued to carry on the business under the style of Messrs. E. J. Burr & Son, at No. 5, Queen-square. Mr Rickman was member of Council of the Architects' Benevolent Society, and Vice-President, 1909-12; a few years ago he gave a most liberal subscription to the New Premises Fund of the Architectural Association. Mr. Rickman was a well-known though somewhat retiring member of the profession, and he will be missed by the friends and acquaintances who knew him well.

Mr. Alexander Graham.

We regret to announce the death on February 9, at his residence, Carlton-chambers, No. 4, Regent-street, S.W., of Mr. Alexander Graham, F.S.A. Mr. Graham was a pupil of J. H. Stevens; he was elected a Fellow of the Royal Institute of British Architects in 1879; he was a Vice-President, 1893-7; Honorary Secretary, 1899 1909, and member of Council; and he served upon the Literature and Records Standing Committees from time to time within the past fifteen years or so. Mr. Graham prepared the plans and designs for the new buildings, Cancer Hospital, Fulham-road, S.W. (illustrated in the *Builder*, September 26, 1885), County Hotel, Newcastle-on-Tyne; Sandlebridge (Cheshire), "Lewis," Colony for Epileptics, 1900-4, erected at a cost of nearly 60,000*l*., and consisting of separate and, for a large number, single-floor houses, with hall, workshops, infirmary, theatre, chapel, etc., in the Elizabethan style; Montreal General Hospital, 1887; warehouses in Moor-lane, E.C., for Messrs. Welch, Margetson, & Co., 1898-1902; blocks in St. James' Court, Buckingham gate, for the Law Guarantee and Trust Society; premises in Elm-street, Gray's Inn-road, for Messrs. W. H. Wagstaffe & Sons; and, one of his most recent works, the new buildings in Copthall-court and Drapers'-gardens, E.C., for the Armourers' Company. He acted as consulting architect, with Messrs. Chorley, Connon, & Chorley, as the architects, of the Women's and Children's Hospital, Leeds, 1901-2; and as assessor in several important competitions, including those for the Weston-super-Mare Pavilion, Wandsworth Guardians' Offices, Bury Infectious Diseases Hospital, Leigh Infirmary, and Rochdale Infirmary. In 1904 Mr. Graham was elected a member of Council of the Building By-Laws Reform Association. He and Mr E. T. Hall were nominated to represent the Institute at the British Congress on Tuberculosis in London, July, 1901; he was a contributor to Dr. Russell Sturgis's "Dictionary of Architecture"; he was appointed (1904) British member of the Permanent Committee. International Congresses of Architects, and was member of the Executive Committee, Seventh Congress, in London, 1906; he was the author of "Roman Africa," his "Sketches in Tunis" we illustrated on January 10, 1885, and his drawings of Famagusta Citadel, the Temple at Dougga, Tunisia, and the Arch of Carscalla at Tebessa, on August 11, 1900. Mr. Graham was a liberal contributor to the Architectural Association's New Premises Fund. He was a Vice-President, 1906-7, of the London Topographical Society, and for a long period a member of the Council; and he was ho treasurer of the National Photographic Association.

Mr. C. Smith.

We regret to also announce that Mr. C Smith, J.P., and Senior Magistrate of ing, died suddenly of heart failure police court on February 6. Mr. Smith seventy-nine years, was one of the respected inhabitants of the town, wh practised as an architect during more fifty years; he was member of the Council in 1868-83, Mayor in 1874-6, ex-man of the Reading Brewster Session for many years Chairman of the R Municipal General Charities. Mr. Smit elected, in 1854, an Associate, and, in Fellow of the Royal Institute of British tects; he practised latterly with his so Charles Steward Smith, F.R.I.B.A., as Charles Smith & Son, of Friar-street, Re Of his chief architectural works we may tion the following:—Queen's Jubilee Farnborough (1898); Infectious D Hospital, Tilehurst, for Reading Bo Council; and the "Joseph Henry W Council School, East Reading, in three with a technical and domestic instructio for a total of 1,320 pupils (1903-5); alte and extensions, Reading School (1908) Wantage Hall, built four years ago, at of about 30,000*l*., for the principal, staf seventy-five resident students of Uni College, Reading; enlargement, at a mated cost of 20,000*l*., of the Royal Be Hospital (1909); Henley-on-Thames Infir Surrey Union Hunt Kennels, for Lorc combe, at Bookham; St. John's Hall a church buildings, Mortimer, Berks; new ing wards, mortuary, etc., and gene modelling of the Union Workhouse, (1909); extensive enlargements and im ments of the workhouse premises and bu for the Unions of Chipping Norton, Ware ford-on Avon, and Hatfield (with the w infirmaries), Easthampstead, Wallingfor the Children's Homes), King's Lynn (w infirmary and new wing), and many similar works in the county and else In 1901 the firm were nominated to c for the new workhouse, Wigan. Mr. leaves three sons and five daughters.

M. Moreau.

The *Times* records the death of M. M Moreau, the well-known sculptor and of the 19th *Arrondissement* of Paris. his works are the group known as Exiles" in the Tuileries Gardens, the statue on the fountain in front of the Français, and "La Fileuse" in the bourg Museum. Mathurin Morea awarded a gold medal at the Paris Ex of 1889. In his capacity as Mayor created an officer of the Legion of Ho

TRADE CATALOGUES.

Messrs. Paul Piketty & Co., of Pari forced concrete engineers ("Piketty" have recently opened London offices 18, Bloomsbury-street, W.C. List of Competitions, Contracts, etc.

For some Contracts still open, but not included in this List, see previous issues. **Those with an asterisk (*) are advertised in this number**: Competitions, iv.; Contracts, iv. vi. viii. x.; Public Appointments, —. Auction Sales, xx.

Certain conditions beyond those given in the following information are imposed in some cases, such as: the advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in.

*** It must be understood that the following paragraphs are printed as news, and not as advertisements; and that while every endeavour is made to ensure accuracy, we cannot be responsible for errors that *may* occur.

Competitions.

EBRUARY 17.—**London, E.C.**—NEW OFFICES.—Port of London Authority invite preiary sketch designs for new head offices Trinity-square, and for laying out remainder nd as a building site. See advertisement in of November 24 for further particulars.

EBRUARY 17.—**York.**—SCHOOL.—The York cation Committee invite competitive designs a public elementary school. See advertise- in issue of January 12 for further iculars.

ARCH 15.—**Drammen, Norway.**—RAILWAYTION.—Particulars from the Norges Statsr, Christiania.

ARCH 15.—**Prestatyn, North Wales.**—NG-OUT ESTATE Lord Aberconway and the tees of the Prestatyn Estate invite designs laying-out of the estate Three premiums offered. Particulars from 33, Henriettat, W.C. See advertisement in issue of iary 5 for further particulars.

ARCH 16.—**Harrow.**—PUBLIC OFFICES.—The row-on-the-Hill U.D.C. invite tenders for the rgement of and alterations to their Public es. See advertisement in issue of January 5 further particulars.

ARCH 25.—**Colchester.** SCHOOL.—Limited to itects practising in the borough.

ARCH 30.—**Edinburgh.**—MEMORIAL TO KING ARD.—Limited. See Competition News, 51, February 9.

ARCH 31.—**Manitoba, Canada.** PARLIAMENT DINGS. The Government of Manitoba e designs for the new Parliament buildings e erected in the City of Winnipeg. See rtisement in issue of February 9 for further iculars.

PRIL 4.—**Portland.**—COUNCIL OFFICES.—Prems 50*l.* and 10*l.*

PRIL 20.—**Birmingham.**—BLUE COAT SCHOOL. mited to local architects. Assessor, Mr. H. Hunt, F.R.I.B.A. Particulars from the etary, the Blue Coat School, Birmingham.

AY 1.—**Society of Architects' Travelling** llentship. Design for a Town Hall. 25*l.* medal.

AY 1.—**Wombwell.** SWIMMING BATHS. Wombwell U.D.C. invite designs in comtion for public swimming baths, to be ted in Hough-lane, Wombwell, Yorkshire. e prizes of the value of 40*l.*, 30*l.*, and 20*l.* ectively are offered for the designs placed second and third respectively by the ssor. See advertisement in this issue for her particulars.

NE 28.—**Hale, Cheshire.**—TOWN PLANNING EME.—Premiums 50*l.* and 25*l.* Particulars n the Council Offices, Hale

LY 1.—**Dusseldorf.**—A plan for the nsion of the City of Dusseldorf. Premiums ,000*l.* to 375*l.* Conditions on application to Chief Burgomaster, Dusseldorf. A translaappeared on page 366, September 29.

GUST 30.—**SAXON SNELL PRIZE.**—Fifty neas; with medal, is offered for essay on a pital subject. Particulars from the Sanitary itute, 90, Buckingham Palace-road, S.W.

O DATE.—**Jordanhill, Glasgow.**—PROPOSED NING COLLEGE.—Limited to six firms, named Competition News, December 1, 1911, page 625

NO DATE.—**Warrington.**—SCHOOL.—The rrington Education Committee invite comtive plans for the erection of a public entary school. See advertisement in this e for further particulars.

Contracts.

BUILDING.

The date given at the commencement of each paragraph is the latest date when the tender, or names of those willing to submit tenders, t be sent in.

EBRUARY 17.—**Bandon.**—COTTAGES.—For erecof nineteen labourers' cottages. Plans, cifications, and tender forms from Mr. A. nes, Clerk, Council Offices, Bandon, Ireland. posit of 5*s*

EBRUARY 19.—**Hunstanton.**—ADDITIONS.—For itions and alterations to the Convalescent me. Forms of tender and quantities by the itects, Messrs. Macalister & Skipper, 20, Andrew's-street, Cambridge, on deposit of 2*s*.

EBRUARY 19.—**Stockton.** SCHOOL, ETC.—For ition of new deaf school, handicraft, and tery centres in Regent-street, Nelson-terrace, Ropery-street Quantities, on deposit of 2*s*., from the Architect, Mr. E. G. Fletcher, nce Regent-street, Stockton-on-Tees.
